## FEEDING SAMMY AT SEA

Two hundred and ten thousand meals were served on a United States transport on a recent voyage. One hundred and eighty varieties of food were used in making up the menus, and this ship carried 750,000 pounds—3750 tons—of food.

An account of how the soldiers are fed is given in the ship's daily newspaper. The vessel has its own journal, printed aboard, containing the news of the day received by wireless thru the "Navy Press," which keeps the men on the seas in touch with the events of the outside world. The ship's reporter, describing how "the almost unending lines of khaki file by for their meals," says:

In spaces no larger than a private dining room at Sherry's they come by, thousands upon thousands, and yet in such perfect order that in less than eighty minutes the last man has been served.

The khaki line seems limitless. It must seem longer than that to those in the rear. But the coffee in the big pots remains hot, the stew continues to steam, and in less than seven seconds each man has an equipment replete with food. It only takes two details to accomplish this miracle—perfect system and vast quantities of things that one can eat. That's about all it takes.

Flour, potatoes and beef are the Big Three that rule the realm below, yet there are 159,000 pounds of fresh vegetables waiting to be absorbed, providing the sea doesn't get too rough.

After receiving their food the men arrange their own menus. For example, one takes gravy on his rice and jam on his bread. The next takes gravy on his bread and jam on his rice, using the combination to produce a crimson-tinted mixture of startling effect. American ingenuity is hard to stop.

Outside of providing 210,000 meals at sea the mess officer of the ship has very little to do. Very little.

He is only called upon to provide, by the regulations, 180 different varieties of food. That's all. Ever try to order 180 different things to eat? Yet this is the authentic list.

The food needed to feed several thousand men at sea ranges beyond the glutton's dream. You get the answer in the ship down below the water line where 7290 loaves of bread have been baked in one day, and eaten, and where you stowable over every variety from 60,000 pounds of beef to 132,000 eggs, or a compartment of brick ice cream in a ten degree above zero vault.

And if this doesn't suit you, you can bump along into 49,324 pounds of potatoes, 7100 pounds of ham and bacon, 7800 pounds of butter, 4200 pounds of sugar, and 61,500 pounds of flour.

If you can't get a meal out of this you can still fall back on 1600 pounds of sausage, 3100 pounds of sauerkraut, 26,000 pounds of apples, 19,800 pounds of oranges, and 4200 pounds of onions.

And that leaves out 1600 pounds of jam and 9400 pounds of lima and navy beans.

The sea brings on an appetite at times. So does wearing khaki. The combination develops a cyclone. Yet this ship not only yields many thousands of meals a day, but will deposit 100,000 pounds of food at its next port. No wonder Mr. Howland wanted all food conserved. He must have thought of those men in khaki eating their tops, one thousand upon another thousand, in a space sixty by forty feet, each man armed with a mess equipment in either foot, ready to go over the top and break the bread line. Breaking the bread line is the proper phrase. On the top more they will consume 15,000 loaves and use an extra ten or more for sandwiches when they leave the ship.

There is no vast space for all this, but per-

fect organization, four clean kitchens, and a mess force of 138 men turn the trick without a tangle. From potatoes to mess, from ice cream to sauerkraut, from grape fruit to onions, from jam to sardines, the allotment is drawn from its shadowed hiding place below, where the removal of several pounds hardly leaves a dent. And handling 180 varieties of food in quantities that range from 800 pounds to seventy-nine tons speaks almost for itself.

Just how many calories 750,000 pounds of food contain you can figure for yourself on the next rainy afternoon

### RED CROSS SOUVENIRS

Two souvenirs of the Second Red Cross War Fund drive in Washington, a Red Cross flag and a gold medal, are for sale. The flag is the only emblem besides the United States flag that has ever flown above the dome of the capitol, and bears the autographs of the President of the United States, the Vice-President and the Speaker of the House.

The medal is one of two struck at the mint in 1900 to commemorate the centenary of the national capital. One was presented to President McKinley and the one which is now for sale has been given to the Red Cross War Fund by the then President of the Commissioners, the executive government of the District of Columbia, to whom it was presented. The medal bears the heads of McKinley and John Adams.

Inquiries can be sent to Henry B. F. MacFarland, chairman of the Red Cross War Fund Committee of the District of Columbia, 1420 New York Avenue, Washington, D. C.

### GOVERNMENT ADVERTISING

Due to the generous donations of patriotic publishers and advertisers, a fund of one and one-half million dollars' worth of advertising space has been made available for use by the Government thru the Division of Advertising during 1918. The support of these publishers and advertisers has made possible the following record of accomplishment by the Division of Advertising since January 20:

**U. S. SHIPPING BOARD.** Campaign to raise 250,000 shipyard volunteers. General magazines and trade papers. 80 advertisements, 8,000,000 circulation, space value, \$20,000.

**WAR SAVINGS STAMPS.** General advertising campaign. General magazines, farm papers, trade papers, house organs, painted bulletins and posters, newspaper advertising. 1130 advertisements, 55,000,000 circulation, space value, \$132,000.

**RED CROSS.** Second War Fund. General magazines, farm papers, trade papers, house organs, painted bulletins and posters, newspapers and college papers. 539 advertisements, 60,000,000 circulation, space value, \$177,000.

**LIBERTY LOAN.** (Third.) General magazines, farm papers, trade papers, house organs, painted bulletins and posters, newspapers and college publications. 177 advertisements, 16,000,000 circulation, space value, \$53,593.67.

**DEPARTMENT OF AGRICULTURE.** War Garden Campaign. General magazines and farm papers. 17 advertisements, 6,000,000 circulation, space value, \$18,412.40.

**COMMITTEE ON PUBLIC INFORMATION.** Various war campaigns. General magazines, farm papers, trade papers, house organs, college papers. 504 advertisements, 61,000,000 circulation, space value, \$162,000.

**WAR DEPARTMENT COMMISSION TRAINING CAMP ACTIVITIES.** "Smileage." General magazines and trade papers. Newspaper advertising plan. 64 magazine advertisements, 1134 newspaper advertisements; magazine circulation, 2,250,000; space value, \$9847.

# SHUMATE RAZOR

**SMOOTH!**

"YES! AND IT'S  
GUARANTEED TO  
KEEP MY FACE  
SMOOTH  
FOR LIFE"

*Written Guarantee With Each Razor*

This SHUMATE "Barber" Razor is so good that we guarantee it to you for *life*. Here's the reason: The blade is made from tungsten alloy steel, which takes a keener edge than any other steel *can*—and *holds* it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously. Here's our unqualified guarantee:

## The Shumate Guarantee

Buy a SHUMATE "Barber" Razor and use it—not once but as long as you like. If you say, after an exacting trial, that you don't like it, we'll exchange it *without a word*.

SHUMATE Razors are made by the master cutlers of the world, and for more than 33 years have demonstrated their superior worth to men who appreciate really good razors. United States sailors and soldiers, and more than four million civilians are using SHUMATES every day. Send for yours today.

**\$2** If you want to settle the razor question for life, send us \$2.00 and the razor will be forwarded postpaid. For those with very strong, wiry beards we recommend our \$3.00 Shumate Razor, specially ground for this purpose. NOTE: In remitting, give us your dealer's name, and a chamois-lined, rust-proof case will be included with your razor.

Shumate Razor Company, 759 Chestnut St., St. Louis, Mo.

## WHY GERMANY CANNOT WIN

IN the olden time when Germans were sane and told fairy stories instead of the more prosaic type of lies in which they are now adept, they never tired of that profound legend of the Fairy Who Was Not Invited to the Birth Feast. All the others, duly invited and much gratified at being remembered, brought the baby (who was always Prince or Princess) some priceless gift, such as wealth, or beauty or length of days. But people in the fairy tales always overlook something, or otherwise there couldn't be any plot. So one fairy was omitted when the invitations were sent out and some indispensable gift was thus denied the child or, if the neglected fairy really took the matter to heart, some cruel curse was laid upon the cradle to spoil the effect of all the blessings that had been offered there.

Modern Germany is just such a young Prince. He was gifted with every quality wherewith to erect a world empire—with one exception. Dame Nature brought the infant empire the twin keys to wealth, coal and iron, and Dame Science taught him how to use them. Good fairies dowered Germany with the strong qualities of the empire builder: courage, patience, endurance, industry, skill, social discipline and aggressive energy. He was a handsome, hardy child with stout muscles and a broad forehead under his golden locks, and, like the other Supermen of legend, he was "beyond good and evil" and so was no more hampered by scruples than by fears. The young Prince's parents hoped that he would become in time Emperor of the Earth, and he believed it even more than they. What yet was lacking?

Many things were lacking, but not all qualities, however desirable in and for themselves, are necessary to world empire. That Germany could not understand personal freedom, artistic taste, courtesy, sportsmanship or the democratic spirit was unfortunate indeed, but not fatal. These are the qualities of peace, and the boy was intended to be a conqueror and ruler. Such luxuries he might disdain.

So he might, but at least one of the gentler traits of humanity is indispensable even to empire builders: magnanimity. The uninvited fairy, who did not bring that priceless gift to the birth feast, saved the world from another Roman Empire. Every student of the classics will remember that noble maxim which was the key to the Empire of Rome, as it is to the even greater modern empire of Britain:

"To spare the vanquished and to crush the proud."

In other words, be as cruel and ruthless as necessary in forcing the enemy to surrender, but make surrender worth his while. If your foe cannot buy peace by ceasing war, what inducement is there for him to cease war? No policy of terrorism can be carried to such a hideous extreme as to force slavery on those who know that they will be as badly treated under the yoke as they were treated under the sword.

There are those who defend the imperialism of Germany by asking how other empires have been made. Did not Cæsar ravage Gaul with fire and sword? Did not France extend her African empire by methods frequently unscrupulous? How did Britain conquer Ireland, India and the Boer republics? Did not we dispossess the Indians and crush the Filipino insurgents? If Germany was wrong to snatch Alsace-Lorraine from France, what was the French title to the land but conquest? Did we grant a plebiscite when we obtained New Mexico?

But those who ask thus do not comprehend the case against Germany at all. Doubtless it is wrong to wage wars for lust of dominion, but the sin of aggressive war is nothing to the sin of aggressive peace, the war against the conquered. Cæsar drenched the plains of Gaul with the blood of its defenders, but those Gallic tribes who from wisdom or fear "allied" themselves to Rome were treated with great favor. When the whole region became a Roman province

the masses of the people were allowed to keep their religions, customs and old traditions; they were often harshly ruled from the point of view of our modern standards, but life was at least freer and securer than it had been, or than it would have been under one of the less successful Empires of the Orient. The Roman as governor was usually a degree less harsh than the Roman as conqueror. Thus we find nations which might have resisted Roman rule voluntarily seeking its protection and fighting under the eagles.

France, Great Britain and the United States have learned to conquer, but they have also learned how to spare, which is to rule. Great Britain conquered the Boers, and gave them all South Africa to rule! A Boer general is now Prime Minister over both Dutch and English. A few years ago a French Canadian was Prime Minister over both French and English in Canada. The once rebellious Maori warriors of New Zealand now vote and sit in the New Zealand Parliament. Natives of India have been summoned to the Imperial Conference. The Prime Minister of the Empire is from "conquered" Wales. Ireland is the greatest British failure, for here the coercive methods of the conqueror lasted far too long, but compare the recent British policy of buying out English landlords and giving the land to Irish tenants with the Prussian policy of expelling the Poles and settling Germans on their land! As for France, her best title to Alsace-Lorraine is the almost unanimous protest of the German-speaking inhabitants when the provinces were "restored" to Germany in 1871; her best title to northern Africa is the fact that within a few years of the conquest she can withdraw her own armies from the conquered lands and even recruit them with enthusiastic volunteers who have found French rule unexpectedly congenial. It is hardly necessary to say that no possession of the United States would consent to return to its old allegiance if it were offered the opportunity to do so. We would provoke a revolution if we tried to give back Porto Rico to Spain, the Canal Strip to Colombia, Arizona to Mexico, Louisiana to France, the Virgin Islands to Denmark, Alaska to Russia or Hawaii to its native dynasty. In no quarter of the world have we destroyed existing liberties; the utmost complaint made by the most impatient anti-imperialist is that we might plant new liberties more rapidly on soil where hitherto this fair flower has never grown.

But whether or not the German conquers more ruthlessly than other conquerors, he rules too ruthlessly to rank with the successful rulers. Conquering Alsace-Lorraine was the venial sin; ruling it for forty-seven years as a conquered province was the mortal sin. The partition of Poland might be excused; the "rooting out" of the Polish peasant from his land is unpardonable. The annexation of Schleswig finds many parallels in French or British history; the persecution of the Danish speech finds few, and none of present date. The world may in some distant future forgive the invasion of Belgium, or even the massacres which followed in the wake of the German advance, but it will never forgive or forget the four years Reign of Terror there and the enslavement of the civilian population. The more triumphant the German is, the less good natured he becomes; the more his victim is abased, the more he is oppressed; the more ready the conquered is to make terms, the worse the terms which are offered. Russia was so hungry for peace that she consented to anything and everything demanded in return for a little leisure to recover from her wounds. But even this was refused; German armies in "neutral" Lithuania, Finland, the Ukraine, the Baltic provinces and in Great Russia itself are violating frontiers, seizing crops, levying indemnities, imprisoning and shooting those who protest, and even forcing men into the German armies and women into German factories. What worse evils could war

bring than submission? Is it surprising that peasants who dropt their arms for very weariness are now rising in vain insurrections in every part of eastern Europe?

That is why Germany cannot conquer the world; why Germany has not even successfully absorbed a single non-German colony or province. The armor of Germany has become the very flesh of the nation; its courts are all more or less courts martial; its police are virtually armies of occupation, and its subjects are not permitted to become citizens. The Pole is not permitted to remain a Pole, nor yet welcomed in full equality as a fellow-German; he becomes a "German of the second class," a prisoner of war for the term of his natural life. If German garrisons were stationed in every land there would be no "Pax Germanica" but open or latent civil war belting the whole earth from Stockholm to Singapore. The old maxim is none the less still applicable: "You can do anything with bayonets except sit on them!"

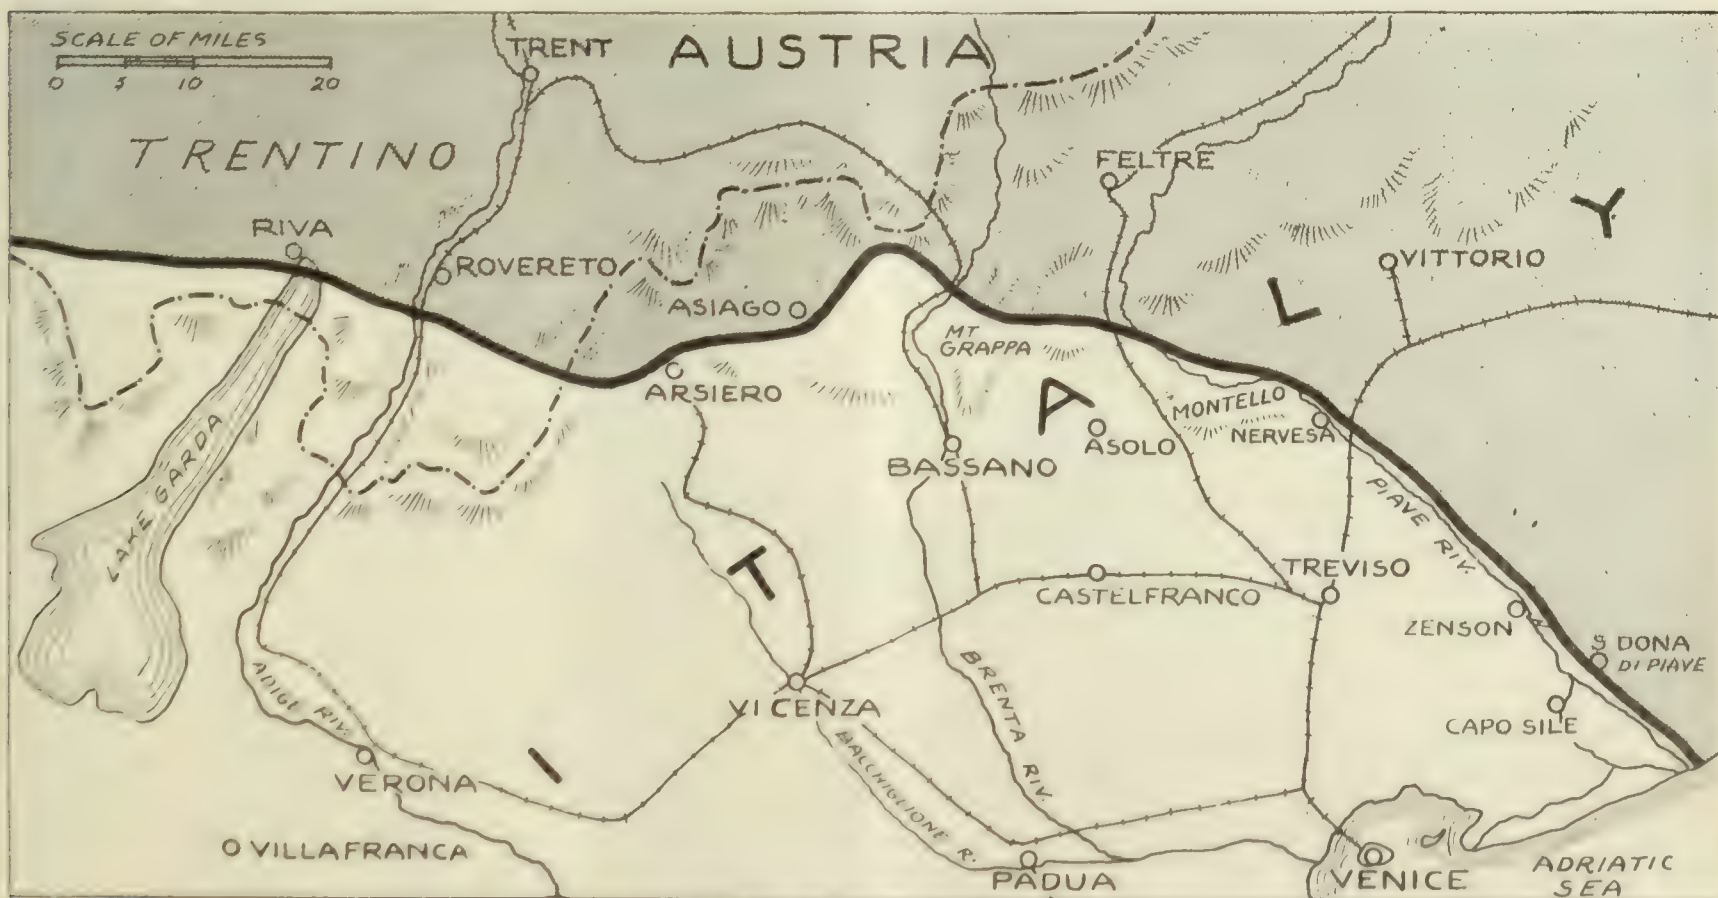

## THE BATTLE OF THE PIAVE

THE Austrians have not merely been stopped or repulsed, they have suffered a decided and ignominious defeat. Considering the hopes they had placed upon this offensive and the supreme effort they had made for it the Italian victory is likely to have a serious effect upon the Austro-Hungarian empire in its present disorganized state. The Austrian soldiers were promised that this drive would bring peace and plenty, but it brought them death and destruction instead. They had been told, when they complained of their scanty fare, that rich stores of food lay just behind the Piave, but now we see the Italians feasting on the bread and jam that the Austrians had stacked up on the Montello plateau. The enemy elements, fire and water, joined forces to defeat the invaders. Their overthrow was consummated by what our legal documents—inheriting their phraseology from the age of faith—call "an act of God." For the rains descended and the floods came and the winds blew and the Austrians were overthrown like the Egyptians in the Red Sea. Monte Grappa, which formed the bastion between the Piave and the Brenta and resisted the attack of 300,000 Austro-Hungarian troops, will, at the request of

General Diaz, be made a national monument in everlasting commemoration of the glorious days of June 15-25, 1918. We may trust the Italian architects to erect on its summit a chapel to Our Lady of Victory that will be more attractive than the brutal *Volkerschlachtdenkmal* that the Germans erected in 1914 on the plains of Leipzig to their defeat of Napoleon.

These north Italians knew what they were fighting for and what they were fighting against. They or their fathers could remember the sad days before 1866 when Austrian officers swaggered about Venetian piazzas, shunned by the Italians as tho they were plague-stricken, when a casual combination of the colors, red, white and green, in a lady's costume or bouquet meant imprisonment and the singing of Italian songs in the streets of Italian cities meant death. To Kaiser Karl as he surveyed the Piave plain from the Tyrolean peak it must have seemed as tho the ghosts of all the nationalities murdered by the House of Hapsburg had risen up against him, for among his enemies he could see Czechs, Slovaks, Slovenes, Croats, Bosnians and Serbs. But these were not mere shades, such as appeared to Richard on Bosworth Field but living men, burning to avenge their ancestors and establish the liberties of their posterity.

The defeat on the Piave does not seriously cripple Austrian military strength, but it is a terrible blow to Austrian pride and self-confidence. For this offensive was intended to be a demonstration of what the Austrians could do "on their own." When the Italian line was broken in the Julian Alps in October, 1917, it was done by a few divisions of German troops loaned for that purpose. Previous to that the Austrians had been giving way steadily before the armies of Cadorna. We may be sure that the German officers did not neglect to remind the Austrians that they owed their victory in Venetia as in Galicia to German prowess. So the Austrians determined to do what the Germans had done in France this spring—but on a bigger scale. Instead of using a half million men for the onset they would use a million. Instead of attacking on a forty-five mile front as Hindenburg did on the Somme they would attack on a ninety mile front. If the Germans could cross the Somme, the Aisne, the Vesle and the Oise so easily, why could not

THE ITALIANS HOLD THE PIAVE LINE

The Austrian offensive against Italy came to a disastrous end within ten days from its start. The Austrians who had crossed the Piave at S. Dona, Zenson, Nervesa and Montello were thrown back with heavy losses. The Italians have held the Asiago and Grappa highlands. The anticipated Austrian attack west of Lake Garda has not yet materialized.

the Austrians cross the Piave—especially at low water? They would rush up their men secretly like Hutier; they would bring overpowering artillery to bear upon the enemy's trenches like Ludendorff. Kaiser Karl should come in person to the battlefield, as did Kaiser Wilhelm.

Everything was like the German operations—except the outcome. Somehow things went wrong, just how we do not know. But we hear that the men did not fight with enthusiasm, that the big guns got stuck in the mud, that the more the troops were massed the bigger targets they made, that the pontoons were washed downstream, that the opposing forces proved strong at points where they were expected to prove weak, that certain detachments went the wrong way and got lost in the woods, that the reserves did not come up on time, and so forth. Such accidents happen in the best regulated of armies, but some way they seem to happen oftener in the Austrian than in others.

Premier Orlando warns his countrymen not to rejoice prematurely, that a more severe ordeal may yet have to be faced. It is a wise warning. The Austrian army is still substantially intact. Counting the things that may be counted and measuring the things that may be measured we might call it a drawn game. On the map the Austrians have not lost ground, in fact they have gained a few square miles on the Asiago side. The Italians claim 18,000 prisoners, but the Austrians claim 45,000. Doubtless the Austrian claim should be discounted, but how much? Even if the Austrians have lost 150,000 men, as the Italians guess, that is not a large proportion of the million and a half that they are supposed to have in Italy. The Austrian forces which were rumored a month ago to have been massed between Lake Garda and Switzerland do not seem to have been brought into action yet and might perhaps be launched toward Mantua and Milan.

What the Austrians must have lost is confidence and courage. That the young Emperor and his Italian wife are anxious to stop the war was shown by their clumsy efforts at peace negotiations last year. Count Czernin, who approved the President's terms, has been dismissed from the office of Foreign Minister, but the first act of Baron Burian, his successor, was to announce that he, too, was ready to consider peace proposals. Austria-Hungary has nothing to gain and everything to lose by a continuance of the war. The best she can do is to hold out and hold together. The Italians have relinquished their claims of Slavic territory east of the Adriatic in favor of the Jugoslavs, and the Allies and America have expressed sympathy with nationalistic aims of the Czechs and Slovaks. The Poles in the Reichsrat have deserted their old allies, the Germans, and a Polish legion has been formed in France. The munition workers in Vienna are on a strike and mobs riot in the streets of Prague.

It is to be hoped that the Italians will not be content with their negative victory but may with the aid of the Allies and America carry the war into the enemy's country. Beyond the Alps lies Austria. The shortest road to Berlin may lead thru Vienna.

## THE SOLDIER IN PEACE

THERE is no need to ask consideration from the generous American public for the soldier who serves his country in time of war. He is not only the hero of the hour but for all his lifetime and that of his children's children he will be honored as the flower of our American civilization. Republics are said to be ungrateful, but our republic has not in the past been slow to recognize and reward those who have endangered their lives that the nation might not perish.

But there is, unhappily, reason to fear that when the war ends and our military forces are no longer warriors but only guardians of the peace the nation may forget the soldiers who perform this humbler but not less necessary duty.

In Germany the tendency has always been to exalt the soldier above the civilian, even in the midst of profoundest peace. This is infinitely dangerous; it is the very essence of militarism. But equally unjust, and almost equally harmful, is the tradition in countries having the volunteer system to honor the soldier only in time of war and slight him in time of peace. If our regular army has not always attracted the highest type of recruit for service in the ranks this has been not a little the fault of a snobbish tradition which has regarded the common soldier as a sort of unskilled laborer on one of the lowest rungs of the social ladder. Let any one who questions this ask himself how many boys in khaki or navy blue were invited to share the Thanksgiving dinners of prosperous strangers in 1917; and how many in, let us say, 1912? Kipling has put the contrast with a characteristic blend of bitterness and wit:

For it's Tommy this, an' Tommy that, an' "Chuck 'im out, the brute!"

But it's "Saviour of 'is country," when the guns begin to shoot.

The pacifist, who is most apt to scorn the soldier's trade except when an urgent emergency makes its necessity unquestionable, ought of all men to avoid this error. For it is his dream that peace shall be everlasting and every army a police force, and what shall be said of a civilization which pretends to cherish peace and yet despises those who safeguard it? A fireman cannot be always running to a fire, nor a soldier always fighting, but it is hardly creditable to the hearts or heads of the public if it cannot see anything heroic in these trades except when its houses are actually burning or the enemy hammering at its gates.

The first motto of preparedness is this: The sword in the scabbard, the gun in the gun-rack and the soldier in barracks deserve your interest and care no less than the sword unsheathed, the gun at the shoulder and the soldier in the trench.

Secretary Daniels has offered a reward of \$1000 for the discovery of a U-boat nest. How much for each U-boat neatly blown out?

Our Russian dilemma: If we intervene we drive Russia into the arms of Germany; if we do not intervene we leave Russia in the hands of Germany.

While great powers, England, France, Japan and America are hesitating whether it is possible or proper to intervene in Russia and seize the Siberian railroad an unborn power, Czechoslovakia, has gone and done it.

Germany and Austria-Hungary are now allied on a permanent basis and on terms of complete equality. Doubtless very satisfactory to both. By the way, did you ever hear the story about the tiger that was roped to the sheep?

The duplicity of Hindenburg is astounding. He was killed by a bomb some time ago; he recently died of typhoid; he has been incarcerated in an insane asylum and now he is attending a war council at Kaiser Karl's headquarters. Be there six Richmonds in the field?

We often hear it said that a man of German origin cannot be blamed if in his secret heart he sympathizes with the Kaiser and his gang. On that line of argument every Italian ought to sympathize with Nero, every Spaniard with the Duke of Alva, every Russian with Ivan the Terrible and every American with Benedict Arnold.

Our coinage is symbolic of the change in America's attitude. On the new quarters the eagle is seen in full flight eastward with beak and talons ready for action. On the old quarters the eagle simply stood still on its tail and flapped its wings. One claw held a few antiquated weapons, the other waved an olive branch, while its beak was entangled with scroll.

Senator Lewis, of Illinois, demands immediate intervention in Russia to protect Siberia from being absorbed by Germany "and then hurled in all its strength against the United States by way of Bering Strait and from Alaska and the Pacific Ocean." We think it more likely that the Germans will attempt next winter to cross over the ice from the Murmansk coast to the North Pole, then on down by way of Hudson Bay to Chicago.

# THE STORY OF THE WEEK

## Fight for the Siberian Railroad

The conflict in Russia seems to have concentrated upon a struggle for the possession of the Trans-Siberian Railroad, the single artery that feeds the great cities of the West and connects with the Far East. The most powerful force seems to be the Czech and Slovak troops from the Russian army who are trying to join the Allies and have been obliged to fight their way out to Vladivostok. They have been estimated to number 100,000 or even 150,000, but according to Colonel Emerson, former general manager of the Great Northern Railroad, now at Harbin, there are 38,000 in European Russia, 18,000 in Siberia west of Irkutsk and 18,000 in the vicinity of Vladivostok. It seems that they hold or dominate most of the railroad from west of the Volga even to Irkutsk. At Irkutsk a trainload of Czechs numbering 318 men on their way to the Pacific were held up by a force of 3000 (another account says 200) composed of Bolsheviki reinforced by German and Magyar prisoners and under German officers. The Czechs had surrendered their arms in European Russia on demand of the Bolshevik government as the condition of being allowed to leave the country, and they had kept with them only ten rifles and a few hand

## THE GREAT WAR

*June 20*—Total destruction of merchant shipping for May, 355,594 tons; for April, 311,456. Strikes in Vienna.

*June 21*—Dr. von Seydler resigns as Austrian Premier. Germans land 3000 troops at Batum, Caucasus.

*June 22*—General Diaz drives Austrians from Montello plateau. President Poincaré presents flag to Polish legion.

*June 23*—Czechoslovaks take Irkutsk, Siberia. Sinking of "Dvinsk," an 8000 ton British transport, on June 18, 700 miles east of Delaware, announced.

*June 24*—German Foreign Secretary Kühlmann declares war must be ended by diplomacy not by military victory. Austrians driven back over Piave with heavy losses.

*June 25*—Americans take 254 prisoners on Belleau hight. Chief Secretary for Ireland exposes Sinn Fein plot to Commons.

*June 26*—President determines to send non-military aid to Russia. Italians take Capo Sile bridgehead on Piave.

grenades. Their assailants, on the other hand, had sixty, or according to another version of the story six, machine guns. The Bolsheviki demanded that the Czechs detrain and surrender within fifteen minutes. Their commander refused, whereupon he was arrested.

Some of the Red Guards then fired upon the train, killing forty-eight or fifteen. The Czechs charged the Reds with their hand grenades and routed them, capturing six machine guns and 200 rifles. Armed with these the Czechs were able to stand against the Bolshevik troops and armored cars sent against them. The Czechs next raided an Austrian prison camp and unearthed six wagon loads of arms. Two days later they seized the arsenal and main battery at Irkutsk. All prisoners taken with arms were killed. At this point the Allied consuls intervened and arranged a compromise. The Czechs consented to give up the arms they had captured to the Bolsheviki on the guarantee of a safe passage to the Pacific. The Bolsheviki on their part agreed not to give arms in the future to the Austrian and German prisoners.

The effort to conduct an anti-Bolshevik campaign from Manchuria has been frustrated. Two expeditions were organized, which were intended to proceed east and west from the Manchurian section of the railroad and so get control of the entire route from Lake Baikal to the Pacific. The expedition going west, under General Semenov, was composed of Cossacks reinforced with Japanese and Chinese. Before it reached Chita it met with a superior

## IN SPITE OF BICYCLES AND WAVING PLUMES THESE ITALIANS CAN FIGHT

The picturesque Bersaglieri, a patrol of renown in the Italian army, have proved their fighting valor once again in the battle of the Piave

force of Bolsheviki assisted by two or three thousand of the German and Austrian prisoners. The Cossacks of Semenov's army, said to number 3000, killed their officers and went over to the Bolshevik side. The remnant retreated eastward to the Manchurian frontier, but the Chinese authorities refused to give them refuge except on condition of surrendering their arms and munitions.

On the eastern side of Manchuria the forces under Generals Orlov and Kalmakov were also worsted by the Bolsheviki holding the line leading to Vladivostok and were forced to retire into Manchuria. But General Tuan Chi-jui, the Chinese Premier and Minister of War, is anxious not to offend the Bolsheviki and risk an invasion from them, so he is insistent that Manchuria shall not be used further as a base for the invasion of Russia with whom China is nominally at peace.

The Japanese, who at first proposed to penetrate into Siberia only as far as Lake Baikal, are now said to be ready to occupy all the railroad from the Pacific to the Urals. The French and British favor such action, but President Wilson fears that it would be regarded by the Russians as an unfriendly act. But the American troops in France, being under the command of General Foch, may be sent along with the French and British to protect the Murmansk coast on the Arctic against the Finns and Germans. Here then the Americans would be fighting on the same side as the Bolsheviki, while if Americans were sent to Vladivostok they would be fighting against the Bolsheviki.

Besides holding the main Siberian line the Czechs advanced up the branch line to Ekaterinburg. Here the ex-Emperor and Empress of Russia and one of their daughters had been interned after their removal from Tobolsk. Fearing lest the approach of the Czechs meant an effort at the rescue of Nicholas, the Red Guard is said to have shot him, or, according to another rumor, spirited him away to Moscow.

## The Partition of Russia

Dr. von Kühlmann, the German Foreign Secretary, in his Reichstag speech gave a significant hint as to Germany's designs on the Baltic provinces when he said: "I will not go more closely into the future of Courland and Lithuania, which lie mainly within the domain of the Home Department." Apparently the same fate awaits the provinces beyond, for he says: "The historical internal cohesion of the entire Baltic region suggested, at the time of the Brest-Litovsk conference, objections against the possibility of a lasting separation between Livonia, Esthonia and Courland. It was hard for the Lettish population to endure the prospect of being cut up." The inhabitants of Livonia, he said, had appealed to the Germans to replace the reign of terror of the Red Guards by peace and order and the Imperial Government had responded but would not give them diplomatic recognition without an understanding with Russia.

Finland had attained her independence with the aid of a small number of German troops. The question was inseparably dependent upon the economic relations between Germany and Austria-Hungary, which were not yet determined, but he believed an agreement acceptable to all parties would be reached "before there are general peace negotiations in Europe."

We may infer from the speech that the recent invasion of the Caucasus by the Turks was contrary to the desires and has aroused the suspicions of Germany, for the Foreign Secretary says:

In her advance from territories falling to her under the treaty of Brest-Litovsk, Turkey, for reasons of safety, pushed the left wing of her advancing troops into regions which indubitably could not be permanently occupied or annexed. The Chiefs of Staff have discussed this matter and the Turkish advance in the Caucasus has stopped.

Turkey found herself obliged quite recently by the strategic developments in Upper Mesopotamia to utilize the Batum-Tabriz-Julfa line of communication across the Aderbian region of Persia to the Tigris Valley.

Dr. von Kühlmann stated that a conference would soon be held in Constantinople to settle the questions that had arisen between the Quadruple Alliance and the Caucasian people. We may assume that the 3000 German troops which were reported this week to have been landed at Batum will play a part in the settlement.

**Belleau Wood** The Americans on the front northwest of Château Thierry continue their raids in the Bois de Belleau region with brilliant success. The rocky and timbered ridge that overlooks the villages of Belleau and Torchy, five miles from the Marne, was taken June 25. Five companies of infantry were stationed here with two machine gun companies, making about 1200. The American troops nearest to this position were drawn back slightly and for thirteen hours the hill held by the Germans was bombarded. Then the barrage was thrown beyond the hill and the Americans charged with an old-fashioned "rebel yell." Practically the entire German force was killed, wounded or captured. The prisoners number 254, including seven officers, and fifty machine guns were taken.

**The Battle of the Piave** The Italians have won a decided, possibly a decisive, victory on the Piave. All of the 75,000 or 100,000 soldiers who had crossed the river have either been killed, captured or driven back within ten days from the time the offensive started. The Italians report 18,000 prisoners taken and estimate the total Austrian losses at 200,000. All that the Austrians have to show for their supreme effort is a few square miles on the mountain end of the line.

The Piave proved a more formidable barrier than either party expected. The river shrinks in summer time to a few narrow and shallow streams meandering over the wide bed between high banks. But when the snows of the Tyrolean Alps melt or heavy rains come the channel is quickly filled to overflowing with a turbid torrent. This is what happened last week. Several rainy days in succession flooded the river and carried out such of the pontoon bridges as the Italian artillery had not been able to destroy. It was often impossible for hours for the Austrians to send over supplies and munitions. They tried carrying bread and ammunition by airplane to isolated troops on the southern side, but the American airmen frustrated this plan.

The battle line of over ninety miles is naturally divided into three sections, mountain, plain and sea coast. At the mountain end on both sides of the Brenta River the Italians, aided by the French, held so firmly that the Austrians could not outflank the line altho they sacrificed nine divisions. At the other end, where the Piave widens and enters the sandy lagoons near Venice, the Austrians effected crossings at San Dona di Piave and Capo Sile and seemed at one time likely to establish themselves in the triangle formed by the Fossetta Canal connecting the Piave with the Sile. But Italians, with the

help of the newly organized Czechoslovak troops, forced them back. Italian warships, adapted and accustomed to threading the shallow waters of the lagoons, bombarded the Austrian bridgeheads.

Between the mountains and the sea stretches the Venetian plain, broken at one point by a group of hills called Il Montello, on the southern side of the Piave. This key position was occupied by the British, but the Austrians succeeded in crossing the river and gained possession of two-thirds of the hills. This ground was mostly recovered in fierce counter-attacks by picked Italian troops and the Austrians were hemmed into a narrow angle hemmed in by hills with the rising river at their backs and exposed to heavy artillery fire from the Italian batteries.

On Saturday night the Austrians began to withdraw across the river by such boats and pontoons as they could get together. But as soon as daylight came the Italian barrage was raised to cover the crossing and the opposite shore. Hundreds were drowned in the flood. The floating trees, timber and loose pontoons broke the bridges lower down the river. The heavy artillery of the Austrians got stuck in the mud. General Diaz, the Italian commander-in-chief, threw in his reserves and converted the retreat into a rout. Guns were abandoned. The soldiers threw away their knapsacks, even their rifles. The stores of bread, preserves, canned meats, blankets and ammunition that had been stacked up at Montello and other bridgeheads fell into the hands of the victors. Italian cavalry cleared the

Austrians from the southern banks and Italian airplanes, machine guns and shell fire pursued them on the northern bank.

#### German Peace Offensive

In addressing the Reichstag on June 25 Dr. von Kühlmann, the German Foreign Secretary, declared that "in view of the magnitude of this war and the number of Powers, including those from overseas, that are engaged, its end can hardly be expected thru purely military decisions alone and without recourse to diplomatic negotiations." Germany had repeatedly and publicly declared her readiness to enter into peace negotiations at any time, but her enemies had never brought forward any proposals to compare with Chancellor von Bethmann-Hollweg's invitation to a conference, with the Reichstag peace resolution of July 19, or with the German reply to the papal note. Count von Kühlmann stated Germany's war aims in this language:

We wish for the German people and our allies a free, strong, independent existence within the boundaries drawn for us by history. We desire overseas possessions corresponding to our greatness and wealth: the freedom of the sea, carrying our trade to all parts of the world. These in brief are our roughly sketched aims, the realization of which is absolutely vital and necessary for Germany.

In a former debate I pointed out that the absolute integrity of the German Empire and its allies formed the necessary prerequisite condition for entering into a peace discussion or negotiations. That is our position today.

In reply to the recent speech of Mr. Balfour, the British Foreign Minister, in which he declared that the Allies would not consider peace proposals until after Germany has expressed a willingness to relinquish and restore Belgium, the German Foreign Minister said:

On this point the fundamental views of the Imperial Government differ from those ascribed to us by English statesmen. We regard Belgium as one question in the entire complex. We must, however, decline to make, as it were, a prior concession by giving a statement on the Belgian question which would bind us, without in the least binding the enemy.

Mr. Balfour, moreover, by way of precaution, has added that we must in no way imagine that any agreement on the Belgian question exhausts the stock of English or Entente wishes. He prudently abstained from describing those points in which he intends to announce more far-reaching claims or desires. The supposition is not unjustified by previous experiences that while these words, on the one hand, were addressed to Paris, on the other hand covetous desires floated across the Mediterranean to the parts of Palestine and Mesopotamia at present occupied by the British troops.

Dr. von Kühlmann denied that the Kaiser or any responsible man in Germany ever believed for a moment that they could win the domination of Europe by this war. The idea of world domination is a Utopia, as proved by Napoleon. Germany never had less occasion to start a conflagration than at the moment when it occurred, for there was then good prospect that Germany would be able to settle her affairs in the East and colonial problems by peaceful negotiation. He blamed Russia for having precipitated the war and France and Great Britain for abetting her. He could say with Mr. Asquith that his Govern-

Passing Show, London

RUNNING OUT!

ment would never turn a deaf ear to any plain, unambiguous peace proposal, but a "preliminary condition was a certain degree of mutual confidence in each other's honesty and chivalry."

For so long as every overture is regarded by others as a peace offensive, as a trap, or as something false for the purpose of sowing disunion between the Allies, so long as every attempt at rapprochement is at once violently denounced by the enemies of a rapprochement in the various countries, so long will it be impossible to see how any exchange of ideas leading to peace can be begun.

The Imperial Chancellor, Count von Hertling, speaking on the following day, also complained of the reception given to the German peace proffers:

I said that these four points of President Wilson might possibly form the basis of a general world peace. No utterance of President Wilson whatever followed this, so that there is no object in spinning any further the threads there started. There is still less object after statements which since then have reached us, especially from America. These statements, indeed, made it really clear what is to be understood—a peace league of peoples, or a league of peoples for the maintenance of freedom and justice. Our opponents made it clear that they would be the kernel of this league of peoples, and that it would in this way not be difficult to isolate the uncomfortable upward strivings of Germany and by economic strangulation to extinguish her vital breath.

#### The Sinn Fein Conspiracy

The new Chief Secretary for Ireland, Edward Shortt, told the House of Commons on the 25th something of the evidence for the pro-German plot because of which the Government last month arrested and deported sixty-nine Sinn Fein leaders. German agents were known to have been active in Ireland since 1911. A German-printed pamphlet, "Ireland, Germany and the Freedom of the Seas," which had been in circulation at the outbreak of the war, had again appeared. Messages from Germany had been getting into Ireland of late and from Ireland to Germany. Corporal Dowling of the Connaught Rangers, who had been a prisoner in Germany, was taken by a German submarine to the Irish coast and landed by a collapsible canvas boat. He is imprisoned in the Tower of London. A

#### WAR HONOR TO A CHAPLAIN

For conspicuous bravery in caring for the wounded under fire, Chaplain Duval, of the Knights of Columbus, has been awarded the Croix de Guerre. Chaplain Duval is attached to a regiment of American infantry.

letter found on Professor De Valera, member of Parliament for East Clare, alluded to something that was to happen two months after the German offensive began. Professor De Valera had said in addressing the Irish Volunteers:

By proper organization and recruiting we could have 500,000 fighting volunteers in Ireland. We can see no hope of a successful rebellion in the near future except thru a German invasion of England and the landing of troops and munitions in Ireland. We should be prepared to leave nothing undone to that end.

As a result of the anti-conscription movement, Mr. Shortt said, there had been a recrudescence of drilling, seditious speaking, outrages and midnight raids for arms. Posters had been put up telling the people how to aid the German troops when they landed. A cargo of arms was landed at Belfast not long ago and 40,000 rounds of ammunition have been discovered in a consignment of grain in the Dublin market.

Premier Lloyd George said that it would be impossible to force thru a home rule bill now, but that a government would be set up which, he hoped, would secure the assent of the majority of the population. Before putting conscription into effect voluntary recruiting would be tried. Referring to the conspiracy the Premier said:

Powerful personalities are engaged with the Germans to subvert British rule in Ireland. There is no doubt at all that the Church as a body in Ireland has associated itself to challenge Imperial supremacy in that country. It is one of the most fatal mistakes that has ever been committed.

Sir Edward Carson, the Ulster leader, attacked the Premier savagely for his toleration of ecclesiastical opposition:

The Roman Catholic hierarchy has gone

to lengths in opposing conscription which no civilized modern community ought to tolerate for a moment. If you have to endure all this indignity and humiliation you are crawling upon your knees to a particular church.

Altho the Government has not formally abandoned its project for conscription to Ireland, energetic efforts are being made to see what can be done in the way of voluntary enlistment. Viscount French, Lord Lieutenant of Ireland, has issued a call for 50,000 volunteers. The attempt at recruiting made early in the war was impeded by the employment of tactless British officers. This mistake is now to be avoided by the appointment of Irish recruiting officers. Among those who have accepted this task is Arthur Lynch, member of Parliament for West Clare. He was a colonel in the Boer army during the South African war and for this was convicted of high treason but pardoned by King Edward. He was one of the signers of the recent anti-conscription manifesto. It is proposed to bring Irish-American troops to Ireland to stimulate recruiting.

The Lord Mayor of Dublin had intended to go to Washington to present the anti-conscription case to President Wilson and ask him to bring the question of Ireland before the League of Nations or a special international tribunal to be convened immediately. But Foreign Secretary Balfour refused to allow him to go to America unless he submitted all his documents to the Lord Lieutenant of Ireland in advance. The Lord Mayor refused to comply and has delivered his petition to Ambassador Page instead of carrying it to Washington.

**Filling Up the Ranks** One hundred thousand men is about the size of the regular army of the United States before the war. Soldiers in units of this size are now being transported across the Atlantic to France each week so far, apparently, without loss by submarine or otherwise. Just as the country has got used to quantity production of ships, and just as it hopes to become accustomed to quantity production of airplanes, so it has just during the last ten days become accustomed to hear the latest figures showing quantity production of men sent overseas.

"The United States is about five months ahead of its program," declared General March, chief of staff, when he announced that the 900,000 mark had been reached last week. Further details of this program were not given, but it is generally understood that other items in the program are keeping pace with the sending of the hundreds of thousands "over there."

Washington despatches in these days do not tell much more than it is officially desired that they should tell, but now that the news is out, there is plenty of evidence to show that those close to the center of the great American military machine have known for some months what was being done in the way of preparing men to go across the ocean to take their place on the fighting line. Last January the Secretary of War,

Kladderadatsch, Berlin

NONE SO BLIND AS THOSE WHO WILL NOT SEE

Coincident with the news of American victories in France and the announcement that a million and a half Americans will be fighting in France by August, it rather pleases us to republish this cartoon from a Berlin paper, attempting to fool the German people. "Good-by, boys," President Wilson is represented as saying. "Tell Lloyd George for me we'll let him have another boatful in October!"

under the crossfire of the members of the Senate Military Affairs Committee, promised that "early in 1918" there would be half a million men in France. That promise has been kept, and its keeping has aroused in every quarter an intense enthusiasm which may well serve to lead the people to place even greater reliance on the efforts of the Government to prosecute the war.

In addition to mobilizing our own man power—our own native man power—the President has stimulated citizens of other Allied nationalities living in the United States to form volunteer military organizations on American soil for foreign service. The "Slavic Legion," which is thus encouraged, will probably be the first of such troops to be raised here under an amendment to the army bill reported favorably by the Senate committee last week. "No man shall be enlisted in it until he has furnished satisfactory evidence that he will faithfully and loyally serve the cause of the United States and that he desires to fight the empire of which he and his race have been unwilling subjects," reads one clause of the amendment.

At the same time the Senate committee took action which apparently permits the training in the United States of troops of our South and Central American allies. A special Washington despatch to the New York Times thus interprets the amendment in question. Officials of the War Department are quoted to the effect that the amendment is purely precautionary and is designed to leave the War Department "in a position in which it could furnish training to Allied troops under American officers and at American expense if a proposal along that line should come from any ally, or if this Government

Press Illustrating

#### CHIEF OF DOCTORS AND SURGEONS

Dr. Arthur Dean Bevan, of Chicago, has been elected president of the American Medical Association, to succeed Dr. Charles Mayo. Dr. Bevan is the lecturer on surgery at the University of Chicago and a first lieutenant in the U. S. Medical Reserve Corps. In his first address as president of the American Medical Association he urged emphatically that twenty per cent of all the medical men in the country be transferred at once to active war service.

should determine that the Allied cause could be strengthened in that manner."

From Cuba last week came the news that the draft bill, or the obligatory military service bill, as it is termed there, is being urged on the Congress by President Menocal. It is also stated that failure by the Cuban Congress to pass the measure before adjournment will be followed by a decree by the President to the same effect.

To the north of us, Canada announces the completion of a vocational registration. Four and a half million men and women have been enrolled by the Dominion Government, which has requested of them information as to their occupations and as to their willingness to enter new occupations more essential to the winning of the war. The registration was required of all citizens sixteen years of age and over. While slower than the United States in adopting the draft, Canada in this respect is more advanced than we are in mobilizing information about its man and woman power.

**The Second Draft** Last week marked the drawing of the numbers of the new section of "draftees" summoned to the colors by the law designed to include men who became twenty-one years of age on June 5. The Secretary of War drew the first numbers in person, and the ceremony was similar to that which opened the great lottery last year, when the numbers were drawn for 10,000,000 men. The same machinery of questionnaires and local draft boards will be utilized in weeding out the classifications and allocating the chosen men to the army, to deferred industrial classifications, and so forth. Important changes in the questionnaires have been made in the interest of clarity. For example, it is now definitely stated that a wife may be named as the "nearest relative"—a point about which there was some confusion last year.

**To Keep Things Moving** Winter is coming on apace—if we are to take proper notice of the governmental authorities having in charge the transportation system of the nation. By the creation of an Exports Control Committee to determine the amount of freight which must be exported for war purposes and to route it from interior to seaboard points, a body of officials who have been working together will now be brought into intimate coöperation. This committee spells order from the chaos of the past. Its task, one of the biggest in the entire war administration, will be to prevent the congestion which last winter tied up the industries of the country and to "get the stuff moving right." As described in an official statement, the committee will have to be daily informed:

1. As to the probable amount of freight which must be exported for the prosecution of the war.
2. How this war freight can best be routed thru the various ports.
3. How much of other essential export traffic has to be handled.
4. The amount of local traffic necessary for each port.

Last week the Interstate Commerce Commission granted to the brand new American Railway Express Company an increase of ten per cent in express rates, effective July 1. This is the last time the express companies will appeal to this tribunal for permission to charge more for operating their business, for after this the Director General of the Railways will have the power to regulate rates.

Students of the carrying business will be interested in comparing the two classes of package transportation which the Government now controls—the express and the parcel post. Doubtless an entente cordiale will be arrived at between the two cabinet officers involved, and the two services will be fitted into each other so as to avoid duplication and unnecessary cost. Some idea of the full significance of the express merger may be gained from a statement made by George C. Taylor, head of the new consolidation under Mr. McAdoo:

Hereafter the express companies will eliminate the individual identity which has separated them for the last three-quarters of a century and offer to the Government and to their joint patrons a unified, single express service.

In the future merchants, manufacturers and individuals need merely specify "by express," and the entire man power and vehicle power of the express world will respond to their call.

At no time in the history of the railroads has the volume of express traffic been so great as it is today, the business reaching a total during the last fiscal year of over \$200,000,000.

Already the vast terminals now maintained by the various companies are being unified for a practical saving of time and transfer.

The street equipment of between twenty and thirty thousand motor and horse vehicles is undergoing a redistribution to avoid duplication of routes.

Branch agencies and multiple offices in many cities will be subject to an economical readjustment.

The claim departments will be unified and a closer coöperation established with the shippers to eliminate losses resulting from faulty packing and incorrect marking of shipments.

**Hurrying Public Business** With the delightful and near prospect of a short recess, approved by the President, Congress is "being good" and is hurrying thru its crowded calendar of public business. A settlement was last week arrived at between the conferees on the bill affecting the hours and pay of thousands of Government employees. Slight increases in rates of compensation were granted, and the office working day was lengthened from seven to eight hours. Suffrage in the Senate and prohibition in both Senate and House continued to hold attention. The delayed army appropriation bill carrying over \$12,000,000,000 was reported to the upper chamber with discussion centering on the proposition to increase the number of men available for the draft by raising and lowering the age limit. The \$5,500,000,000 fortifications bill, disclosing interesting information relative to our military program, is due for early consideration in the House.

The House enacted the so-called alien anarchist deportation bill, which amends the immigration laws in an important detail. Enemy alien anarchists will be chiefly affected by the provision, and some drastic action is to be expected when the measure finally passes.

In the Senate the pending treaties between the United States and Great Britain, permitting reciprocal operation of the army draft laws to the citizens of these two nations, were ratified without a dissenting vote. It is estimated that some 54,000 American citizens in the British Empire and some 300,000 British subjects in the United States will be affected, tho how many will be finally accepted for military service is not definitely known. Those who are exempted at home, as for example the Irish, will not be subject to the draft in the country of their foreign residence. Sixty days' leeway is given for voluntary enlistment.

Committee on Public Information, from International Edition

#### AMERICAN CADETS AND THEIR "GRASS CUTTER"

This plane with clipped wings which keep it no more than six feet above the ground is variously nicknamed by the aviators "grass cutter," "creeper," "two-spot." It is used to teach the ground school graduates whose experience in flying has been brief, by accustoming them to an almost instinctive control of the machine.

A U. S. HOSPITAL SHIP TO TEST GERMAN PROMISES

The "Comfort," one of the two new hospital ships of the United States, is to sail thru the submarine zone unarmed and unguarded, following to the letter the principles of the Hague Convention of 1907 that "hospital ships shall be respected and cannot be captured." The "Comfort" proclaims her service by broad green and white painted stripes, Red Cross flags and lights. Germany denied her pledge to the Hague Convention on January 29, 1917, and sunk many British hospital ships, but the pledge was renewed some months ago. On the "Comfort" are three hundred and fifty men—doctors, nurses and crew. The commander is Medical Inspector Charles Malden Oman, one of the best known surgeons in the Navy.

**Toward Victory** The swiftly moving events of the last week baffle the chronicler. In them there is much that augurs well for the prosecution of the war. Early in the week Major General Brancker, of the British Royal Air Force, announced that he considered it perfectly feasible to send military airplanes under their own power across the Atlantic, and that, furthermore, there was every reason to believe that the feat would be carried out successfully by September. "Once this has been established," he said, "America's output of big bombing machines can proceed to Europe by air, and so save the shipping that is so invaluable for other purposes."

As a companion organization to the Fleet Corporation, the new chairman of the Aircraft Production Board, Mr. Ryan, has proposed to Congress an Aircraft Corporation, the primary purpose of which would be to produce spruce, tho it would also be available for general aircraft manufacture.

The Shipping Board continued to report satisfactory progress: the Government is now averaging one ship a day, with an aggregate carrying capacity of nearly 126,000 tons.

General Crowder, whose name is familiar to every man of draft age, issued a statement to the effect that the work or fight order will be effective on July 1. The statement defined non-essential occupations.

The American Federation of Labor at its annual convention reelected Samuel Gompers as president. One feature of the closing day was the voting down of a resolution calling on England to establish the independence of Ireland.

As this issue goes to press, the Western Union Telegraph Company had not acceded to the request of the President

that it accept the decision of the National War Labor Board. As a counter-blow, the Post Office Department arrested messengers who were carrying night messages and telegrams on trains between eastern cities, on the ground that they were violating the Government's monopoly of letter carriage.

#### No More Wheat Speculation

Food will win the war, as the splendid posters displayed by the Food Administration everywhere announce to us. Perhaps the most important event in the food world last week was the presidential order which in effect makes the Government a hoarder of wheat for the duration of the war. The Independent recounted some weeks ago the intention of the Government to take this action, which is today an accomplished fact.

The machinery whereby this gigantic storing up of this essential foodstuff will be accomplished is the Food Administration Grain Corporation, now authorized to increase its capital from \$50,000,000 to \$150,000,000 in shares of a par value of \$100 each. If there is to be any speculation hereafter in wheat, it will be done by Uncle Sam for the benefit of all the people. The stock in this going concern will be owned by the Government and will be purchased by the Food Administration from time to time in order to maintain the present price of \$2.20 a bushel plus any increase which may be permitted. It is stated in reliably informed quarters that the situation arising from the deadlock in Congress over the price of wheat precipitated the action of the President.

With an insistence which never lets up, the Food Administration is asking the people to "go slow on sugar." Ice cream and soda syrup manufacturers, makers of grape juice, and dealers and

consumers selling and buying sugar are urged to cooperate. Three pounds per capita per month is the present limit—and it may go still lower. Sugar is an energy-giving food—a food for fighters—and the hundreds of thousands of American fighting men, to say nothing of the Allied troops, now in Europe must have sugar to beat the Huns.

#### For a Uniform Eight-Hour Day

The establishment of the eight-hour day in the Edison plants was an event of interest last week, coming as it did simultaneously with consideration by the National War Labor Board of demands for a basic eight-hour day from, among others, some twenty thousand employees of the General Electric Company at Schenectady. The War Department has already established the eight-hour day in the plants turning out ordnance. This does not mean necessarily a decrease of production, for the basic eight-hour day permits overtime, limiting the day practically to the shorter limit for the purpose of reckoning wages.

Gradually thru the instrumentality of the War Labor Board there is coming about a uniformity in labor policy thruout the United States. At hearings held in Washington last week, Messrs. Taft and Walsh, the joint chairmen, ruled that inability on the part of street railway companies to pay a living wage under their present financial arrangements is not a reason for not paying such a wage. This ruling supports a decision of the Supreme Court of the United States, and steps will now be taken by Federal authorities, in conjunction, possibly, with the war finance board and state public utility commissions, to raise the necessary funds for the increased wage payments.

#### Washington Discusses Beer

Beer and other alcoholic drinks still continue to perplex legislators and administrators in Washington. The outstanding pro-liquor argument of last week was that made by Bainbridge Colby of the Shipping Board, who issued a public statement to the effect that prohibition of the sale of beer would reduce the output of American shipyards probably twenty-five per cent. This statement had the quite natural effect of calling forth opinions from Mr. Colby's colleagues as well as of officers of the cabinet. "There would be more risk in war time prohibition than in conscription of labor," declared Chairman Hurley to the Senate committee a few days later. "War time prohibition would disturb the public mind," said the Postmaster General. "Liquor never promoted efficiency anywhere," said Secretary Daniels, author of the present dry and quite effective naval anti-liquor regulation.

"If we are to choose between beer and German victory," declared the acting chairman of the committee, "we will, of course, choose the lesser evil." The amendment proposed by Senator Jones to the emergency agricultural bill offers the text for the arguments pro and con beer or no beer for the rest of the war.

# THE WORLD OF SCIENCE

## Peking Medical College

The buildings erected by missionaries and foreign residents are apt to look "outlandish" thru a failure to adapt them to their environment. If a church is to be put up in a tropical island, it is likely to have a steep snow-shed roof and stained glass windows. But the Rockefeller Foundation, in planning its new buildings for the Union Medical College at Peking, has avoided this mistake and the group as may be seen from the architect's drawing printed herewith looks quite Chinese, while at the same time it provides the laboratories, hospital wards, service buildings and staff residences required by a modern medical center. The corner stone was laid last September by the Minister of Education of the Chinese Republic, and it is expected the college will be completed by September, 1919. In the meantime a school has been opened to give a pre-medical course in science and English.

Besides providing for first class medical colleges at Peking and Shanghai, the Rockefeller Foundation is assisting Chinese to acquire an education in the United States. Last year they brought fifty-seven individuals from China to America for that purpose, including twelve Chinese physicians, seven Chinese students, three Chinese pharmacists, three Chinese nurses, and thirty-one medical missionaries.

## Can Fishes Hear?

The question of the hearing of fishes has been discussed by scientists from the time of Aristotle to the present, and is apt to come up for debate in any fishing party. That fishes have ears was undeniable, but it has been claimed and supported by experiments that the ears served for keeping the fish in equilibrium, as the semicircular canals do in man, and that fishes responded to vibrations in the water received thru the skin.

This old question has been put to a crucial test by Professor G. H. Parker of Harvard by a series of experiments on the common catfish in which he eliminated one or the other of the two avenues of sensation. In catfishes in which the ears had been destroyed, the skin was found sensitive to the dropping of water, to water currents, to a slow vibratory movement of the whole body of water, to the impact of a leaden ball on the slate wall of the aquarium, but not to a whistle blown in the air. In catfishes in which the skin had been rendered insensitive, the ear was stimulated by a slow vibratory movement of the whole body of water, by the impact of the leaden ball, and by a whistle blown in the air, but not by the dropping of water nor by currents of water. To test more fully the effects of sounds, catfishes were subjected to the tones from a telephone contained in a tight

rubber bag and submerged in the water of the aquarium. When the ears were destroyed, the catfishes responded to vibrations 43 to 172 per second but not to vibrations 344 to 2752. When the skin was rendered insensitive, they responded to vibrations 43 to 638 but not to vibrations 1376 to 2753. The range of the human ear is mostly between 40 and 4000. The standard A of the violin is 435 vibrations per second. Catfishes respond, therefore, to a range of low vibrations less freely thru the skin, more freely thru the ear. Hence they have unquestionable powers of hearing.

## Nature's Advertising

In these days when people are trying to draw a dividing line between essential and non-essential expenditure, some are inclined to call advertising wasteful and unwarranted. To them we would commend the biblical injunction, "Consider the lilies." Why is the lily arrayed in a splendor exceeding that of Solomon? Because it is advertising its Spring Opening. "Free nectar on draft today" it announces to every bee and butterfly and hummingbird who passes by, and like the wily advertiser that it is, it says nothing about the pollen it wants shifted from stamen to pistil by the aid of those who enter its attractive portals.

So it is with much, we do not know just how much, of the beauty that delights us in the vegetable and animal worlds. It is not that futile form of art which our decadent and dilettante esthetes praise. It is applied art, purposive, business-like. It accomplishes its object and then disappears. The wings of the butterfly, the varied hues and perfumes of the flowers, the plumage and the song of birds, all such are but examples of nature's art in advertising. To one who in the love of nature holds communion with her visible forms a forest is as interesting and full of meaning as the billboards on Broadway.

You may say that the advertising poster and page are not always beautiful or tasteful. But neither always is nature's advertising—to our taste. The caw of the crow and the braying of the ass are not musical, but they are effective. The parrot displays combinations of color that would startle a Bakst. No woman is so devoid of taste as to dress as certain orchids do. But the parrot and the orchid succeed in making themselves conspicuous even amid the fierce competition of the tropical forest.

You may call this wasteful—and so it is to a short sight. But here is where nature, so economical elsewhere, is most lavish. The bird in the nest wears dowdy clothes in order that her mate who goes out in society may be dressed as well as any of his associates. In the design of a tree the structural strains are figured closely to secure the greatest possible economy of material consistent with the strength necessary for its height, its burden and the wind pressure, but when it comes to flowering, nature is no longer niggardly. The wasted petals strew the ground like the discarded dodgers on the sidewalk, and if one seed in ten thousand finds a lodgment, the expenditure is worth while. The argus-eyed tail of the peacock, the trailing plumage of the bird of paradise, and the long, sweeping feathers of the lyre-bird, are hampering to movement and expensive to keep up. They are examples of what Professor Veblen calls "competitive expenditure." But it pays to advertize, and often to advertize with extravagance and seeming recklessness. The fossil beds are filled with the remains of species which went into bankruptcy because they failed to advertize or advertized unwisely. A study of paleontology, that is, of the stone records of success and failure in the vegetable and animal kingdoms, from the beginning of time would be a profitable occupation for any business man.

## The Log of a Q M 2

Paul Thompson

**A**PRIL 4—Today Congress declared state of war existing between Germany and the United States.

April 5—President Woodrow Wilson issued proclamation calling for volunteers for Army and Navy.

April 6—Biff B., "K." F. and I came to New York to enlist in the U. S. N. R. F.—Cl. 2 (foreign service). Recruits in this service are to man the subchasers and patrol boats. Biff was the only one to pass the physical exam., and after being rejected I went back to Virginia on the afternoon train.

June 25—Came to New York today to have operation so as to be eligible for service.

June 27-July 3—Recuperating in the hospital—operation a success.

July 6—After several trips backward and forward between the Navy Yard and Cortland street and very nearly losing my goat, I was finally accepted and sworn in.

Week ending July 21—This has been a week of hectic plans and wild telegrams. Called by Navy Department Monday—Mother wired me at the Y. M. C. A. Roanoke telling me to return to New York at once. Got to New York, threw up my job en route, and reported at the Naval Militia Armory. I was in-

oculated and vaccinated and given leave.

July 24—At about 11 a. m. was told to report at 12:30 ready to go aboard ship. I have been assigned as quartermaster second class on the U. S. S. "—," a converted yacht. The "—" is one of the fleet destined for scout patrol duty in foreign waters. They are painted peculiarly according to a protective scheme the French term "camouflage" and make us look like animated Easter eggs.

July 27—Learned today that we are to leave tomorrow, destination unknown. Tried to get in touch with W— at the club and failed. Met Jerry — and had a swim with him and after that a wonderful dinner. Went to the National Democratic Club with Jerry and from there to the Majestic Roof, landing at the ship at midnight.

July 28—The ship's crew purchased small stores in the morning and at 2 p. m. we got under way.

Things broke rather badly for us on the getaway. The U. S. S. "—" went out of the slip first and bumped us in passing, tearing away her port shrouds. First battle goes to the "—."

We backed out in good shape and then started down the river with Dunc

© Enrique Muller

"Three days the storm continued with unabated fury. A man overboard would simply be out of luck, for no boat could be launched."

© Committee on Public Information, from International Film

Here is the German crew on the deck of their submarine, the first prize of an American vessel manned by our Reserves

— at the helm. Due to an error in the rudder indicator and bad river currents we scraped the Fifty-seventh street pier and headed straight for the Fifty-sixth street dock.

It looked as tho our gay young trip to Europe to make the world safe for democracy would end right there, but all we did was to split a pile in two. When our gallant but unwieldy craft slid back off the pile, the stern crashed into the Fifty-seventh street dock and smashed the taffrail.

We kept on our way down the river and out in the bay to take a trip outside Montauk Point. That sail was as fine a one as I've ever had. The sunset was wonderful and the moonlight better.

The deck force is composed almost entirely of university undergraduates and among the colleges and fraternities represented on board are Lehigh, Amherst, Union, Cornell, Missouri, Brown, Lafayette, Yale, Harvard, N. Y. U., and D. K. E., Psi U., Alpha Delta Phi, Phi Delta Theta, Zeta Psi.

The engine room force is a motley crowd. What most of them lack in real toughness they try to make up in conversation. I am quartered with them amidships and will probably have trouble avoiding the same. The really tough ones, however, are by far the less objectionable, as is usually the case. This bunch is termed the "Black Gang" and they look the part.

The officers seem to be a fine crowd. Skipper has been laboring under terrible conditions, as the craft is not adaptable to the purpose for which it is being equipt and is in poor condition. Thru all the disagreeableness he has been infinitely patient and cheerful.

The executive officer is a prince and a real diplomatist. He gets things done well and quickly with very little fuss. The other officers are efficient, earnest men who know their job and command respect.

Of course the reserve brings all kinds and conditions in on the various jobs. I, for instance, am a rotten Q. M. and the boatswain's mate looks and acts more like a ribbon-counter salesman. If he's been having anything to do with sailing ships, he's been leading a double life.

July 29—Dropt anchor in a Long Island Sound port about 9 a. m. On the trip up I was initiated to the job of helmsman and nearly put the ship on the rocks. It answers its helm poorly and has a sluggish compass, so is hard to manage.

July 30—A bunch of us went ashore on liberty and were going to a dance at the hotel, but lost out. We understood we were to be there three weeks, but Mr. — rounded us up and informed us that we were to proceed to a Rhode Island port the next day.

August 1—Got under way at 4 a. m. and proceeded without mishap to our anchorage off —.

August 3—Went ashore tonight and had dinner with the two Lansing thugs at the M— Club. After dinner Sandy and I went down to the beach.

The motor boat was suffering from engine troubles, so I didn't get back to

the ship until 2 a. m. and then had to take the 4 to 8 a. m. watch.

August 4—Under way at 2 p. m. to an unknown destination.

August 5—Getting much colder. Yesterday's papers recounted over one hundred deaths from extreme heat in New York, and on the bridge I wore my sheepskin coat. The weather is steadily becoming rougher and I anticipate a squally period inside and out.

August 6—Now I know what real fog banks are. This morning when I got up at 3:30 to take the "four by" we could see no further than about fifty feet and were in a driving rain. K— sighted a German submarine that turned out to be a whale.

August 9—Today has been one of the most perfect days I have ever seen on the water. The sky was without a cloud all day and the water was sapphire blue.

There were [Continued on page 32]

"Coaled ship today. As half the crew are on Paris leave we had to slave some"

# EXIT THE DOLLAR-A-YEAR MAN

NOT at all daunted by the labor of preparing a revenue bill, the House Committee on Ways and Means is undertaking to collect information about that well-known Washington wartime institution, the dollar-a-year man. This is not the first time that the dollar-a-year man has been made the object of investigation. Earlier in the war he was unstintingly praised; later he was as wholeheartedly damned; now he is accepted as a fact which requires consideration and constructive development. Secretary of the Treasury McAdoo and other cabinet members have been requested to assist in furnishing the physical background of truth, so to speak, upon which the case of the dollar-a-year man is to be decided.

From a strictly neutral point of view a dollar-a-year man is a citizen of the United States who is serving the Government for the annual salary of one dollar, and who, furthermore, is so serving because his private purse and patriotism are sufficient to permit him. From the extreme dollar-a-year point of view, such a public servant is "sacrificing" his time in the nation's business. From the muckraker's point of view, the dollar-a-year man is a big business spy who has wormed his way into the Government in order to benefit himself and those who pay his more than a dollar-a-year salary. What Congress is now trying to sum up is the case for and against the dollar-a-year man with a view to determining whether he is useful or useless, a parasite or an asset.

Historically, the dollar-a-year man dates back to well before the war. It is probably not generally known that Gifford Pinchot was a dollar-a-year man when, as a member of the Roosevelt tennis cabinet, he was chief forester. Mr. Pinchot was and is wealthy and his passion was and is public service. Because of the existence of a certain United States statute which prohibits Uncle Sam from receiving service free gratis, the device of paying Mr. Pin-

chot and others an insignificant sum was hit upon. For years the Department of Agriculture has had on its payroll a number of consulting scientists to whom the department has referred technical questions for advice and settlement. Other departments of the Government made use of this system also. In fact, the dollar-a-year scheme was so common before the war that the public was not interested in its existence. With the changed conditions after the war, and with the great necessity for securing help from every quarter and every walk of life, the system expanded to its present size. Now, apparently, it is about to contract.

I asked an old-time Government employee what he thought about the dollar-a-year man. This employee is a college man, an expert economist, and has served the Government in many responsible capacities, always on the regular salary basis, which means anything from two thousand dollars up to thirty-five hundred or four thousand. He said:

"It's a question that goes to the heart of the whole big question of service to the public. We here in Washington know perfectly well that the Government pays well for clerical service and poorly for many kinds of professional service. I could give you a hundred instances of fine men, trained in the Government and valuable to the Government, who have been lured away by private concerns by higher salaries. I could also give you a score of instances of men who have had offers but who have refused them because of their sincere desire to serve Uncle Sam so long as they were making enough money to scratch along on. Of course every American wants the United States Government to be the employer ideal—to set such high standards of wages, hours, promotion, and so on that it can command the best talent in the country and not at the same time require personal sacrifice on the part of its servants. Some kind of compromise between the

often excessive, competitive salaries paid by private corporations and the dollar-a-year salary, which is really no salary at all, must be found and adopted.

"As regards the dollar-a-year man: He is, I suppose, a necessity of the war, and I hope I will not be misunderstood when I say that in the last analysis he is a demoralizing influence. Not that he is a corrupting influence, for most of the dollar-a-year men I know are honest and sincere. But the basic principle is wrong. If the Government—which is the people—needs a certain service, it should, in the long run, pay for it. Something for nothing never succeeded either in business or in politics. Very likely it is true that the Government can not pay as high salaries as the private corporations. The Government is not operating for private profit. But it is perfectly possible for the Government to assess roughly the value of a service and to pay for it in money. I say assess roughly. Who could assess accurately the value to the people of the United States of its President? The money which Woodrow Wilson receives for his services is clearly but a small fraction of his real worth in the cause of democracy."

Concerning the doings and sayings of the dollar-a-year man in the service of his country during the last year or so there is much that is amusing and at the same time significant. For example, a certain well-known university professor was appointed to an important post in the War Department, and the newspapers, eager to expose patriotism, announced for him that he had sacrificed his salary from the college for the nominal dollar from the Government. The fact of the matter was that his college was paying him his full salary as a patriotic contribution, and that the Government was paying him a couple of thousand or so a year, thus giving him a total income far larger than anything he had ever made. No one was more disturbed at the inaccurate publicity than the [Continued on page 31]

# AN ANTIDOTE FOR PRUSSIAN POISON

**C**ASTOR oil, because it continues to lubricate even when the bearings are red hot, is the oil *par excellence* for airplanes. And since we were going to build some thousands of planes for use against Germany the Government determined to augment the supply of castor oil. Accordingly the farmers in a certain part of Texas where it was known that the plants from whose seeds the oil comes would thrive, were induced to put in some 85,000 acres.

Along about the time the first successful Liberty motors were almost ready for shipment, Government agents were sent to arrange to take over the harvest of castor seeds. Whereupon it was discovered that the crop was short. In fact, acres and acres which had borne a heavy growth of castor plants were now covered with corn or rye. A large number of the farmers who had planted for castor seeds in response to the Government inducement, had plowed the land under and substituted a more familiar crop. It seems they had heard that castor plants would exhaust the soil so that it could never produce anything else.

Agents of the Department of Justice immediately set to work to trace the source of the farmers' misinformation. It was too late, however, to repair the damage. The object of the German general staff—to hamper the American aviation service by restricting the supply of castor oil—had been accomplished. A future military advantage on a battlefield four thousand miles away had been gained by a lie deftly planted among some Texas farmers.

**N**EAR the other end of the Mississippi Valley, in a town which had over-subscribed its Liberty Loan, Red Cross, Y. M. C. A. and K. of C. quotas, there was suddenly perceptible a cessation of recruiting. Young men just under the draft age were not coming forward as rapidly as was desired to make up the complements of special arms of the service outside the national army; and men of draft age were beginning to evince an almost desperate desire for deferred classification. At no public meeting and in no newspaper item was there any hint as to the cause. Government agents circulating among the population, however, quickly found it out. They discovered that a widespread distrust of the Government existed, and that the town was electric with rumors of disaster—transports loaded with our men had been sunk, and troops in training were dying like flies from disease, starvation, and harsh military discipline. The living sources of some of these rumors were found and stopped up; but weeks elapsed before the town was restored to a normal state of mind.

Interning or even shooting the agents of the German general staff whose mission it is to invent and disseminate lies has not sufficed as a remedy. The lie that was started in that middle western town, for example, continued to have its effect long after its author was caught

BY THOMAS H. SIMPSON

and imprisoned. For a tale, once given currency, continues to circulate. The first unwitting tool of the German propagandist may repeat a rumor perhaps to only half a dozen persons; but each of them has his or her little circle to whom the startling news is imparted, usually with embellishments; and it takes only a few links of the endless chain to encompass a thousand news-hungry people, each of whom becomes in turn a talebearer to countless other thousands. It is conceivable that a startling rumor begun at, for example, Centralia, Illinois, might reach the ears of every man, woman and child in the United States within a month, having traveled only by word of mouth.

**T**HE loyalty or morale of America, notwithstanding the hysteria of a few well-meaning but misguided patriots, is practically 100 per cent. The persons in this country who would wittingly aid the Prussian cause constitute a mere handful as compared with the rest of the population. But even a "handful" out of one hundred and ten million people must number many thousands; and it is doubtless true that new agents of the German Government are continually contriving under various guises to enter the United States. To circumvent the spies and dynamiters among them we have only to increase and perfect our means of detection and capture. But for the propagandist, as distinct from the spy or the plotter, force is not enough. Catch him, imprison him, even shoot him—but the lie that he dropt into ignorant ears goes on after him, goes on and on and on, perverting the intelligence of thousands of Americans to the purposes of the German general staff.

Answer it! That is the only real remedy. Every German lie, every nasty rumor, must be smothered with the truth, which must be spread broadcast over and over again on every possible occasion so that nobody is left in ignorance and doubt and fear.

The only effective weapon against propaganda is—propaganda! Indeed, this is the very essence of the present war; for it is a war of opposing ideas—democracy versus autocracy—and the chief field of battle is, or will finally prove to be, in the minds of the people on both sides. Germany recognized this fifty years ago. That is why German propaganda for half a century has been assiduously sown not only in the minds of the German people but in the minds of people everywhere. That is why the German general staff spares no fewer pains in spreading the Prussian poison than in operating the Prussian war machine.

America must parry each thrust of the German lie with the tempered blade of truth. And the instrument of truth—the only agency by which the truth can be quickly and widely disseminated—is the press. Which brings one to consideration of the fact, somewhat discouraging but not yet disheartening,

that our Government is, in this particular at least, neglecting to develop and employ to the fullest possible extent one very potent tool of victory.

The attitude of the Government toward the press has presented a curious and perplexing spectacle of inconsistency. That the power of propaganda was recognized when we entered the war is evidenced by the fact that one of the very first steps taken by the Administration was the establishment of the Committee of Public Information. This committee was and is frankly the Government's press agency, a bureau for the preparation and the distribution of news and argument as to both policies and events thru every possible channel of publicity.

The principal channel of publicity, almost ever since Gutenberg perfected a machine that would print, has been the newspaper and periodical press. It is the only agency by which the whole country can receive identical intelligence quickly and simultaneously. Its coöperation of course was sought at once; and it goes without saying that without its coöperation America could not fight this war. If it were not for the press a large part of America would not know there was a war.

The truth as to Germany's sinister purposes was gradually hammered into the public consciousness by the press. Public realization of the necessity for the draft as opposed to the haphazard volunteer system was brought about by the press; enlistment of the navy's personnel, Liberty Loans and Red Cross drives have all been "put over" by the press. And only the press can effectively combat German propaganda.

Consider, then, the wisdom of a governmental policy which on the one hand recognizes the power of propaganda by establishing an agency for it and on the other permits the passing of a law the chief effect of which will be to destroy the principal means of both combating and conducting propaganda.

**I**N short, Congress has enacted a measure, called the postal zone rate law, which will add to the already heavy cost of distributing periodicals a charge of from fifty to nine hundred per cent—a law that will inevitably restrict and curtail the usefulness of the periodical press, whose authoritative monthlies and weeklies of nation-wide circulation play so large a part in forming public opinion. That this legislation puts an unfair tax upon the publishing business, that the curtailment of magazine circulation would take away from millions of Americans one of their principal means of education and amusement, is not the question. The point is that the periodical press is—and could be made much more so—a powerful instrument of victory in the war against Prussianism.

That Congress should be in a such a state of mind as to think of enacting this law at the present time is largely the fault of magazine publishers themselves, who have [Continued on page 31]

A perfect sweater in an hour is his record

# A LIGHTHOUSE TO GUIDE SOLDIERS

BY WALTER A. DYER

One of ten now employed in potteries

**T**HOUSANDS of miles away from Amiens and Verdun, on the other side of a great ocean, we study a war map, and with varying feelings of apprehension and hope we watch the shifting of the battle line. That line represents for us the ebb and flow of the tide of war—the War for Democracy. It also means miles of trenches, thousands of cannon, millions of men. It is difficult for us to visualize the single soldier, the sentient human being who holds his infinitesimal place in this great frontier of liberty, fearing, suffering, perhaps dying. When our own boys begin to come home, maimed and broken, we shall understand. But up to this time, who of us that has not been there has been able to put himself in the place of the individual Tommy or *poilu*, to think as he thinks and feel as he feels, to suffer with him, and to look out upon the future thru his eyes? Eyes, did I say? Sometimes there are no eyes.

Try to picture a French peasant or clerk, mechanic or shopkeeper, a young man full of hope and ambition, betrothed to a village maid, with all of life glowing bright before him. The Hun breaks loose; the War has come. He kisses his sweetheart goodbye and goes forth to face the danger, to stand long hours of vigil in the trench mud, to bend his back to the spade—heart-breaking work for the saving of France.

There comes a day when a shrapnel shell bursts above his head and the

Miss Holt teaching the men to play checkers on a "blind" board

world goes black. He is borne to a hospital, and when at last consciousness returns—pitiless consciousness!—he learns that his eyes are gone, and perhaps an arm as well. The glory of combat is over for him. Gone, too, are all his life's hopes. He is a helpless, worthless wretch. Independence is henceforth impossible for him; he must not hold his fiancée to vows granted to a whole man; life holds nothing for him. Suicide is too often his refuge.

In Paris, at 14 rue Daru, there is a typical French mansion of three stories including the mansard roof, in which there dwells a company of these French soldiers blinded in battle—*les aveugles de la guerre*—who are laboriously, patiently and cheerfully learning to live without eyes. Already there have gone forth from its walls hundreds of men with hope reborn within them and with hands trained to earn a livelihood without the assistance of eyes. What the Hun has stolen from them the house on the rue Daru, so far as is humanly possible, has given back. And all because an American woman was vouchsafed her vision.

Last winter la Gardienne, as she is affectionately known among her pupils, wrote a letter home which gave a vivid glimpse of the life at 14 rue Daru. It told of the entertainment which the blind soldiers got up on Christmas Eve in honor of their patrons, and it overflows with the spirit of their gratitude and their rekindled hope.

The blind men refitted an old stage in the historic music room on the top floor and trimmed a Christmas tree. Programs of the entertainment were printed by the blind men on their own

press in ordinary type and ink and also in Braille, the raised lettering of the blind. A young soldier, his sightless eyes bound, wearing his hard-earned decorations—the Medaille Militaire and the Croix de Guerre—came forward and sang a ballad in a sweet tenor voice—"Si j'ai pleure pour vous." Then a blind Samson, who had already gone forth to earn his living as a stenographer, sang with great earnestness the Christmas hymn, "Long lay the world in sin and darkness pining," and there was no doubt that he felt to the uttermost the meaning of the words. An-

other played the violin. There followed a riotous debate on "la femme" by two irrepressible blind conferenciers, and more singing and vaudeville.

Many readers are familiar with the name of Miss Winifred Holt and with the work of her Lighthouse at 111 East Fifty-ninth street, New York. This woman had already found her work and when the great call came she was ready. Miss Holt was an authoress and sculptress of distinction who gave up a brilliant career for one even more honorable. Some years ago, while in Italy with her sister, Miss Edith Holt, now Mrs. Bloodgood Baltimore, she became interested in the discovery that the Italian Government had arranged "blind seats" at the opera, at concerts, and at some plays. Upon their return home the sisters endeavored to persuade American managers to provide similar facilities [Continued on page 38]

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## CONSIDER THE DOOR KNOB

BY HAROLD DONALDSON EBERLEIN AND ABBOT McCLURE

**H**ARDWARE for the house is a matter of far more importance than the majority of people usually attach to it. For the most part they are content to take what chance gives them, and let it go at that. This customary apathy is unfortunate, for it is conscientious attention to small details that goes a long way toward giving a house a very real *cachet* of distinction that makes itself felt whether people pause to analyse the cause or not.

House hardware—it might be termed, not inaptly, the “jewelry of the house”—we may divide, for the sake of system and convenience, into interior and exterior hardware, with the further subdivisions of the features concerned—*doors, cupboards and windows* for interior application; *doors and shutters* for exterior. Lighting fixtures of every kind have been omitted purposely, as they constitute a subject by themselves, too extensive for discussion with such items as hinges, locks and knobs. For the same reason such features as ornamental grilles and metal stair rails are also omitted.

A sense of fitness and consistency dictates that a piece of household hardware, whatever it may be, shall be chosen, first, with reference to the character of the door or shutter or cupboard to which it is to be attached. To put it more concretely, this means that the suitability of an individual piece of hardware must be gaged with consideration for the following features of its background—the *material* of which the background is made; the *color and quality of the surface* presented; the *size* of the object; and, finally, the *scale* of such details as panelling, moldings, and the like,

Only an inexpensive brass lock, engraved with an arabesque design of foliage

Both are ten cent iron hinges—one looks it

which enter into the composition of which the hardware becomes a part. A large and bulky lock, or overly large and heavy hinges, affixed to a small door would look grotesquely out of place and ridiculous; likewise, locks and hinges of bold contour and ponderous detail would ill consort with panelling of restrained scale and moldings of refined and flat profile, no matter what the size of the door. Then, again, it would be clearly unsuitable to equip a white-painted, panelled door of simple American Georgian type with an elaborately fretted and chased lock, keyplate and hinges of burnished wrought iron, or, to take another instance, to fit a stout oaken door of early English model with daintily painted French porcelain knobs or with brass mounted knobs of prest or cut glass. Of course these are all supposititious and purposely somewhat exaggerated cases, but they serve to emphasize the point at issue. That point is the necessity of exercising due discrimination in selecting hardware to suit the character of its setting and, still further, the necessity of exercising discrimination according to some *logical principle*. Surely such care is worth while when we reflect that the aspect of an whole room or, at least, the aspect of the most conspicuous part of the woodwork may be completely spoiled, tho good in itself, and robbed of its rightful effect by the use of bad or unsuitable hardware. *Vice versa*, poor woodwork may often be partly redeemed and made of passable appearance thru well chosen and appropriate hardware.

While the goodness or the badness of hardware is to some extent a relative quality and dependent upon discreet combination, several points of universal application are to be kept constantly in mind. First of all, good shape or contour is a prime essential of which nothing can take the place. Secondly, workmanship, design and the manual effort bestowed upon a bit of hardware, or upon any other object for that matter, constitute the real basis of its value rather than the material of which it consists. The importance of a door or other structural feature must determine the amount and nature of the hardware with which it is to be dignified. On the house door, for instance, from its usually conspicuous position and important function, and often its size, one naturally expects to see a handle or knob and lock accoutrements in keeping with its character and, mayhap, some display of prominent hinges. Utility justifies their presence; on a cupboard door or on a small door opening into a passage, such things would be unnecessary and consequently ridiculous.

*Cost and excellence bear less relation to each other than many suppose.* It is entirely possible for an inexpensive and simple lock or other piece of hardware to be thoroughly good; conversely, a very costly and elaborate fitting may be thoroly bad and its employment in execrable taste. The responsibility of selection sometimes presents a bewildering and serious problem from which only a conscientious adherence to sound logical principles can extricate one. It sometimes happens that the addition of a touch of manual [Continued on page 36]

The hardware on this door is proportioned to harmonize with the panels

Merely studded with nails and fitted with decorative wrought iron locker and handle

Every child loves to see a circus and he would be delighted to have one all his own parading around the nursery walls

# THE GOOD TIME NURSERY

"THIS is the age of the child"

BY WINNIFRED FALES AND MARY NORTHEND

twelve-year-olds. The ceiling color or a

is a favorite maxim of educators, and one that is accepted without argument by the city pedestrian who daily risks life and limb in a maelstrom of whizzing auto-peds, flying hand balls and catapulting roller skaters. Yet to realize how completely the younger generation has come into its own, one must investigate the matter of juvenile equipment. Makers of wondrous toys and of Lilliputian shoes and garments, authors and illustrators of enchanting tales and verses, and composers of jolly kindergarten songs have for years improved their wares. But it is only within the memory of the present generation, and especially in the last decade, that the interests of infancy and youth have been accorded serious consideration by manufacturers of rugs, bedding, china, decorative fabrics, wall papers and furniture.

Blankets, coverlets and rugs woven in patterns and colors especially designed to appeal to children are shown each season in greater variety. Cretonnes for curtaining the nursery or upholstering its furniture are printed with Mother Goose characters, and figures of animals, birds or toys, and flowers or trees, will be stenciled to order on plain hangings, walls or furniture by specialists in nursery decoration. Even the world's greatest potters have lavished their best skill on wee cups and saucers, bowls, plates and milk jugs, and their adornment with pictured puppies, kittens, chickens and other pets.

It is in wall papers and furniture, however, that the greatest variety and originality are displayed. The former offer a wide range of choice, the greatest delicacy of design and finish being exhibited in the imported offerings. One of the most desirable is decorated with medallions connected by garlands of ribbons and flowers in soft, pale tints, each medallion containing quaint little figures reproduced from drawings by Kate Greenaway. Gayer and more direct in its appeal, the lacking the notable grace and refinement of the English design, is a Mother Goose paper of domestic manufacture from among whose animated groups of figures children will delight in picking out their favorite characters.

There is a degree of reasonableness in the objection to a patterned paper in the nursery which is advanced on the ground that its endless repetitions are fatiguing to the eyes and brains

A sandbox is lots of fun, indoors or out

of small children and destructive to the atmosphere of tranquillity that should characterize a room designed for them. Where this is the case, nursery borders and cut-outs solve the problem by supplying a decorative element whose use can be restricted to limited areas. The number of good friezes available is even larger than that of good wall papers, and enormous variety is possible in applying them. Their use may be extended to the decoration of screens and furniture, most friezes being so designed that the separate motifs can be cut out and used singly. The nursery frieze never should be carried around the top of the room, for at such a height it cannot be seen by the child without a strain upon the eyes and neck muscles. Three feet from the floor, or about the height of a chair rail, is a suitable height for little children and, in the average room, three feet below the ceiling will be about right for the six to

paler tint of the wall color should be carried from the junction of wall and ceiling down to the top of the frieze in the latter case.

One of the best of the nursery friezes, shown at the top of this page, represents a complete circus parade done in lifelike colors, and thirty-nine feet long without a repeat. Groups or single figures can be cut out and scattered over a dado, or pasted on the backs of chairs, drawer fronts, doors and the head and foot boards of the bed.

Another delightful pattern, of English origin, represents a variety of winter sports and is quite Pickwickian in character; and a third is printed entirely in silhouette and consists of charmingly executed figures of children and animals at play.

Then there are the cut-outs, usually printed in sheets, the one popular set that illustrates Mother Goose jingles is bound in book form, the colored pages alternating with leaves on which the designs are repeated in outline only, to be colored by the children with crayons or water colors. When all are finished, the original color pages are removed and the figures cut out and pasted on the wall. The child not only has the pleasure of painting a large number of attractive pictures, but in cutting out the extra set he shares the work of decorating his own room, which adds enormously to his interest and sense of possession.

Much of the furniture for the nursery is finished in white or tinted enamel made cheery with painted decorations in bright colors. For babies of the toddling age, there are tiny chairs with all corners rounded as a measure of safety, and rockers with sides shaped and painted to represent dogs, cats or ducks. For the older children, miniature ladder back chairs with rush seats, Windsor, Mission, and other copies of grown-up types are available in mahogany, oak and enamel finish, together with

child-size beds, desks, wardrobes and tables. In addition there are many attractive pieces of furniture such as indoor swings of various styles, sand boxes with painted decorations, and slides which will aid in working off surplus energy on rainy days.

With an almost inexhaustible wealth of material at hand, it is singular that there are so few well equipt and artistically decorated nurseries. [Continued on page 39]

The well equipt nursery is neither bare nor overcrowded but has plenty of play space

# RUGS FOR SUMMERTIME

BY GEORGE LELAND HUNTER

Nos. 2, 3 and 4 are examples of valuable "hooked" rugs

in the qualities and prices of rag carpets. In the 9x12 size they range from \$20 to \$50 each, in an extraordinary variety of patterns and colorings planned as well as "hit-or-miss," and in woolen rags as well as those of cretonne. The finest, oddly enough, are made by weavers who cannot see, and bear the trade mark of the Massachusetts Commission for the Blind. In purchasing them one encourages to help themselves unfortunates who without guidance would find it difficult or impossible to do so. Illustration No. 22 shows a sample of their work. No. 18 shows one of the cheapest grades of rag rug. No. 19 shows another grade of "hit-or-miss." No. 21 shows a nursery pattern with ducks in the border; No. 20, a "bungalow" rag rug with weft larger than usual, and with coarse woolen colored warps instead of the usual white cotton ones. The self-fringes of No. 20 are especially attractive.

It is a mistake to think that rag carpets have anything undignified about them. When carefully chosen for pattern and color, and well laid on good lining, they can be made to play an important and effective part in not a few pretentious decorative schemes.

Even more patriotic than the woven rag rugs are the braided ones, which have served to accen-

**D**ELIGHTFULLY cheerful and cool are many of the rugs and carpets that at this season of the year hold the place of honor in American shops and homes. Wiltons, brussels, axminsters, tapestries and velvets have been shoved into the background to make room for weaves less comfortable in winter, but better able to resist dust and moisture in summer, and cheaper. In war times the last feature assumes unusual prominence.

Rag carpets have the recommendation not only of the thermometer but also of patriotism. Back in the old Colonial days our great-great-grandmothers painstakingly saved their rags to produce, on their primitive hand looms, coverings for the floors. In a shed on the farm adjacent to my own one of their aged descendants still plies the shuttle on a splendid oak frame over two hundred years old. During the nineteenth century the industry largely deserted the home for the factory, and every town of any size had an establishment to weave the rags brought by the housewives. Now a large proportion of the rag rugs are woven in large mills from new cloth, and distributed like other rugs thru the regular channels of wholesale and retail trade.

There is a great deal of difference

Nos. 5, 6, 7, 8 and 9. The first two are of grass, the third and fifth of Chinese, and the fourth of Japanese matting

Nos. 10, 11, 12 and 13. Durable and attractive are these braided rag rugs. No. 13 looks coarser because it is crocheted

tuate the Colonial note in the interiors displayed in the catalogs of wall paper manufacturers, as well as in our Colonial museums, and in the works of those painters in oils and water colors who are ambitious to be heralded the Dendy Sadlers of America. I think the oval shape of these braided rugs has a great deal to do with their publicity vogue, because it makes them stand out clearly in a printed picture. Besides, the fact that braided rugs do not require a loom in the making, rendered them possible even among the earliest settlers for homes but scantily provided with tools and creative equipment. As late as the third quarter of the nineteenth century, while rural sitting rooms and parlors might boast of Eagle Head, Henry Clay or Martha Washington ingrains, the living rooms and the chambers were content with home-made braided rugs. The sizes now common in the shops are from 2x3 to 4x7 feet, but I have heard of one made to order 18x26 feet 6 inches

The prices average around \$1 a foot in cretonne, and \$1.25 a foot in wool. Of the three rugs illustrated as Nos. 11, 12 and 13, two are braided, and one is crocheted, the latter method leaving comparatively large interstices and giving a decidedly different tho also pleasing texture.

Far superior in artistic merit to rag carpets and braided rugs are the "hooked rugs," also popular with our ancestors, and still made here and there thruout the New England States. As their name implies the

strips are hooked thru a foundation web of burlap and the loops rise on both sides like the pile of the once popular chenille Smyrna rugs, with the back only a little less regular and finished than the face. Some of the ancient hooked rugs which are occasionally picked up by the traveling dealers are veritable treasures, whether edged with applied woolen fringe or with braid. Examples of these are Nos. 2, 3 and 4. Their beauty justifies the high prices and renders them worthy to be compared with Oriental rugs. The modern hooked rugs are seldom of the same merit as the old ones.

Among modern American creations for use on the floor in summer, the least expensive (only \$12 for a plain and \$13.25 for a stenciled 9x12), are the grass rugs. Woven out of the tough straws grown in the great Northwest, with a texture resembling that of rag carpets, they are possible for many halls and verandas and summer cottages that would otherwise go un-

Nos. 15 16 and 17. These rush rugs are composed of blocks sewed together

Nos. 18, 19, 20, 21 and 22 are all rag rugs, some "hit or-miss" and others with worked out designs. No. 21 is attractive for the nursery

# What to Do in July

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## THE GREENHOUSE

**Stocky Plants** Pinch back some of the late bloomers, so as to make stocky plants. This applies especially to pot plants. Pinch back and keep all flowers from the fuchsia, abutilon, flowering begonia and other pot plants.

**Chrysanthemums** Dust the foliage frequently with tobacco dust, or spray with a nicotine solution to keep the green fly under control. Paint the greenhouse pipes, etc., with a paste of sulfur, dust the foliage with flowers of sulfur, or spray with Bordeaux mixture in order to keep the mildew under control. Spray vigorously on bright days to keep the red spider in check. The foliage should be dry before night. Water the plants early in the morning or late in the afternoon. Get the moisture to the roots. Apply liquid manure to the plants in bench or pot once each week; after each application give the plants a good watering. Keep all disfigured buds cut off, and begin to disbud the early varieties for single blooms the last of the month.

**Roses** Before transplanting the roses to the bench, whitewash the wood with a combination of sulfur, lime and carbolic acid. This will kill the insects and diseases. A layer of sod, grass side down, with broken pieces of pot placed over the holes, will insure drainage. Pack the roots of the plants tightly in a rich clay soil. Water freely, and keep the walks moist during the day. Walks, woodwork and plants should be dry by night. Spray vigorously on bright days to check the red spider. To destroy the green fly, fumigate on damp, calm nights by burning tobacco stems or punk.

**Pot Plants** Keep cyclamens, primulas and other pot plants cool but growing. Sow the seed of cinerarias for next spring's bloom. Order your bulbs for pot plants now.

## THE FLOWER GARDEN

**Enemies** If the powdery mildew attacks the Boston ivy or five-leaf ivy, dust the foliage with flowers of sulfur or spray with potassium sulfide,  $\frac{1}{2}$  ounce to  $1\frac{1}{2}$  gallons of water. Mildew on the lilac and roses may be controlled by spraying with Bordeaux mixture, or dusting with flowers of sulfur. Field carnations are subject to soft rot of the stem. Stop watering, cultivate frequently, and burn affected plants. Hollyhock rust and anthracnose are common diseases. Spray with Bordeaux 4-4-50 thruout the season, and in the fall burn both leaf and stem. Peony leaf and stem spot may be controlled by spraying with Bordeaux mixture. The black beetle of the aster is best controlled by peeling twice each day.

Keep in touch with the Department of Agriculture, or your Experiment Station, if your plants are troubled with insects or disease. The Countryside War Garden Bureau will also answer questions.

**Bulbs** Don't allow the bulbs to dry out and shrivel up. If in sand or soil, they should be kept in a cool place with a pail of water near. Do not wet the soil. Store in a dark place.

**Roses** Cut back the hybrid perpetuals in order to get a second bloom. Mulch down with well decayed cow manure. If this is not available, apply a liberal application of sheep manure, and bone meal mixt. Keep all rose hips picked off. Keep the soil well cultivated. Spray the rose leaf spot with Bordeaux 5-5-50. Apply as soon as the spots appear. Rose caterpillars may be controlled by dusting the foliage with hellebore, London purple,

or powdered arsenate. Destroy the rose slugs with a dusting of plaster and Paris green. Keep your rose garden clean and thrifty.

**Summer and Winter Bloom** All seed of flowers and flowering shrubs should be removed if bloom is desired later in the season. Sow the seed of verbenas, snapdragons, etc., for the fall bloom.

The seedlings must be transplanted into very rich soil, and the plants kept growing vigorously, in order to have bloom before the frost. If you wish to save seed for the next year, be sure to select a healthy seed stalk from a free blooming plant. The seed should be thoroly ripe, dried and kept in a cool dry place.

**Window Boxes and Hanging Baskets** Apply liquid manure every week. Where it is impossible to secure this, apply  $\frac{1}{2}$  pound of nitrate of soda, dissolved in 4 gallons of water. Water frequently. The root space is extremely limited, and the plants should never suffer from the lack of food and moisture. Plunge the baskets in water, and allow them to remain fifteen to twenty minutes, so that the soil may be well saturated.

## FRUIT AND BERRIES

**Apples** Cease cultivation about the 15th, and sow a clover crop of Monmouth clover, 11 pounds per acre, and winter wheat, 2 bushels per acre. Other crops such as crimson clover, 13 pounds per acre, and wheat may be used so that the roots of the trees are well protected. Mulch the trees with grass, hay or straw, if the orchard is in sod. Place this material over the sod where the water drips from the foliage. Thin the apples, leaving only one best or most perfect fruit to a spur, and the strength that would naturally go into the seed of the removed fruit will go into the fruit buds for the following year. Keep a close watch on the leaves. If the young leaves begin to curl, examine the under side of the foliage, and should you find the pink aphids (sucking insects), spray with Black Leaf 40, or Kerosene Emulsion.

**Pruning** If the limbs are crowded in any of your fruit trees, cut out a few of the small ones. Summer pruning is not generally recommended, but is one way of thinning the fruit. Cut out all suckers and water sprouts. Remove all dead wood and burn.

**Peaches, Pears, Plums and Cherries** If you find sawdust at the base of your peach or plum trees, follow the hole by opening it with a sharp knife. Also use a wire, and force it into the hole, and on drawing it out should you find the tip wet, you will know that you have punctured the borer. Keep a close watch for tip blight, which is first noticed when the twigs turn brown, and finally black. Cut these off two inches back of the infected part, and burn. Thin the pears, if there is a heavy crop. Don't allow plums and cherries to ripen and decay on the trees. This neglect spreads the molds to other fruit ripening later. Never gather any fruit when it is wet with dew. When the fruit begins to color, substitute ammoniacal copper carbonate for Bordeaux mixture, or lime sulfur, in order to control fungus diseases.

**Strawberries** Two to three year old strawberry beds should be manured (always decayed) heavily, and plowed under. This will make good soil for a late crop of celery or sweet corn. Shift the potted runners to the new bed. Have the soil rich. Do not bury the heart of the plant.

**Blackberries and Raspberries** Cut out all canes infected with rust. Keep a dust mulch over the surface, and cut out all suckers appearing between the rows.

## VEGETABLES

**Perennials** Stop cutting asparagus and rhubarb this month. Keep all weeds out and cultivate freely. Apply a free application of bone meal and dried blood. Remember that the plant must make sufficient plant food in the foliage, and store it up in the roots in order to insure a crop next spring.

**Intensive Culture** After removing early cabbage, intercrop with summer lettuce, or late sweet corn. Follow the early peas with late beets or carrots. Late cabbage may be planted between the rows of potatoes, providing level culture is to be followed. Late celery may follow the early beets. After digging the early potatoes, transplant celery, late cabbage or brussels sprouts. If the soil space is limited, a summer lettuce plant may be planted between each cabbage plant. The last of the month prepare the soil for New Zealand spinach. In order to practise intensive gardening successfully, know the best time and method to plant each crop. Know the time of maturing each crop. Give each plant room enough in which to mature. Keep all enemies in check, and supply the needed food and moisture.

**Practical Practise** Prune out all suckers of the tomato. As the fruit reaches the size of a silver dollar, cut the lower leaves in half. This will hasten the ripening of the fruit. Pinch back all side growths of the squash and melons. If the vines are shifted in order to give them more room, be careful not to bruise the young tender fruit. If enough fruit are set, pinch back the tips of the vines. Apply a little wood ashes to the soil. If the stink-bug attacks the squash leaves, dust the under side of the foliage with powdered arsenate, or spray with a solution of pyrox or paste arsenate, 3 pounds to 50 gallons of water.

**Transplanting** All plants to be shifted to the garden should have the soil soaked with water, so that it will adhere to the roots. Transplant in the evening, and water freely after the plants are fitted to the soil. Shade plants with poor root systems, using shingles, papers, strawberry baskets—but never flower pots.

**Watering** Water in the evening, and get the moisture to the roots. Cultivate the surface soil the following morning, in order to form a dust mulch, which will aid in retaining the moisture. In watering, do not dash the soil so that it is displaced. Spray the soil as would a gentle rain. Never wet the foliage while the sun is high.

**Cultivation** Keep your Norcross weeder or wheel cultivator busy each morning. Don't wait for the weeds to appear; destroy them in the first stages of their growth. Each time you cultivate and let the air into the soil, you liberate plant food. Keep the soil fresh, and supply the plant with the much needed oxygen from the air as well as conserve moisture by forming a dust mulch over the surface. Exercise care in cultivating close to the root crops, so as not to bruise them. Stop cultivating the corn as the ears begin to form. The roots are near the surface, and must not be injured.

**Late Corn** For a late crop of the best corn, plant the early Golden Rod or Golden Bantam corn not later than the middle of the month. The soil should be rich and moist.

# CAMPING

## By the Hour, Day or Month

The motor restaurant at the left carries hot and cold food and full equipment for a luncheon out-of-doors for six

This picture does its own talking! A tent, a lake, a little fire - content

A life-preserver cushion like that at the left may be a real boon. Put it in the canoe or in the car for safety

This vacuum food canteen is easy to carry and it keeps things cold or hot for several hours

Don't walk in a circle—carry a dependable compass with you

A basket refrigerator assures an appetizing lunch. There's actual ice in it

A collapsible, portable table is a big help for some outings. This one folds up in a bag as is shown above and is compact and convenient

"How far did we walk today?" A pedometer substantiates your guesses

A full set of wooden plates and dishes, table cloth and napkins in one small box. Use them and throw away when thru

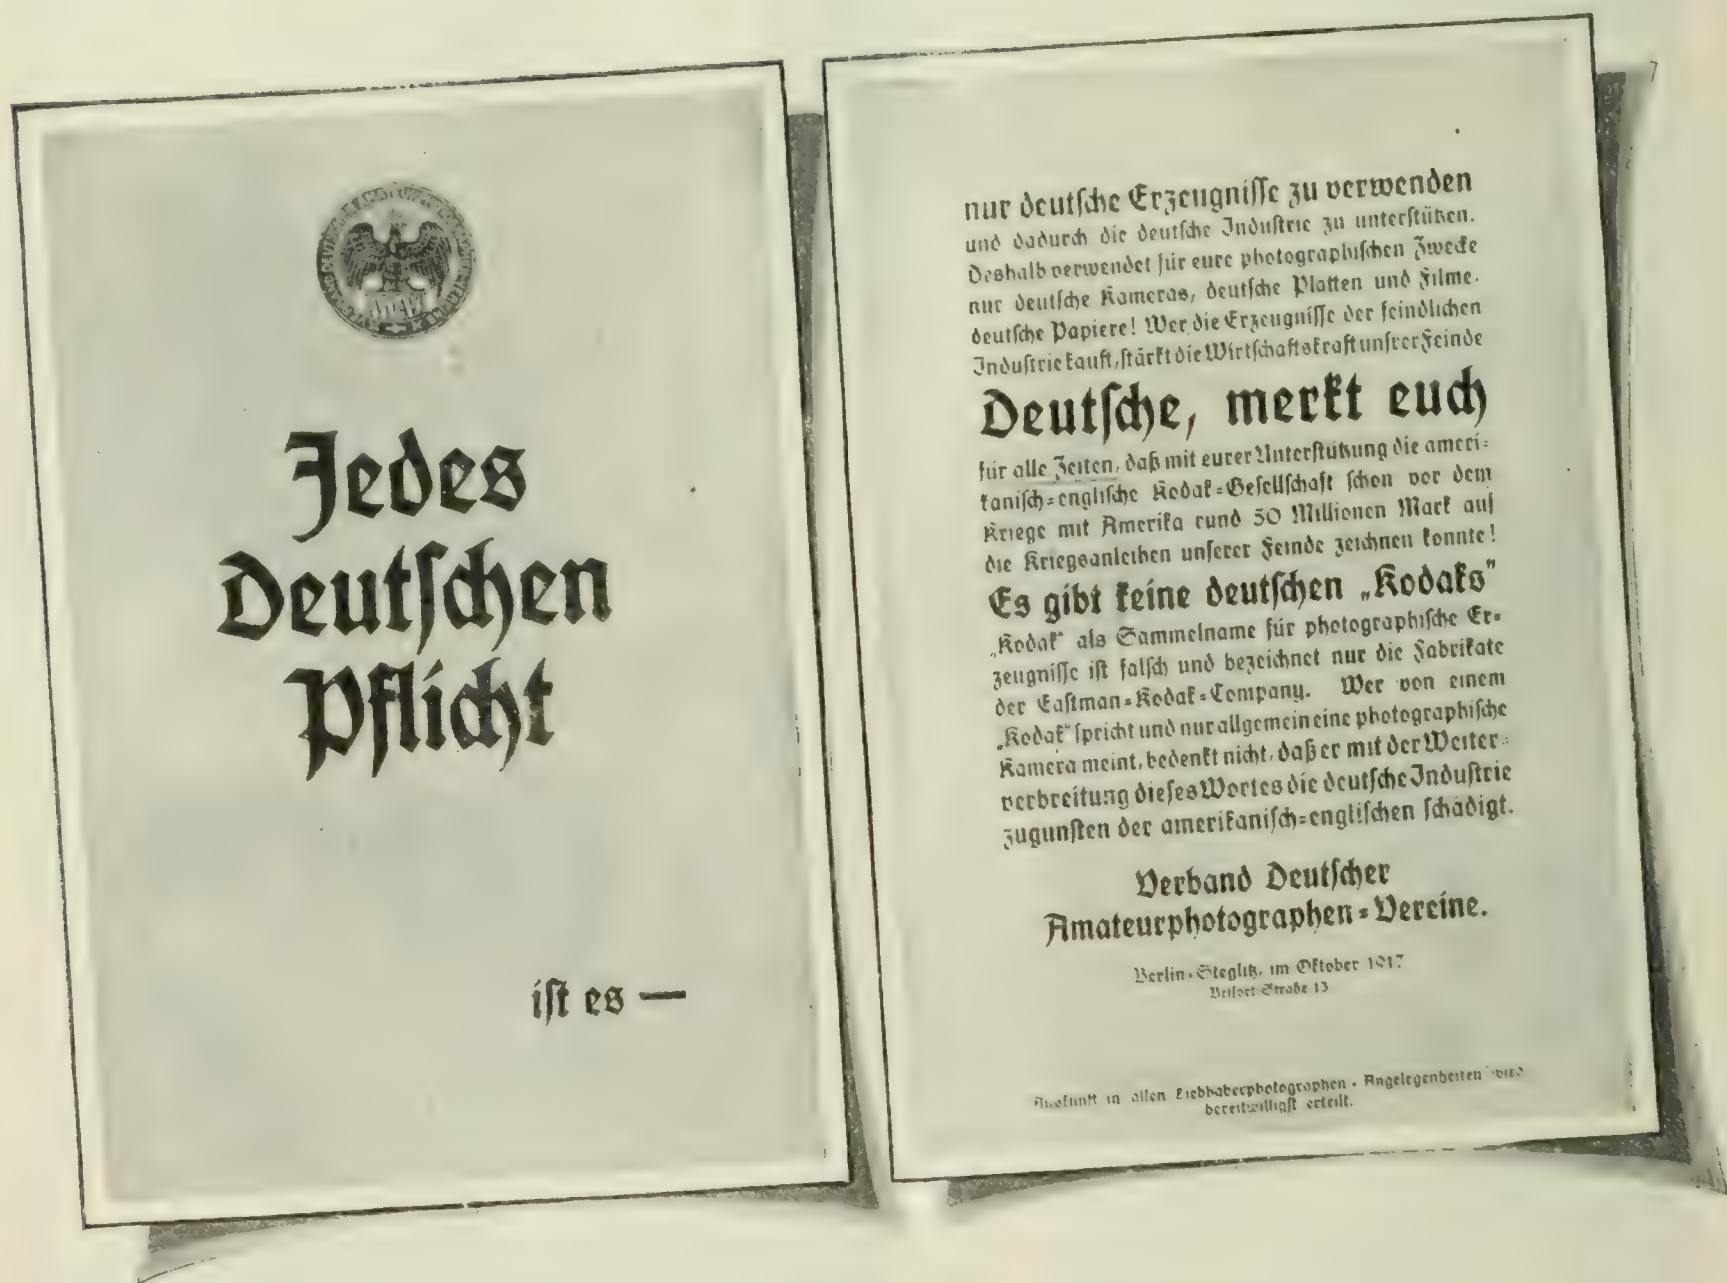

Fuel cubes make camp cooking easier, simpler, and cleaner

A folding broiler stove, for use anywhere, makes the cook's work fun and isn't much extra baggage

# *To the People of Germany they said:*

The illustration shows a pamphlet signed by the Association of German Amateur Photographers' Societies and dated Berlin, October, 1917. It is reproduced from a photographic copy lately received in this country. The translation in full is given on opposite page.

# *-If it isn't an Eastman it isn't a Kodak!*

*A translation of the circular in full is as follows:*

“It is the duty of every German to use only German products and to patronize thereby German industry. Therefore, use for photographic purposes only German cameras, German Dry Plates and German papers. Whoever purchases the products of enemy industries strengthens the economic power of our enemies.

“Germans! Remember for all times to come that with the aid of your patronage the American-English Kodak Co. subscribed before the war with the United States, the round sum of 50,000,000 marks of war loans of our enemies!

“There are no German ‘Kodaks’. (‘Kodak’ as a collective noun for photographic products is misleading and indicates only the products of the Eastman Kodak Co.) Whoever speaks of a ‘Kodak’ and means thereby only a photographic camera, does not bear in mind that with the spreading of this word, he does harm to the German industry in favor of the American-English.”

*If it isn't an Eastman it isn't a Kodak!*

# THE NEW BOOKS

## A Story of Hate

**FOE-FARRELL** is a fantastic yarn told in a dugout near the Aisne, by snatches night after night, but it has no real relation to the war. It is a working out of the effect of hate upon two very unlike natures, and the conclusion is a reversal of the older fancy that we grow like what we love. "Q" appears to believe that we grow like what we hate. The story starts in the bitter feud, in England, between the anti-vivisectionists and the workers in physiological research. Dr. Foe, professor of animal morphology in South London University College, has for eight years been engaged in research, as a matter of fact not using vivisection but simply observation of emotion in animals. But Farrell, accusing him of torturing animals, incites a mob that wrecks Foe's laboratory and burns his records. Hence the hate that springs up between the two men, and the relentless pursuit of one by the other. This is the weak spot in the story. That so rare and fine a man as Foe is described to be should have devoted his life to the following and torturing a man who has destroyed his work is hardly credible. An unhinged mind would be the only explanation.

The pursuit of Farrell by Foe runs thru many years and lands and they are finally cast away together on an uninhabited isle of the Pacific. It has the perennial interest of a chase; and the psychological problem has a grim fascination; but, on the whole, it is a morbid, unpleasing book—a surprise coming from "Q," whose shining rivers leave happy ripples in the memory. Yet it may serve as a warning:

... That's all ... unless you want a moral. I can give you that, all right; and if you have any use for it you may apply it to this blasted War. The more you beat Fritz by becoming like him, the more he has won. You may ride thru his gates under an Arch of Triumph; but if he or his ghost sits on your saddle-bow, what's the use? You have demeaned yourself to him; you cannot shake him off, for his claws hook into you, and thru the farther gate of Judgment you ride on—inseparables condemned.

*Foe-Farrell*, by "Q" (Quiller-Couch). Macmillan. \$1.50.

## S. O. S. Stand To!

**THIS** is the amazing story of a young artilleryman who volunteered in the First Division of Canada's overseas forces and for three years experienced a remarkable series of hairbreadth escapes which won him the name of "Horseshoe" Grant. He was in the thick of it at the battles of Ypres, Givenchy, Sanctuary Woods and Vimy Ridge. The Huns simply couldn't kill him tho they came within an inch of it a hundred times.

It was the fourth day of the second battle of Ypres. I was in charge of my sub-section at the guns and the men wanted water. I volunteered and went to a farmhouse 150 yards off, got the water and started back for the guns. I had just stepped outside the door of the farmhouse when Kr-kr-kr-p! a huge shell came over and blew the guns and the crew into kingdom come.

In spite of the vast number of war books flooding the market, the artillery seems to have been more or less neglected and one is not likely to realize the supreme importance of this arm of the service to which all other movements are subsidiary. Sergeant Grant says the dash of the charge of the infantry over the top is so magnificent in its appeal that one forgets that the success or failure of the charge depends on

the blazing of the trail by the guns. And so this book tells of the men in the sacrifice battery, that unit in which the percentage of loss is the greatest of the entire fighting machine.

*S. O. S. Stand To!* by Reginald Grant. D. Appleton & Co. \$1.50.

## Over Periscope Pond

**MOST** of us want to go over; most of us can't. But the next best way to get the spirit of the men and women who are fighting and working at the front is to read their letters home. In that respect *Over Periscope Pond* accords an unusual privilege. It is a collection, grouped to make the narrative continuous, of the letters written by two American girls in Paris to their families. In October, 1916, Miss Esther Root, of New York, recently graduated from Smith College, sailed for Paris to assist in the war work of Dr. Ernest W. Shurtleff, of the Protestant American Church. In December, 1916, Miss Marjorie Crocker, of Boston, sailed for the same purpose. In February the two girls met in Paris and soon became fast friends. Their work together, hard service at a *vestiaire* from which clothing was distributed to thousands of refugees, takes on the quality of adventure in these letters colored with human sympathy, amusing incident and vivid comment. There are stirring struggles with a recalcitrant Ford engine and with irregular French verbs, a week-end visit at the chateau of a marquise—and a visit to the front line trenches. Miss Root's description of that trip deserves more space than we can give it:

September 9, 1917.

DEAREST FATHER:

I've been there! Past the sentries, thru the devastated villages, right into the army zone.

The refugees at the *Vestiaire* tell vivid stories, and they all have that inborn dramatic instinct which can make live the scenes they describe. But even from their background I had no idea of the look and atmosphere of the ruined towns as they now are. No one ever told me that the trenches taken from the Germans a few months ago would now be half hidden by long grass

and brilliant red poppies, nor that the sunshine could ever soften the grimness of barbed wire and dugouts. Yesterday I saw for myself.

Beyond Roye about eight kilometers, "as the shell flies," the old first-line German trenches can be seen from the road. Barbed-wire entanglements stretch away to left and right, half hidden in the grass, and dugouts covered by heavy logs occur at intervals. Where the trenches began to run along close to the road, we left the motors and climbed down among the narrow, rustic walks that are trenches.

I saw a tube of iron with a star-shaped end which interested me; the lieutenant hastily called out that it was a hand grenade. I had read too many war stories to be inclined to have anything more to do with it, so I passed obediently by; the next minute I caught my foot in some infernal machine and my heart leaped as I wildly clutched at the sides of the trench for support. It was a twisted bedspring.

On our homeward journey I saw things that simply did not exist to my eyes earlier in the day. The country around Bailly is full of trenches and barbed wire, dugouts, shell holes, and shade trees cut down by the road, all of which escaped me before I had had those five full hours of tense observation; and just as I did not at first distinguish the signs of war, so I did not fully consider until afterward the completeness of the destruction we had seen. In the section of forty miles square that we skirted, not one bridge is left—the only ones now in existence are of temporary military construction. The same is true of telephone and telegraph poles—not one remains. Also there is not a stick of furniture of any sort except what was too heavy to be taken away, such as pulpits and big tables, which were hacked to pieces and are of no value now. That the furniture was not blown up with the houses I am sure, for not a piece can be found in the ruins, and I looked carefully for any trace. Germany must be full of French furniture. What it is wanted for I can't imagine.

It is wonderful what vistas can be thrown open by the experiences of one day. I never again can hear of any one who comes from Chauny or Roye or Lassigny without seeing row upon row of deserted, ruined houses. I never can hear of a fortune lost in the war without picturing the ruined sugar factory at Flavy-le-Martel. And yet the sight of men and mules and engines clearing out the canal at Ham is more significant than either of these, for it means that the energy which once built the cities of France is deathless. A new beginning is being made within sound of the guns; and we are helping. *We are helping!* ESTHER.

*Over Periscope Pond*, by Esther Sayles Root and Marjorie Crocker. Houghton, Mifflin Company. \$1.50.

## Short Stories

**K** EEN interest in the short story and in short story writing constantly demands more textbooks on the subject. One of the newest comes from Frederick Houk Law, head of the department of English in the Stuyvesant High School, New York City.

Dr. Law, whose series of *Eight Stories of Good Cheer* has recently been completed in *The Independent*, has assembled twenty-two specimens of the true short story.

In the introduction to this volume he has in mind the student beginner at fiction writing, and his suggestions are made especially for class room composition. Other authors of short story helps have found it easier to define the short story by telling what it is not. Dr. Law says, "It is like a Roman road that goes straight to the point the maker had in mind at the beginning, and produces a single effect."

In his selections Dr. Law has included dialect stories, fairy tales, stories of the forest, stories from the Chinese and the Russian, stories of adventure, mystery and war. Besides the stories which are printed in full, several pages of titles of good short stories of every kind are quoted. The book supplies the need of the student and will be of great value to the teacher of English.

*Modern Short Stories*, by Frederick Houk Law, Ph.D. Century Company \$1.

# EXIT THE DOLLAR-A-YEAR MAN

(Continued from page 16)

gentleman himself, and he is endeavoring to live it down.

But the dollar-a-year man is not always quite so earnest, and it is the parasitic type that Congress is evidently now seeking to eliminate. One such of my acquaintance presents an interesting problem. When the war broke out he came to Washington to live and to watch the fascinating unfolding of events from this vantage point. After a while he began to have the feeling that he, too, should get into the game, and he accordingly began to go the rounds of the various departments and commissions to see what they were doing and what he was qualified to do. After several weeks of delightful journeying and interviewing and lunching he selected a certain board as the place where his peculiar qualifications would be of the most use to the nation. He came to work late in the morning or early in the afternoon and departed before the whistle blew at four o'clock. Then he stayed away for two weeks. And then, without a word to any one, he stayed away completely.

This, of course, is a peculiar case, but it illustrates the fundamental weakness of the dollar-a-year proposition. The salary of one dollar per annum is no salary at all. While theoretically it binds the bargain, it is not compelling. The man who works for this pay has an entirely different status from the man who works for something more nearly commensurate with his worth. Further than this it has a certain demoralizing effect on the rank and file of the Government employees who have been years in the harness to be placed, suddenly and completely, under a newcomer who is not on the same basis with them on the payroll. The dollar-a-year man introduces into the Government labor situation, in other words, an element which, if it is to be successful, must be assimilated thoroly. And labor, whether clerical or mechanical, is at bottom democratic. Equal pay for equal work is a slogan containing desirable truth. In so far as the dollar-a-year people disrupt and disarrange the labor problem of the United States Government itself, they are obviously a factor well worth consideration and revision upward.

WILLIAM LEAVITT STODDARD

# AN ANTIDOTE FOR PRUSSIAN POISON

(Continued from page 20)

always been notoriously poor advertisers of their own interests. Even now when the whole world has awakened to the power of propaganda as an instrument of warfare their remonstrances against the postal zone law have consisted in large part of protests that the law would—as it surely will—seriously damage their business. As if Congress of the American public in wartime care very much about anybody's business!

The Administration, Congress, and the people must realize, not only the menace of propaganda, but how to combat it effectively. To curtail or destroy one of the principal safeguards against the Prussian poison seems therefore to be evidence of an illiberalism and short-sightedness that is criminal. If it is true that national morale is largely dependent on public intelligence, then paper and ink are munitions of war and the Government might better supply them to the publishers and distribute their periodicals free than to put the press out of business in the vain hope of gaining a paltry few millions of additional postal revenue.

# MAZDA

"Not the name of a thing, but the mark of a service"

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this service.

MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York. The mark MAZDA can appear only on lamps which meet the standards of MAZDA service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## PERISCOPE HO!

(Continued from page 15)

enough clouds at the horizon when the sun set to reflect the rays of the sun and disseminate them. The colors ranged from a bright orange at the horizon to the blue of the sky, merging in a manner defying description. Sharply defined against this was the sapphire blue of the water.

Later on in the evening I was on the bridge when the moon came up. It may seem an exaggeration, but the officer of the deck actually had the helmsman throw the wheel over hard because he thought we were headed into an iceberg. It was so large and yellow that it took us some little while to recognize it as the moon—and then for the next couple of hours we had as fine a moonlight as can be imagined.

August 10—This has been my unlucky day for fair. From 4 a. m. to 11 p. m. I caught hell from everybody who had any authority plus every one who thought he ought to have some authority.

It has been one of those days when everything breaks wrong. I didn't get away with a single mistake, and had more things blamed on me, with which I had no connection, than I had time to perpetrate.

We dropt anchor in the harbor at ——— about 10:30 a. m.

The entrance is a small break in the headlands forming the coastline consisting of an almost bare red-brown rock corrugated by glaciation and erosion. It is probably three hundred yards wide, flanked on both sides by giant hills which run down to the water's edge. One would have no difficulty in finding this place in a fog. The odor which drifts out to greet you is like nothing else in the world—even the Pas-saic River couldn't smell like that.

August 11—Had liberty tonight, so a bunch of us went to town and had a party. We went to the "Seaman's Institute" founded by a missionary named Grenfell and had the first hot fresh water baths we had experienced since leaving ———. As we are rationed out two quarters of water morning and evening, cleanliness is not next to godliness on this ship; it's next to impossible.

I went to the barber shop and took a regular rest-cure. I turned that barber loose, the last intelligent one I expect to see for some time, and let him run wild. He scraped and cut and massaged and shampooed to his heart's content and my comfort.

Then we proceeded to fill our insides with the most motley array of fodder than can be imagined. We climbed outside of sun-dae, chocolate, peanuts, near beer—and a beefsteak dinner. It's a plumb wonder that we did not desert this yachting party we're on by turning up our toes among the daisies.

The chow we've been getting has made the assimilating of any quantity of human food quite easy.

August 12—Preparations have been made to weigh anchor tomorrow at 4 a. m. and start on our long trip across the Atlantic, touching at some intermediate point for supplies and then proceeding to our station in the war zone. It is our last night in North American waters and nobody knows or speculates much about what is in store for us after we leave them.

August 13—Weighed anchor at 5 a. m. and cleared for ———. It is beginning to look like war now. Every one must either have his life coat on or right at hand, and the lookouts are on constant watch.

Had target practise this afternoon. The "———" dropt over a target and after making two practise runs we steamed past

the target at one thousand yards and each gun crew fired some shots at it.

We made by far the best showing of any boat in the fleet. I———, on our forward gun, would have blown it out of the water with a little more pep on the part of the spotter. We are off to fight the Germans with the wealth of experience of having fired four shots at a target. I was at the wheel during the practise and I guess I will be if we see any action.

August 15—The most exciting thing to-day was the meeting in mid-ocean of a huge fleet of convoyed ships. They appeared on the horizon about 10 a. m. and we crost in front of them about noon. Luckily the fog had lifted or we might easily have been run down by them. It was good to see the boys on their way to France.

August 16—In the middle of a hard "sou'wester." The waves are running high and the "———" is bobbing around like a cork.

We have two problems: 1. Get outside of food. 2. Keep outside of it after we get there.

So far—3 p. m.—I've been successful, but I'm not laying any bets.

August 18—Changed our course a number of times during the night and this morning, due probably to the fact that we have been warned that a couple of subs are operating between ——— and ——— nearby.

The gun crews are becoming more adept and speedy every day, and confidence in our ability to cope with the submarine is increasing.

August 19—At 4 p. m. we dropt anchor in the harbor of the little pink and green houses.

——— defies description on my part because it is so absolutely different from anything I've ever seen, that every turn of the head gives one new things to wonder at and be impressed by.

The first thing that strikes the eye is the method of agriculture. From the sea wall to the rims of the volcanoes, every inch of ground not occupied by a house is under cultivation of the most intensive type. If our American farmers practised agriculture of this type there would be an amount of crops raised beyond the dreams of the most optimistic, in these days when production is being pushed to the limit. We could easily feed ourselves and all our allies.

There is not a single house painted a dull color. All are of stucco and are painted pastel shades—pink, yellow, green and pure white. All this, standing out in the brilliant sunshine against the green of the fields and the irregular skyline of the volcano craters, makes a picture I have never seen equaled.

August 22—Weighed anchor at 6 p. m. and said good-bye to the quaintest spot of my recollection.

August 24—This chasing the elusive submarine is great dope, but when it gets all mixt up with bellyache and things, most of the romance is driven out of it. In other words, I feel as tho I have been stepped on and then thoroly shaken before using. For some reason there has been an exceptionally heavy sea running, altho that reason is not as apparent as the results.

The ground swells are enormous and make life one long Coney Island revel—without the tracks and jitney fares. To think that at this moment there are people paying real money to ride in those up and down things!

This afternoon our lookout picked up a submarine and for a few moments it looked as if we were up against the real thing at last. It proved to be a raft with a stout mast in the center and the fleet took ad-

### Danersk Decorative Furniture

DELIVERY is a prime factor in special finish furniture.

Our entire organization is planned for quick action in carrying out individual schemes. All pieces are held

ready for finishing as ordered. Ours are not the over elaborate, expensive styles. They possess the greatest dignity and beauty possible in proportion to their cost, and are in harmony with the spirit of the times. Deliveries near New York by van. Our factories are at your door.

vantage of the excellent target it afforded and indulged in some firing practise.

August 25—Had our first real excitement today—our first war action. We chased a sailing vessel and had her "heave to," whereupon she displayed the British flag.

August 27—One of my duties as Q. M. is to read the log which registers the distance run, every hour. About 3 a. m. I went out on the fantail to read it and very nearly spelled my finish. My method was to creep out as far as the winch by hanging on to the gun, etc., and then, judging the roll of the ship, run to the taffrail, flash my light on the dial and get back to the winch before the next wave hit. This time a big one fooled me and caught me half way. I saw I couldn't get away, so I threw myself flat and my arms and legs wide apart. This was lucky because I landed with an arm and a leg over, but the other arm and leg were wrapt around stanchion and wire taffrail.

The hardest thing I have ever had to force myself to do was to take the reading the next hour, but I got it, and the next day they rigged a life-line for me.

A man overboard would simply be out of luck, because no small boat could be launched in the storm thru which we are struggling. The waves are mountainous and the wind is blowing a gale—probably eighty or ninety miles an hour.

August 29—All day yesterday the storm continued with unabated fury, but this good little boat proved to be mighty "sea-going" and pulled thru and we finally arrived at the rendezvous this a. m.

For the three days of the storm we had our meals standing up, hanging by one hand to a stanchion and with the other to a sandwich—tables and benches were useless.

The attitude of the boys is peculiar. All thru the stress and strain of the storm, and the uncertainty of our weathering it, the conversation was not about the storm or probable submarine attacks but of food. They recited menus and talked of the things they would like to have and intended to get when possible. They dream of home as mainly connected with food in plenty and are quite apathetic as regards any other single item in their present situation.

Later—Just came up from mess—pandemonium reigns. The Tower of Babel was a Quaker meeting compared to those thirty-three humans clamoring to be fed. Convoys to our post by French destroyers all our ships arrived safely.

August 30—Went ashore for the first time since leaving America. Five of us joined three more from the " " and after an enjoyable scrub we went down to a wonderful meal. Oh, boy! What a party!

September 1—The strain of the trip has gotten to Captain . The ship was in rotten shape when we left and the terrific effect of that three days' storm brought about a nervous breakdown. We sure are sorry to see skipper go and hope he'll be back soon.

September 3, Paris, France. They have given us a seventy-two hour leave and we all beat it for Paris.

September 6—That was sure a wonderful party, and Paris is all anybody ever claimed for it—up to and including Billy Sunday.

September 7—Coaled ship today. As half the crew are on Paris leave we had to slave some.

September 8—Coaling again today. I was in the lighter three hours in the morning and three in the afternoon. As a quartermaster I'm a damn good coal heaver.

Met S. S. and J. H. (Cornell men) first time I'd seen either of them since leaving Ithaca. We had some old time ban-

## Move Your Poultry Yard When and Where You Want it by Using "Buffalo" Portable Poultry Runways

This new fencing system enables you to make any size yard desired and move it to other locations at will. To erect simply push legs into the ground.

Substantially constructed from 1 1/2 inch Diamond mesh heavy galvanized wire fabric and galvanized round iron frames with one inch galvanized Hexagon Netting along the bottom, twelve inches high. Strong and durable and its portable feature makes it readily adaptable for fencing in young chicks or ducklings as well as grown chickens, ducks, geese, etc. Also used to advantage for enclosing small vegetable garden plots, dog runways, etc.

Made in standard size sections as follows:

7 ft. long by 5 ft. high.....	\$3.75 per section
2 ft. 6 in. long by 5 ft. high (gate) ..	1.60 " "
8 ft. long by 2 ft. high.....	2.00 " "
6 ft. long by 2 ft. high.....	1.60 " "

PLUS 10% TO THE ABOVE PRICES.

F. O. B. Buffalo.

These prices are effective April 1st, 1918, and are for orders consisting of six sections or more. Above sizes can be shipped from stock immediately. Special sizes made to order on short notice. Send money order, check, New York Draft or currency by registered mail NOW! Don't delay, freight conditions are bad and delay in ordering may disappoint you in delivery.

Our booklet No. 67 BB will be sent upon request with six cents to cover postage. A trial order will convince you of the merits of this system.

# TOWNSEND'S TRIPLEX

The Greatest Grass-Cutter on Earth

Cuts a Swath 86 Inches Wide

The Public is warned not to purchase Mowers infringing the Townsend Patent, No. 1,494,399, Dec. 19, 1916

Floats Over the Uneven Ground as a Ship Rides the Waves

One mower may be climbing a knoll, the second skimming a level and the third paring a hollow

Drawn by one horse and operated by one man, the Triplex will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men.

Does not smash the grass to earth and plaster it in the mud in springtime, neither

does it crush the life out of the grass between hot rollers and hard, hot ground in summer, as does the motor mower.

Write for catalogue illustrating all types of Lawn Mowers.

At all druggists, or sent post-paid on receipt of price. Cream 50c, Lotion 50c, Soap 25c.

PROF. I. HUBERT, Toledo, Ohio.

room harmony so of course I enjoyed myself.

We have been given a number of nicknames in this port, among them being—The Suicide Fleet, The Little Collins and The Easter Egg Flotilla.

One of our ships came in today with seventeen survivors of a torpedoed ship. Fritz turned tail and ran when it came into view. They passed a small boat carrying four men—dead. The rotten skunks had killed them with a machine-gun after getting away from the sinking ship. I'll say she's a rough war all right.

September 11—We have lost our Captain —, one of the best scouts in the world. Our new captain officially took charge today. He appears to be a bear for discipline, but I guess all who behave themselves will be all right.

September 14—Working steadily for past three days. The new captain is a bear for work but he has done wonders for us already in the line of sanitation. This ship is going to be a home after we get something to eat.

September 17—About 12:30 we passed a low-lying craft in the darkness which did not answer by blinker challenge altho I repeated it.

We had the guns trained on it all the while and discovered just in time that it was a small French patrol boat. When all of a sudden a white streak headed for our bow, every one was on edge, thinking it was Fritz running on top. I freely admit I was scared to death but nobody else knew it so it made no difference.

It looked like a torpedo, and hence curtains for us, when the streak swerved and went ahead of us. Not until then did we realize that it was a porpoise and every one heaved a sigh of relief. The phosphorescent water made the splash of the fish's tail look like the wake of a torpedo. I know I can stand the test without losing my nerve now, so let them come.

September 21—Field Day—scrubbed the ship, clothes, mattresses, covers, etc.

September 23—Left mooring yesterday and went out on patrol duty. Nothing exciting to lessen the monotonous strain of being on the constant alert. One has to notice the smallest things, especially toward dusk and at early morning when the subs are more active.

Learned the other day that after we came to — the minesweepers went out and collected a number of mines in the path we followed. Fooled again, Fritz old boy!

September 30—The "—" pulled some clever seamanship today in passing us our mail. They cut behind our fantail so closely that it didn't seem possible for them to get away with it, but exactly at the right time the helmsman threw his wheel over and a man on the bow heaved his line to us. What a haul! Letters galore and some knitted things from real friends.

October 2—Coaled ship in a couple of hours—not a bad job now that we are organized and replenish our supply each trip.

Captain — has revolutionized affairs. He has immeasurably improved living conditions and has shown himself to be a wonderfully efficient leader. He is far more strict than his predecessor and holds us much closer to naval discipline, but anybody who does his work conscientiously gets away without interference. He certainly knows navigation and handles this uncertain old bateau just like it was a regular ship. In the old days we hardly ever left our moorings without knocking something into the middle of next week, and now we play tag with the mooring buoys and never hit anything.

October 7—Lots of excitement. The "—" got Fritz for a goal but he came back strong by putting a merchant ship

on the rocks outside the harbor. Coming back from liberty we were in the dory and were being towed by the "—" launch. A tug headed right at us and we looked to be rating a swim sure enough even tho we showed a light. The only thing that saved us was the tug hitting a mooring buoy and bumping aside.

October 12—The last few days have been the most exciting since we came from the States. Thursday afternoon two submarines were reported laying mines in the Cheval — and we highballed out to go get them.

Everybody was at chow when somebody yelled "There goes 'General Quarters.'" The crew thereupon fell all over each other getting away from the table and up the hatchway. I landed on the bridge, taking the steps four at a time with a pair of glasses grabbed on the fly in one hand and a frankfurter in the other, to find the guns trained and the ship swinging in a circle. It's tough to bring this to a weak climax, but we got no action for various reasons.

About 9 p. m. the lights at —, —, — were blotted out by the suddenly-rising storm and Mr. — was forced to run to sea, as one needs lots of landmarks to navigate in those channels.

The storm got steadily worse all night, the barometer dropping from 29.73 to 28.76 in twelve hours, so that by Friday it was just as bad as the one we ran into on the way over. Time and again it seemed as tho she couldn't get away with it, the waves breaking all the way up on the bridge. They smashed in the engine room hatch, filled the life boats and all the quarters (Officers' and mens' alike) and tore the mines loose. Then followed a repetition of the old picnic game of catching the greased pig, with loaded mines playing the part of runaway pig and—we won.

A little while after Captain — came forward and quietly told the gunner's mate that there was a fire near the magazine. Luckily one of the waves squashed it before they got there and we won again. This captain of ours is the coolest human I've seen. "Periscope Ho" means about as much in his young life as "Dinner is served, sir!"

All this time the storm was tossing us around, and four hours on the bridge was a fine little specimen of hell on wheels. Nobody knew where we were—and by that time didn't care much, but along toward Saturday we located our position.

This trip gave us about all the excitement the law allows except actual battle. Fritz ducked the one chance. Submarines, runaway mines on board, running over mine fields, a 100 to 200 mile gale blowing and turning us upsidedown, fire on board and a magazine close to blowing up to Kingdom Come—all in all—a perfect day.

Naturally with the bunks flooded and a continuous downpour of rain, hail and seawater for two days, nobody got much sleep, and brushing my teeth once was the extent of my toilette for three days.

We arrived in the harbor Saturday night and it was like pulling teeth to get me out at midnight, after three hours' sleep, to go on watch.

October 14—This morning we bathed and shaved and got ready for liberty when word was passed to get ready to get underway in an hour, and the groans that rent the air were pitiful to hear. All these had as much effect as a summer zephyr on Gibraltar.

October 19—Just before we left we received word that the channel we usually use was mined, a patrol boat having gone up that morning. By aeroplane they were locating others for the trawlers to

### HODGSON Portable HOUSES

You needn't put off buying that small house or bungalow you want because building material and labor are so high. Buy your house the Hodgson way.

Send first for the Hodgson catalogue. It's full of photographs of all kinds of bungalows, cottages, garages, poultry houses, etc. Select the one you want and write us. Then our factory gets busy and in a short time your house is shipped to you in sections all painted, finished and ready to put up. A couple of unskilled workmen and yourself can assemble it in a day. First thing though is to send for catalogue. Do that today.

**E. F. HODGSON CO.**

Room 230, 116 Washington St., Boston, Mass.  
6 East 39th Street, New York City

### Base and Floor one continuous piece.

### Imperial Sanitary Floor

#### Put On Like Plaster—Wears Like Iron

It is a composition material, easily applied in plastic form over old or new wood, iron, concrete or other solid foundation—lasts 30 to 1-2 in. thick—does not crack, peel or come loose from foundation. It presents a continuous, fine grained, smooth, non-slippery surface, practically a seamless one. No cracks, creases or joints for the accumulation of grease, dirt or moisture—It is solvent and does not fatigue.

#### The Best Floor

For Kitchens, Pantries, Bath Rooms, Laundry, Porch, Garage, Restaurant, Theater, Hotel, Factory, Office Building, Railroad Station, Hospital, all places where a sanitary, permanent and fireproof floor is desired. Four thousand of several practice covers. Full information and sample FREE on request.

119 West 40th Street, New York

sweep up. These are evidently the mines laid by the subs we tried to get altho we've lucked thru that chance a couple of times since.

October 20—Just as we were off ———, trawlers working that channel exploded two mines with a splash that would make Old Faithful crawl in his hole. I'll say the good old "———" would have been reduced to souvenirs if we had hit one. They are the damndest things—no chance to fight them—just curtains if you hit one. Fooled again, Heine old top!

October 22—Arrived safely and tied up to the supply ship and took on stores. Holy Mike! Those stores! Honest t'Gawd turkeys for our Thanksgiving dinner. "No need to wait," says we, and dropt figuratively to our knees and gave Thanksgiving on the spot.

Skipper says he's going to make this the best feeding ship in the navy. From past experiences I'll say he has a long way to go but this looks like an awfully good start.

## RUGS FOR SUMMERTIME

(Continued from page 25)

carpeted, or else seek refuge in Oriental mattings that cost half as much again. Nos. 5 and 6 are grass rugs, and Chinese mattings are shown in Nos. 7 and 9, and a Japanese matting with its thin, fine texture in No. 8.

The finest modern American creations for summer use are undoubtedly the flax rugs with their self-fringes, solid body and agreeable surface. I like them especially in the natural, but the range of solid colors is splendid, and justifies the claims made by those who manufacture them out of flax grown in Wisconsin, Minnesota and the Dakotas.

Another pleasing American product, some with borders figured in the weave, is the so-called "woolen rugs." The texture is firm and attractive. Part of the processional animal border of one of them frames the heading of this article.

Coarser and thicker of weave are Oriental rush rugs. They are immensely durable, and in pattern fascinating, whether in large ovals like No. 10, or composed of 18 inch "blocks" sewed together like Nos. 15, 16 and 17. No. 15 has a line of color around each block, while No. 17 has a small square of color in the center, the rest being in the natural. No. 16 is altogether in the natural, but patterned like silk or linen damasks by contrast of direction of the lines of the surface, alternate small squares being composed of ropes perpendicular to one another. These rush rugs are especially to be recommended for large halls and sun rooms and verandas, and wherever durability beneath hundreds of feet is quite as necessary as beauty. Judged from the esthetic point of view I should hesitate to place any summer rug ahead of the rush "block" rugs.

If asked what are the most desirable qualities in a summer rug, I should say porousness, that lets dust and moisture easily thru to the floor beneath, and material that dries easily and quickly. In summer there is a great deal of moisture free in the air. When the summer comes all the Oriental rugs and other thick woolen fabrics in our homes are likely to be injured by dampness unless carefully cleaned and dried and safely stored. It is then that the demand naturally comes for damp-proof weaves like those of most of the summer rugs illustrated on these two pages.

In summer, too, natural grass and fiber colors are especially pleasing, whether in the solid or backgrounding bands and blocks of rich color. The all-over patterns that please in winter are in summer taboo as far as the floor is concerned.

# You Can Save

by tearing out  
your old heat and  
putting in the

IN three to five years a Kelsey pays its extra cost over ordinary heaters, in the coal it saves. This statement, we will gladly prove. If, then, such be so, wouldn't it be worth your while to replace your present heat with the Kelsey Health Heat? A Heat that not only heats economically, but ventilates while it heats.

Not only ventilates, but automatically mixes the air with just the right healthful amount of moisture.

Send for Saving Sense Booklet, and draw your own conclusions. Make us prove that a Kelsey pays for itself in five years.

## CONSIDER THE DOOR KNOB

(Continued from page 22)

craftsmanship to a cheap commercial product will completely transform its character. Here is a case in point. A metal craftsman took a pair of ten cent iron hinges and, with a hammer and punch, traced on them a graceful little scroll, leaving a slight burr at the edges of the lines. The process required little expense and little time, but it changed an ugly thing to an object of grace and, without impairing usefulness, created a real additional value. Don't fear cheap price, but shun cheap looks. At the direction of the architect, a metal worker chased an arabesque design of foliage and flowers upon an ordinary brass box lock. The value of such treatment speaks for itself in the illustration.

Common stock articles, made and sold by the dozen or the gross, may thus be appropriately embellished with either little or much workmanship, as one chooses, and with varying degrees of expense, none of which, however, need be extravagant to secure desirable results. One caution to the purchaser it seems necessary to add—the simpler stock fittings are generally preferable to, and safer than those on which more ambitious designing has been bestowed.

The tendency to use invisible hardware, or to minimize the visibility of such items as are not wholly hidden, is to be deplored. Hinges, handles, knobs, locks, keyplates and similar fittings have an honest utilitarian service to perform and their plainly visible presence is nothing of which to be ashamed. Even more objectionable and indefensible is the employment of sham fittings. All shams are reprehensible, but decorative shams, purporting to be utilitarian as a *raison d'être* for their presence, are doubly stupid and futile, for they are neither rationally decorative nor useful. A piece of ornamental metal work, whose purpose is obviously and solely decorative, affixed to a door is permissible; a piece of metal work that pretends to serve a useful purpose, and does not, is a permanent lie.

The most commonly employed materials for household hardware are brass, bronze and iron, either cast or wrought. These are suitable for use either indoors or out. Besides these, for indoors there are knobs of either porcelain or of metal-mounted glass, cut or prest. It is desirable that there be a pleasing contrast between the hardware and its background. White or light painted woodwork suggests brass or black iron, while burnished wrought iron seems less suitable. On the other hand, any moderately light-toned natural wood is an admirable foil for black or burnished wrought iron.

In choosing knobs, latches, bolts or other projecting pieces of hardware, be careful to pick out shapes that are convenient and comfortable to grasp and also see that they are so placed as not to catch and tear clothing. After duly considering consistency of style, keep in mind the fact that the following items for exterior use not only may, but ought to have a distinct decorative as well as utilitarian value—knobs and grasps, keyplates and locks, knockers, bell pulls, foot scrapers, hand-rails for steps and lanthorns, in connection with doors; and for shutters, bolts, pulls and stays or catches. For indoor use on doors, knobs or handles, hinges, latches, locks, bolts and keyplates bespeak attention, while for casement windows, one must consider handles, especially in the case of metal casements where the handles are usually silhouetted against the glass and may well form a bit of pleasing decoration. Once the household hardware becomes a subject of study, its fascination constantly increases.

### Do You Know

That The Independent maintains a service for the free use of its readers, which will give you suggestions in home furnishings, the names of manufacturers whose product is standard, a description of any article about which you are in doubt? Also we will give you the names of new devices which are manufactured to save trouble and expense.

Just write Countryside Shop, 119 West 40th Street, New York, and ask for Check List. This printed list will enable you to make full use of this service which we offer gratuitously to all our readers.

## Allied and American Peace Terms

By SAMUEL A. B. MERCER, Ph.D., D.D.,  
Professor of Semitic Languages in  
the Western Theological Seminary,  
Chicago, and Editor of the Journal  
of the Society of Oriental Research.  
Cloth, 60 cts. Postage about 5 cts.

We must win the war first. But we must not wait for it to be won before we consider what comes next. The fate of races, peoples, and groups will depend upon the terms of the treaty of peace. To be able to deal intelligently with them, America and the Allies must learn what group units have the elements of nationality in themselves and what have not. This is the subject of Professor Mercer's inquiry.

He evinces a thorough knowledge of the many separate groups in the Balkans and elsewhere. What are the race affinities and prejudices of each of these? Statesmen must know before they can deal intelligently with the issues that come after the war; and when the war is over it will be too late to begin to learn.

ALBERT E. HADLOCK, Treasurer.

## A LIGHTHOUSE TO GUIDE SOLDIERS

(Continued from page 21)

for the blind, assuring them that the blind guests would be neat, that they would wear darkened glasses to conceal their infirmity, that they would be accompanied by a sighted guide, and that they would be content with the undesirable seats that did not command a view of the stage.

Miss Holt's efforts to arrange these details brought her into contact with the home conditions of the blind and led at length to the formation of what is now the New York Association of the Blind, which recently issued its eleventh annual report. Miss Holt was instrumental in securing openings in 1912 and 1913 of the Emma L. Hardy Memorial Home at Cornwall-on-Hudson, the well equipt Bourne workshop for blind men on Thirty-fourth Street, New York, and the Lighthouse on Fifty-ninth Street, the headquarters of the association. Here hundreds of blind persons have been educated and made self-supporting.

Miss Holt has gone to Europe a number of times in the interests of blind welfare work. She was in England in 1914 when the war broke out, and before she left, studied the British methods of reeducating men blinded in battle. After a brief return to New York, June, 1915, found her in France at Bordeaux, where she helped to reorganize the Travailleurs du Sud-Ouest, and assisted in its becoming the Phare de Bordeaux, the first college for the war blind on the Continent.

The Committee for Men Blinded in Battle was organized in this country—the first organization in America established to aid the war blind of the Allies—with the late Hon. Joseph H. Choate as president, and Miss Holt, ex-President William H. Taft and former Justice Charles E. Hughes as vice-presidents. The offer of their services was accepted by President Poincaré in behalf of the French Government, and later by General W. C. Gorgas in behalf of the United States.

Les Travailleurs de Sud-Ouest was an organization for the blind established in Bordeaux by Abbé Moreau, who, with the coöperation of Miss Holt, reconstructed it for war work and purchased the Château de Lescure. Fifty pupils were at first accommodated, and simple occupations were taught, such as brush making, chair caning, basketry, as well as reading, writing, type-writing and music. Teaching and relief work were also conducted in the hospitals.

This establishment became the Phare de Bordeaux in 1915. In July of that year the Comité Franco-Américain pour les Aveugles de la Guerre was formed with Miss Holt as president and Mrs. Cooper Hewitt as vice-president. In March, 1916, work was begun at the Phare de France, the Lighthouse in the rue Daru, Paris, and in August it was formally opened by the President of France and the American Ambassador. A broad course of studies was adopted, ranging from the trades to higher mathematics. Basketry, weaving, knitting by machine, massage, modeling, pottery, stenography, bookkeeping, languages and music were taught, as well as gymnastics, fencing, swimming, skating, and games. The blind soldiers in the government hospitals were also taught and assisted by the staff.

A Braille library and printing plant were established at the Phare de France. Two hundred copies of the house organ, *La Lumière*, were first published in December, 1916. Four blind men were regularly employed in the printing shop, and books and Braille music were published.

Miss Holt returned to America for a lecture tour, and then, in October, 1917, again went to France. On January 13, 1918, the

third Lighthouse was opened at the ancient château of the Marquise de Pompadour at Sèvres. The Phare de Sèvres accommodates twenty regular pupils. Pottery is taught in the famous porcelain factories near by, and poultry raising and agriculture on neighboring farms.

The Phare de Bordeaux and the Phare de France each accommodates about fifty resident pupils besides a number of day pupils. Manual labor is largely the specialty of the former, while at the latter blinded soldiers are thoroly reeducated for trades and professions. Over 3500 have been assisted in this way, including blinded soldiers of French, Italian, Belgian, Scotch, Canadian, Polish, Russian, Arabian, Swedish and other nationalities. Soon the French Lighthouses may be extending their succor to Americans. The totally blind, the temporarily blind, and those suffering from incapacitating head wounds have been helped and taught. The regular pupils have numbered more than 300.

The Phare de France assists about 150 men a day, either at the Lighthouse or in the hospitals. Over 130 blinded men have been reeducated in that institution alone. During 1917, 10,000 gifts were presented to the families of the blinded, including food, fuel, bedding, clothing, medicine, seeds, etc. Thirty hospitals were served.

No less important than the teaching is the follow-up work. Men who have been graduated obtain work, thru the efforts of the Lighthouses, as dictaphone stenographers, telephone operators, weavers and knitters.

One blinded adjutant, who had also lost his right hand, learned to use the knitting machine and now earns a good living. Another soldier who arrived at the Phare suffering from mental shock as well as blindness, recovered a normal viewpoint before his year of reeducation was over. He learned knitting and now receives so many orders that he passes some of them on to his friends.

One Lighthouse pupil is now masseur in a large hospital in Paris, and others have taken up this profession. A clever mechanic who has been reeducated is now at work in an electric school in Paris. Several are doing well at farming and poultry raising. One graduate is a Government inspector connected with the Academy and the office of the Public Prosecutor. Another has resumed his former business as a furrier and has prospered so well that he has been forced to move to larger quarters. Several are telephone operators. Others are continuing their studies in music and in languages.

An intelligent and cultured pupil of a normal school was much discouraged when he first entered the Lighthouse. Having lost his sight, he thought that his career was over, but little by little hope was brought back to him and he was persuaded to resume his studies. With Braille, stenography and dactylography to help him, he is now working enthusiastically at higher mathematics. He has the advantage of youth, and he again dreams of a happy and successful future. In his spare time he studies the violin. He is reconstructing his library in Braille, copying even scientific works with their complicated mathematical characters.

Statistics are interesting when they denote progress, and one must have them in annual reports, but after all it is the personal, human side of this work that interests Miss Holt and her helpers. These men are very grateful for the new hope and courage that have been painfully born within them.

(Continued from page 23)

The child's conception of beauty is distinctly primitive and demands simple forms and pure, strong colors for its satisfaction. The infant will pass by an object painted in faded tints of soft old blue and rose, to grasp delightedly at one in cobalt and vermillion. Hence the usefulness in nursery decoration of the gay little friezes printed in glowing colors, the Mother Goose fabrics, and the cheerful painted furniture. But to offset their often crude intensity and maintain the essential balance, the background of the room—its floor, walls and ceiling—should be kept comparatively neutral with creams, warm tans and luminous grays.

## A business that is as big as its job

**K**EEPING a nation of over 100 million people regularly supplied with meat and meat products is a big and complex job.

And a still bigger job when to it is added the needs of the American soldier here and in Europe and of the Allies as well.

It is a job of converting the live stock of the West into meat and meat products and distributing them in perfect condition over long distances to the consuming centers—the North, South, East, West and abroad.

A job of supplying with *unfailing regularity* products that in the main are perishable, in the exact qualities and quantities needed, to the smallest out-of-the-way village as well as to complex and congested metropolitan centers.

Only organizations like that of Swift & Company, with its highly

specialized methods of meat-dressing, its hundreds of branch-distributing houses, and its thousands of refrigerator cars, could have handled such a job efficiently and at a minimum of expense in the present war emergency.

Today American meat and meat products are the recognized standard of the world.

And the economy with which these products are produced is indicated by the fact that today the meat of a steer, dressed, is sold for less than the cost of the steer on the hoof! The proceeds of by-products, made out of what once was waste, have made this possible.

The size of the job has dictated the size of America's packing industry. And America's packing industry has proved itself to be equal to its job.

## REMARKABLE REMARKS

**JOHN HASTINGS TURNER**—Clever people are always worth their money.

**ED. HOWE**—I hereby give notice to poets that I cannot read their books.

**G. LOWES DICKINSON**—I see things as they are. I have never let myself be duped.

**JOHN D. ROCKEFELLER, JR.**—What the world craves today is a more spiritual and less formal religion.

**FRANK MORGAN**—Truth is one of those virtues which we always admire more in ourselves than in other people.

**MAXIMILIAN HARDEN**—More than the good will of anybody else, Austria-Hungary needs that of the United States.

**ARNOLD BENNETT**—This modern craze for naturalness seems to me to be rather unwholesome, not to say perverted.

**SAMUEL GOMPERS**—The labor movement does not discount the service to civilization tendered by intellectual ability.

**EUGENE V. DEBS**—In a country fighting to make the world safe for democracy, it is dangerous to express an honest opinion.

**DR. W. T. McELVEEN**—You can no more educate a bad man into a good man than you can educate a buttercup into a butterfly.

**REAR ADMIRAL BRADLEY A. FISKE**—The immediate instrument that has decided the rise and the fall of nations has been military power.

**PRINCE KROPOTKIN**—With her population reduced to starvation Russia risks losing even the liberties she has conquered. Send us corn.

**PRES. NICHOLAS MURRAY BUTLER**—Great Britain and America will never loosen this new and splendid bond of interrelationship.

**EMPEROR WILLIAM**—I will welcome with all my heart those who wish to assist me in my work, no matter who they may be, but those who oppose me in this work I will crush.

**CATTLE RANCHMAN WILLIAM HANLEY**—The worst thing I know about life is that just when you are feeling the best you have to go to bed, and when you are feeling worst you have to get up.

**GENERAL LUDENDORFF**—The effective of an offensive is not to be measured by the results in territory gained and in captures made, but by its effect on the spirit and morale of the enemy's civil population.

**CAPTAIN KNYVEET**—The only monument that we dare erect to our fallen dead, the only monument that would not be a dishonor to them and a shame and eternal disgrace to us, is the monument of victory.

**EX-PRESIDENT TAFT**—He who proposes peace now either does not see the stake for which the Allies are fighting, or wishes the German military autocracy still to control the destinies of all of us as to peace or war.

**GRIEVED NITPOID**—The German people will find themselves at the hour of their awakening facing a world of enemies, and they will have to recognize that instead of honor and glory they have reaped a harvest of hatred and contempt for years to come.

## CAPITAL COPY

Practically every woman in Italy from sixteen to sixty years old is a war nurse or a volunteer war worker.

College students who have completed courses on food conservation will receive certificates from the Food Administration.

In the first month's operation of the Aerial Mail Service between New York, Philadelphia and Washington, a total of five and two-fifths tons of letter mail was transported.

Every person who travels into Denmark must submit upon arrival a list of all the wearing apparel he carries with him. On leaving the country he may take with him only the listed articles.

Five hundred college trained young women, graduates of the classes of the last ten years, are training at Vassar College in the emergency course for nurses, known as the "College Woman's Plattsburg."

Hereafter Red Cross purchases will be accorded the same prices and the same privileges as those of the Government. The Red Cross dollar and the Government dollar stand side by side in market value.

The ocean trip between New York and Valparaiso, Chile, has been cut from twenty-seven days to eighteen days by the new passenger steamers plying on that route under the United States Shipping Board.

Walter Damrosch, conductor of the New York Symphony Orchestra, will soon sail for France, under the auspices of the Y. M. C. A., to organize an orchestra of fifty of the best French musicians in the country.

The Quartermaster's Department is now supplying gas-proof food containers to the soldiers in the zone of operations in France. These prevent seepage of gas into the containers and guard against contamination of the food.

The restrictions governing the shipment of parcels to the American Expeditionary Force on written request only, do not apply to newspapers and magazines. These can be mailed without any request from the intended recipient and without military approval.

Women librarians in the camp hospitals are to wear uniforms of natural-colored pongee shirt-waist dress, worn with a white collar and dark brown tie. On the sleeve is a dark brown brassard, bearing the letters A. L. A. A Panama hat with a brown band and an A. L. A. pin is part of the uniform.

A number of leaders of the Woman's Land Army will be trained at Wellesley College, where camp conditions will be reproduced and the type of instruction standardized. This training, to begin about August 1, is offered to recruits from all parts of the country. Applications should be made to the Dean of Wellesley College, Wellesley, Massachusetts.

The Post Office Department has called attention to the fact that many of the unwrapped, unaddressed magazines mailed by the public at the 1-cent postage rate for soldiers and sailors are so old as no longer to be of any interest and, therefore, are useless for the purpose intended. A weekly publication should be not more than two or three weeks old, and a monthly publication not more than two months old.

## A MESSAGE FROM ITALY TO THE AMERICAN PEOPLE

BY COUNT V. MACCHI DI CELLERE

ITALIAN AMBASSADOR TO THE UNITED STATES

ON the 24th of May, the American people, at the request of their beloved President, by fitting public exercises, by the exhibition of Italian flags, by a number of other acts, too many to be here enumerated, yet to be for many a year remembered by the grateful people of the land which I represent, gave proof to the people of their sister nation, Italy, that the oldest country of the New World understands and appreciates the sentiments and the ideals which animated Italy, one of the youngest countries of the Old World, when she accepted the challenge, unsheathed her sword, and took up the crusade for world liberty and justice.

And now once more the hands of time point to the return of the anniversary of that fateful day which can be fitly described as the birthday of this free nation. Our turn has come, and Italy, an ever grateful country, having learned from her many past sufferings how to remember and repay for kind words and kind acts, rejoices in the opportunity offered her by the present circumstance. You said to us: "Welcome, sister." We repeat to you: "Welcome, sister; the land of Garibaldi is proud to shake the hand tendered to her by the land of George Washington."

This welcome, I know, does not proceed only from this, my residence in Washington, whence I, as an official spokesman, release it to the world; it comes, America, from the sun-kissed slopes of the beautiful Italian hills, where old men and children wrest from the earth that harvest which shall give their fighting sons and fathers a means of sustenance; from hospitals and Red Cross trains, where noble women and daughters of the people mingle in splendid comradeship in ministering to the heartrending sufferings of tens of thousands of bodies torn by the lead or burned by the gas of the Hun; from the thousands of war factories dotting our cities, where once the gentle spirit of art and of poetry ruled supreme, and where now reverence for a glorious past is only enhanced by a desire to live up to the greatness of our history by helping humanity in the practical requirements of our crucial days as we helped it in the past by lifting skyward the flame of civilization; from the bloodstained trenches of the Piave, where the fury and the hate and the cruelty and the chicanery of the Austro-Germans spent themselves in vain against the impassable barrier of brave Italian hearts, urged on by the sight of American aviators flying above the river and by the knowledge that American infantrymen will soon reinforce their lines.

## A PEACE LEAGUE NOW OR LATER?

**I**N his speech to the Reichstag last week, Count von Hertling, the Imperial German Chancellor, scoffed at the idea of a League of Peace, alleging that it was nothing but a scheme of the Allies to isolate Germany and strangle her legitimate economic and political development. As one of the chief purposes of my trip to Europe was to find out the present status of the Peace League idea in the minds of the peoples and government officials of England, France and Italy, I am able to report with some degree of assurance the very interesting and somewhat startling views I found obtaining there.

In general there is great encouragement to be found in the attitude of all classes in England, France and Italy. The question is no longer one of whether we shall create such a League, but rather how and when. The idea, as the business man would say, is already "sold," and it is only the carrying of it out that is giving concern.

At present there are four active groups in each of the three great Allied countries advocating the League program: 1st, government officials; 2d, intellectuals and literary men; 3d, labor leaders and radicals; 4th, propagandists. It has been my privilege to have discussed fundamental principles as well as ways and means with important representatives of each group. And in order that it may be seen I have not drawn my conclusions from too few particular conversations, I publish herewith the names of some of those who have been good enough to talk with me on the matter:

### GOVERNMENT OFFICIALS

England: Mr. Balfour, Lord Robert Cecil, the most ardent champion of the League idea in the British Ministry, Lord Haldane, ex-Minister of War, Mr. Roberts, Minister of Labor, and Dr. Addison, Minister of Reconstruction.

France: President Poincaré, Premier Clemenceau, Leon Bourgeois, president of the official commission studying the League, Jules Cambon, Baron L'Estournelles de Constant, ex-Foreign Minister Hanataux, Admiral Fournier, Henry Fromagot.

Italy: King Victor Emmanuel, Premier Orlando, Foreign Minister Sonnino, and Senator Ruffini, president of the newly formed Italy-American Union.

### INTELLECTUALS AND LITERARY MEN

England: H. G. Wells, whose last book, "In the Fourth Year: Anticipation, of a World Peace," is on the subject of the League; Louis Woolf, who wrote the brilliant report of the Fabian Society; Sir Sidney Oliver, one of the founders of the Fabian Society; A. E. Zimmern, author of the Greek State, now attached to the Foreign Office; Lionel Curtis, author of "The Imperial Commonwealth."

France: Prof. A. Aullard, authority on the French Revolution; Ferdinand Brunschwig, Director of the Ministry of Public Instruction; Dr. Planzoles, Director of the College of Social Sciences; E. Lavrize, of the French Academy.

### LABOR LEADERS AND RADICALS

England: Rt. Hon. J. H. Thomas, Mr. Roberts, Minister of Labor, Sydney Webb, John Burns, Ramsey MacDonald.

France: Albert Thomas, ex-Minister of Munitions; Deputy Monttel, Socialist; D. Vinant, ex-Minister of Aviation.

### PROPAGANDISTS

League of Nations Society of England—James Bryce, Lord Shaw, Lord Parmoor, Lord Buckmaster, Sir Willoughby Dickinson, Major David Davies, Mr. Aneurin Williams, G. Lowes Dickinson, Raymond Unwin and J. Allan Baker, M. P.

League de Droit de L'Homme in Paris—Its executive committee.

While of course the men above enumerated had many and diverse opinions, it is quite evident that the situation is exactly the opposite in Europe to what it is in the United States.

In America the leading officials and unofficials in every community in the land are now ready to give their time, money and names to promote the League of Nations program, whenever called upon to do so. But the masses of America, tho sympathetic, are more acquiescent than enthusiastic. In England and France and Italy it is the people, I find, who look to the League for the salvation of the world

after the war is over. Mr. Thomas told me that labor in England would stand to "the last ditch" for two things at the Peace Conference; first, to prevent an imperialistic peace, and second, to insure the establishment of the League of Nations. In France Professor Aullard said that already the idea of a League of Nations has almost become a religion to the soldiers now fighting in the trenches.

While the propagandists and intellectual classes in all countries were as enthusiastic as the working classes, I found the official classes more hesitant. No one was opposed to the theory of the League, but I was almost universally met with the qualification that "we must not go too far," "we must be very careful not to attempt anything Utopian," "are we sure it is practicable?" And yet despite this hesitancy on the part of the governing classes, it is as certain as anything can be certain that England, France and Italy are ready to join the United States in the establishment of a League. Not only are they ready, but what is perhaps the most important thing I have learned in Europe, they are ready here and now and before the war ends.

The day I left England Mr. Barnes, member of the Inner Ministry of the British Cabinet, made a speech in which he said:

The beginning must be made before the war ends or otherwise in the first flush of peace the world will fail thru sheer exhaustion to make proper provisions for the maintenance of peace.

I was told by those who ought to know that Mr. Barnes would never have made this statement without the concurrence of Lloyd George and Mr. Balfour. The League of Nations has already officially declared:

There are various reasons why Great Britain and her present Allies should proceed at once to form among themselves the provisional framework of such a League.

And the last word that was said to me as I left Paris, by the man in the French Government perhaps the best fitted to speak on the subject was, "I beg you to tell President Wilson to take the initiative in forming the League now." The reasons he gave me may be summarized as follows:

(1) The union of the Allies now into a real League will make them more efficient in the prosecution of the war.

(2) Now is the opportunity to realize the plan. As soon as the war is over conflicting interests will arise.

(3) There is now no system of settling conflicts between Allied States. The Franco-American Treaty of September 14, 1914, should at last be extended to all Allied Nations.

(4) The Allies must be united if they are to be winners at the Peace Conference. If they are not united Germany may be able to disassociate them.

(5) If the League is established at once the Allies will become a nucleus for the neutrals because the principles of justice established by the League will be a protection to their freedom and liberties.

(6) The League, if established now, would be a stimulus to the democratic ideals among the Central Powers.

I find that these reasons are convincing to practically everybody in Europe with whom I have discussed the League.

In the United States many members of the organization known as the League to Enforce Peace hold to similar views. But apparently our Government feels that any conference of the nations at this moment would be sure to raise more questions than it could possibly settle. At all events jealousy and competing interests would be likely to endanger the idea before it was born.

Thus, apparently, a direct issue exists between our allies and ourselves as to whether the League should be formed now or after the war. And this suggests that possibly von Hertling's scoffing reference to the League may have been

due to the fact that he was aware of this difference of opinion and was trying to disassociate the Allies by confirming the administration's suspicions that Germany will view the formation of the League now as a hostile measure directed against herself. Whether this be the true explanation or not and whether the League is to be established now or later, one thing is at least certain and that is that both the United States and her allies are converted to the idea that the old days of international competition that prevailed before the war must give way to the new order of international coöperation, functioning thru a League of Peace, and sanctioned by it. This, and this alone, is worth all the sacrifices of all the brave men whose blood has reddened the clay of Europe these past four fateful years.

HAMILTON HOLT

## JULY FOURTEENTH

FRANCE has chosen for a national hymn the song of a revolution; for her flag a banner of insurrection; for her national holiday the sacking of a royal fortress by a frenzied mob. Her political institutions carry democracy to an almost dangerous extreme; not only does the French Government dispense with the feudal trappings which are still dear to the "crowned republic" of Britain, but it lacks even the constitutional checks and balances which restrain the impulses of our own democracy. A single breath of public opinion can overturn any French cabinet. Economically, France is the land of the independent farmer, happily free from the rule of landlordism and the rule of industrial plutocracy. Socially, France is most democratic of all. In a single afternoon at a café you may chance to fall into easy, familiar chat across your table with a day laborer, a priest, a professor, a high official, a private soldier and a general. None of them will condescend to you or expect you to condescend to them. France is literally a nation of brothers; and this is none the less true tho brothers sometimes quarrel.

Across the Vosges is a civilization opposite in every respect; a land of caste in political, economic and social life; a land where the distance between one man and another is like the difference between man and the lower animals. Between the two types of civilization there is an irreconcilable conflict. France and Germany may think that they are fighting about Alsace-Lorraine, but they are really fighting because the institutions of each imperil by very neighborhood the institutions of the other. Fire and water cannot dwell together permanently; either France will set Germany aflame with her own democracy or Germany will smother the last dying embers of freedom in continental Europe. That is what Bastille Day means.

## TEN COMMANDMENTS FOR CRITICS

IS it patriotic to find fault with the Administration in war time?" This is a question which occurs to every American a dozen times a week. On the one hand he has always felt it to be his duty—often, indeed, his pleasure—to exercise the right of free speech granted him by the Constitution, and to make the Chief Magistrate of the Republic his particular target. In war time, especially, when the activities of the Federal Government are no longer confined to mail deliveries and customs inspections but touch every scuttle of coal and every plate of bread, the faults of those who sit in high places become so much in evidence that patience often seems no longer to be a virtue. It never was a popular virtue in this country anywhere. But, on the other hand, every murmur of complaint, wise or foolish, is borne down by the shout of "Stand behind the President!" or "Don't change horses while crossing the stream!" Some are so impressed by the need of supporting the Government that they would forthwith abolish every newspaper in the

country that mentions either war aims or war methods. Others are so convinced that only incessant fault-finding will win the war that they would turn Congress into a perpetual investigation tribunal with the whole Cabinet on trial every morning. Obviously the road of sanity lies between these extremes. Can we map it?

We venture to suggest that every one feel perfectly free to speak his mind about the Government to any extent, *provided* that he will constantly bear in mind the following simple rules:

1. Remember that the Administration now in office has quite recently received the voted approval of your fellow citizens. A minority in a democracy may always criticize the decision of the majority, but it must render that decision loyal obedience.
2. Remember that no war was ever waged without blunders, and no big war without some big blunders.
3. Remember that it is useless to blame what is past unless it can suggest better policies for the future.
4. Remember that every member of the Cabinet is under tremendous pressure and that the President is attempting six men's work with no more hours per day to do it in than any one else.
5. Remember that the Federal Government at Washington is not directly responsible for the mistakes of every raw lieutenant or the errors of every local draft board clerk. The wisest policies must sometimes be committed to second class people to carry out, because there are not enough first class minds to do everything that has to be done.
6. Remember that listening to criticism and preparing answers to it takes time that is very badly needed for the work of running the Government and fighting the war.
7. Remember that if your suggestions are very obvious they may have occurred to those in authority.
8. Remember that the President and his Cabinet have and must keep secret a great deal of information that would explain some of their most puzzling acts—or failures to act—if you were in the secret.
9. Remember not to let loose any information that an enemy agent could use.
10. And the last and greatest commandment is to remember that the result of this war depends more upon our moral unity than upon our material strength. A people who are ready to coöperate unflinchingly with their chosen leaders, who are able to take mishaps good-naturedly, and who are full of mutual confidence in their common patriotism, are ten times more formidable than a people who clamor, "We are betrayed!" whenever the Ship of State pitches a little in a high sea.

## WHY GO BACKWARD?

FORMER Justice Charles E. Hughes makes a telling point against the postal zone law for second-class mail in a recent statement condemning both the harm and the waste that such a system of penalizing periodicals must cause. As head of the commission which conducted the latest investigation of the Postal Department Mr. Hughes adds to the weight of his professional reputation the authority of a thoro understanding of the facts in the case:

In my judgment the zone system for second-class mail matter is unjust to the publisher and unjust to the public. It not only imposes upon the publisher the additional rates upon a sectional basis, but it makes necessary the added expense for the necessary zone classifications at a time when every economy in production and distribution is most important. It introduces a complicated postal system to the inconvenience of the publisher and public when there should be a constant effort toward greater simplicity. There is no more reason for a zone system of rates for newspapers and magazines than for letters. Newspapers and magazines are admitted to the second-class postal rates on the well-established policy of encouraging the dissemination of intelligence, but a zone system is a barrier to this dissemination. If it is important that newspapers and magazines should be circulated, it is equally important that there should not be sectional divisions to impede their general circulation thru the entire country.

We are proud at this moment of our united purpose, but if we are to continue as a people to cherish united purposes and to maintain our essential unity as a nation, we must foster the influences that promote unity. The greatest of these influences, perhaps, is the spread of intelligence diffused by newspapers and periodical literature. Abuses in connection with second-class mail matter will not be cured by a zone system of rates. That will hurt the good no less than the bad, and perhaps some of the best sort of periodical literature will be hit the hardest.

We do not wish to promote sectionalism, and "one country" means that in our correspondence and in the diffusion of neces-

sary intelligence we should have a uniform postal rate for the entire country. The widest and freest interchange is the soundest public policy.

I hope that Congress will repeal the provision for the zone system which is decidedly a looking-backward and walking-backward measure.

## THE CASE AGAINST ANARCHY

IN this age of much government the anarchist pure and simple has largely vanished from sight; whether the fanatic with his creed of dynamite or the gentle philosopher in the study; Czolgosz and Herbert Spencer are alike out of date. But anarchy in the broader sense of lawlessness, unwillingness to abide by covenant and rule, impatience of social discipline, is as popular as ever. It is equally characteristic of the lyncher who cannot wait for the slow process of the law, the Bolshevik who cannot wait for the slow process of reform, and the non-resistant pacifist who cannot wait for the slow process of breaking to pieces the military oligarchy of Central Europe.

We hear to tedium that liberty must not be permitted "to degenerate into license" as if the breaking down of all social sanctions would make men *too* free. If that were so, it would be a small evil to pay for a great good; the blunders of a few unstable individuals would hardly weigh in the balance against the mighty outrush of creative energy that comes with every emancipation of the human spirit. But when liberty does degenerate, it becomes not license but tyranny. There is freedom of speech; but there is also such a thing as freedom from being libeled. There is freedom of travel; but there must be freedom from intrusion.

The anarchist says that the policeman on the street cor-

ner is a "minion of the capitalist" set there to protect the gold of the rich from the hunger and anger of the poor; that but for Congress and the constabulary we would instantly have communism. There was, it is true, a period in history when the public authorities were too weak to rule, and administration fell into private hands, but we call it the age of feudalism. If the nation ceased to administer the public agencies, does the anarchist suppose that he and his fellow propagandists would step into the empty shoes of President Wilson, Governor Jones, and Mayor Brown? Have the anarchists the military skill, the intelligent mastery of practical affairs, the organizing genius, or the command of the means of life and labor to dislodge the capitalists from power even if they could overthrow the politicians? We fear that possession would become ten-tenths of the law if the state should step aside and let the dreamy social revolutionist confront the shrewd man of business in unrestricted competition. In the state of nature it is not the lamb who rules the jungle.

We do not fear Bolshevism for itself, but for the reaction which may follow it. Lenine and Trotzky may have intended to let loose the Russian proletariat to devour the bourgeoisie, but so far as the rest of the world is concerned the net effect of their actions is to let loose the Junkers to feed upon the peasants of Poland and the trades unionists of Belgium. The I. W. W. in this country are not strong enough to endanger our institutions; the peril is that they may provoke reprisals, lynchings and reactionary laws which really will hamper our national progress to a freer civilization. In a word the danger of reckless aviation is not of soaring too far from the earth, but of falling at too great a speed.

## NO COMPROMISE!

### From President Wilson's Speech at Mount Vernon on Independence Day

THIS, then, is our conception of the great struggle in which we are engaged. The plot is written plain upon every scene and every act of the supreme tragedy. On the one hand stand the peoples of the world—not only the peoples actually engaged, but many others, also, who suffer under mastery but cannot act; peoples of many races and in every part of the world—the people of stricken Russia still, among the rest, tho they are for the moment unorganized and helpless. Opposed to them, masters of many armies, stand an isolated, friendless group of governments, who speak no common purpose, but only selfish ambitions of their own, by which none can profit but themselves, and whose peoples are fuel in their hands; governments which fear their people, and yet are for the time being sovereign lords, making every choice for them and disposing of their lives and fortunes as they will, as well as of the lives and fortunes of every people who fall under their power—governments clothed with the strange trappings and the primitive authority of an age that is altogether alien and hostile to our own. The Past and the Present are in deadly grapple, and the peoples of the world are being done to death between them.

There can be but one issue. The settlement must be final. There can be no compromise. No halfway decision would be tolerable. No halfway decision is conceivable. These are the ends for which the associated peoples of the world are fighting and which must be conceded them before there can be peace:

I.—The destruction of every arbitrary power anywhere that can separately, secretly, and of its single choice disturb the peace of the world; or, if it cannot be presently destroyed, at the least its reduction to virtual impotence.

II.—The settlement of every question, whether of territory, of sovereignty, of economic arrangement, or of political relationship, upon the basis of the free acceptance of that settlement by the people immediately concerned, and not upon the basis of the material interest or advantage of any other nation or people which may desire a different settlement for the sake of its own exterior influence or mastery.

III.—The consent of all nations to be governed in their

conduct toward each other by the same principles of honor and of respect for the common law of civilized society that govern the individual citizens of all modern states in their relations with one another; to the end that all promises and covenants may be sacredly observed, no private plots or conspiracies hatched, no selfish injuries wrought with impunity, and a mutual trust established upon the handsome foundation of a mutual respect for right.

IV.—The establishment of an organization of peace which shall make it certain that the combined power of free nations will check every invasion of right and serve to make peace and justice the more secure by affording a definite tribunal of opinion to which all must submit and by which every international readjustment that cannot be amicably agreed upon by the peoples directly concerned shall be sanctioned.

These great objects can be put into a single sentence. What we seek is the reign of law, based upon the consent of the governed and sustained by the organized opinion of mankind.

These great ends cannot be achieved by debating and seeking to reconcile and accommodate what statesmen may wish with their projects for balances of power and of national opportunity. They can be realized only by the determination of what the thinking peoples of the world desire, with their longing hope for justice and for social freedom and opportunity.

I can fancy that the air of this place carries the accents of such principles with a peculiar kindness. Here were started forces which the great nation against which they were primarily directed at first regarded as a revolt against its rightful authority, but which it has long since seen to have been a step in the liberation of its own people as well as of the people of the United States; and I stand here now to speak—speak proudly and with confident hope—of the spread of this revolt, this liberation, to the great stage of the world itself! The blinded rulers of Prussia have roused forces they knew little of—forces which, once roused, can never be crushed to earth again; for they have at their heart an inspiration and a purpose which are deathless and of the very stuff of triumph!

# THE STORY OF THE WEEK

**Russian Rumors** The week has been filled with the wildest reports regarding the Russian situation. It was repeatedly affirmed and as often denied that the ex-Czar Nicholas had been killed by the Bolsheviks to prevent his being rescued and restored by the Czechoslovaks who took possession of Yekaterinburg, where he had been interned. The Czarevitch, according to various reports, had been murdered or died of disease or was very ill or was safe and well. A message coming by way of Helsingfors and Stockholm conveyed the startling intelligence that Moscow had been captured by the Cossack generals, Kornilov and Kaledine, "supported by German troops," and that Lenine and Trotzky were trying to escape from Russia by way of the Murmansk coast and that the Grand Duke Nicholas had been proclaimed emperor. On the other hand it was said that German troops were aiding the Bolsheviks in their stand against the Cossack counter-revolution.

The report of the overthrow of the Soviet government at Moscow was received with natural incredulity, for little had been heard of Kornilov since his unsuccessful attack upon the Kerensky party at Petrograd, and Kaledine

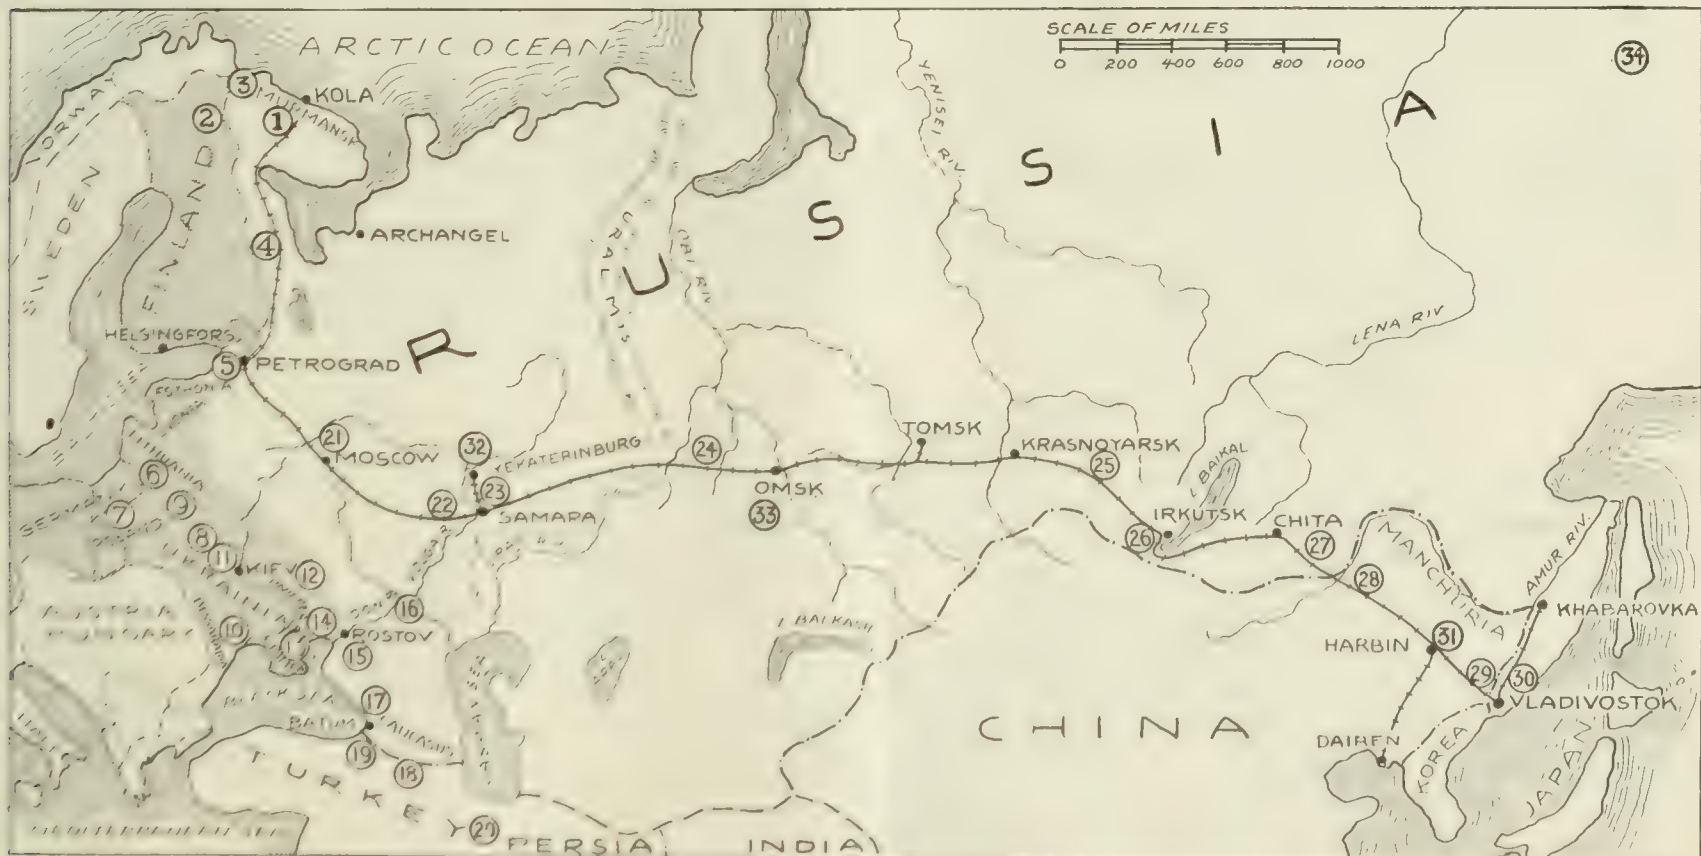

was supposed to be dead. Besides, these generals were not pro-Germans and their attempt to undo the work of the revolution and restore the Czar was instigated by a desire to keep Russia aligned with the Allies. The present counter-revolutionary movement of the Don Cossacks led by General Krasnov is admittedly aided by German troops but does not seem to be making much headway.

The fighting in Russia is mostly carried on by the former prisoners from the Austrian army, of which the Magyars and Germans generally take the Bolshevik side and the Czechs and Slovaks take the other. The Czechoslovaks seem to be advancing eastward along the Siberian Railroad. They are said to have abandoned the stations west of Samara to the Soviets, but on the other hand they are now in possession of Irkutsk and they have gone up the branch line to Yekaterinburg (Empress Katherine's city), where the ex-Emperor and Empress were put by the Bolsheviks for safe-keeping. This gives them command of the Ural mining region as well as of the transcontinental transportation system. Petrograd is said to be starving for lack of grain from Siberia. The Czechs recently allowed

twenty-six carloads from Ufa to go thru, but only eleven reached Petrograd, the others having been taken off at various stations.

Professor Paul Miliukov and General Alexander Guchkoff, leaders of the moderate party in the revolution, are now reported to have arrived at Harbin in Manchuria. This has been the headquarters of the anti-Bolshevik movement in the Far East and the center from which General Semenov sent his expeditions over the border into Siberia. These were defeated by the Bolsheviks and driven back into Manchuria but are now said to be advancing again along the Siberian Railroad toward Chita. The aim of this movement is supposed to be the establishment of the Grand Duke Nicholas as Emperor. A younger brother of the ex-Czar, the Grand Duke Michael, has placed himself at the head of a new Siberian government. He is at Omsk, which is on the Siberian Railroad east of Irkutsk, the terminus of the thousand-mile section controlled by the Czech soldiery. In his manifesto to the Russian people Michael expresses a willingness to leave the selection of a Czar to a popular assembly.

A new secession movement is report-

A KEY TO THE RUSSIAN PUZZLE

1. Bolsheviks and British and French marines defending Murmansk coast against Finnish White Guards and Germans. 2. Germans have occupied Finland and are running railroad to Arctic Ocean. 3. Soviet government cedes port on Arctic to Finland. 4. Finns claim Karelian territory from Russia and attack Petrograd-Kola railroad. 5. Petrograd famine stricken thru failure of transportation. 6. Independence of Lithuania recognized by Germany. 7. Independence of Poland recognized by Germany. 8. Independence of Ukraine recognized by Germany. 9. Shaded area shows territory occupied by German troops. 10. Rumania ceded to Rumania. 11. Kiev, capital of Ukrainian People's Republic, under pro-German Cossack dictator, General Skoropadsky. 12. Revolt against Ukrainian dictator. 13. Crimea asserts independence as the Tauridian Republic, but is occupied by German troops and is claimed by Turkey. Germans seize Russian fleet at Sevastopol. 14. Bolsheviks under Czech officers reported defeated by Germans at Taurian. 15. Bolsheviks manning by Bolsheviks and in battle on Black Sea. 16. Cossack General Krasnov supported by Germans has headquarters at Rostov. 17. Krasnov fighting against Bolsheviks for independence of the Don Cossacks. 18. German troops landed at Batum. 19. Armenians and Georgians defend Caucasus against Turks. 20. Turks take Transcaucasian Russian territory. 21. Moscow, the capital of the Bolshevik (Soviet) government. 22, 23, 24, 25. Czechoslovak troops taken prisoner from Austrian army have captured these points on the Siberian railroad. 26. Czechoslovaks defeat Bolsheviks at Irkutsk. 27. Cossack General Semenov defeated by Bolsheviks in attempt to advance to Lake Baikal. 28. Semenov's troops driven back into Manchuria, where Chinese president insists upon disarming them. 29. General Kalmakov driven back into Manchuria by Bolsheviks. 30. Japanese troops landed at Vladivostok. 31. Professor Miliukov starts counter-revolutionary movement from Harbin. 32. Ex-Czar confined at Yekaterinburg and reported assassinated by Bolsheviks on approach of Czechs. 33. Grand Duke Michael declares himself head of new Siberian government with headquarters at Omsk. 34. Yakuts of northeastern Siberia declare independence of the Soviet government.

ed. The Yakuts, of northeastern Siberia, have declared their independence of the Russian Federal Soviet Republic.

The Tatar Government of the Crimea is reported to have been overthrown by the Germans, who have now possession of the whole peninsula and of the Black Sea fleet at Sevastopol.

**Kerensky Reappears** Alexander Kerensky, who vanished from the public view immediately upon his overthrow by the Bolshevik *coup d'état*, made a dramatic reappearance upon the platform of the London Labor Conference on June 26. He was introduced by Arthur Henderson very much to the surprise of the conference and spoke in part as follows:

For three years Russia's soldiers had to fight an enemy perfectly equipt and cruelly merciless under conditions which no one outside of Russia can imagine. It is not to be wondered that, having repeatedly suffered the blows of the enemy and having again hit him hard, thereby saving the western front, the Russian soldiers were the first among the belligerents to faint in the struggle.

The great revolution instilled new courage into the tired spirit, but could not immediately revive the moderated bodies of the soldiers. It is a thousand pities that the warning voices coming from Russia were not heeded by the western allies.

The treacherous invitations to peace by Germany were not unmasked, and the mass of the Russian soldiers, incited by fanatics and German agents, were deceived. Now they know what is a German peace. The Ukrainian peasant understands how the Germans secure the independence of small nationalities, when German bayonets and chemical vapors are employed to rob him and reinstate all the atrocities of the old régime.

All classes of Russians strongly protest now against the tyranny that again reigns in Russia. To my astonishment some very serious European political men consider Bolshevism as democratic, altho it has abolished freedom of speech, made human life the easy prey of every red guardsman and has made an end of all institutions of self-government.

It is for you, the oldest and most mature

### THE GREAT WAR

*June 27*—British gain east of Nieppe forest. French gain east of Villers-Cotterets forest. Canadian hospital ship, "Llandovery Castle," torpedoed, 70 miles from land; 234 missing.

*June 28*—American troops on Italian front. Rumanian Chamber of Deputies ratify peace treaty.

*June 29*—Italians take Monte di Val Bello, near Asiago, with 800 prisoners. British airplanes bomb stations and airdromes near Metz, Strassburg and Karlsruhe.

*June 30*—American, British and French marines take possession of Russian port of Kola on Arctic. Austria reported opening peace negotiations thru Spain and Switzerland.

*July 1*—France recognizes national aspirations and organization of Czechoslovaks. Grand Duke Michael starts counter revolution in Siberia.

*July 2*—Italians gain in Asiago region and take 2000 prisoners.

*July 3*—A million Americans in France. American troops capture village of Vaux and advance a mile. Italians capture important positions in region of Monte Grappa.

of the democracies of the world, to settle the question whether it is possible to remain a calm spectator of this tragedy. I have crossed thousands of miles of the Arctic Ocean to tell you and America this, which I profoundly know to be the absolute truth.

Mr. Kerensky next went to Paris for a conference with the French socialists and expects soon to come over to this country to appeal for aid for Russia.

### Railroad Strategy of the German Drive

The significance of the recent German drive to the Marne and its effect upon the strategical situation may be seen from the accompanying map. The loss of ground is not serious and the Germans

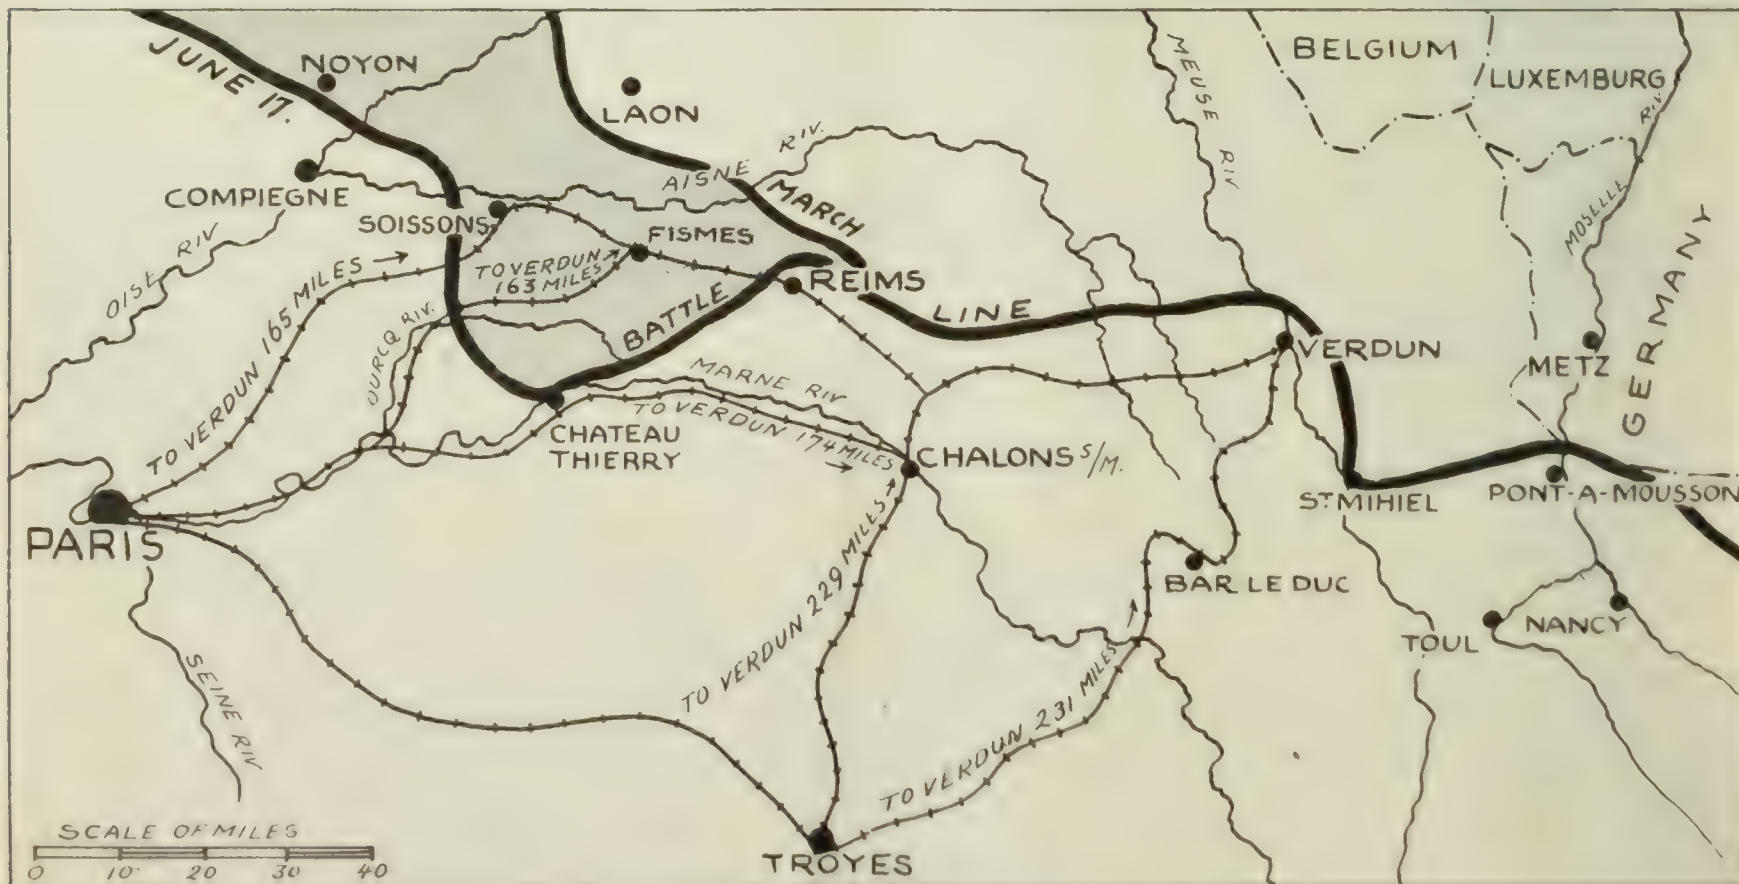

have not been brought practically any nearer to Paris than they were before, but their new salient cuts three of the important lines of communication with the eastern front.

The shortest routes from Paris to Verdun were those that ran thru Reims by way of Soissons or Fismes, 165 miles and 163 miles respectively. Both these lines were cut off by the German advance, which also brought them to Château Thierry. Part of this town lies on the southern side of the Marne, and directly thru it runs the main line from Paris to Chalons-sur-Marne.

Thanks to the work of the American Marines, the Germans have not been able to cross the Marne and cut the railroad on the other side, but since they hold the bluffs on the north side of the river for a distance of thirteen miles, the railroad is under fire and all traffic must be considerably impeded.

This forces the French to use the roundabout route by way of Troyes and Chalons, a distance of 229 miles. The recent German attack on Reims indicates a disposition to extend their operations toward the east. An advance of about five miles in the Champagne region might enable them to cut the railroad between Chalons and Verdun. This would reduce the rail connection of the capital with Verdun to the minor and indirect lines that lead from Troyes thru Bar le Duc.

Obviously this also affects the American sector between St. Mihiel and Pont-a-Mousson as well as Toul and the other French forts on the eastern front. We can therefore understand why the French are holding so stubbornly to the ruined city of Reims and the line stretching eastward from this point.

THE RAILROAD STRATEGY OF THE GERMAN DRIVE

The recent German advance from the Aisne to the Marne has cut the three lines of railroads leading most directly from Paris to Verdun. If the Germans should attack east of Reims a drive of a few miles would cut the line between Chalons and Verdun, forcing all the traffic from the capital to take the roundabout route via Troyes and Bar le Duc.

#### BEYOND THE ALPS LIES AUSTRIA

In this stretch of mountains between the Brenta River and the Piave the Italian army is steadily pushing the enemy back. Important positions were captured last week in the region just beyond Monte Grappa, the highest of the peaks and commanding the Asiago plateau. In the far distance are the Dolomite Alps in Austria

**French and British Attacks** While awaiting the next German offensive, which is thought to be imminent, both the French and the British are improving their positions by local actions on June 28.

The French corrected a German salient between Soissons and Villers-Cotterets, south of the Aisne. Here in a loop of the Laversine ravine the Germans had approached dangerously close to the forest of Compiègne, the chief natural obstacle lying in the way of their advance on Paris. The French attack, following a brief but severe bombardment, carried their lines forward a distance of over a mile on a front of four miles and a half. This pushed the Germans back from the village of Amblény and the forest. Over a thousand prisoners were taken. Two days later the French attacked south of the forest of Villers-Cotterets and advanced 800 yards. This forest was one of the favorite hunting resorts of the French kings from the sixteenth century down and it was here in 1815 that Marshal Grouchy made his last stand against the Prussians in defense of Napoleon.

The situation of the British front was very similar, for the Germans in their drive toward Hazebrouck had come to the very edge of the forest of Nieppe. A division of Saxons and one of Prussians were stationed here among the growing grain and protected only by shell craters linked up with barbed wire fences. A six o'clock attack surprised the Germans at breakfast and the British reached their objective, a brook a mile ahead. The British took over four hundred prisoners as well as two field guns and twenty-two machine guns.

**The Battle of Belleau** On the night of June 23 an American force cleared the enemy from their last positions in Belleau Wood, in the Marne region, and captured prisoners and machine guns. This action was carried out with such speed, skill and complete success as to rank first among the minor offensives thus far undertaken by American troops wholly on their own initiative.

With troops new to the battle line, trained by a military organization which has been the creation of a few hurried months, we are confronting German veterans of three or four years' experience of active warfare, very many of whom had years of careful training before the war began. That we have not as a rule come off second best in these encounters is a heartening

fact, a proof that the raw material of our army and the methods by which it has been fitted for battle equally stand the test of actual fighting.

The quality of our army is now the vital question because its quantity is already assured. The War Department has made public the fact that we are already holding thirty-nine miles of trench line in France; and since the greater part of our army in France, said to be over a million men, is as yet held in reserve, our lines will be very greatly extended in the months to come. The American army is divided into small units scattered at various points along the western front; some in the Marne valley, some east of St. Mihiel and east of Luneville, some across the German frontier in Alsace. Other forces are being shipped directly to Italy from this country. Premier Lloyd George has promised that as soon as British man power has been sufficiently mobilized to fill out to full strength the Allied units, the Americans will no longer be brigaded with the Allies but be enabled to form their own independent divisions, subject only to the supreme command of General Foch over the whole western front. The feeling of increasing strength in numbers, equipment and military experience in the American ranks has already crystallized into a proverb: "Our war will begin in September."

**British Mine Fields** Beginning October, 1914, the British Admiralty has from time to time issued warnings to neutral shipping that certain designated areas of the North Sea have been sown with mines. These danger zones have been extended and changed about, but their present location is shown on the accompanying map. It will be seen that there are three mine areas, one placed so as to barricade the exit from the Kiel Canal and the German ports of Hamburg, Emden, Bremen, Wilhelmshaven and Cuxhaven; one to block Dover Strait and the third to guard the northern entrance to the North Sea. It would, of course, have been simpler and safer to have drawn the prohibited zones completely across all three of the outlets of the North Sea, but this would have interfered with the rights of the neutral nations, Norway, Sweden, Denmark and Holland. Consequently the Skagerrak, leading to the Baltic, has been left nominally open by both parties, altho actually no ship obnoxious to either Germany or England could get thru this passage. A three mile strip is left open along the neutral coasts.

To lay and maintain such extensive mine fields is a very expensive and dangerous undertaking, for of course the enemy is continually trying to sweep them up. The exact location of the mines is of course known only to the British Admiralty and only British pilots can guide vessels thru the tortuous and frequently altered channels.

The Germans began strewing mines in the North Sea early in the war and later followed the example of the British Admiralty in proclaiming specific danger zones. These danger zones have been extended by Germany until they now cover the Atlantic waters off the British and French coasts and as far west as the Azores. But the Germans rely more on submarine patrols than on mine fields and they do not restrict their depredations to the danger zone they have defined.

**BRITISH MINE AREAS IN THE NORTH SEA** This map shows the danger zones as designated by the British Admiralty up to April 26, 1918, and published in the London Times. They are so placed as to blockade Germany without altogether preventing access to the neutral nations of Norway, Sweden, Holland and Denmark.

**Hospital Ship Sunk** The Canadian hospital ship "Llandovery Castle" was torpedoed without warning at 10:30 on the night of June 27. The vessel was plainly marked with red crosses on the side, illumined by electric lights. A huge electric cross was over the bridge and green and white lights were strung along either side of the vessel. The U-boat commander demanded the eight American flight officers who he was

told were on board, but the captain stated that he had none and that in the six months that he had been running between England and Canada he had carried no one except patients, medical staff, crew and Sisters. It has been reported from Germany that some of the American airmen who have been captured carried passports showing that they came over to France originally in the Red Cross or other non-belligerent service on hospital ships. This, in the opinion of the German Government, justifies the treatment of hospital ships as transports.

The "Llandoverly Castle" was a 11,000 ton ship and carried eighty men of the Canadian Medical Corps and fourteen women nurses. Altogether there were 258 persons on board and of these only one boatload of twenty-four has so far reached the land seventy miles away.

#### Austria in Distress

The news of the Austrian defeat in Italy has come upon a population least able to bear it on account of being distracted by racial and labor dissensions and weakened by shortage of food. The weekly bread ration has been cut in two and now amounts to twenty-two ounces. Besides this, legal allowance per week may include one pound of potatoes, one ounce of black bran mash, one ounce of another mill product, an ounce and a half of fat, six and a half ounces of sugar, one egg, seven ounces of meat and a small amount of jam and coffee substitutes. But sometimes even these are lacking, and it is often necessary to wait all night before the butcher shop to obtain the minimum allowance of meat.

Bread riots are reported in Vienna and many other Austrian or Hungarian cities. The Mayor of Vienna and of other cities have defied the Government and appealed directly to General Ludendorff, First Quartermaster General of the German armies, for food. But Ludendorff responded that he could do no more, for during the last three

months he sent all the cereals imported from Rumania, Rumania and Bessarabia, and "notwithstanding the difficulties of our own food situation" shipments of food destined for the western front had been diverted to Austria. It is pointed out in Berlin that while Austria-Hungary has had to feed a population of 52,500,000 on an area of 676,061 square kilometers, Germany has had to feed a population of 67,000,000 on an area of 540,858.

The Vienna Labor Council has passed a resolution declaring that no improvement in food conditions is possible while the war lasts and demanding "the speediest general peace, notwithstanding the great obstacles at present in the way of peace endeavors."

More than 100,000 workmen in the munition works and other factories of Vienna have struck and serious riots have occurred in the streets. The strikers demand that the Government immediately invite the enemy countries to enter into peace negotiations.

It is reported from Berne and Madrid that the Austro-Hungarian Government is trying to open peace negotiations thru Swiss or Spanish channels. Last year, as we now know, Austria made three attempts to come to an agreement with France and England. Bulgaria is also thought to be anxious to bring the war to an end even against the will of Germany, and a Bulgarian commission is said to be in Vienna to confer on such a policy.

Dr. Alexander Wekerle, the Hungarian Premier, in announcing the result of the Italian campaign, asserted that the Austro-Hungarian loss in killed and wounded was 100,000 and the number of prisoners taken by the Italians 12,000.

The Italians, on the other hand, claim to have taken 20,000 prisoners and to have inflicted 250,000 losses. The Premier said that in spite of the losses and withdrawal it could not be called a defeat, for they took 50,000 Italian prisoners.

#### Our Police in Panama

The peaceful invasion of the Canal cities, Panama and Colon, by American troops, under orders from Washington, was an occurrence last week which caused a little flurry in the headlines and which was doubtless exaggerated by the German press into proof that we also regard treaties as scraps of paper. The facts of the matter were, however, that, under the treaty of 1904, the authorities of the United States are to assume police duty in the cities of the Zone whenever it is necessary to maintain order. A pending election was postponed because of certain disturbances, described by one of the officials as "political excitement because of the approaching elections, but this is characteristic of all democracies." President Uriola filed a protest against our action with President Wilson.

"I do not wish," declared President Uriola, "to characterize now as unjustifiable this act of the Government of the United States, but the fact should be considered that my Government, with the forces at its disposal, is able to maintain public order in the whole nation and without doubt in the cities of Panama and Colon."

The treaty of 1904 leaves it to the judgment of this country to determine the state, both actual and probable, of public order.

#### Our Men Overseas

One short letter from the Secretary of War to the President of the United States, made public last week, contains historical information of prime importance and worth filing away:

War Department.

Washington, July 1, 1918.

MY DEAR MR. PRESIDENT—More than 1,000,000 American soldiers have sailed from the ports in this country to participate in the war in France. In reporting this fact to you, I feel that you will be interested in a few data showing the progress of our overseas military effort.

The first ship carrying military personnel sailed May 8, 1917, having on board Base Hospital No. 4, and members of the Reserve Nurses' Corps.

© Clarendon, from Central News

#### READY FOR AN AIR RAID OVER HERE

These are U. S. Marines at one of our coast defense stations where men and guns are waiting for a chance to show Germany our answer to a try at "frightfulness" over here

General Pershing and his staff sailed on May 20, 1917. The embarkation in the months from May, 1917, to and including June, 1918, are as follows:

1917—May, 1718; June, 12,261; July, 12,988; August, 18,323; September, 32,523; October, 38,259; November, 23,016; December, 48,840.

1918—January, 46,776; February, 48,027; March, 83,811; April, 117,212; May, 244,345; June, 276,372; marines, 14,644; aggregating 1,019,115.

The total number of troops returned from abroad, loss at sea, and casualties, is 8165, and of these by reason of the superbly efficient protection which the navy has given our transport system, only 291 have been lost at sea.

The supplies and equipment in France for all troops sent is, by our latest report, adequate, and the output of our war industries in this country is showing marked improvement in practically all lines of necessary equipment and supply.

Respectfully yours,

NEWTON D. BAKER.

**One Hundred Launchings in a Day** The Emergency Fleet Corporation of the United States Shipping Board celebrated the glorious Fourth of July by sending into the water from its various yards approximately one hundred ships, aggregating a tonnage of about 470,000. Fifty-two of the ships are wooden, the others steel; they are of all types, cargo boats, colliers, tankers, refrigerators. From four navy yards on the Atlantic and the Pacific coasts there were also launched fourteen destroyers.

This spectacular day's record was made possible without delaying the launching of a single ship in June; that month's construction beat all previous American records with more than 280,000 tons. But shipbuilders all over the country raced against time to finish ships ahead of schedule for the launching on the Fourth. At the Union Plant of the Bethlehem Steel Corporation a new shipbuilding record was made by the completion of the "Defiance," a 12,000-ton steel boat, in thirty-seven days.

**For a Government Telegraph** That power to control and operate the wire communication systems of the United States during the war will be granted by Congress to the President now seems a strong likelihood. The President's request for this power followed the announcement of S. J. Konenkamp, president of the Commercial Telegraphers' Union, that he had fixed the date for a strike to enforce the decision of the National War Labor Board. While the President made no reference to the pending strike, the Postmaster General, who has long advocated Government control of both telegraphs and telephones, declared:

At this moment the paralysis of a large part of the system of electrical communication is threatened with possible consequences prejudicial to our military preparations and other public activities that might prove serious or disastrous. We are reminded that there is not a nation engaged in the war that intrusts its military or other communications to unofficial agencies. I deem it, therefore, my duty not merely to approve, but to urge the passage of the resolution in order that the President may act, if necessary, to safeguard

Norman Lindsay in The Bulletin, Sydney, Australia

#### GET IN OR GET UNDER

This vigorous Australian argument for conscription suggests that military service now is preferable to the goose-step after German conquest. "Ach, yes!" the Prussian officer is saying, "a little rebellious at first, these Australians who did not believe in military service, but we shall of them make yet good soldiers for der glory of der Faderland"

the interests of the country during the prosecution of the war.

Legislation authorizing this control has been before Congress for many years. The President's request for power took the form of an indorsement of the Aswell resolution, already endorsed by Secretaries Baker and Daniels, as well as by Postmaster General Burleson. The resolution reads:

That the President, if in his discretion it is deemed desirable in order to insure their continuous operation or to guard the secrecy of military and governmental communications, or to prevent communication by spies and other public enemies thereon, or for other military or public reasons, shall have power to take possession and control of any telegraph, telephone, marine cable or radio systems, and operate the same subject to those conditions or law, so far as applicable, which are in force as to steam railroads while under Federal control.

Early indications are that the House will enact this bill with little delay or discussion, but that opposition of considerable force will show itself in the Senate.

**Sounding Out Socialists** The arrest of Eugene V. Debs, long and often candidate for President on the Socialist ticket, under charges of violating the espionage act, is not to be regarded as an attack on socialists or socialism, according to officials of the Department of Justice. Mr. Debs' plight has called forth pledges of aid from socialists thruout the country, and the trial may develop into a *cause celebre*. The political and personal friendships of the accused are many and wide.

On almost the same day, Allan L. Benson, candidate at the last election for the Presidency on the Socialist ticket, resigned from the Socialist party for the reason that the party is now controlled by foreign-born leaders who, according to Mr. Benson, are devoid of Americanism and belong to "an an-

archistic syndicalistic minority." The Socialist press naturally criticizes the resignation and belittles the charge, but the fact remains that Mr. Benson for many years was one of the most popular expounders of socialism in the United States and that his resignation leaves a breach in the party walls.

**Labor's Innings** Is labor unrest growing? An affirmative answer might be gathered from a wide reading of the daily press reports which bring us news of strikes and threatened strikes from New England to the Southwest. Yet it may be that labor unrest is merely finding expression in demands for wages more nearly in accord with living costs. Textile mills in New Hampshire, Rhode Island and Massachusetts, machinists in Connecticut munition plants, street car motormen and conductors in Columbus, Ohio—these are but a few of the many thousands of laboring men and women at deadlock with their employers.

Pro-Germanism does not seem to be back of these strikes. In practically every instance the strikers are patriotic holders of Liberty bonds. From every quarter comes the cry that old wage scales are inadequate to meet rising living costs, coupled with the desire to share in the heavy war profits of the owners of the industries. Fortunately the National War Labor Board, altho its docket is badly crowded, has so far inspired general confidence in its fairness and competence, and the most acute disputes are being placed in its hands. Broad matters of general principle—what the living wage is, whether poor financial conditions in an industry should prevent that industry from paying a living wage—are questions now being determined by the board, and this determination is building a foundation for the industrial relations of the future.

Central News

## L'AVENUE DU PRESIDENT WILSON IN PARIS

The French Government's decision to rename one of the most beautiful avenues of Paris in honor of the President of the United States is a graceful tribute to the ever-growing friendship between the two nations. This photograph of L'Avenue du President Wilson was taken thru an arch of the Eiffel Tower.

President Wilson's personal and political opinion about the length of the working day for Government clerks was emphatically expressed last week when he vetoed an appropriation bill because it carried a rider extending from seven to eight the hours of the Federal clerical workers. "At the outset of the war," declared the President in a statement which should go far to discredit the belief that the "Government clerk" is a shiftless, lazy creature, "I felt it my duty to urge all employers in the United States to see to it that the conditions of labor were in no respect altered unfavorably to the laborers. It has been evident from the first how directly the strain of this war is to bear upon those who do the labor which underlies the whole process of mobilizing the nation, and it seemed to me at the outset as it seems to me now, that it is of the highest importance that the advantages which have been accorded labor before the war began should not be subtracted from or abated."

In Congress Appropriation bills, prohibition and various odds and ends chiefly occupied Congress last week. Failure to enact new supply bills before the end of the fiscal year necessitated the passage of resolutions continuing the old laws till such time as House and Senate can solve their difficulties and come together. The army, the emergency agricultural, and one or two other measures are thus affected.

Debate of the military appropriation bill in the Senate brought out opposition from Administration Senators to the amendment proposing to extend the draft ages up and down so as to enlarge Class 1. The opposition was explained on the ground that the War Department wanted two or three months' time wherein to submit its enlarged military program. The authorization of the \$100,000,000 aircraft cor-

poration was granted, officers were permitted to buy their uniforms and other equipment from the Government, and an adequate system of promotions for the medical corps was effected.

As a specimen of the kind of legislation which Congress from now on will be likely to be passing, a certain bill approved by the Senate last week may be mentioned. This bill gives a monthly allowance of \$100 for twenty years to Lieutenant Frank Barber, a British officer who was blinded last February by an accident at Camp Wheeler, Georgia. Secretary Baker described the bill as "an act of international courtesy and grace."

## Taxes and Incomes

Hearings before the Ways and Means Committee on the new tax bill are nearly at an end, and the actual task of drafting the measure has begun. In all likelihood the principal clash will be on the provisions relating to excess profits. Testifying last week, James A. Emery, representing the important and powerful National Association of Manufacturers, proposed the adoption of the English system, which makes a distinction between pre-war profits and war profits. Mr. Emery's suggestions for fixing excess profits are as follows:

Select five years before the war, preferably 1911 to 1915, and find out what the profits were during that period.

Out of these five years allow the manufacturers themselves to select three years by which the average annual profit shall be fixed.

Add to this figure the average normal increase of capital invested and the profits earned upon it.

Upon the figures thus obtained levy the amount of tax which the Government needs, consistent with the ability of the company to pay the tax.

Even the moving picture business has become interested in the pending revenue legislation, and last week a committee of the Motion Picture War Serv-

ice Association sent a representative to Washington, who urged that a heavier tax be placed on unearned rather than on earned incomes, and argued that no person should be allowed an unearned income of more than \$50,000 a year. High earnings of movie stars, it was reported to the committee, were for a short time only, as the life of a star is only about five years.

Heavy profits made by Profiteers meat packers, flour millers, and others, together with the existence of "trade tendencies" to increase and maintain prices against forces of competition, are described and analyzed by a report made for the War Industries Board, the Food Administration, and the Fuel Administration by the Federal Trade Commission. A summary of the report has been published pending final publication, and has been sent to Congress as an aid in preparing anti-profiteering legislation.

Some of the important items may be briefed as follows:

The survey of the meat-packing situation showed, according to the report, that "five packers, Armour, Swift, Morris, Wilson and Cudahy, and their subsidiary and affiliated companies, have monopolistic control of the meat industry and are reaching out for like domination in other products. Their manipulations of the market embrace every device that is useful to them without regard to law."

"However delicate a definition is framed for 'profiteering,' the commission comments, 'these packers have preyed upon the people unconscionably. They are soon to come under further governmental regulation approved by executive order.'"

While the price of flour has been stabilized by fixing a price for wheat and a maximum margin of profit for flour, the report shows that profits increased from an average of 12 per cent on the investment for the four years ending June 30, 1916, to nearly 38 per cent in the year ending June 30, 1917.

"These profits," it is stated, "are indefensible, considering that an average profit of one mill for six months of the year shows as high as \$2 a barrel."

Investigation in the coal mining industry reveals, in the opinion of the commission, that despite Government price fixing large margins of profit have been made. Ranges in the cost of production in a field having the same maximum prices has caused some operators to make small margins of profit and others large margins, the bulk of the production enjoying the large margin.

In the oil industry large profits are now being made in fuel oil, and gasoline, the industry being one where the law of supply and demand still operates. The operation of this law is held to be in part responsible for the heavy profits, but a portion of the blame is laid to the spreading of false reports regarding supplies.

Steel companies made abnormal profits before the Government fixed a price for the product, and it is shown that some have since made unusual returns. Profits of the United States Steel Corporation are estimated at 24.9 per cent in 1917, as compared with 15.6 per cent in 1916 and 5.2 per cent in 1915.

In practically every one of the other industries covered by the report it is shown unusually heavy profits have been made in the last few years. Abnormal salaries have also been paid to executive officials.

Trade practices contributing in addition to profits to higher prices to consumers are noted, as failure to ship goods on a rising market or refusal to accept goods on a falling market, commercial bribery, and the tendency of manufacturers to maintain a resale price.

# THE WORLD OF SCIENCE

## The Army Ration

If our boys do not show themselves more energetic than their allies "over there" it cannot be laid to lack of energy supplied to them, for Uncle Sam is more liberal than any of the other governments in the matter of grub. The American army ration for the training camps foots up to 4632 or 4809 calories a day, while the British get 3822, the French 3321 and the Italians 2551. The Canadian allowance, 4198, approaches ours in liberality. These rations are increased by some 300 calories when the men go into the trenches.

In the matter of meat the difference between our forces and the others is more striking. The American allowance is 1½ pounds of meat per man per day. The British Government gives out one pound a day, the French ¾ pound and the Italian only ½ pound.

Probably the American army diet is unnecessarily liberal, especially in meat, for Major Murlin reports in *Science* of May 24, 1918, that the average consumption of food in the American training camps amounts to a little less than 4000 calories. But the men supplement this by buying at the exchanges about 500 calories on the average in the form of candy, soft drinks, cakes, pies and ice cream. The meat actually consumed in the camps is only 3/7 pound a day. At this rate the average recruit has put on nine pounds of muscle since beginning drill.

The ordinary dietary of farmers and laborers in this country ranges between 3200 and 3600 calories a day. These are eating as they please and presumably get all they want to eat. Clerks and salesmen consume about 3000 calories; teachers and professional men 200 to 400 calories more.

## The War of Gases

This has from the start been a war of gases, for it is the expansive force of combustion gases that drives the airplane and motor car and propels the projectile from the gun. But the use of gas as a weapon began when the Germans sent over clouds of chlorine into the Canadian trenches at Ypres. This was contrary to The Hague rules, but the Germans did not mind that. Our American representatives at The Hague Conference opposed the attempt to prohibit the use of poison gas and other novel weapons of warfare, arguing that such rules would prove ineffective when it came to actual war, and that gas was not necessarily more cruel than the methods in use. The event has justified the American contention, and all parties are now making use of poison gases on a large scale. They cause great distress, and sometimes frightful agony, but are not more apt to result in death or permanent injury than shrapnel and high explosives. The latest reports from the American front show that 90 per

cent of the soldiers disabled by gas recover within a few hours.

It has been found that gases that irritate the mucous membrane and set up irresistible sneezing, coughing and weeping, are most effective in breaking a defensive line, so they are being used in proportionately greater quantity than the more deadly gases. The first lachrymators or "tear shells" used by the Germans were benzyl bromide and xylol bromide and the like, made by brominating the higher fractions of coal-tar distillate. These were followed by more villainous compounds, phenyl carbylamine, which brings tears to the eyes of the most hardened soldier; diphenyl chlor-arsine, a very poisonous sneezing gas; di-chlor-di-ethyl sulfide, the so-called "mustard gas" that penetrates the best of gas masks and lingers in the vicinity with the persistence of Mary's little lamb; and allyl iso-thiocyanate, that is the quintessence of onion raised to a higher power. One of the most common of the new poison gases is phosgene ( $\text{COCl}_2$ ), but there are many similar compounds in use which the chemist will know and which nobody else will want to know, such as chlor-acetone, chlor-picrin, and tri-chlor-methyl-chlor-formate ( $\text{ClCOO-CCl}_3$ ). Twenty-two different gases have been identified as used by the Germans.

In the attack of June 14 more than 15,000 gas shells were fired into the American lines on the Marne. Mustard and sneezing gases were alternated with shells filled with chlorine and phosphene, so that the soldiers would be forced to take off their masks, and then would be caught by the poisonous gases following.

If the Germans had employed such a bombardment when they first tried gas at Ypres, they would have broken

thru and captured Calais, three years ago. But the British, tho taken by surprise then, sent over to France three million gas masks in four days and so stopped the German drive. It was found that the chlorine first employed by the Germans could easily be absorbed by pads soaked in soda and photographer's hypo (sodium carbonate and thiosulfate). Later when phosgene was introduced an absorber and neutralizer was found in sodium carbonate.

Still better protection against phosgene fumes is afforded by hexamethylene tetramines. Fresh charcoal soaked in alkaline permanganate will stop most of the gases for a short time. Now every soldier and officer carries his gas mask ready to be put on in a few seconds, and even the most violent bombardment does not necessitate the evacuation of the position.

New forms of gas tactics are reported every week. The Germans have just got out a sort of super-snuff, a fine sneezing powder in a glass container which is exploded and scatters its contents widely. The cartridge is three feet long and four inches in diameter. In order to get sufficient concentration of gases at a point seven or eight miles behind the front, the Germans have arranged to set off a dozen or more mortars aimed at the same spot by electricity, so the shells strike together.

The British recently played a clever trick on the enemy by sending over shells filled with a non-poisonous but vile smelling compound, a modern development of the oriental stink-pot. The Germans, finding it harmless, at length left off their masks. Then the British suddenly shifted to poison shells, and two thousand of the Germans were suffocated.

# UNCLE SAM AND THE PACKERS

THE packers STAFF CORRESPONDENCE FROM WASHINGTON

we have always with us. For twenty years at least the Chicago packers have been a legitimate and favorite target for public and private abuse. They have been charged with every conceivable economic crime—monopoly, suppression of competition, cutthroat competition, exploitation of labor, price-boosting, profiteering, and the rest. Just at the present moment there is a lull in the crimination and recrimination. The Federal Government is completing an investigation into packing-house methods, and, thru the medium of the Trade Commission, is about to make public its findings and suggestions for the future.

What are we going to do about the packers?

With what we have done up to date the country is fairly familiar. We have, as has already been said, abused them. We have coöperated with them by inviting their representatives to sit with the Food Administration. We have coöordinated the Government still further with them by forming an inter-departmental regulatory committee, now in operation. Thru the medium of a labor arbitration we pushed forward the packing industry by granting the employees a living wage and permitting them to organize into unions for collective bargaining. If the few outward and visible signs which escape from the discreet officials of the Trade Commission mean anything, we are going still further—we as a Government—into the packing industry.

The Trade Commission has on file and open to the public an immense mass of testimony taken under the questionings of one Francis J. Heney, the famous prosecuting attorney of San Francisco. A casual inspection of this testimony reveals many striking facts and a multitude of constructive suggestions. One suggestion which apparently meets with favor in intelligent circles in Washington is that the Government should strictly limit the packers to ownership, control and management of the producing business, breaking up once and forever the tangle of ownerships of stock yards, banks and railroad terminals which now exist. This suggestion is not, of course, acceptable to the packers, and there may be a fight over it. What it means may be gathered from the following quotation from the hearing:

Mr. Heney—Do you think the ownership of the stock yards by the big packer has a tendency to impede competition?

Mr. Houx (a prominent commission man from Kansas City)—

That is rather a broad question, Mr. Heney, but as an abstract principle, it is wrong because it leads a man into temptation. He may be ever so good a man, but if he is surrounded with enough influence it is mighty hard for him to stand up against that influence, and it ought not to be allowed. The Government should not allow packing houses to control the stock yards, and banks and railroads and terminals and every facility for handling beef in this country; it is absolutely wrong.

Mr. Heney—They start with the loan bank and loan the money to the feeder at a good high rate of interest; they control the terminal railroads over which the feeders go out, and over which the finished cattle will come back; they fix the rates on these; they fix the stock yard's charges for yardage; they furnish the feed that must be given to the animals during the short time they are in the yards, and set it at a high price; they do the weighing themselves, because they control the stock yards that run the scales. So, there is a constant temptation from the time that the thing starts until it is thru with, for the packer to take advantage, and the opportunity for it.

Mr. Houx—It is in absolute conflict with the Lord's Prayer where it says: "Lead me not into temptation," and there is no man can stand the influence that is put around him.

What might be called an unofficial official opinion from a member of the present Administration came recently from William Kent, a member of the tariff commission. Mr. Kent, formerly Congressman from a California district, is a wealthy man who has investments in practically every kind of enterprise in the United States and Mexico. Yet he is one whose opinions are never determined by his financial status. He opposed intervention in Mexico, for example, tho he owned oil fields there; a large landowner and profitor from land, he is a single taxer. I do not know whether he is in the packing business, but he is in the stock-raising business and is familiar with the situation.

"If compelled to prescribe for the packers," says Mr. Kent, "the symptoms would indicate that it would be well to lock some of them up for the sake of example and parole others on good behavior, commandeering their services for the proper and legitimate management of the business in which they have shown enterprise, ability and cussedness worthy of wonder and admiration."

More concretely, however, Mr. Kent's program calls for action of a substantial and constructive nature. He proposes—and I repeat that these proposals are weighty because of their author's political relations with the powers that be in Washington—as follows:

1. The Government should acquire the stock yards as part of the railroad equipment of the United States.

2. The Government should assume control of the refrigerator cars, under the Railroad Administration.

3. The law against discriminatory practices in the wholesale and retail meat trade should be rigidly enforced.

Complete Government assumption and operation of the packing business Mr. Kent does not see "at the present time." It is "an impossible absurdity," he declares.

"The packing business, thru more than fifty years of steady development, has acquired a recognized efficiency in the handling and distribution of live stock and meat products. It is a skilled and extremely technical business and one that cannot be handled except by experts without destroying the producers' market and the efficiency of manufacture and distribution of product. Moreover, if taken over by the Government, we should be forced to pay for equipment based on bad economics and duplication of plant, and as time went on and this unnatural artificial monopoly were more and more dispersed by the establishment of adequate local agencies, the loss of shrinkage would

fall upon the public instead of upon those who have created the monster. Nothing could be more difficult to handle from the labor standpoint than the situation that would follow the Government's assumption of direct operation of the business with the immense force of disorganized, incoherent, unskilled people now engaged in the packing industries. Recent arbitration has gone far to correct abuses, but it would seem an extremely dangerous time for the Government to become involved in the questions that would arise in this essential industry.

"After the packing [Continued on page 22]

The Great Union Stock Yards at Chicago are the largest in the world

# THE CASE FOR THE BOLSHEVIKI

BY JOHN REED

**A**N undated despatch from Moscow published in the New York Times of May 23 reports a speech made by Lenine before the Central Executive Committee of the All-Russian Soviets, evidently about the 10th of May. Among other things Lenine said:

"We are now the *abarontsi*," (*abarontsi*—defenders, once the appellation of the war-to-a-finish party) "and since November 7 we have won the right to defend our fatherland. We shall defend, not a 'Great Power,' for there is nothing of Russia left but Great Russia; not national interests, because for us the interests of the world's socialism stand higher than national interests."

In spite of unintelligent assertion to the contrary, the Soviet leaders and the Russian masses accepted the German peace terms at Brest purely as a matter of necessity. In ratifying the treaty the All-Russian Soviets referred to it as "this shameful peace forced upon us by German imperialists." And ever since peace was concluded the Russians have regarded it as an opportunity for strengthening the internal regime, and organizing for a resumption of the struggle; not that of the Allies against the Central Powers, but of "the world's socialism," championed by Soviet Russia, against the world's predatory capitalism, whose arch-exponent is Imperial Germany.

Nobody realizes the danger of Imperial Germany better than the Soviet leaders. Instead of being the wild-haired ignoramus they are popularly portrayed, Lenine, Trotzky, Tchicherin and other Bolsheviks and Left Socialist Revolutionaries are very thoro students of international relations, the tariff, colonial policy, and so forth. All of them realize very clearly that the progress of socialism under a world-wide Prussian hegemony would be infinitely retarded.

The Bolsheviks did not wait until this minute to make war against Germany. When the first revolution broke out in March, 1917, and the Russian armies in the West remained immobile for four months, the revolutionists immediately set about fraternizing with their German and Austrian neighbors. Of the effects of this first fraternization I have had hundreds of proofs. The German high command was not prepared for it; whole regiments, whole divisions were permeated with propaganda. It has never been so well done since that time.

Upon this spontaneous soldiers' peace broke suddenly the Galician offensive

Mr. Reed has recently returned from Russia, where he took an active part in the Bolshevik campaign of international revolutionary propaganda organized shortly after the Russian revolution. His viewpoint is in interesting contrast to that presented by Edward A. Ross, professor of sociology at the University of Wisconsin, in his article published recently in *The Independent*, "How the Bolsheviks Got on Top." While *The Independent* is by no means in entire accord with the Socialist program Mr. Reed advocates, we believe always in giving our readers a chance to choose between conflicting views on important questions of the day. Mr. Reed presents authoritatively the case for the Bolsheviks.

© Underwood & Underwood

The Red Guard of the Bolsheviks before the Petrograd headquarters

of July, urged by Kerensky. Nothing could have been more welcome to the German Staff; the officers were able to say to their troops, "You see, we were right. You believed what the Russians told you. And then, when they got you off your guard, they turned around and stabbed you in the back!" I have seen a despairing letter written by the German revolutionist, Rosa Luxemburg to a Russian Socialist, in which she said, "So you have broken the peace! . . . When our troops were so disorganized that their own officers could not force them to advance; when the revolutionary spirit was spreading thruout Germany . . . You Russians fell upon the German troops, and now they won't believe you any more. . . ."

The reason for the failure of the Galician offensive was the refusal of the majority of the Russian troops to support the policy of foreign conquest, as they considered it, embarked upon by Kerensky and his army.

All thru the autumn the Bolshevik papers and the Bolshevik speakers, with all their bitter criticism of the Allies, their ceaseless reiteration that neither of the belligerent groups was fighting for democratic peace-terms emphasized in their own way the sins of the German Imperial Government.

"The German Kaiser," said *Rabotchi Poot*, the Bolshevik organ, "covered with the blood of his millions of victims, is only waiting for an opportunity to push his armies against Petrograd."

But it argued at the same time that the Russian bourgeoisie was his ally, and that the Allied bourgeoisie was not unsympathetic. . . .

The November revolution was the signal, coincidentally with the offering of peace terms to all the belligerents for a mighty campaign of propaganda launched against the German Government. Order was given by Krilenko, the Bolshevik commander-in-chief of the armies, for all troops to begin fraternizing at once; and this was obeyed with such zest that the German General Hoffmann protested almost daily during all the time of the Brest negotiations.

At the same time there was organized, as a department of the Ministry of Foreign Affairs, the Bureau of International Revolutionary Propaganda, of which Boris Reinstein, an American, was Commissar, and in which I had the privilege of working.

Those concerned with spreading revolutionary propaganda in all countries, the immediate task of the bureau was the corrupting of the German people. In connection with the

Press Bureau we published daily papers in German (*Die Fackel*, afterward *Volkerfriede*), in Hungarian (*Nemzet-szocialista*), in Rumanian (*Inainte*), in Bohemian and in Serbo-Croatian. These were printed in editions of 500,000 and shipped to the front to be smuggled into the enemy trenches. Besides this there were hundreds of proclamations, "To Our German Brothers!" translations of the Soviet decrees, of pamphlets by Lenine, etc.

Almost all the deserters passed thru our office. Often they came with demands for literature, or even speakers, to take back and smuggle into the German lines. Once we received a delegation of German soldiers from the island of Oesel, who wanted propaganda material for their comrades. To listen to all these men one would think that the German eastern line, in spite of the terrible discipline in which it was kept, was slowly disintegrating. One of Trotzky's reasons for so desperately prolonging the Brest negotiations was to give this process time to work.

As it was, the German strikes, when they came, took the form of Soviets of Workers' Deputies; and what is not generally known, the German advance into Russia after Brest was not performed by the regular troops on the Russian front, but by a volunteer army made up of men chosen carefully from the western front. From all I have learned, I am [Continued on page 72]

THE rout of the Austrian armies on the Piave has once more shown the importance of Italy and the Italian front in the defense of the great common cause and in the preparation of its triumph. It has once more shown the great gallantry of the Italian soldiers which had previously been strongly manifested, though not at that time fully appreciated by the world, during two and half years of victorious drives against Austria, and also, and it is well to affirm it loudly, during the sad events on the Italian front last fall.

There is a tendency, particularly in the press, to exalt the actual success of the Italian arms, which by itself is really magnificent, not so much for itself as in comparison to the moral depression and to the deficiency of sentiment attributed to the Italian Army last fall! I want, however, to assert that such a way of celebrating the valor and the fortune of today is a real injustice to the valorous soldiers of yesterday who, to a great extent, are the same valorous soldiers of today, and to those who last fall gave consciously, bravely and generously their lives for their country. The fact that military reasons are the main explanation of our painful withdrawal is not sufficiently taken into consideration in judging our retreat and it is a real calumny to charge it only to the moral condition of the Italian Army, representing it as a victim and a proselyte of German propaganda. I do not deny that such a propaganda may have exercised its fatal and dangerous influence on some of the weakest brains and hearts: but weak brains and hearts exist everywhere and not only by them should an army be judged. In an article I wrote last December, published in the January issue of the *Army and Navy Register*, I pointed out that the withdrawal of an army in good order in front of the immediate pressure of the enemy is always a very difficult and doubtful military operation. It is, I wrote then, a real miracle of energy and discipline if accomplished under the immediate pressure of forces five times numerically superior, intoxicated by a great and immediate success, thru plains quite flat and richly cultivated, and over rivers on whose bridges it is necessary to push the retiring troops thru throngs of vehicles and animals and the flood of refugees fleeing before the invaders. Such a miracle not only was accomplished at that time by the Italian Army, but, covered by heroic rear detachments, that army made an immediate counter-attack, stopping the enemy on the River Piave before the loyal and gallant Allies, French and British, could arrive to help. Is it right to stamp the mark of demoralization or unfaithfulness on troops who have accomplished such a double miracle?

I do not know yet exactly what really was the action of the few troops of the second army who caused the Caporetto breach; but I positively know that the very same second army, which has given to the supreme command the valorous General Badoglio, had a recent, magnificent past of discipline, valor,

*The Italian front is perhaps the shortest road to victory, for by beating Austria, Ital*

glory and victories. I know that the greatest part of this and all the other armies withdrew only to obey orders, because, after the breaking thru of the front at Caporetto, it was absolutely impossible to maintain the previous positions. This is a fact which places once more in its real light how just and sacred is the Italian cause in this great war, as the prevailing cause of the retreat of almost the whole bulk of a brave and loyal army was the shape of the border as it had been imposed upon us by Austria in 1866, leaving in Austria's hands our strongest positions and part of our Italian people, exposing, by its reaching the very heart of Italy, the Italian Army to a rear or flanking attack, wherever it might be broken. And it was only because of the immediate danger of having the communications of our armies cut in the rear, that, by order of General Cadorna our armies, not corrupted, neither demoralized nor beaten, withdrew to the present lines. It should not be forgotten either that Italy was fighting at that time, alone, on a front longer than that running from Switzerland to the North Sea, and that the two splendid offensives of the previous summer had exhausted her reserve ammunitions; that the rear lines, prudently prepared for an eventual defense, were absolutely stripped of

artillery, since our army, always very scarce of such arms, had been obliged to bring to the support of her first lines the totality of her guns.

It ought to be remembered also that discipline and perservance have always inspired and are still inspiring the Italian soldiers and that this is due essentially to the ideals of the whole nation, to the importance of her plan, vivified by right, duty and will, of restoring to their mother country the Italian provinces suffering under foreign yoke—a plan that harmonizes well with the high common ideal: the triumph of Liberty, Justice and Right. And it is with a clear vision of her rights and duties and with the exact conscious realization of the importance of her action and of her front, that Italy has fought, is fighting and will fight until final victory will be reached. Italy will not lay down her arms till she achieves the triumph of the great common cause, the triumph which will result also in her own cause's triumph, giving back the children to their mother.

About the importance of Italy's action and front I have had several times occasion to write. Without any exaggeration or mistaken "chauvinism" I have asserted, and many prominent men in all the Allied nations have actually recognized this fact, that already three

ATTACHE

ld deprive Germany of her principal accomplice and cut her off from the minor ones

times—by the declaration of her neutrality—by entering the war at the right moment—by stopping the Hun hordes on the Piave—Italy, previous to the present actual success, had saved her cause and with it the fate of all the Entente nations. It is not too much to affirm once more the great importance of our front, from which starts, perhaps, the shortest and safest road to victory.

I do not intend to state that a decisive victory cannot be reached on the French-Belgian front: the great means that the Allies will have at their disposal in a very near future, particularly on account of this great country, America, their powerful strategic and economic reserve, the gallantry of the soldiers of all the Allied Nations, Italy included, who are on that front, are certainly great elements from which absolute faith in victory can be drawn; but an impartial examination of concrete and fundamental elements emphasizes the importance of that part of the front entrusted to the Italians, between Switzerland and the Adriatic Sea.

From a defensive standpoint, breaking thru that part of the common front by the Austrian Army should mean (*quod Deus avertat*) the complete elimination for the Allies of the powerful Italian Army, including 4,000,000 sol-

diers, and the availability for Germany of the entire Austrian Army, about 5,000,000 strong; this would mean not only the possibility of Germany's reinforcing her front in France, but an eventuality which would be far more dangerous for the Entente, that this Austrian Army could menace the heart of France and the rear of the western front thru the Po Valley and the Maritime Alps.

From an offensive standpoint, it should be considered that the distance between the western front and Berlin is almost twice as much as the distance between the Italian front and Vienna: that between the western front and Berlin there are numerous lines of resistance, prepared in years for defense by Germany, and that great rivers, especially the Rhine, obstacles not easily surpassed, run perpendicular to the direction which the Allies should follow: that, if between the Italian front and Vienna there are very strong positions, the Italian Army has shown that such positions are not impregnable; in fact Austria was obliged to ask help and assistance from her most powerful ally, Germany, only because Italy had almost reached the last lines of Austria's defenses, and assistance was given by Germany only because she realized the danger from the south: that across

the Rhine there is still a homogeneous and compact population, united behind their God, the Kaiser, while on the other side of the Isonzo there are populations of different nationalities, raging under the Hapsburg yoke, who would cheer the Allies as liberators: that, by beating Austria, we would deprive Germany of her principal accomplice and support, and cut off her direct communications with her minor accomplices, Bulgaria and Turkey, thus enabling us eventually to attack Germany from the south. And it should also be borne in mind that if an energetic and common action of the Allies would result in the exclusive control of the Adriatic Sea, the operations of their armies would be greatly eased by the efficient assistance of the Allied navies on the Oriental coasts of that sea which Nature has made and history and justice proclaim to be Italian.

After the dual attempt to break thru the common front, by the Germans on the north and by the Austrians on the south, has been definitely checked, the competent authorities must decide whether the powerful and constant counter-blow which will bring victory shall be given rather on the German than on the Austrian front. My purpose is here to affirm not only the great importance of Italy in the common war, but also the great importance of the Italian front as a promise of definite success. If I have said and repeated that the front running from Switzerland to the Adriatic Sea is a part of the common front, it is because I know that this commonness of front, means, and ideals makes Italy glad, proud and confident. I do not speak for encouragement, as Italy—Army and Nation—has always shown the greatest courage, even during the saddest moment of the war, and certainly does not need any encouragement, but precisely for the purpose of proclaiming to the world and to the enemy such complete commonness, such unity in all camps, that Italy wishes to see on her front the flags of her allies, and has sent her own on the front, but also in France, in Macedonia, Italy is fighting, for the common cause not only on her part of the common front but also in France, in Macedonia, in Palestine, in Albania, in Erythrea, in Lybia; and, while she is not asking big Ally contingents for her front, at least unless a great collective action is decided against Austria or special need occur, she asks only that the principle of such unity be affirmed. The few French and English divisions which have gloriously shared with the Italian troops in the mountainous part of the front the laurels of victory, have affirmed by their presence that France and Great Britain consider vitally included in the common cause Italy's own sacred cause; and America, who is going to send her boys to our front, will show not only to the people of Italy but also to our allies and to our enemies, that in the same way as the redemption of all the French provinces is for her an essential part of the great common cause, so also is indissolubly bound to this the redemption of all the Italian provinces.

# WHEN THE SIRENS SOUND

BY DAVID CARB

THAT night I walked in the garden of the Louvre, in the mist which precedes the moon as a fringe of boys preceding a parade, and stopped before the triumphal arch of pink marble surmounted by bronze horses four abreast, awed by its remoteness from the earth on which it rested and from the sky toward which it towered. I stood until the mist fled before an orange moon.

"It is the loveliest thing in the world," I said to a man in horizon blue leaning on a stick.

He did not answer.

I walked round the arch and gazed at its other side. The man approached me.

"Yes," he said, "I love it best of all in Paris"—and then, half shyly—"I am not French—I am Slav: a Czech from Hungary. That is my country; but one cannot fight to destroy Paris. It is too lovely."

About ten o'clock the alerte sounded, cars whistling thru the streets as a wind whistles thru a forest. I ran out into the Place de la Concorde. People were scurrying into the Metro, into the great hotels of the Rue de Rivoli. Jolting taxis squealed across the Place.

The dim city grew black. One could hear the pulsation of the Boche motors and the even purr of the defenders'. One thought the lights of the French avions were stars till suddenly they would speed across the heavens, their white light burning to red. It would be like

this in the last night of the world—stars, gone mad, racing and twisting across the heavens after the world is dead.

A Boche released a flare; the vast red light illumined the scene and dwarfed it. Then a tremendous detonation. They had reached Paris. Bomb after bomb after bomb, and as each one distorted the air and clove the earth the few people in the Place gasped—not with fear, but with the horror that comes from the destruction by hatred of things that were created in the sheer love of beauty.

One dropped to the north of us—a dozen to the east. French avions were signaling from the air; shrapnel was bursting and cracking. A man standing behind me, a Parisian—rather stout, well tailored, just beyond middle age—he whose home was being invaded, whose life was being imperiled, being a Latin, he murmured spontaneously, "How beautiful!"

Out of the mass of falling flares and flying lights one emerged. It was descending slowly, carefully. It circled the Place, sweeping it with a searchlight, once, twice, three times. The motor was jerking. The pilot was seeking a safe place to land. Each time he circled the Place he came nearer to the earth, so slowly, so surely, that it seemed he was selecting his landing. And then, suddenly, unexpectedly, he

crashed into a bronze lamp post.

A crowd sprang from nowhere, a chattering, foolish crowd. Some ran for pieces of the shattered plane; some rejoiced because they thought it was a Boche, altho the French rosettes were plainly visible. A dozen cochers scampered to the broken tank, and, using their high silk hats for pails, salvaged gasoline, ran to pour it into the tanks of their cars, and then returned for more. They formed an oval, going and coming, filling and emptying their shiny silk hats, practising the frugality of their race at the moment of its greatest travail.

The aviator tottered from his seat—a towering, beleathered monster. He staggered a few steps, and then, in the heart of the city which is the heart of his country, on the very spot where his fathers demonstrated to humanity that freedom is possible, in the seat of liberty's finest expression, of civilization's most delicate bloom, he who had ridden the air full-panoplied to defend his people and his sense of values, lay down on the cold pavement and stared with unseeing eyes at the anguish of the heavens.

The cochers were still filling their tanks from the broken tank of the aeroplane. One of them held his palm over the leak, like the little boy of fable who saved Flanders from the seas by holding closed the hole in the dyke. Then the sirens blew, and the raid was over, and Paris went to bed.

## A DESERTED CHURCH

BY ALTER BRODY

It has stood that way for years,  
Awesomely empty—

A flat-roofed lumbering structure in the shape of a  
half cross,

Jutting out of the block at the corner of two busy  
avenues;

The long head of the cross stretching towards the street  
With a sign on the door telling passers-by it is for sale;

The two arms receding awkwardly into the block.

Weed-covered grounds,

One boasting of a tree—

Flank the long head of the cross

On either side.

Windows,

Tall, narrow slits

With broken panes and curved tops,

Stare gravely into the ground like owls—

The building stands there like a tomb

Deserted of its God.

I pass it sometimes on my way to the library,

At night

When gray clouds sail over its flat roof like shrouded  
souls,

And the yellow moon shines down from among the  
clouds,

On its bare, brown walls,

Thru its tall, dilapidated windows,

On the gaunt spare-branched trees.

Then I am almost afraid of it—

I am afraid of the God that is haunting His old  
home. . . .

If I were bold enough to climb over that fence

And steal up close to one of those windows,

And look thru its broken panes—

I think I would see Him sweeping up and down the  
chancel,

Seeking vainly for His old worshippers,

Listening vainly for the blessed sound of the Mass,

Forever hushed—

Yes,

God's ghost is haunting this gloomy church—

I am afraid of it!

Soon,

Tn enterprizing Jew will buy up the property,

And turn it into a moving-picture house—

(Jews are not afraid of God because they created Him).

"The Vitagraph Palace" or "The Art Motion Pictures"

or "The Lee Avenue Theater" or some other

name,

Will glare in electric letters over the door;

Signs and posters all around the building will tell the  
public what is playing.

At night,

Sweethearts from the cosmopolitan neighborhood will  
sit together in the aisles,

Playing secretly with each others' hands in the dark,

Flirting together in a dozen different languages,

While the hero and heroine make love to each other on  
the screen,

Where once the altar stood.

Gayety and pleasure shall crowd into every nook of  
the church,

And God's ghost shall be driven out.

*This soldier in one of the big lounging rooms is giving himself a time with Caruso or maybe Tetrazzini. Contrary to the popular superstition men don't just naturally revert to jazz when they put on khaki; this club makes a point of meeting their varied musical tastes. The big map that covers half the wall of the room is a thorough-going guide to all the sights of New York, with complete information as to how to get to them*

### A CHANCE TO TAKE IT EASY

*Neither officers with orders nor hostesses with good intentions can swerve the men here from enjoying themselves in their own way. Food—mighty good food, too—is served at cost, plenty of stuff to read and big, lazy chairs and smokes are always handy. There are invitations forthcoming, too, to such specialized forms of entertainment as French lessons or dances, but the club's main idea is to provide a comfortable hotel*

The progress of storms across the Atlantic is indicated by the three lines, A, B and C, each of which marks the course of a typical storm center recorded by the United States Weather Bureau. There are hundreds of such storms every year. The numerals 1, 2, 3, etc., show the progress of the storms from day to day. The rings of arrows described about the storm tracks where they reach the European coast show the resulting effect upon the wind for hundreds of miles around. It will be noticed that the effect is to produce prevailing winds that are favorable to the Allies in the use of gas, for they are at right angles to the general direction of the battle line

## THE WEATHER FIGHTS FOR US

**W**E have yet to hear it said that the weather will win the war. Food—more particularly the pig and the potato—will do it, we are told, and from time to time there is mention of the American Army and Navy and Victory Ships and numerous other forged weapons, the value of which is not to be denied. All these things will undoubtedly figure largely in the final result, but no list of the resources of America and her allies would be complete without due reference to the weather.

The weather is on the side of the Allies. This may sound like romancing, but it is only another way of stating a scientific fact that is just beginning to acquire military importance. It is not merely weather in general—of which it is safe to assume that Germany still has a normal supply—but a peculiarly convenient and useful brand of weather, made in the U. S. A. and especially designed to make it warmer, if not fair and warmer, for the enemy when the proper time arrives. The Government has taken this fact into account and has in a sense commandeered the weather, just as if it were one of the essential industries, for the duration of the war.

It may be recalled that some time ago General Pershing issued a call for 1200 American meteorologists to serve with our army in France. A call for 1200 men is not particularly impressive when men are being called by the hundreds of thousands; but a call for 1200 meteorologists was a mighty big order even in the United States where weather observation is conducted on such a large scale and has become more of an

BY FOSTER WARE

everyday necessity than in other countries. There were not, in short, 1200 qualified meteorologists in the entire United States, but some of the 1200 have been supplied by stripping our Weather Bureau observatories of every observer who could be spared, and the remainder have been drafted from colleges and universities and are being trained in Government observatories. Among those lost to the Weather Bureau in this way—and by no means the least—was Major Edward H. Bowie, a man who had few if any equals as a weather forecaster. Serving under him in the Signal Corps is a staff of meteorologists the like of which has probably never before been assembled, even tho it is still short of the desired 1200.

Just what all these meteorologists are needed for may be something of a mystery to the layman. For the moment it is sufficient to state that they are not in France for their health.

Something of the same sort is being organized in the British army. Recently it was announced in London that Sir Napier Shaw, president of the International Meteorological Committee, and since 1905 director of the British Meteorological Office in London, had been appointed scientific adviser to the Government for the period of the war and that hereafter the British army would have the services of an official weather forecaster. "Battles," says the announcement, "may be won or lost owing to unforeseen weather conditions, and experts will be appointed to make daily reports of probable changes in weather."

The importance of such weather forecasts will be readily understood. Not

alone in battle but in the everyday life of an army, it is desirable to know what kind of weather to expect. The movement of troops, the shifting of guns and the planning of aerial observation and bombing expeditions all depend very largely for their success upon the weather. Instances in which an offensive has been brought to a full stop because of heavy rains and mud are too numerous to mention. And how often we hear of good gunnery being rendered difficult because of "low visibility." That experts should be called in to determine as nearly as science can, the atmospheric and climatic conditions likely to obtain at a given time seems no more than ordinary precaution. One of the things which counted heavily for success in the British naval raid upon Zeebrugge was the screen of "artificial fog," used on that occasion for the first time. As the raiders neared the mole, smaller vessels were sent forward to project a fog screen and thus hide the approach of the "Vindictive" and her dummy consorts. The feat was successful, thanks to the breeze which held true and wafted the "fog" landward. Had the wind shifted or had it not been in the right direction to start with, there would have been another story to tell. That, of course, was a naval operation and we are more accustomed to take stock of the weather when the sea is concerned. The same necessity holds true of warfare on land—especially the scientific warfare of today.

But it is not the ordinary run of weather observation and forecast that is to play such an important part in the future operations of the Allied forces in France. The American habit

of doing things on a big scale extends even to the matter of weather forecasting. The American meteorologist has had the advantage of an entire continent in which to take observations, whereas his colleagues in England and France have of necessity confined their attention to the infinitely smaller areas of their own particular countries. Without attempting to reflect in the slightest upon the abilities of the European meteorologist, it was almost bound to happen that the science of weather observation should develop in this country to a higher state of usefulness than anywhere else in the world.

The work of our Government Weather Bureau with its morning and evening forecasts of conditions in every part of the country has become so much a part of our everyday life that few of us give the matter more than a passing thought. Accordingly not much attention was paid to a recent announcement from Washington that detailed reports of weather conditions on this side of the Atlantic are now being cabled daily to American army headquarters in France. In other words, every twenty-four hours our commanders abroad are informed of just what are the prevailing weather conditions in the United States. There is more than a sentimental interest in such information. This is where Pershing's 1200 meteorologists come in.

Back in the middle of the last century an American, Dr. Daniel Draper, set up an observatory in Central Park, New York City, and began taking measurements of the wind and the temperature and the rainfall and other things which ordinary people were satisfied to sit around and complain about. Dr. Draper was looked upon as a sort of harmless fanatic. His observations were of little interest to New Yorkers and his records meant even less. But Dr. Draper himself was very much interested. From time to time he issued reports. Along in 1873 he put out a re-

port in which he expressed the conviction that weather conditions which we experience in this country tend to move eastward across the Atlantic and eventually find their way to Europe. He arrived at this conclusion from his study of storms in and about New York. He kept tab on the logs of ships arriving in New York and when a storm put out to sea he was able in this way to trace its progress. His records showed that out of eighty-six storms, only three had failed to follow the beaten path to Europe.

Only a few scientists and shipping men took notice of Dr. Draper's discovery. It was not until many years later that its full importance was realized. Since the establishment of the Weather Bureau and the invention of the wireless it has been possible to follow up the records kept by Dr. Draper and it is now established beyond a doubt that Dr. Draper's storm theory was right. Go into the office of the New York Weather Bureau today and you may have for the asking a document known as a Pilot Chart of the North Atlantic Ocean, prepared from data furnished by the Hydrographic Office of the Navy Department and by the Weather Bureau of the Department of Agriculture. These charts are issued for every month in the year and are distributed to ship masters touching at our ports. They have many uses but by no means the least is the record which they preserve of the more important storms which occurred in a given month during the past fifteen or twenty years. Each chart records anywhere from one to two dozen storms, their paths indicated in red lines stretching from west to east across the Atlantic. A curious thing is that there is very little variation in the general course which these storm centers take from month to month and season to season. After leaving our coast they strike out in a northeasterly direction, veering a bit more to the north in winter, until they bring up somewhere on the other side. The charts show the location of the center of the storm from day to day, so that it is possible to tell just how long it took a given storm to cross the ocean. In most cases the trip is made in five or six days.

Now as to the military value of this information. It is easy to see its value to shipping now more than ever before, but of what importance is it, say, to General Pershing, to know that last Monday a violent wind and rain storm was reported off Cape Hatteras and that by Tuesday it had moved to a point so many miles south of the Gulf of St. Lawrence and that on Wednesday it was so many miles due east of Cape Race, Newfoundland? Again it is necessary to consult the meteorologist.

These storm centers so painstakingly tracked across the Atlantic are of interest not merely as storms but because every storm center is a weather breeder. Given a map with a line indicating the itinerary of a good sized storm center, and your expert meteorologist is in a position to tell with reasonable accuracy what sort of weather you may expect to find within a radius of 500 to 800 miles or more of that center. This

is a principle that is being applied every day in the making of forecasts here in the United States and it holds true also on the other side of the Atlantic. Let one of these made-in-America storms cross the Atlantic and bring up on the south coast of England or somewhere in Ireland—as they not infrequently do—and its influence will be reflected in the weather conditions prevailing along the battle front in France.

The reason for this becomes clear when it is remembered that a storm center is what the meteorologists call a "low area," that is, a sort of atmospheric void into which the winds from miles around are rushing. It so happens—and doubtless the meteorologists have discovered a good reason for this, too—that the inrush of the winds is accomplished in a perfectly orderly manner. The air currents stirred up by a storm center move in a great circle about that center and in a direction that is best described as counter-clockwise.

Even this may seem to have but slight bearing upon operations on the western battlefield, but you may be sure that our meteorologists in France are not overlooking it. A glance at the war map will show that the present battle line extending from the Channel to the Swiss border runs in the general direction of northwest to southeast. Now let us take an imaginary storm center of American manufacture and move it across the Atlantic to a point in the south coast of England. Within a comparatively few hours after its arrival, the presence of the storm center will be felt thruout the battle area of France. The direction of the wind at the front will be determined by it, and if you will draw rings of arrows running counter-clockwise around the storm center you will notice that the arrows, when they cross the battle line in France, will be headed in a general northeasterly direction. That is, a southwest breeze. [Continued on page 71]

# THE NEW BOOKS

## More Poems by Swinburne

THIS posthumous collection, ranging over Swinburne's whole career, includes, of course, much work that is below the poet's best. "Pretty well every mode of Swinburne's muse, every string of his lyre, is represented in this volume, with the exception of the passionate eroticism of 'Poems and Ballads,'" says Richard Le Gallienne in his criticism, "but, represented, one is obliged to say, with nothing of the magic that fascinates and carries us away in the great unforgettable examples of the master's art. The swaying, sonorous meters are here, the gorgeous vesture, the familiar reiterated imagery, the familiar themes; but, as too often in volumes published in the poet's lifetime, it is a case of *vox et praeterea nihil*, melodious sound and fury signifying next to nothing."

Each reader no doubt will choose what seems to him the exceptions to this verdict. "Evening by the Sea" is a consistent picture:

It was between the night and day.  
The trees looked weary—one by one  
Against the west they seemed to sway,  
And yet were steady. The sad sun  
In a sick doubt of color lay  
Across the water's belt of dun.  
On the weak wind scarce flakes of foam  
There floated, hardly borne at all  
From the rent edge of water—some  
Between slack gusts the wind let fall,  
The white brine could not overcome  
That pale grass on the southern wall.  
That evening one could always hear  
The sharp hiss of the shingle, rent  
As each wave settled heavier.  
The same rough way. This noise was blent  
With many sounds that hurt the air  
As the salt sea-wind came and went.  
The wind wailed once and was not. Then  
The white sea touching its salt edge  
Dropt in a slow sigh: again  
The ripples deepened to the ledge,  
Across the beach from marsh and fen  
Came a faint smell of rotten sedge.  
Like a hurt thing that will not die  
The sea lay moaning; waifs of weed  
Strove thro' the water painfully  
Or lay flat, like drenched hair indeed.  
Rolled over with the pebbles, nigh  
Low places where the rock-fish feed.

*Posthumous Poems of Algernon Charles Swinburne*, edited by Edmund Gosse, C. B., and Thomas James Wise. John Lane Company. \$1.50.

## The Fourth Year

WELLS'S "Mr. Britling Sees It Through" taught many of us to think the war thru even if, for the present, we cannot see it thru. Since its publication, Mr. Wells has been writing much about the war. He represents better than any one else, perhaps, the reactions to the war of the keen-thinking, broad-visioned English publicist. Neither soldier, diplomat nor man of public affairs, he is swayed by none of the complex and tangled expedencies that influence these others. His function is to turn upon his subject the searching light of truth, directed by a keen and active mind. He appeals to others like himself and to all who are striving to see the truth as he is trying to see it.

Perhaps the most noteworthy thing in his new book, from the point of view of the American reader, is his acceptance of President Wilson as "the man who is more than any other man the leader of English political thought thruout the world." Over here we are now so absorbed in getting our war machine in running order that we sometimes fail to remember the larger significance of our participation

in the war. We sometimes forget that we went into this war, as Mr. Wells says, simply for an idea; and we sometimes forget, also, who it was that pointed out this idea and is keeping it so clearly defined that the rest of the world "sees it clearly and sees it whole" even if we temporarily lose sight of it.

It is President Wilson who has set forth the stern necessity for a League of Nations and "it is largely the detachment and practical genius of the great English-speaking nation across the Atlantic that has carried the world on beyond and replaced that phrase (the war to end war) by the phrase the League of Nations, suggesting plainly the organization of a sufficient instrument by which war may be ended forever."

This book of Mr. Wells is, in effect, a series of discussions based upon various writings of his during the last year when he, with others, has been endeavoring to educate public opinion to the idea of a League of Nations as the only feasible plan to prevent a renewal of war. It is not a carefully worked-out plan for such a league. It is, rather, an attempt to emphasize certain aspects of the question: the causes of the present war; the reasons why it is lasting so much longer than was expected; national and international considerations; and an inquiry into this thing called democracy. His conclusion, in so far as he reaches one, is that there must be a League of Nations.

Existing states have become impossible as absolutely independent sovereignties. The new conditions bring them so close together and give them such extravagant powers of mutual injury that they must either sink national pride and

this lesson, but for my own part, I cherish an obstinate belief in the potential reasonableness of mankind.

*In the Fourth Year*, by H. G. Wells. Macmillan, \$1.25.

## The Toll of the Road

THE stage-struck girl in the stage-life story discovers after a season of one night stands that the glow of the footlights is a feeble flicker compared to the steady flame of the kitchen stove in her own little house. So she throws her makeup box from the window and herself into the arms of the Man Back Home who always waits for her at the station.

The stage-struck girl in the real-life story after one season of all-day stands at the kitchen stove discovers that the horrors of small-town shows are nothing for her, compared to the horrors of small-town beaux. That is why *The Toll of the Road* is true to life. It is written in what seems almost a frenzy of haste; the reader wonders sometimes if it is meant for an extravaganza and looks for a catch at the end. The traveling company is drawn with sincerity, tenderness and humorous charm. As for the heroine, Gertrude Hallam can never again be Gert Hall. She can never live with Terry in the little nest he has built. The toll of the road is heavy but she is ready to pay. She could never again shut herself out of its bitter broadness:

A troublesome and restless pilgrimage into a future that meant only disappointment, disillusionment and debt. If I lived, I would be oftener hungry than fed; if I died I would be forgotten before the curtain rose on the evening's performance. My "friends" would thunder past me in the night, leaving my dead body upon the station platform. . . . Old age would come to me not as the guerdon of the years but as a leprous plague fitting me for nothing but isolation. Life would go on flatly like a continued story without a plot, a thing full of pathos and anticlimax, nobody caring if it kept on or if it stopped. But, oh, God, the *maybe* of it, the *maybe* of it!

*The Toll of the Road*, by Marion Hill. D. Appleton & Co. \$1.50.

## A Study of Credulity

JUST now when the war atmosphere has, as always before, given rise to a recrudescence of superstition, another volume from Joseph Jastrow, of the University of Wisconsin, is especially needed. Professor Jastrow is one of the sanest of psychologists and one of the frankest of critics and even those who do not agree with him—most of all those who do not agree with him—will profit by reading him. *The Psychology of Conviction* covers in part the same ground as his "Fact and Fable in Psychology," but deals more with the fundamental principles of belief with numerous references to "cases" ancient and modern. He tells how some of the leading scientists of Europe were fooled by an Italian peasant woman with a loose left leg Eusapio Palladino, who occupied our attention in the idle days before the war but has now passed into the other world whose existence she presumed to demonstrate. He shows how Kluge Hans and Jim Key and other learned horses were able to extract cube roots and read people's minds. He explains the rise and fall of phrenology, humorology, astrology and animal magnetism. He relates the story of Diana Vaughan, the fictitious woman who got tame and half a million francs from those who were credulous to learn of the diabolical mysteries of [Continued on page 66]

Paul Thompson

H. G. Wells (right) on a visit to the front

dynastic ambitions in subordination to the common welfare of mankind, or else utterly shatter one another. It becomes more and more plainly a choice between the League of Free Nations and a famished race of men looting in search of non-existent food amid the smoldering ruins of civilization. In the end I believe that the common sense of mankind will prefer revision of its ideas of nationality and imperialism to the latter alternative. It may take obstinate men a few more years of blood and horror to learn

# How I Discovered the Reason For My Failure

The Story of a Successful Man Who at Twenty-nine Earned Only \$25 a Week—How He Lifted Himself by the Boot Straps and Now Heads a Nationally Known Corporation

**I** LEFT college at the age of twenty-four, being graduated as an engineer. I tried for a few months to get an opening in my profession, and then, being on my 'uppers,' I took a position as a reporter on a local paper. I had always thought I should like to be a newspaperman. I started at \$18 a week.

"That was the beginning of my tortuous career as an employee, bobbing around like a ship without a steersman, this way and that, by the trivial opportunities for three different newspapers in that town. A year later I came to New York expecting to land something bigger, and after three months of near-starvation, got a job on a trade paper. Then later, again by persistence, I graduated to a metropolitan daily, but in a short time I drifted out of that job, too. In one year I have had as many as six different positions.

"Altogether in my nine years of drifting I worked for twenty-three different concerns. I became interested in writing advertisements, and from that drifted into selling advertising space. Twice I tried to start a little business of my own and failed dismally. I became a salesman of novelties and since then I have sold almost everything—even going as low as selling whiskey.

"In all those years I was never discharged by any of my employers; they were always satisfied with me: I didn't paint the sky red, but got moderate results, enough to satisfy them. But I wasn't satisfied with myself—far from it. I was ashamed, deeply ashamed, of myself—particularly when I contemplated what some of my nearest friends had accomplished in the meantime.

"One of them had gone into a broker's office and at twenty-five was a full partner. He had his automobile, he had bought a country home; he lived elegantly. Once he invited me out to his home. I gave some excuse and didn't go. The gall of my own failure was bitter enough without having it rubbed in.

"Another of my friends had hung up his shingle as a lawyer. Six years ago, 'making' my home town on a trip, I learned that he had become assistant district attorney; apparently a brilliant career lay ahead of him.

"Another one of my closest chums had gone out as a salesman of an electrically-driven machine. I ran across him in a hotel in the Middle West. He was making \$17,000 a year on commissions. I was lucky to make my expenses.

"Imagine how I felt in contemplating the successful careers of these and many other friends. What was the matter with me? What is the matter with thousands—yes hundreds of thousands—of men and women like me, who spend not merely nine years, but twenty, thirty, forty, and fifty years, plugging away aimlessly to get enough to eat and a roof to sleep under?

"Only when my back was to the wall, when I hadn't enough money in my pocket for my next meal, did I wake up to what was the matter with me. Thank God, I had the intelligence to realize it before it was too late. *Aimless*—that's the word that sums it up. My work had been utterly and wholly aimless from the first. I did each day's work as it was given to me by somebody else to do.

"I did it well, usually; but it was *somebody else's* plan I was always working on; *somebody else's* aim I was helping to achieve. *Somebody else* was making money and gaining prestige on my labor. I was

helping to gain wealth and comfort and recreation and travel and culture and the satisfaction of a life's work well done—*always for somebody else!* They were employing *me* in *their* aim, but as for myself, I had had no clear life-plan from the beginning. I was as inefficient and unsystematic, and, on the whole, as effective—as an energetic June bug. That, I gradually came to understand, was the one big, vital, outstanding difference between me and my successful friends.

"I had heard quite a little about the principles of Scientific Management as applied to factories. I knew of the marvels that had been accomplished by Efficiency Engineers in increasing the productivity of laborers, while making the work easier and the hours shorter. Gradually it dawned on me that it was just as possible to increase the efficiency of a *person* as it is of a factory. All that was required *was to study myself* with only a small particle of the application that an efficiency engineer devotes to a plant. If there are obstacles that stand in a man's way, whether inside himself or outside himself, he has to know what they are before he can remove them, before he can stride along on his way unhampered.

"I began to study *myself*. I searched into my ambitions and found nothing definite—so I put something there. I began to plan my work—*then I was able to work my plan.*

"What results *did* I get?

"Five years ago, at twenty-nine, I was making \$25 a week by the hardest kind of work. Today I make ten times that much, and this time next year I should be making fifteen times as much, *yet I do not work so hard now as then.* Today other people work for me. I am the head of the business, built up largely by myself, and known throughout the country.

"I tell my story because I feel it is in a measure typical of the experience of tens of thousands of other people. I went through purgatory myself for a number of years. Perhaps this bare relation of facts may inspire others to bring order and purpose and success into their present aimless, tangled lives."

This man succeeded by applying the same methods that are taught—simply and easily—by the Purinton Foundation Course in Personal Efficiency.

A word about Edward Earle Purinton and his work is now in order.

There is no man living today who knows more about increasing the personal efficiency of men and women than does Edward Earle Purinton.

If it is well to improve the productivity of a mechanic tending a machine by studying his motions, how much better it is, and how much more can be done, to improve the efficiency of the men who employ the mechanic, *by studying how they do their work; how they waste their time and effort; why they fail to overcome the obstacles that confront them.*

For twenty years Efficiency has been Mr. Purinton's great study; and it is an undoubted fact that no other efficiency counsel in the world has been called upon to advise so many kinds of people in so many different ways. Men and women in every conceivable trade and profession, men and women of every age and class—bankers, teachers, lawyers, doctors, manufacturers, salesmen, editors, ministers, manual workers, housewives, young men starting in business for themselves—all of them, literally tens of thousands of them, have

brought their problems to him for advice and counsel. He has clients and students in every state of the Union and ten foreign countries.

More than a thousand leading corporations, stores, offices and educational institutions have profited by his suggestions for their patrons, officials, employees or students. Among these are the Pennsylvania Railroad, National Cash Register Company, Wanamaker Stores, Prudential Life Insurance Company, Remington Typewriter Company, University Society, Eastman Business College, New York City Department of Education, New York Y. M. C. A., American Association for the Advancement of Science, United States Army, British Army, Australian Government.

As the organ for the National Efficiency Society The Independent magazine has for several years opened its columns to Mr. Purinton, and his articles have assisted an untold number of people in estimating themselves truly; in planning out their life's work clearly; in overcoming the obstacles that stand in their way.

But these articles, helpful as they have been, have not been enough. They have not altogether filled the need. What has been needed, it was clear from the first, was a clear, simple course of instruction in the attainment of maximum personal efficiency.

For several years, at the request of the Independent Corporation, Mr. Purinton has been at work, codifying his vast experience, compiling it into a course easy to follow, fascinating to study, and—more than all else—beneficial in a concrete practical way to every man and woman who takes it up.

This course of instruction has been called the Purinton Foundation Course in Personal Efficiency.

## EXAMINE IT FREE

So confident are we that you will see the tremendous value of the Purinton Foundation Course in Personal Efficiency that we are glad to send the ENTIRE Course of nine books containing over 125,000 words to you on approval. Keep the Course five days. Read the first lesson or two. See what a splendid work Mr. Purinton has completed after twenty years of study. Compare it with others costing much more. See if you can afford to be without it. Consider whether this Course will improve your health and increase your pleasures and salary. We say it will. Let us prove it.

You assume no obligation except to return it within five days if you decide not to keep the Course. The Purinton Foundation Course in Personal Efficiency may be worth thousands of dollars to you. Be efficient NOW and send the coupon before this introductory offer is withdrawn.

Do you remember when Tom Sawyer went swimming and had everything hidden so carefully, so that Aunt Polly couldn't find out?

Aunt Polly had sewed up his shirt that morning. But Tom had carefully resewed it, so he thought he was safe. But alack and alas, he used black thread instead of white!

Once more you will laugh with Tom Sawyer and Huck Finn—but you will want to cry as you laugh. For behind the joy of youth is the reality of life—the philosophy you did not see when you were a boy.

## MARK TWAIN

25 VOLUMES: Novels—Boys' Stories—Humor—Essays—Travel—History

While he lived, we loved him. He made us laugh, so that we had not time to see that his style was sublime, that he was biblical in simplicity, that he was to America another Lincoln in spirit.

We watched for his great white head in the crowds—we hung on his every word—we smiled, ready to laugh at his least word. But now he is gone, we love him—yes, he's still the familiar friend—but he has joined the immortals. More than Whitman—than Longfellow—than Poe or Hawthorne or Irving—he stands for America—with the great of the earth—the Homer of this new land—a prince of men—a king among dreamers—a child among children.

### LOW PRICE SALE MUST STOP

Mark Twain wanted every one in America to own a set of his books. So one of the last things he asked was that we make a set at so low a price that every one might own one. He said, "Don't make fine editions. Don't make editions to sell for \$200 and \$300 and \$1,000. Make good books—books good to look at and easy to read—and make their price low." So we have made this set. And up to now we have been able to sell it at this low price.

Rising costs make it impossible to continue the sale of Mark Twain at a low price. New editions will cost very much more than this Author's National Edition. Now the price must go up. You must act at once. You must sign and mail the coupon now. If you want a set at a popular price, do not delay. This edition will soon be withdrawn, and then you will pay considerably more for your Mark Twain.

### Send Coupon—No Money—Today

Get your set before these go. Remember, never again will a set of Mark Twain be offered at such a price as this. When this edition is gone, there will be no more.

## THE NEW BOOKS

(Continued from page 64)

free masonry. Then he passes on to the consideration of such controversial topics as "The Democratic Suspicion of Education," "The Feminine Mind" and "Militarism and Pacifism." His point of view may be illustrated by the following quotation from the preface:

The world war has shaken convictions and made necessary an examination of foundations, and a fundamental inquiry into the basis of those values that keep endeavor keen and civilization alive. In such times we learn to cherish with an increasing fervor the convictions that sustain our national and our individual being. The shock to men's minds has been as serious as to their senses. That German minds could think as they do seems even more amazing than that German hands should be so infamously polluted with crime. The assault upon reason has been as savage and as deadly as the violation of law, of morality, of decency, of honor, of humanity. The intellectual violation is the more responsible, since by its nature it emanates from the trained leaders, those by calling competent and vowed to the defense of the values of right thinking. The supreme importance of conviction is thus revealed in Macchiavellian motive and pan-Germanic perspective. But equally are the responsible nations of the moralized world determined to defend to the uttermost of their resources of mind and hand, of wealth and blood, the convictions that they are assured by all the evidence of time and faith, stand at the root of sane and humane living.

*The Psychology of Conviction*, by Joseph Jas-trow. Houghton Mifflin Company. \$2.50.

### The Roots of the War

TAKING his title from President Wilson's words, "You can explain most wars very simply but the explanation of this war is not so simple. Its roots run deep into all the obscure soils of history," Prof. W. S. Davis, of the University of Minnesota, in collaboration with his colleagues, William Anderson and M. W. Tyler, has given as simple an explanation as is possible. No better book has appeared to give the ordinary reader a comprehension of the causes of the great catastrophe. The author writes plainly and forcibly. He handles the copious historical and polemic material easily and without a trace of pedantry. He is clear-sighted and as fair-minded as anybody ought to be in such a crisis. The tangled diplomacy of the partition of Africa and the Balkan problem is skilfully disclosed. He shows that the ruling powers of Germany in precipitating the war were as foolish as they were wicked. It was, to use the old epigram, "worse than a crime, it was a blunder" for

In 1914 the admitted strength of the German empire was so vast that only a nation whose statesmen were fools would have deliberately sought a quarrel with it. By the mere influence of economic attraction, the Scandinavian lands, Holland, Belgium and Switzerland were being led half-consciously and not very unwillingly into the circle of Berlin influence. The same was even true of Austria, Italy and to a great extent Russia. The ties, racial, intellectual and commercial, which Germany was extending around America were to become patent to all men in 1914. *Everything* seemed coming the Germans' way. Their Government had only to conciliate foreign opinion, create a reputation for fair and friendly dealing, make it clear that commercial relations did not have behind them political scheming, keep a firm front in England, France or Russia, the only possible military rivals really menacing—and the empire would have invariably advanced from glory to glory. It might have been predicted that by 1940, let one say, Germany would reach a position of such wealth, such influence, such prestige, that by a magnet attraction the lesser nations of northern Europe would have been drawn into her federal system upon terms honorable for all parties, and no nation outside the Teutonic pale would have had the courage to command them nay.

Such a placid waiting for almost inevitable results was not to satisfy the generation that had fed on the glories of Moltke and spent its days admiring the magnificent edifice of Bismarck. Not honorable leadership in very many forms of cultural endeavor; not a position of a nation which no coalition would lightly provoke or menace; not a hegemony, even, in the brotherhood of friendly empires working for the com-

mon betterment of man—not these were the ambitions of the framers of high policy for the new Germany. Ever more clearly developed their keen intention to found a Teutonic world empire and to found it immediately—and to do this preferably with the sword.

Therefore, in the language of the ancient mystic, instead of friendliness and peace there came forth the "pale horse, and his name that sat on him was Death, and Hell followed with him."

The frank expression of the author's own opinions gives life to the volume and his personal footnotes are particularly enjoyable. But in the chapter on "the last years of the fool's paradise" his "disgust" at the pacifistic agitations blinds him to its fundamental cause. The feverish activity of the peace societies manifested to some degree in every country before the war was due to the realization of the ever-growing menace of war. Speakers and writers devoted themselves to warning the world of the impending calamity. It was a race between the militarists and the pacifists. The militarists won by a neck (the Lichnowski memoir shows how close it was) and thereby proved that the most hysterical of the pacifist Cassandras had not exaggerated the horrors and wastefulness of war.

*The Roots of the War*, by William Stearns Davis. The Century Company. \$1.50.

### The Graftons

THIS is essentially a soothing, old-fashioned book, full of quiet manners and quiet talk, with a point of view—if it can be said to have anything so sharp—that we are apt to call early Victorian. *The Graftons*, with its principal interest centering about a charming relationship between father and daughter, is a book to drowse over and a means of escape from war thinking.

She was divided between loyalty to her husband and loyalty to her father. . . . Two strands were interwoven in her love for her father. Of late years he had been so much her preferred companion, and her position in his household had been such, that there had come about a sense of equality more than exists commonly between father and daughter.

The women with whom the author is acquainted age very early—"getting on" at twenty-two, and quite passé at twenty-five. Anything in the faintest degree resembling the modern young woman, beyond a little lady-like slang, is not allowed to disturb the severity of Mr. Marshall's pages. But he gives a series of pleasant and quiet pictures of English country life as it used to be—before the war.

*The Graftons*, by Archibald Marshall. Dodd, Mead & Co. \$1.50.

### Two Volumes by Tagore

TAGORE can write in such beautiful and excellent English that one wonders a little why he should leave his short stories to the hands of translators, however competent. But these stories are fascinating. Kipling has given us one India, Tagore gives us another—the intimate, personal lives of Indian men and women. The women are free and individual in their "subjection," so delightful in their friendliness to each other, so filled with high feelings of religion and honor.

Every note is touched in these tales—tragedy, comedy, supernatural horror, romance, self-sacrifice, greed and wickedness.

In *Lover's Gilt* and *Crossing* we have two slim volumes of verse bound in one, the first full of human passion and of sheer joy in nature, the second full of the sense of the immanence of the Divine that is the heart of Tagore's mysticism. Yet each

way of expression runs over into the other book.

There is a melancholy in *Crossing* like the shadows of twilight and a deep radiance like the gold of sunset that is the promise of another day:

In the world's dusty road I lost my heart, but you picked it up in your hand.

I gleaned sorrow while seeking for joy, but the sorrow which you sent me has turned to joy in my life.

My desires were scattered in pieces, you gathered them and strung them in your love.

And while I wandered from door to door, every step led me to your gate.

*Mashi and Other Stories*, \$1.50; *Lover's Gift and Crossing*, \$1.25, by Rabindrinath Tagore. Macmillan Company.

## Joan of Arc

THE story of *Joan of Arc* is one of which we do not tire and which doubtless needs constant retelling to keep it fresh from generation to generation. The present historian has a vivid narrative style and great wealth of detail, which together make the book easy and lively reading.

The author is greatly tempted to fall into recondite philosophizing (not very lucidly exprest) about "will" and "faith," but it is quite easy to skip those parts. Taking the book as a whole, we have to thank Mr. Stevens for a sympathetic and living portrayal of one of the most arresting and spiritual characters in history.

*Joan of Arc*, by C. M. Stevens. Cupples & Leon Company. \$1.50.

## Here and Over There

ATTACK, by Edward Liveing. (Macmillan, 75 cents.) Describes vividly the attack on the fortified village of Gommecourt which began the Battle of the Somme.

THE WARFARE OF TODAY, by Paul Azano. (Houghton Mifflin, \$2.50.) Thoro, authoritative and non-technical work by the chief of French instructors in American training camps.

BEYOND THE MARNE, by Henriette Cuvru-Magot. (Small, Maynard, \$1.) Naive, touching little diary of a Frenchwoman who viewed the battle of the Marne from her cottage in Voisins.

WAR ADDRESSES OF WOODROW WILSON. (Ginn & Co., 32 cents.) A compilation for use in schools as studies in history and literature, with an introduction giving the setting of each address.

THE SECRET OF THE MARNE, by Marcel and Maude Berger. (Putnam, \$1.50.) Exciting novel built around that glorious Marne week when the Germans turned northeast instead of rushing on Paris.

APPROACHES TO THE GREAT SETTLEMENT, by Emily Greene Balch. (Huebsch, \$1.50.) Statement of the position of the belligerent and neutral governments in regard to war aims and peace terms.

WAR TIME "OVER HERE," by William Allen Knight. (Pilgrim Press, Boston, Mass., \$1.) Pen pictures of conditions in this country during the memorable year of America's entrance into the war.

HER COUNTRY, by Mary Raymond Shipman Andrews. (Charles Scribner's Sons, 59 cents.) A girl with a beautiful voice and no soul finds her soul when she sacrifices ambition for the Liberty Loan.

THE WAR OF WAR TIME FRANCE, translated by William L. McPherson. (Dodd Mead, \$1.25.) A volume of most French war stories containing some of the best work done in France in the department of fiction.

LETTERS FROM AN AMERICAN SOLDIER TO HIS FATHER, by Lieutenant Carl Wheeler. (Bobbs-Merrill, 75 cents.) A little volume full of good stuff, of humor and action, telling day to day happenings in a soldier's life.

THE LAST FRUITS OF WATERLOO, by John Spencer Bassett, Ph.D., LL.D. (Macmillan, \$1.50.) One of the most permanent peace examinations in the annals of history. An informing and timely discussion by the author of "A Short History of the United States."

A HISTORY OF INTERNATIONAL RELATIONS BETWEEN THE UNITED STATES AND GERMANY, 1914-1917, by James Brown Scott. (Oxford University Press.) A valuable reference book of the events connecting the two countries from 1914 to the entrance of the United States into the war.

PRESIDENT WILSON'S ADDRESSES, ed. by George McLean Harper. (Henry Holt & Co., 52 cents.) Addresses dealing almost exclusively with political

## All Need Puffed Grains To Complete Them

A dish of berries is twice better with thin, crisp, flavory Puffed Grains scattered in it.

In a bowl of milk there is nothing so good as these flimsy, toasted bubbles of grain.

They are like airy nut-meats on a dish of ice cream. No other garnish is half so enticing.

In soups they are ready-toasted morsels with texture as light as a snowflake.

Puffed Grains are the star foods among all breakfast dainties. But nearly every meal has a place for them.

And between meals, every child loves to eat them dry or doused with melted butter.

Puffed Rice      Corn Puffs      Puffed Wheat

All Bubble Grains

Each 15c—Except in Far West

## Maximum Grain Foods

Puffed Grains are scientific grain foods, prepared by Prof. Anderson's process. Every food cell is exploded, so every atom feeds.

By these explosions the grains are puffed to bubbles, eight times normal size.

By no other process are grain foods so fitted to digest. Every ounce is an ounce of clear nutrition. And their ease of digestion makes them all-hour foods.

Let children eat them in any way, at any time they will.

The Quaker Oats Company

Chicago

(1948)

## SCHOOLS AND COLLEGES

## Kiskiminetas

## SCHOOL FOR BOYS

Located on a wooded highland overlooking the Kiskiminetas river, 200 acres. "Kiskiminetas" is a boy's way out of doors. Special preparation for colleges and technical schools. 13 expert teachers keep in close personal touch with boys. Small classes. High athletic spirit and strong competitive teams. Several athletic fields. Tennis Court. Swimming Pool. Bowling Alleys. New Gymnasium. School owns its own farm and coal mine. Rate \$100. For catalogue address:

DR. A. W. WILSON, JR., President  
Kiskiminetas Springs School, Saltsburg, Pa.

## SKIDMORE SCHOOL OF ARTS

CHARLES HENRY REYES, Ph.D., President  
SARAH GUIDLEY ROSS, A.M., Dean

A college for the professional and vocational training of women. Offers four years courses leading to B. S. degree in

Household Economics, Fine Arts, Music,  
Physical Education, Secretarial Studies

A special diploma, securable upon the completion of two or three years, commands teacher's or supervisor's certificate.

Residence accommodations for two hundred students. Outdoor sports. Non-sectarian. Summer session. For catalogue address

LOUISE HOLMES WATERBURY, B.A., Registrar  
SARATOGA SPRINGS, NEW YORK

## STUDY MEDICINE

Opportunities in medicine are never more attractive. Full preparation for medical or civil life. Homeopathic graduates in great demand. For catalogue address: W. N. Y. Homeopathic Medical College and Flower Hospital, 400 E. 6th St., New York City.

## MARTIN COLLEGE For GIRLS

PULASKI, TENN.

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue-Grass Hills of Sunny Tennessee. Careful Supervision. Box 1. W. T. WYNN, President.

## RANDOLPH-MACON WOMAN'S COLLEGE

LYNCHBURG, VIRGINIA

Offers courses for A. B. and A. M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 35 states and countries. Address

WILLIAM A. WEBB, Pres., Box 46

ATTEND  
Chicago  
"Tech"

The nation is calling for technical men. Engineers and Draftsmen are needed. Demand for our graduates is greater than we can supply. Study now. Faculty of consulting experts. No unusual entrance requirements. Low tuition fees. Our intensive methods bring quick results.

ARCHITECTURE DRAFTING  
ENGINEERING  
CIVIL-MECHANICAL-STRUCTURAL-ELECTRICAL

No time wasted on unnecessary studies. Complete course in two years. Short courses for special students. Chances for self-support while studying. Write us for catalog and full particulars.

DAY AND  
EVENING

INDEPENDENT EFFICIENCY SERVICE  
119 West 40th Street New York City

ical affairs and especially with Americanism, from the first inaugural address to the speech delivered on April 6, 1918.

ARMENIA, A MARTYR NATION, by M. C. Gabrielian. (Fleming H. Revell Co., \$1.75.) A history dealing principally with the religion of the country from ancient times.

THE WAR AND AFTER, by Sir Oliver Lodge. (Doran, \$1.50.) "Takes stock" of the past and the present and scans the future with relation to the war and to Germany.

WAKE UP, AMERICA, by Mark Sullivan. (Macmillan, 60 cents.) A timely discussion of the shipping problem pointing out how tonnage controls our participation in the war.

OUTWITTING THE HUN, by Pat O'Brien. (Harpers, \$1.50.) Thrilling adventures of the escape of an American lieutenant in the Royal Flying Corps who had been captured by the Germans.

BOYS' MILITARY MANUAL, by Virgil D. Collins. (Frederick A. Stokes Company, \$1.) Practical information for boys from twelve to twenty years concerning army organization and preparation for military service.

HISTORY OF THE AMERICAN PEOPLE, by Willis Mason West. (Allyn & Bacon, \$1.75.) A text book for high schools based upon the author's "American History and Government," with a chapter on the Great War.

THE FIGHTING ENGINEERS, by Francis A. Collins. (Century, \$1.30.) A graphic account, with photographs, of the stupendous work accomplished by the first hundred thousand United States Engineers in France.

WAR FACT TESTS FOR GRADUATION AND PROMOTION, by William A. Allen. (World Book Company, 25 cents.) A valuable manual concerning the causes of the war and present-day and future problems occasioned by it.

LIBERTY AND DEMOCRACY, by Hartley Burr Alexander. (Marshall Jones, \$1.75.) War-time essays defining Americanism for Americans and portraying the ideals of American institutions in the new light which the war casts upon them.

BOMBS AND HAND GRENADES, British, French and German, by Captain Bertram Smith, bombing instructor with Canadian Expeditionary Forces. (Dutton, \$2.) Diagrams and concise explanations of how to use explosives in trench warfare.

## Thrift in War Time

WAR GARDENS, by Montague Free. (Harpers, 50 cents.) A practical guide for the man with a backyard or vacant lot to cultivate.

WAR BREAD, by Alonzo Englebert Taylor. (Macmillan, 60 cents.) A clear statement of the wheat problem confronting the United States with practical conservation suggestions.

WAR-TIME BREADS AND CAKES, by Amy L. Handy. (Houghton Mifflin, 75 cents.) Every receipt is simple, economical, has been tested and found satisfactory and none call for white flour.

THRIFT IN THE HOUSEHOLD, by Dora M. Hughes. (Lothrop, Lee & Shepard, \$1.75.) Recitals and recipes showing how efficient management will produce economy of money and energy.

EVERYDAY FOODS IN WAR TIME, by Mary Swartz Rose. (Macmillan, 80 cents.) The author seeks to make it easier to "save wheat, meat, sugars and fats" and still prepare an acceptable and economical bill-of-fare.

THE BACKYARD GARDEN, by Edward I. Farrington. (Laird & Lee, \$1.) Handbook to help the amateur garden-maker get the maximum of crops from his land at a minimum of expense and time.

SOUP, OYSTERS AND SURPRISES, by Mrs. Lionel Guest. (John Lane Co., 25 cents.) Practical and economical recipes for soups made from vegetables, meat and fish stock, and directions for preparing oysters, mussels and eels.

THE FOOD PROBLEM, by Professors Kellogg and Taylor and the U. S. Food Administration. (Macmillan, \$1.25.) The problem as it immediately concerns us and our allies, and suggestions for possible solutions, with preface by Herbert Hoover.

## Stories of all Kinds

THE FIGHTING FOOL, by Dane Coolidge. (E. P. Dutton & Co., \$1.50.) A rousing western love story full of action from beginning to end.

SHOT WITH CRIMSON, by George Barr McCutcheon. (Dodd, Mead & Co., \$1.) A story of the German spy system at work in New York society, told with the author's usual colorful description.

BRUCE OF THE CIRCLE A, by Harold Titus. (Small, Maynard & Co., \$1.35.) A readable story of love in the far West, with the usual condiments of cowboys, desert and sporadic gun play.

YOU NO LONGER COUNT, by Rene Boylesse. translated from the French by Louise Seymour Houghton. (Scribner's, \$1.50.) The story of a young war widow's development from selfish

sorrow into complete self-renunciation. The philosophy seems to an American somewhat overwrought.

**REKINDLED FIRES**, by Joseph Anthony. (Holt, \$1.40.) A novel of youth and Americanization and of old world ideals rekindled on new hearths.

**TALES OF CHEKHOV**. (Macmillan, \$1.50.) Volumes V and VI of a new series of short stories by Anton Chekhov, ably translated by Constance Garnett.

**OH, MONEY! MONEY!** by Eleanor H. Porter. (Houghton Mifflin, \$1.50.) Homey, non-problem kind of book, by the author of "Pollyanna," that takes us into a very human make-believe world.

**SIMBA**, by Stewart E. White. (Doubleday Page, \$1.40.) Describes in entertaining fiction the picturesque features of British attempts to civilize inland Africa.

**EXILES**, by James Joyce. (Huebsch, \$1.) A forceful, somber play of doubt and passion, which wraps in literary flavor a cold dissection of emotional reactions.

**OVER THE HILLS AND FAR AWAY**, by Guy Fleming. (Longmans, \$1.50.) An old story retold with a literary grace which will please lovers of superior fiction.

**MERRY ANDREW**, by F. Roney Weir. (Small, Maynard, \$1.35.) A satisfying, all-round book with a wholesome love story that reflects the fresh, out-of-doors setting.

**THE HEART OF ARETHUSA**, by Frances Barton Fox. (Small, Maynard, \$1.35.) A story about a flyaway girl that will delight girls from fourteen to the most youthful grandmother.

**THE LIGHT ABOVE THE CROSSROADS**, by Mrs. Victor Rickard. (Dodd, Mead & Co., \$1.50.) A war novel in which a young British attaché in Berlin renounces the way of the sword and becomes a spy.

**THE MARTIAL ADVENTURES OF HENRY AND ME**, by William Allen White. (Macmillan, \$1.50.) Humorous and wholesome antidote to the numerous publications which have over-emphasized the horror of the war.

**THE FIREFLY OF FRANCE**, by Marion Polk Angellotti. (Century Co., \$1.40.) A bright spot in the fiction of the Great War—proving again that love will have its way in spite of gun-fire, crutches and bandaged heads.

**STORIES OF THE STEPPE**, by Maxim Gorky. (Stratford Co., Boston, Mass., 25 cents.) Three gipsy tales translated by Henry T. Schnittkind and Isaac Goldberg, comprising the second volume of the Stratford Universal Library.

## Other Books in Brief

**WHAT IS CHRISTIANITY?** by George Cross. (Univ. of Chicago, \$1.) A survey of the rival interpretations of Christianity.

**THE FIELD OF PHILOSOPHY**, by Joseph Alexander Leighton. (R. G. Adams & Co., Columbus, Ohio.) An introductory text book, especially designed for use in college classes.

**SOCIAL DEMOCRACY EXPLAINED**, by John Spargo. (Harpers, \$1.50.) An untechnical and lucid statement of the essentials of Marxian Socialism. Especially pertinent at this time.

**COUNTERFEIT MIRACLES**, by Benjamin B. Warfield. (Scrivner, \$2.) An investigation of the alleged miracles of post-biblical Christian history from the second century to our own times.

**THE MENTAL SURVEY**, by Rudolf Pinter. (Appleton, \$2.) An explanation, with charts, of standardized tests for measuring intelligence, and an application of the mental survey to schools.

**THE SCHOOL AS A SOCIAL INSTITUTION**, by Charles L. Robbins, Ph.D. (Allyn & Bacon, \$2.) A study of the school's place and influence in society, and a discussion of its organization and curriculum.

**PSYCHOLOGY AND PREACHING**, by Charles S. Gardner. (Macmillan, \$2.) A thorough study of the more important mental processes involved in preaching from the standpoint of functional psychology.

**REGULATION OF RAILWAYS**, by Samuel Dunn. (Appleton, \$1.75.) A forceful discussion of the railroad situation, with special emphasis on the particular problem of government ownership vs. government regulation.

**THE BUSINESS OF FINANCE**, by Hartley Withers. (Dutton, \$1.50.) An authoritative book upon important present-day aspects of finance. Deals especially with the reconstruction of finance as the result of the war.

**THE EXPERIENCE OF GOD IN MODERN LIFE**, by Eugene W. Lyman. (Scrivner, \$1.) Reinterprets Christianity as the type of religion which is the essential factor in the development of personality and in social progress.

**POLICE RESERVE AND HOME DEFENSE GUARD MANUAL**, by Major W. A. Hawkins and Inspector C. C. Conalane. (Dutton, \$1.) A text book of practical information on organization and duties of value to every member of the reserve and guard.

# TRAVEL AND RESORTS

# THE VERDICT—

of an advertiser who speaks from experience is proof of the value of a medium. Here is the verdict of an advertiser who has used space in THE ROTARIAN:—

THE INDEPENDENT  
HARPER'S WEEKLY

THE COUNTRYSIDE  
SUBURBAN LIFE

INDEPENDENT CORPORATION

119 West Fortieth St,  
New York

June 8, 1918.

Dear Mr. Jennings:

Our Roth Memory Course advertisement in the May issue of THE ROTARIAN has paid out very well. The June issue looks very promising, and I have sent you copy for the July Number.

Very truly yours,  
[Signed.] W. W. Ferrin,  
Director of Sales.

Mr. Frank R. Jennings,  
Advertising Manager,  
THE ROTARIAN,  
Chicago, Illinois.

THE ROTARIAN is the official publication of the International Association of Rotary Clubs, which is composed of nearly 38,000 leading business and professional men in 400 principal cities of the United States, Canada, Great Britain and Ireland; also Havana, Cuba. They are all affiliated together in a splendid organization that has done much to put the Golden Rule into everyday use and to bring about a better understanding of the word SERVICE.

Rotarians represent an average annual income of better than \$10,000 each and are in a position to influence the spending of millions of dollars annually for business and domestic requirements.

You can reach all of these men thru their own magazine, THE ROTARIAN—the Magazine of Service (send for sample copy and write to others of our advertisers for their verdict).

FRANK R. JENNINGS, Advertising Manager

THE  
ROTARIAN

The Magazine of Service

Room 1009—910 So. Michigan Ave., Chicago, U. S. A.

## WORDS OF THE WEEK

"BERTHA"—A French nickname for the big German guns (referring to Bertha Krupp, nominal head of the Krupp Arms Company).

CHIEF OF GENERAL STAFF—The head of the advisory and organization branch of the army. The staff of the army is distinguished from the line (officers and men engaged in active military operations).

SMOKE SCREENS—A system of defense used by battleships, particularly by destroyers, whereby the ship itself and the other ships which it is protecting are completely obscured by a dense screen of black smoke.

DAZZLE CAMOUFLAGE—A system of painting ships in irregular black and white stripes. This has the effect of confusing the outlines of the ship, making it difficult for submarines to determine the direction in which the ship is steering.

FLYING CIRCUS—A squadron of German aviators of whom Captain von Richthofen (killed April 21) was the leader. The squadron fights in a circular formation so that if one aviator is attacked the next flyer can sweep the attacking machine from the rear.

IRON RATION—The term applied to the food that the soldier carries in his pack when in the field. It may be eaten only in time of great necessity by order of the commanding officer. The term has recently been used figuratively to describe the food situation in Germany.

ARMAGEDDON (ar mäh ged' on)—A name used in the Book of Revelations (xvi. 16) as the place where the decisive battle was to be fought on the Day of Judgment; hence the word is now used to describe either a place of great slaughter or a struggle which people regard as the final conflict between two ideas.

BASE HOSPITALS—Hospitals far enough removed from the firing line to be out of danger from the ordinary hazards of war. Men are brought here from the First Aid Stations for treatment. From the base hospitals they are passed on to permanent hospitals outside the battle zone if their wounds or ailments are serious.

UNITED STATES BOYS' WORKING RESERVE—An organization inaugurated by the United States Department of Labor in cooperation with the Council of National Defense for the mobilization of boys from sixteen to twenty-one for work during the spring and summer upon farms (farm cadets), in shipbuilding plants and in other industries carrying on war work.

WAR SERVICE LIBRARIES—Libraries maintained by the American Library Association at cantonments, training camps, army posts, forts, naval stations, on vessels and in the army camps overseas. These libraries were established as a result of voluntary contributions (\$1,700,000) and are being maintained by donations of money and books. Such donations may be made thru any public library in the United States.

"BOCHE" (Bosh)—Term commonly used by French soldiers to designate Germans. The use of the term in this connection dates back to the Franco-Prussian War at least. The term "ce boche" corresponds to the English slang expression "that clump." It is probably a contraction of "tête de boche" which means "blockhead" tho some authorities explain it as a contraction of "alle-boche," made up of a contraction of Allemand (German) and the French slang ending which Frenchmen use for things which they wish to condemn.

## THE WEATHER FIGHTS FOR US

(Continued from page 63)

What does this mean? It means that the wind on such occasions will be, generally speaking, at right angles to the battle line, and what is more important, it will be blowing from the Allied side to the German side. Of course this is only a general rule, but it may be relied upon to hold good in a sufficient number of cases to render valuable service to the Allies.

The Germans, when they introduced the use of poison gas, probably foresaw that this was a game that two could play, but it is doubtful if they reckoned on the advantage which the Allies enjoyed in the matter of the weather. In fact, the Allies themselves have only lately come to appreciate their advantage in this respect. And they are going to turn that advantage to good account. They have accepted the German challenge and are going to give the enemy a dose of his own medicine. No secret is being made about that. Only the other day Carl L. Alsberg, Chief of the Bureau of Chemistry, told the Senate Agriculture Committee in Washington that the Allies now excelled the Germans in the matter of gas warfare, that they have more gas at their disposal and are applying it more effectively than the Germans. It is the story of the tank reversed. The British introduced the tank and the Germans appropriated the idea. In the development of that machine, both sides would seem to be on an equal footing. At all events, there is nothing to indicate as yet that the Germans have succeeded in making a boom-crang of the British tank.

The race for supremacy in gas fighting is likely to be another story. The Allies have learned how to make and how to use poison gas, and they are making it and using it, as has been said, with good effect. But above all they have the weather, plus a foreknowledge of the weather which seems certain to become the determining factor in maintaining Allied superiority in gas warfare. For this foreknowledge, this fund of advance information about weather conditions, is something which—like the weather itself—is made in America. They cannot duplicate it in Germany.

### Pebbles

Our idea of a guilt-edged insecurity is the Hohenzollern Throne.—London Opinion.

The Friend—Does Mary favor your suit?  
The Lover—No, she's in love with a uniform.—Sun Dial.

Amidst all the shortages, there is one article that remains abundant: Government red tape.—London Opinion.

Two men came out of a department store the other day. One was Scotch and the other hadn't bought anything either.—Nebraska Auguran.

My idea of a far-sighted man is the soldier who wrote to the book committee and asked for a guide to the city of Berlin.—New York Morning Telegraph.

Lady (to wounded soldier in hospital)—You must have come thru some pretty tight squeezes?

He (guiltily)—Well, ma'am, the nurses have been pretty good to me.—Record.

They were questioning the suburbanite from the trenches. "And weren't you terrified that night among the barbed wire entanglements?"

No," he replied. "I have come home late when the wife has left the croquet set out on the lawn"—London Opinion.

## REMARKABLE REMARKS

WOODROW WILSON—This is no time for amateurs.

ED. HOWE—Instead of improving I think I shall do worse.

ARCHBISHOP OF CANTERBURY—Devils can be cast out.

KERENSKY—Russia is gathering herself for a fresh spring.

HAROLD BRIGHOUSE—Good names are cheaper than good addresses.

PASTOR LEHMANN—Germany is the center of God's plans for the world.

EMPEROR WILLIAM—I had been able to do my work as a prince of peace.

HARRY EMERSON FOSDICK—Never again will I call any man commonplace.

COLONEL REPINGTON—When I was a boy my ambition was to be a juggler.

THE DUKE OF MECKLENBURG—I hope we shall secure a great African colonial empire.

FIELD-MARSHAL HINDENBURG—I have the right to do what I have the power to do.

THE POPE—We have left nothing undone, nothing untried as far as we possibly can.

VICE-ADMIRAL SIMS—The world is witnessing today the most impressive manifestation of sea power that history has ever recorded.

CROWN PRINCE WILHELM—It is only by relying upon our good German sword that we can hope to conquer that place in the sun which rightly belongs to us.

COUNT VON BAUMGARTEN—Whoever cannot prevail upon himself to approve from the bottom of his heart the sinking of the "Lusitania," him we judge to be no true German.

DR. ETHER E. BROWN—A young college man can make his life count more for his country by sticking to his present task than by rushing off to the recruiting office that will bring him soonest to the firing line.

PREMIER HUGHES, OF AUSTRALIA—When all the nations wish to live freely and in harmony and one nation stands out and says it won't do it, all the others must get out their grindstones, sharpen their swords and sleep with one eye open.

PREMIER LLOYD GEORGE—There are people who are too apt at one moment to get unduly elated at victories which are but incidents in the great march of events, and the same people get unwholesomely depressed by defeats which are nothing more than incidents.

KING ALBERT—The relationship between our peoples cemented in this time of suffering will strengthen confidence, sympathy and good will, and increase the devotion of every citizen of the Allied countries to the sacred cause of liberty and justice.

PROFESSOR SPALDING, OF STRASSBURG—It was he who brought into the world the idea that the common state life of mankind should depend upon a triad: the right of all freedom for every individual member of the community, and peace as an ordered state of civilization.

## NATIONAL EFFICIENCY SOCIETY

The August issue of the new *National Efficiency Quarterly* (the second number to appear) will be devoted to the general subject of "Labor—as Affected by War," under the editorship of Mr. William R. Hayward, secretary of the National Efficiency Society. Many articles of importance and value on various phases of labor are included in the table of contents. Among the expected contributors are: Mr. Henry A. Wise-Wood, Mr. C. E. Knoeppel, Mr. Charles B. Barnes, director, Bureau of Employment, New York State Department of Labor; Mr. R. A. Sigsbee, employment manager, The Emerson Company; Mr. W. H. Leffingwell, author of "Scientific Office Management"; Mr. Fletcher Durrell, of the Lawrenceville School; Mr. F. W. Witte, of the United States Aluminum Company; Mr. C. L. Close, manager, Bureau of Safety, Sanitation and Welfare, of the United States Steel Corporation; Mr. J. B. Densmore, director general, United States Employment Service; Major Frank B. Gilbreth, and Mr. H. F. J. Porter.

Forthcoming numbers of the *Quarterly* will discuss Management—Production—Transportation—Sales and Selling—Americanization—Governmental Efficiency—Foreign Trade and other subjects that are timely but of more than passing interest.

A very decidedly quickened interest in the work and benefits of the new society—which, as announced in The Independent of June 15, was recently formed by the amalgamation of the Efficiency Society with the National Institute of Efficiency—is evidenced by the number of new members coming in, the prompt acceptances by members of both the old associations, the growing list of life members, the good number of nominations coming in, by the much increased use of the consulting service, and by the letters of interested members pleased with the combination of the two associated groups, and with the outlook for an improved and broadened service under the present arrangement.

The society desires and invites the active interest and support of all its members, in making known to those likely to join, the benefits of membership, in writing articles for the *Quarterly* and in making suggestions for increased service to members.

All members receive for the year the *National Efficiency Quarterly*, and The Independent, which carries many articles on various phases of efficiency. They are entitled to the free service of The Independent's Plan and Purchase Department, for information about office equipment, and problems of organization and management, and to the free use of its Household Division for information on any of the questions which puzzle the home-builder, the gardener, the community worker, the home-maker.

# PACKARD TWIN SIX

## *Announcement of Policy*

THE Third Series Twin Six will be continued in response to public demand. It is essentially unchanged. Our patrons shaped this decision by their approval of the latest Packard.

Packard cars of today are identified at once by the new *fuselage* line. Some of the best critics say this design has set the standard for body styles.

The smoothness and plus-power of the Twin Six engine are even more widely known. We believe the road ability of this engine is matched by what we now offer in lines, finish and appointments.

It is true that war has

cut down the number of good cars that can be built. And yet in war-time a good car is known to be almost indispensable to the efficient man of affairs.

Every condition of the times sets a premium on cars of character and lasting worth.

Twenty thousand Twin Six owners know the Packard as a mode of travel—assurance of swift and safe transportation over any road.

## THE AEROPLANE DELAY

**I**F America had enough aeroplanes to bomb hourly every railroad and every highway leading from the Rhineland to the German front we might sit complacently down and count the remaining days of the war. For with all her arteries of communication systematically destroyed Germany could no longer bring food, ammunition and reinforcements to her soldiers in the trenches. The life blood would cease to flow to the front line. This logical strategy was perceived over a year ago when an enthusiastic Congress quickly appropriated \$640,000,000 to make America supreme in the air. Fourteen months have since passed. What has America received for her money?

Roughly estimated America has purchased and equipt 27 flying fields where some 8000 pilots have already learned to fly. This is a very creditable showing indeed. These 8000 pilots have been provided with 10,000 or more training machines. This, however, is a private rather than a national achievement, for the Curtiss Company, which built these aeroplanes, was already prepared to furnish them, thanks to the foreign orders which had kept this American company alive.

The much heralded Liberty motor has been designed, constructed, demonstrated and improved. The date of its perfection and standardization is twelve months nearer than at the date of the huge appropriation made by Congress. This is worth a great deal of money to the nation, for ultimately such a motor will greatly simplify our aeroplane production program.

It is a pity, however, that our authorities did not adopt the urgent recommendations of our allies and set about producing the Hispano-Suize motor of France and the Rolls-Royce motor of England while waiting for the Liberty motor to develop. Such a parallel building program would have given us all the aeroplanes we desired by now and would have retarded the production of the Liberty motor not one jot.

Somewhere near one-third of the congressional aeroplane appropriation was pledged for aeroplanes and training fields in Europe. This was a reasonable and wise expenditure of the money, but it failed to deliver us aeroplanes because of the necessities of France, England and Italy to first provide for themselves their own machines. This country was to have sent them certain necessary raw materials. Many minds and many bureaus were involved and thru the gaps between these many bodies our aeroplane deliveries slipped.

Now the money is gone. Many wasted months have passed. Under the pressure of the public demand our officials are now emerging from their caves of secrecy and admitting

that the 20,000 aeroplanes promised by spring diminished to one actually delivered.

We know also that thousands of our pilots are warming the benches of their aerodromes here and in France because they have no aeroplanes to fly. We know that the pitiful handful of aeroplanes now furnished our gallant band of flyers in France are "seconds" that can be spared us by our allies. We know that our aviators who have offered us their lives are risking them upon machines that French and British airmen do not care to use.

The truth concerning our situation is known now to Germany. What could delight her more than to be assured that our stagnation of the past year will continue?

Truly it would be vastly better if we knew just what was going on within our own aeroplane circles regardless of that ancient fetish concerning giving information to the enemy which too often serves merely to conceal the omissions of our own officials. We are now told when ships are launched from our shipyards. We are told the number of soldiers we have in France and in our home camps. We were told we would have 20,000 aeroplanes in France by spring, which statement was not believed by Germany but was hailed rapturously by our allies—and grievously were they disappointed when the truth became known to them.

Germany has her expert aeroplane constructors in charge of her aeroplane production. Fokker, whose products have led the world, is on General von Hoeppner's staff. In England the production of aeroplanes is in charge of aeroplane experts and pilots, not automobile manufacturers and politicians. In France veteran aviators are taken from the front and placed in charge of avion factories. The men who fly the machines know more about their own science than do the politicians.

Let us then call together our aeroplane brains in America and even at this late day begin aright. Except for the Liberty motor we have sought to copy foreign designs instead of originating our own. The fault in this policy is that we shall never lead so long as we toddle along three or four months behind our competitors—so long as we imitate instead of originate.

Our aeroplane talent must be collected, selected, encouraged and utilized. The best constructors in America should be sent to the front, where the latest information may be quickly and continuously gathered, studied, and cabled home to their confreres in the factory.

America can build aeroplanes. She built the first one. She can lead the world as soon as she is given a chance.

Have we the right men in charge of this program at last? Fervently we trust so. But how long must we wait to know?

## THE NATIONAL RAILWAYS

**W**E are promised a new railroad ticket. On August 1, or soon after, it is said, we shall be able to get mileage books good anywhere in the United States. They will contain modern improvements. Coupons will provide sleeping car berths, parlor car seats, dining car meals, and baggage transfers. Whether they will fee the porter in satisfaction of his whiskbroom enterprise we have not seen stated.

This will be immensely convenient, beyond a doubt. But its significance is not measured by convenience. The average common-sensible American will soon be asking himself why a people for two generations and more daily using the postage stamp, good on any postal route and to any part of the United States, has had to wait until the storm and stress of war made it necessary for a thing so obvious and on all accounts desirable as a unified management of our railway service. In the transition from private owner-

ship and divided control to operation under one directing head there have been, of course, many annoyances and some serious evils, and these will not all disappear at once. But as the months go by the public will discover that they are nothing by comparison with the waste and discomfort of the older system.

Among the excellent reforms already accomplished we have noted these: Freight and passengers are moved from point to point over the line that at the moment is least congested or otherwise most available; passenger trains depart from and come into stations where it is most convenient for the public to get them or leave them; the dog-in-the-manger policy of "keeping out" a competing road regardless of public convenience is, for the time being, at any rate, in abeyance. The immense convenience of one central ticket office in place of a dozen widely scattered has been provided. Purely extravagant luxuries in Pull-

man service have been curtailed, and the hauling of half empty cars, in particular of great numbers of private and special cars, has very nearly been discontinued. At present the regular trains are overcrowded, and altogether too many passengers, unable to pay the high prices for Pullman comforts, are compelled to stand in the aisles, often for long distances. This evil, of course, will be remedied to such extent as it can be in wartime, when tracks and locomotives must first of all be used for the transportation of troops, munitions and imperatively necessary freight. On long-distance trains coffee and tea from the dining cars are served at suitable intervals to common mortals in the coaches, an obvious bit of humanity which the Pullman people formerly would not undertake.

The list of reforms might be made longer and it undoubtedly will be. And among the items will be many yet more important than some of those that have been named. Hitherto there has been no rational apportionment of capital available for making repairs, extensions and improvements. Extensions in particular have been made with no proper regard to commercial necessity or public convenience. Roads on which traffic has been heavy have been neglected, track and bridges have deteriorated, rolling stock has run down, often with consequences of serious accidents destructive of property and life. Gilt-edged roads have expended extravagantly and often uselessly. Under central control improvement funds will be laid out with at least some approximation to reasonable requirement and the public welfare.

It is not common sense to believe that these changes for the better will make no impression upon the practical mind of the American public. There are, to be sure, some hundreds of thousands of voters, particularly among the business classes, who predict that the railroads will go back to private control after the war. It is possible that for a time they will, because beyond a doubt, when the tension of war relaxes there will be a wave of reaction toward old habits. But it will spend itself and a counter reaction will set in. The economies and conveniences that we are now getting used to will be remembered and common sense will assert itself. Whether immediately after the war and in continuation of present arrangements, or after an interval of disorganization, and possibly waste, we shall accept and develop the national ownership and the government operation of the American railways as our permanent policy.

## INTERVENTION IN RUSSIA

**S**HALL the Allies intervene in Siberia? France and Italy demand it. England favors it. Japan is doubtful. The United States opposes. What are the arguments pro and con?

Those who favor the proposition say: Let an Allied army of two or three corps, of which one should be Japanese, seize the Siberian railroad and proceed to the Ural Mountains. Instantly the moderates will rally to this army. The Bolsheviks, whose demise is already overdue, will vanish into thin air and all Russia will join with these Allied troops and renew the war against Germany.

If this plan is not carried out now Russia will fall under complete power of Germany, who is now buying up all the Russian guns and arming the German prisoners in Russia with them, and who is also employing ignorant Russian soldiers to go to fight in Germany for 200 rubles a month, paying them in Russian counterfeit bills.

The argument against intervention runs as follows: The instant that the Allied armies penetrate Siberia all the Bolsheviks will fall into the arms of Germany, and both the Bolsheviks and Germany would spare neither effort nor money to invoke the spirit of Russian nationality, so that it would appear that the Allies were forcing war weary Russia back into the shambles just to satisfy their capi-

talistic ambition. Whether this argument would have weight with the majority of the Russian people no one can surely say, tho it is certain that Russia wants internal peace more than anything else.

Japan, upon whom the brunt of such an offensive must necessarily fall, will naturally not act without the full concurrence of her Allies. They must be unanimous in such a great undertaking as this, for, while it might be easy enough to get to Lake Baikal with a small army, it would be impossible to proceed as far as the Ural Mountains against a hostile Russia without vast military preparation and a very large army.

Nevertheless, the time is approaching when a decision must be made. If we do nothing Russia will surely fall completely into the hands of Germany. If we intervene the same result may ensue. Still, many patriotic and well informed Russians assure us that Russia is only waiting for us to appear, to rise and throw off the German-Bolshevik yoke. We had better take the chance. Statesmanship can surely find a way to assure Russia that we are her saviors and not her exploiters. An eminent Allied Commission protected with adequate military force and with plenty of money at their disposal for legitimate propaganda could surely accomplish this. We must put the pressure again on the eastern front. This will save Russia. This will hasten the day of victory.

## DR. GLADDEN

**I**N the death of Washington Gladden, D.D., LL.D., at Columbus, Ohio, on July 2, in the eighty-second year of his age, the country and the Christian Church lose one of the greatest leaders and bravest soldiers of conscience.

Richly endowed as speaker and writer, Dr. Gladden for the past two generations has wielded an influence second to few in the land by his service as teacher to all the churches as to their civic duties and their fellowship of union.

In his death the last link that binds the old Independent to the new is severed. Dr. Gladden served as religious editor of The Independent from 1871 to 1875, immediately succeeding Beecher and Tilton and only ten years after the departure of Drs. Bacon, Thompson and Storrs, the first triumvirate of editors. Like Dr. Ward, he was probably the only editor who knew every member of the editorial staff of The Independent from 1848 to 1918, and, like Dr. Ward, there was not one who did not love and revere him. Ever since he left us The Independent has published frequently articles from his strong, brilliant and versatile pen, and we are pleased that elsewhere in this issue appears the last composition that he wrote.

## FOR FRANCE

**T**HE objectives of the war, always clear enough to men of unimpaired moral vision, have become more sharply defined as the months have passed. The safety of the free peoples of the world, the preservation of their civilization and the establishment of law as the basis of international relations are the supreme ends. Each nation arrayed against the common enemy is ready to make any necessary sacrifice, and no nation desires or expects to obtain material reward therefor. Every right-thinking American, however, intends that the small nations which have been all but destroyed shall be restored and indemnified so far as such redress is possible, and that France shall get back her own. By common consent, the civilization, the heroism, the devotion and the courage of France have shone resplendent thruout these years of appalling devastation and of sorrow. America has never forgotten the chivalrous aid that France extended in our struggle for independence and France will never forget what America has done for her

M. H. Moscow

#### AS RUSSIA SEES HERSELF

*Bolshevik: "Nothing can move me. I stand as a wall!"*

*Entente: "Yes, for the moment, but when a few more pieces have fallen what will be left for you to stand on?"*

in the hour of peril. French gratitude and admiration are as deep as they are spontaneous and unrestrained, and America will see to it that France is again whole and sound.

On July 14th we honored France and rejoiced in her liberty, as France on July 4th paid tribute to our ideals and achievements by celebrating with us the anniversary of our independence. The fall of the Bastille, which the 14th of July commemorates, was an incident of revolution rather than a proclamation to mankind, yet like the Declaration of Independence, it was a point of departure in the history of human liberty. It is fitting that both of these July days should from this time forth be internationally observed and abide forever in remembrance. Both are anniversaries of the downfall of the divine right of kings and of the enfranchisement of peoples. The American Revolution and the French Revolution were different in circumstance and incident, but both were the observable beginnings of one embracing social evolution, not yet complete, and destined to extend its blessings to the human race.

The civilization of France and the civilization of America have ripened thru a century of freedom; different in form and in external aspect but alike in essential, elementary principles. In each the political equality of citizens is fundamental. In each the right of the people to create their own political system, to modify it with changing need and to administer it in the light of experience, is proclaimed. In each the liberty of the individual to think and to speak and to act within the limits set by reasonable law, protective of equal rights, is defended. In each the necessity of universal education and of opportunity for all men to improve their condition is recognized. In each democracy of social intercourse is a habit and a manner, and in each there is an unalterable conviction that in all sorts and conditions of men there are practical and spiritual possibilities which must have scope for realization.

Not inconsistent with these identities there have been interesting differences, some of which are likely to disappear. One of them has been the French love of manners, contrasting with a certain American indifference to formal polite-

ness. American manners have been in general hearty and sincere rather than correct in form. At times and here and there Americans have questioned whether the refinements of Gallic social intercourse were expressive always of genuinely kindly feeling. Thru the coöperation of many influences a truer appreciation of the French way has been growing, and, beyond a doubt, the experiences of our soldiers in French environments will hasten the change. The Frenchman understands, what we have not always quite comprehended, that outward graciousness of manner and a punctilious attention to the little requirements of the code of politeness are the most important of all energy and nerve conserving inventions. They smooth out the rough places of daily life, and, so far from being unrelated to sincerity of feeling, they strengthen and cultivate the sentiment of good comradeship.

The French have understood, also, better than we the value of equality of obligation. As insistent as ourselves upon equality of rights, they have demanded of every man that he serve the Republic which lavishes benefits upon him. The service required has been personal; paying taxes has not discharged it. A practically universal military training and obligation have created a democracy of feeling, a genuine fraternity which we have not hitherto in comparable degree attained. The war has destroyed, forever we hope, our false notions on this subject, and, like the people of France we shall henceforth put equality of obligation in its rightful place by the side of equality of rights.

To a nation so sensitive to the finer things of life and, as events have proven, so heroic in defense of them, the ruthless seizure of the beautiful provinces of Alsace and Lorraine by a brutal victor was a well-nigh unendurable outrage. The Franco-Prussian war of 1870, as we now know from Bismarck's confessions, was a deliberate act of pure devilishness. Like the war begun in 1914 it was a carefully planned assassination and robbery. To France it was infinitely more than humiliation and loss of territory. It was a seizure and carrying off of her own flesh and blood, of people French in feeling and in habit, French in civilization, to be exploited and bullied by the freebooter. Nothing in history is more admirable than the quiet fortitude with which the people of France for a generation have borne themselves, repairing their losses, conducting themselves graciously and preparing as best they could to meet the next invasion which they knew would surely be attempted.

There must be no peace with Germany which does not completely redress this injury. Alsace and Lorraine in their entirety must be restored to their own land, their own kindred, their own civilization. Such restoration will be but one item in the accounting which Germany must make to the world, but this item will be insisted on with an emphasis that the most obtuse German intellect will not fail to understand.

One other item, too, will be singled out for particular attention. For the deliberate, wanton and savage destruction of the Cathedral of Reims, Germany must be punished with a penalty that she will not forget for a thousand years. Civilization owes this to itself.

The Archbishop of York got into trouble when he returned home. He was accused by Lord Benbigh in *The Times* for having on Good Friday preached that we should forgive our enemies, even the Germans. Fortunately his Grace was able to disprove the charge. He explains that the text "Father forgive them" was not of his choosing but imposed by the occasion and that he did the best he could with "this most difficult subject." He said that it did not apply to the rulers of Germany, who knew very well what they were doing and could only be forgiven when they repented and made reparation.

Bombardment of hospitals is nothing new for the Germans. When they did it in 1870, Faure protested to Bismarck about it but Bismarck replied: "I do not know what you find hard in that. You do far worse. You shoot at our men who are in sound and vigorous health."

# THE STORY OF THE WEEK

## An International Holiday

For the first time in history, on July 4, a national holiday was celebrated with equal enthusiasm in many countries on both sides of the Atlantic. It is true that a year ago, in recognition of our entrance into the Great War, the British and French authorities united to extend many official courtesies to this country. But on this Independence Day, with an American army already holding an important part of the western front, the Entente Allies did not so much pay tribute to our holiday as adopt it for their own.

Fireworks, to be sure, were not much in evidence, as the people of France, Great Britain and Italy have been somewhat surfeited with pyrotechnics for the past four years, but nothing else that makes up the American holiday was lacking. There were the usual praises of the "Revolutionary Fathers" and denunciations of the tyranny of George the Third, but on this occasion they came from the lips of such men as Lord Bryce, who declared that "the severance came because we had then a perverse court and a nonrepresentative Parliament"; Winston Churchill, Minister of Munitions, who said that by the principles of the Declaration of Independence "we lost an empire, but by it we saved the Empire," and Lord Derby, who asserted that the American Revolution "taught us how to treat our children; it is the reason why we now have Australia and Canada, and even South Africa, fighting beside us today." There were official proclamations, parades, banquets, addresses by public men, band concerts, decorations, ceremonies, and a universal flying of the starry banner in the important cities of England, France and Italy, and even in Algiers and Tangier. That nothing appropriate to the day might be lacking, there was a baseball game at London, in which a team of American sailors beat an army team, 2 to 1. Among the enthusiastic rooters in the grand stand was His Majesty, George the Fifth, who seemed to find much more pleasure in the day's celebration than one of his ancestors could have experienced on any such occasion.

In Paris there is now an Avenue du President Wilson, once the Avenue Trocadero; in Brest, a Place du President Wilson in place of a Place du Champ de Bataille; in Marseilles, a Bassin President Wilson. President Wilson has also become an honorary citizen of Florence, and thus, of course, a fellow citizen of Dante, Michel Angelo and Savonarola. These honors reflect the personal estimate in which President Wilson is held in Europe as well as evince friendship for the nation which he represents.

## Lloyd George Echoes Wilson

On July 5, while reviewing American troops in training near the British front, Premier Lloyd George made a most significant statement of the war aims of the British nation. He identified these absolutely with the four bases of peace outlined by President Wilson in his Independence Day address, saying:

President Wilson yesterday made it clear what we are fighting for. If the Kaiser and his advisers will accept the conditions voiced by the President they can have peace with America, peace with France, peace with Great Britain tomorrow. What are we here for? Not because we covet a single yard of German soil. Not because we desire to dispossess Germany of her inheritance. Not because we desire to deprive the German people of their legitimate rights. We are fighting for the great principles laid down by President Wilson.

The importance of this declaration lies in the complete answer thus given to those, in England as well as in Germany, who have sought to draw a distinction between the policy of the

United States and the alleged imperialistic aims of Great Britain.

## The Battle of Hamel

The Australians paid homage to our national holiday by selecting it for a dashing and successful raid on the German lines south of the Somme. On the morning of July 4 the Australians attacked under cover of a strong artillery fire and supported by a number of tanks. With the aid of these juggernauts they smashed a number of machine-gun outposts which were well capable of resisting an infantry attack. The success of the attack was mainly due to its unexpectedness. The Germans had not prepared any concentration of artillery to meet it and as a result the Australian losses were extremely light. The advance covered a four-mile front to a depth of one and a half miles and swept over the whole of Hamel village. Fifteen hundred prisoners and over a hundred machine guns were captured. Altho the battle was mainly an Australian affair, a few American companies took

## THE BLACK ARMY OF FRANCE

These Sengalese Colonials, picturesque in blue coats and red fezzes, have played a bigger part than most of us realize in French valor on the western front. It was the Sengalese Tirailleurs who won the battle of Chemin des Dames

French Official, Western Newspaper Union

## CHINESE TROOPS ON THE SOMME

There is a dozen in the Allied armies now. "The coolies carry on." Tho these Colonials are used chiefly to dig and carry they are doing their share in helping hold the Allied line

part and did their share of the work in splendid style.

The battle of Hamel is but one of an extensive series of minor attacks by which the Allies have sought to regain the more important positions lost in the great German drives. The Americans have made several raids on their own account to the west of Chateau Thierry in the wooded country north of the Marne. Such names as Bois de Belleau (since rechristened the "Bois des Américains"), Bois de la Roche and the village of Vaux stand for military actions which have tested out our new army to the full and proved its reliability for the greater battles of the future.

**Italy Gains Along Piave** The victory which the Italian army and the friendly floods won over the Austrians on the Piave has been followed by vigorous local attacks which have cleared the invaders from every foothold beyond the river. General Otto von Below, the victor of last year's offensive, has again assumed supreme command of operations on the Italian front. During the earlier months of this year he directed German forces in France, but the incompetence of the Austrian commanders who attempted to repeat the successes of last year against the Italians has provoked general criticism in the press of both Germany and Austria and made it necessary to call once more upon the general. A number of shifts have been made in the Austrian command and it is expected that the next Austrian drive will be far better planned and supported, particularly since three army corps from Germany are reported on the way to help out the Austrians in the highlands. Germany has taken over the railroads of the Trentino for this purpose.

Whatever may be the result of a future drive, the success of the Italians in repelling the recent attack along the Piave becomes daily more striking. Altho floods hampered the Italian counter-attacks, Vienna admits the complete abandonment of the Piave delta and local reverses at several points. The Italians have taken prisoners daily; in many cases, however, the so-called prisoners were deserters who surrendered at the first opportunity and not infrequently accepted service in the Italian army. These were mainly Austrian Slavs, who could have no sympathy with the objects for which their rulers bade them fight. Many German Austrians, however, were compelled to surrender because the storm and the Italian artillery had cut them off from their base of supplies and left them without anything to eat. The Italians claim a grand total of 24,434 officers and men taken prisoner from June 15 to July 6.

In Albania, also, Italian arms have met with marked success. On the 6th and 7th of July an Italian force supported by some French troops attacked an Austro-Hungarian army in the valley of the Voyusa River. The enemy retreated, leaving more than a thousand prisoners in the hands of the victorious Allies. There are now said to be half a million Italian soldiers in Albania and Macedonia, acting in close association with the very composite army of British, French, Serbian, Greeks and small contingents from other belligerents which is holding the Greek frontier.

**American Transport Sunk** An American transport, the "Covington," formerly of the Hamburg-American Line, was torpedoed and sunk on the night of July 1 on a return trip from France. All the officers and crew, with the excep-

tion of six, missing from the crew, were taken to a French port in safety. After the "Antilles" and the "President Lincoln," the "Covington" is the third army transport which the Germans have succeeded in destroying, altho others have been attacked.

The almost absolute failure of the German submarines to hamper the transportation of American troops has been partly compensated by successful attacks on neutral shipping. During June twenty Norwegian vessels were sunk with a loss of thirty-one lives. The entire loss of Norway since the beginning of the war is placed at 842 vessels of 1,154,143 tons aggregate and 1747 lives.

During June the British shipyards completed over 134,000 tons of merchant shipping; the American yards over 280,000 tons. The British figure fell short of the high mark reached in May, but the American output broke all previous records for this country. The figures for July will, however, much exceed those of June because of the vast output on the Fourth of July.

**Rumanian Treaty Ratified** As a matter of course, the German Reichstag has ratified the treaty with Rumania whereby the defeated nation is restored to nominal political independence at the cost of part of its territory and most of its resources. Only the Independent Socialists voted against it. Dr. Cohn, one of this party, is said to have characterized the treaty as "nothing but a disguised, perhaps undisguised, robbery." Even the pro-war Socialists, such as Scheidemann, criticized the terms of the treaty severely and urged a general world peace based on compromise and conciliation. The Socialist Ledebour declared for a revolution of the proletariat everywhere. The outspoken attitude of the Socialists in Parliament and (so far as the censorship permits) in the press is causing the German Government some concern, since the food shortage remains as great as ever and radical propaganda may soon find many recruits where famine has prepared the way. On July 5 a franchise reform bill passed the Prussian Chamber of Deputies, but the Socialists regard the measure as a timid and dishonest attempt to conciliate the people with the minimum of concessions. Even this half-hearted instalment of reform has yet to pass the Prussian House of Lords, where there will be further opportunities of delay and amendment.

The Rumanian Senate by unanimous vote has accepted the peace treaty forced upon it. Austria-Hungary has still some details to adjust with Rumania and Bulgaria's demands in the Dobrudja are not yet fully satisfied, it being necessary to reach an adjustment between Turkey and Bulgaria on certain questions. The oil and grain of Rumania are being transported to Germany as rapidly as the available means of transportation will permit.

Even Rumania appears to enjoy a greater extent of self-government than will be allowed to "independent Po-

French Port of Refuge

#### IN FRANCE, BUT HONORED BY THE KAISER

Fifty girls were killed by German bombs dropped on a plainly marked hospital in Belgium last week. But the will that ordered that destruction has marked for safety this French monastery of Mont des Cats, because the body of Prince Max of Hesse, cousin of the Kaiser, is buried somewhere near it. Only the Trappist monks know the exact location of the grave and they have sworn themselves to keep the secret till Alsace-Lorraine is once more French.

French Officer and Son

## A SON DECORATING HIS FATHER

Here is one of the surprising "human interest" stories that remind us every now and then that the war is a small place after all. Father and son are both officers in the French army and the son, who ranks his father, has just given him the legion of honor

land" if the terms of settlement currently reported in the German press are officially inspired. The Polish kingdom will have frontiers fixed by the German military authorities and its standing army will be limited to 90,000 men. For fifty years the Central Powers will have access on their own terms to the Polish markets, German schools will be opened thruout the country, and newspapers published in the languages of any of the Central Powers may not be restricted. None of these conditions may be modified by constitutional amendment except with the consent of the Central Powers.

**German Ambassador Killed** The ever chaotic Russian situation has taken a new turn with the assassination of Count von Mirbach, the German Ambassador to the Bolshevik Government. On Saturday, July 6, two men entered the German Embassy and wounded the count so severely that he died. The assassins succeeded in escaping, altho the Russian authorities at once organized a man hunt to capture them and bring them before a revolutionary tribunal.

It is not believed that the Bolshevik Government had any direct responsibility for the act, and even the German press, quite naturally indignant over this bloody defiance, lays the blame on the political enemies of Lenine and Trotzky. It is true that the Russian authorities must frequently have been restive under the autocratic dictation of the Ambassador, who controlled the foreign affairs of Russia from the embassy in Moscow in much the same fashion as he had once directed the conduct of the Greek Government at Athens before the Allies lost patience and forced the German intriguers to leave Greece. But the whole position of the Bolsheviks is dependent upon the political support of Germany and it is improbable that they would run the risk of provoking a German intervention against their party. At all events,

Lenine sent an abject apology to the German Government, promised to punish the murderers if they could be found and even offered to send a special envoy to Berlin to express in person the regret of Russia over the untoward event. In spite of these assurances and professions, the German Government marked its displeasure by breaking off the negotiations then going on between the German Foreign Secretary and the Russian delegates at Berlin.

Coincident with the assassination there was a serious outbreak in Moscow, said to have been fomented by the Social Revolutionist party. The Bolsheviks may be excused for tracing some connection between these two events and in looking for the slayers of the German Ambassador in the camp of their political rivals. The Social Revolutionists include in their number not a few of the "Terrorists" of the old régime who carried out numerous assassinations of the Czar's officials. In their own way the Social Revolutionists are as radical as the Bolsheviks, but many of them are displeased with the peace of surrender which the Bolshevik leaders signed with Germany at Brest-Litovsk and with the high-handed way in which Lenine and Trotzky have ruled Russia, excluding from all political rights not only the "bourgeoisie" but all the Socialist factions who ventured to oppose their policies or methods.

**Turkish Sultan Dies** Mohammed V, who succeeded Abdul Hamid by the revolution of April 27, 1909, died on July 3, and has been replaced by Mohammed VI. This change of Sultans is not an event of prime importance, as the Turkish Government is really in the hands of a few civil and military officials who act under the orders of Germany. Even before the war, the Sultan hardly enjoyed in practise the free exercise of the almost absolute powers which were nominally his. A man of weak but not un-

amiable character, thrust into power by the chiefs of the Young Turk party, he was not responsible for the disastrous wars into which his supporters forced him—the Tripolitan war with Italy, the war with the Balkan States and the Great War—but he lacked the will power to assert himself on questions of foreign policy. In many respects this puppet monarch may be compared with Nicholas the Second of Russia, a gilded fragment of humanity swept away on the torrent of military adventure to a national ruin which he was equally unable to foresee and to prevent. Mohammed V might have been a more effective ruler but for the fact that he came to the throne suffering the effects of an imprisonment of thirty-three years imposed upon him by his ruthless brother, the Sultan Abdul Hamid.

The Turkish Empire, sustained only by the force of German arms, is suffering seriously from the exhaustion of a prolonged war. As a compensation for losses in Palestine and Mesopotamia, Turkey has sought expansion in Russian Armenia and western Persia, but reports from Russia, by way of Erivan.

Frightful conditions are reported in Persia, where typhus and typhoid are epidemic and the death rate ten times normal. Commerce is wholly paralyzed and food selling at abnormal prices.

Conditions are much better in Mesopotamia, where an effective British occupation has wrought a veritable transformation. Bagdad now has busy traffic, a police force and fire department, street lighting by electricity, a training school for native teachers, and a workable municipal government, all the product of a few months of British overlordship.

## THE GREAT WAR

July 2—General Otto von Below appointed Austrian commander on the Piave front. Germans land great army in Finland. American army in France estimated at more than one million men.

July 3—Germans counterattack American positions at Vaux. Italians gain on the lower Piave. Germans recapture old positions north of Albert from British.

July 4—Australians, supported by American forces, attack German lines at Hamel. Great American merchant fleet launched.

July 5—Armenian army reported at Erivan. Italians extend Piave gains.

July 6—German Ambassador to Russia assassinated. Rumanian Senate accepts German peace treaty.

July 7—Australians continue their advance to Hamel. Revolutionary outbreak in Moscow. Italians win victory in Albania.

July 8—French straighten line near Soissons. Bolsheviks crush Moscow rebellion.

July 9—Richard von Kühlmann, German Foreign Secretary, resigns. Allied offensive continues in Albania. French attack near Antheuil.

July 10—Bolsheviks abandon Irkutsk. Revolutionary movement spreads in Siberia.

#### MAJOR MITCHEL—HERO

Probably for no other man has New York City given spontaneously the respect and love it showed at the funeral of Major John Purroy Mitchel, formerly mayor of the city, and recently major in the aviation corps of the United States army. Major Mitchel was killed in an airplane accident at Camp Gerstner, Louisiana, on July 6. He enlisted directly after the expiration of his term as mayor, passed his tests as pilot in record time and had expected to sail for France soon

**An Indecisive Dutch Election** On July 3 there was a general election in the Netherlands for the national Parliament. The relative strength of the parties was not greatly changed by the result, and it is probable that a compromise Government will hold office with the one fundamental policy of keeping the nation at all costs from being drawn into the war. The conservative parties came out well in the elections, the Catholic party winning a larger representation than any other political group. On the other hand, the Socialists have somewhat strengthened their position at the expense of more moderate liberals. One of the Socialist members is the first woman to win a seat in a Dutch Parliament. Women, altho permitted to be candidates, do not yet have the Parliamentary vote, and the present elections are the first to be held under the new system of universal manhood suffrage with proportional representation.

**Our Bit** Secretary of War Baker celebrated his Fourth of July by making public the extent of our achievement to date in the matter of military organization. He showed that within fourteen months our army has increased from 9524 officers and 202,510 enlisted men to 160,400 officers and 2,010,000 men. Approximately half of this great force is now across the Atlantic. Supplies ordered by the Quartermaster Corps include such items as ten million files, twenty-seven million pairs of shoes and more than a hundred million pairs of wool stockings. For railroad operations in France there have been provided more than 1600 locomotives and 22,000 freight cars. More

than 45,000 Americans are engaged in railroad construction and operation behind the battle line. More new rifles have been manufactured than we have soldiers in France to handle them, besides several thousand machine guns of various types. The United States is at last catching up with its belated aircraft program. Over five thousand training planes, including the types used in elementary work, were completed by June 8; also 286 combat planes. Ports under American control on the French coast have been so developed that 750,000 tons of supplies can be landed every month. The death rate from disease in the American cantonments is a trifle over three per thousand; one of the lowest death rates attained in any army or civilian community in the whole history of medical science. American soldiers are now going to France at the rate of nearly three hundred thousand a month, and not a man leaves port without complete equipment for all his immediate requirements. Fewer than three hundred American soldiers of the million and more sent to France have lost their lives at sea. Seven-tenths of the American army in France belong to combatant units chosen for the actual fighting in the trenches.

#### Money to Run the War

The problem of money to run the war will not down. While Congress is debating the revenue bill, the Treasury Department is making arrangements for the next Liberty Loan, the measure authorizing which the President signed last week. The campaign for the fourth issue promises to be the most earnest yet. Immediately follow-

ing it, according to an announcement made by John R. Mott, international secretary of the Y. M. C. A., will begin a drive for a \$112,000,000 fund for the "Y." Mr. Mott has already been touring the country preparatory to the drive, and he made the announcement after consultation with President Wilson.

Money raised by loans is all well and good, but it requires actual, physical coin to keep the wheels of business moving. To this end the United States Mint has been working overtime and has succeeded in breaking all records of money for circulation. The value of the money coined in 1918 was \$43,596,895 as against \$25,445,148 the previous year. The demand for cent pieces, "pennies" as they are illegally called, was such that it required no less than 528,351,479 to meet it, or more than twice as many as the year before. Half dollar pieces seemed to be most necessary, for whereas in 1917 a little over 9,000,000 were enough, last year the Government had to manufacture more than 24,000,000.

Without going into intricate financial explanations, the Director of the Mint, who has now taken his plants back from the twenty-four hour basis, suggests that the war has stimulated the circulation of the country to a very healthy degree.

#### Twelve Billion Dollars Spent Last Year

The United States Government has closed its books for the first fiscal year since its entrance into the war. Altho Congress does not keep a budget, Mr. McAdoo maintains books in such condition that it is possible to secure a clear idea of what money the country spent and what it took in. More than \$12,600,000,000 is the actual outlay since July 1, 1917. In times of peace the Government spends less than \$1,000,000,000 each year.

With figures for the last day or so of June not yet tabulated, expenses for the entire fiscal year were reported as follows: Ordinary expenses for various Government departments, \$7,567,000,000; payment to Allies, \$4,708,000,000; interest on Liberty bonds and other public debt items, \$175,000,000; Federal farm loans (to be repaid), \$65,000,000; Panama Canal, \$19,000,000. In addition, \$6,747,000,000 certificates issued earlier in the year were redeemed; \$27,362,000 one-year Treasury notes were paid, and \$21,536,000 national bank and Federal Reserve Bank notes were retired.

Receipts for the year, without records of the last two days, were reported as follows: Liberty loan, \$7,563,000,000; income and excess profits taxes, \$2,115,000,000 (with probably \$500,000,000 or more yet to come in); miscellaneous internal revenue sources, \$863,000,000; war savings and thrift stamps, \$296,000,000; customs (tariff revenue), \$178,000,000; miscellaneous revenues, \$287,000,000; Panama Canal tolls, \$5,846,000.

The Government also took in \$8,468,000,000 from the sale of certificates of indebtedness redeemed later

in the year; \$1,020,000 from postal savings bonds; \$19,150,000 deposited for purchase of one-year Treasury notes under the Federal reserve act, and \$10,240,000 deposited for retirement of national bank and Federal Reserve Bank notes.

**Profiteering 500 Per Cent** A Treasury report to United States Senate, made in response to a formal request for information on profiteering, was published last week almost on the heels of the report of the Trade Commission covering some of the same ground. It does not require an astonishingly acute observer to conclude that the Government has the facts—as the President told Congress a few weeks ago—and that it is going to press them home so that there will be a strong public opinion back of the heavy excess profits tax now pending.

The summary of the horrible examples of profiteering just published will be supplemented later by a list of names of firms which made more than 15 per cent. last year. While awaiting these, we shall have to content ourselves with such items as:

A cold storage concern, capitalized at \$10,000, exceeded its 1916 profits by 472 per cent. Another, capitalized at \$249,000, made 31 per cent. In the dairying business, excess profits ranged from nothing to 182 per cent; banking nothing to 82 per cent; contracting nothing to 596 per cent; clothing manufacturers up to 191 per cent; chemicals as high as 377 per cent. A flour miller with \$90,000 capital showed an excess profit of 236.24 per cent. In 1916 he made \$48,000 profits, and in 1917 he made \$260,000. Another, capitalized at \$25,000, made \$27,000 in 1916, and in 1917 raised it to \$81,000, an excess of 437.67 per cent on his capital.

A \$500,000 meat packer made 1430 per cent, while a \$72,000 concern made 204 per cent. On \$10,000 capital, a soft coal mining concern made 504 per cent excess. A \$2,000,000 concern showed an increase of 17.75 per cent, having made \$171,000 in 1916, and \$526,000 in 1917. A retail coal concern showed 80 per cent on a \$1,250,000 capital, making \$185,000 in 1916, and \$285,000 in 1917.

Underwood & Underwood

#### AMERICANS INVALIDED HOME

These are some of our boys, wounded in France, who are incapacitated for further military service. They are recuperating at the big Government hospital at Fort McPherson, Georgia, where they will be given a chance, too, to prepare for a good civilian job

Department stores ranged from nothing to 331.69 for one with small capital. Several with capital as high as \$300,000 showed no excess profits. Paper manufacturers ran from none to 176 per cent. On \$50,000 capital, a concern in the retail clothing trade made 1181 per cent, jumping profits from \$68,000 in 1916 to \$127,000 in 1917.

Electrical machine makers ran from no excess to 91 per cent; machine tool manufacturers from none to 788 per cent; dry goods concerns up to 117 per cent.

#### New Taxes

Who is to bear the burden of the new war taxes? This, after all, is the fundamental question which Congress is endeavoring to answer in the new revenue bill. According to a memorandum submitted

by the Treasury Department last week, those who purchase luxuries should pay the most in proportion to the total.

In working out a system to put this theory into effect, the Treasury suggests two kinds of taxes: flat retail sales taxes and specific rate taxes. The first would be levied directly on the consumer, while the other would be charged directly to the producer or dealer, coming indirectly only to the consumer.

The rates suggested by the Treasury are many and various and include a 50 per cent. tax on the retail price of jewelry, covering watches and clocks, except those sold to army officers; 20 per cent on automobiles, a tax on men's suits selling for more than \$30, and 10 per cent on hotel bills amounting to more than \$2.50 per day per room. Doubling of club dues, taxes placed on all male household servants and on all in addition to the one female servant allowed, levies on soft drinks increased—these are some of the items in the bill which the Government proposes to have the public pay.

On the other hand, there is quite a group which is pressing on Congress the plan of Henry George for taxing unused land both to stimulate production and to raise money for the war. The advocates of this plan are against the taxation method suggested by the Treasury Department. "The committee members were obviously interested and obviously unconverted," states a news dispatch reporting a hearing on this plan before the Ways and Means Committee. Among those advocating the single-tax as a Federal revenue-raising measure were H. H. Willock, William Kent, member of the Tariff Commission, and Jackson H. Ralston, attorney for the American Federation of Labor.

# Taking Over the Wires

Because Congress was earnestly debating the bill to give the President power to take over the wire system of the country on the date set for a strike, the telegraphers determined to keep industrial peace awaiting governmental action. They had previously gone on record in favor of Federal ownership of the wires, declaring that they preferred working for Uncle Sam to working for a management which refused them the right affirmed by the War Labor Board to affiliate with an outside union.

Under the wing of the Post Office Department the telegraphers will doubtless be permitted to combine with any organization they please. It is not, perhaps, generally known that thousands of clerical workers of the United States Government possess an organization which is affiliated with the American Federation of Labor. This union, however, does not use the weapon of the strike, trusting solely to publicity and education. The postal clerks are separately organized, and during the last four years have had several spirited tilts with the present Postmaster General, a fact which may augur similar contests between that official and the telegraphers, when they finally shall be joined with the Post Office.

In the haste of the party in power to make short work of the telegraph bill, the Senate last week was the scene of a flare-up of the kind which often characterizes that chamber when issues are drawn tightly and suddenly. The opposition denounced the Administration for using steam-roller methods. The committee in charge of the bill, only seven members being present, voted to report the resolution without recommendation, thus reversing its former decision to hold hearings.

Other than this, Congress has been "reasonably inactive." At the request of former President Roosevelt, the \$40,000 Nobel Peace Prize which he had donated to an industrial peace commission and which had not been utilized, was returned by the House and Senate in a joint resolution to the donor, who will use the money for war work. A large number of unimportant bills, relatively speaking, were debated and enacted, among them being a measure forbidding sale during the war of American ships without the approval of the Shipping Board. Additional funds for the navy to the extent of more than \$3,000,000 were requested by the Secretary of the Navy, nearly one-third of which is for the naval medical department. By unanimous consent the House determined to take up and finally dispose of the Administration water power bill. This measure is earnestly advocated as a necessary war measure by Secretaries Baker, Lane and Houston.

# Going Dry?

The so-called "dry amendment" to the agricultural bill, as agreed on by the Senate committee, is likely to be the subject of considerable discussion and possibly prompt action. The original text is as follows:

## AN ENVOY FROM AUSTRALIA

Following the example set by Canada some months ago Australia is sending to the United States a representative of her own, distinct from the British Embassy. Ex-Premier Crawford Vaughan has been appointed to the position.

That after December 31, 1918, until the conclusion of the present war, it shall be unlawful to sell for beverage purposes any distilled spirits, and during said time no distilled spirits held in bond shall be removed therefrom for beverage purposes except for export.

After November 1, 1918, until the conclusion of the present war, no grain, cereal, fruit or other food products shall be used in the manufacture or production of beer, wine or other intoxicating malt or vinous liquors for beverage purposes.

After December 31, 1918, until the conclusion of the present war, no beer, wine or other intoxicating malt or vinous liquor shall be sold for beverage purposes except for export.

Any person who violates any of the foregoing provisions shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding \$1000, or by imprisonment not exceeding one year, or both.

## Our Policy in Russia

Unofficial information round Washington last week credits the Administration with a definite plan for affording moral and material support to Russia. Intervention by force of arms

Uk, Berlin

HE LAUGHS BEST WHO LAUGHS LAST "Flieversfurcht in New York" says the caption of this cartoon from a Berlin paper, representing Americans as panic-stricken at the fear of air raids over New York City

will not be the program, unless specifically requested by the Russian people or by their accredited representatives.

Economic intervention, taking the form of a commission of broad-minded and sympathetic Americans, carrying with them the power to pledge the utmost of the resources of this nation to Russia, will be the solution. The economic mission will probably be accompanied by a small military police force, traveling primarily to protect the mission, and sent, secondarily, for the purpose of looking over the military situation, with a view, apparently, of forming connections with the Russian military leaders such as to render the success of the mission in Russia certain and sure.

During the last two weeks the Russian situation has been the subject of endless conferences and "conversations," both diplomatic and undiplomatic, in Washington. Every aspect of the situation has been discussed, it may be stated, with every officer of the Government who is in a position to render such discussion useful. The silence from officialdom should not, according to the best-informed correspondents from the Capitol, be considered a silence of inaction. Rather it is the kind of silence which precedes the announcement of a formulated plan, capable of translation into accomplishment.

## The Advertisers' Program

At San Francisco last week the Associated Advertising Clubs of the world held their annual convention, attended by more than three thousand advertising men from every quarter of the globe, exclusive of Germany.

The keynote of the next big advertising campaign for the United States was struck by Herbert S. Houston, who declared that when the war is won "Germany must not be allowed to prepare for another war by growing rich in competition with nations whose industries she has all but destroyed in this war. That would be to permit the robber to set up business in the store he has robbed."

Next September a group of the advertising men will meet in New York to map out a definite campaign for promoting world trade after the war is over.

A significant incident in the opening session was the reading of a telegram from President Wilson expressing his appreciation of the service played by the advertising men in the prosecution of the war, particularly in putting over the Liberty Loans and the drives for Red Cross and Y. M. C. A. appropriations. "It was with real satisfaction," said the President, "that I created by executive order the government division of advertising as a part of the committee on public information. The men appointed as members of that division are all members of your organization, and the work that has been done has been of far-reaching service and value."

# AFTER THE RAILS, THE WIRES

PRESIDENT STAFF CORRESPONDENCE FROM WASHINGTON  
WILSON'S Government engineers are convinced

request to Congress for authority to take over the wire communication systems of the United States means that, sooner or later, Congress will grant him that power. As the resolution which has already passed the House reads, that power will apply equally to telephone, telegraph and wireless, tho as yet the public seems to think that merely the telegraph is desired by the Government.

The present contest on Capitol Hill brings to mind a vivid picture drawn in a debate on the same subject less than two years ago. Here it is:

"Scene I. I take you to an average town in Germany and introduce you to the postmaster. You go into his office. It is the express office, the telegraph office, the telephone office, all in one. He shows you his wire system. It converges to one line of poles in the street, carrying the telegraph-telephone wires. The toll telephone wire is also the telegraph wire, and you can use it for both purposes at the same moment. The German postmaster uses all the five fingers of the postal hand, the express package up to 110 pounds, the savings bank, the letter, the telegraphic and the telephonic agencies of communication. Unity, efficiency, economy, and an annual surplus of \$22,000,000 is the result.

"This picture is true not only of Germany, but of all leading countries, Austria, Belgium, Denmark, France, Great Britain, Hungary, Italy, Japan, Norway, Netherland, Russia, Sweden, Switzerland and New Zealand, and in 1910 the gross profits from their postal, that is, their mail, express, telegraph and telephone activities—amounted to \$124,335,217, or 20 per cent of their gross receipts.

"Scene II. We now go to my home town and we meet the American postmaster. It would be a misnomer to call him a postmaster in other countries, for his functions have been divided among strangers. Looking from his post-office window he shows you their rudimentary fragments. You see on one corner the office of Wells Fargo, on another the Adams, farther down the street the American and the National express offices. And even in the field of communication, sacred to the postal system under the Constitution, what do you see? Well, all still in sight, you see the separate offices of the Western Union and the presumptuously named 'Postal' Telegraph Company, all vying with each other and the express companies in a prodigious waste of the postal resources. When Alexander G. Bell found he could talk over a wire the news was cabled to Europe, and the Postal Telegraph engineers soon found they could use the telegraph wires for telephoning and telegraphing at the same moment, and as in Europe you see only one line of poles for both. But on the Maryland roads, the glory of the Union, you see three lines of poles—the Western Union, the Postal Telegraph (neither render-

ing any telephone service) and the pole lines of the Bell system, a better telegraph structure than either telegraph company's, yet it is rendering no telegraph service whatever. Three pole lines! Yes, even a fourth, for sometimes the pole line of a 'competing' telephone company stalks into the phantasmagoria. Waste, waste, a perfect carnival of waste of overhead, of men, of material, of capital, of managerial and executive labor."

Since the penning of this description one item in it has been altered—the Government has consolidated the express companies, and the tendency is to coördinate them with the postal service. But the rest of the picture is still true, and those who have been following the gradual development of the Administration's telephone and telegraph policy are aware that the member of Congress whom I have just quoted was long in close consultation with the Postmaster General on the subject of the socialization or postalization of the wires. All of which makes Scene I and Scene II interesting as representing the probable views of Mr. Burleson and his colleagues.

Already speculation in Washington has run far ahead of the time when Congress shall give the President the power which he has requested, and discussion is centering on the broad principles which will underlie the actual operation of the lines when the Government takes them over for the period of the war. It is quite possible that the Government will assume control only of the telegraph systems. If, however, the

that there is reason and good business in a judicious combination of the telephone and telegraph systems, that may be effected. In all probability the linking up of the wires with the Post Office Department would, under normal circumstances, result in the consolidation of the telegraph branch offices with the branch post offices. Yet war conditions may make such a violent physical reform impracticable. But the public will want to know how the Government intends to handle these matters. And above all, the public will want to know what is going to happen to telegraph and telephone rates.

According to the advocates of public ownership of public utilities, it is a cardinal principle that operation without profit should and does reduce rates. While cheapening wire communication is not the confest purpose of the Government in this emergency, nevertheless the Government will have to make rates, and in making them will have to reduce the element of profit to the minimum. What will this mean? According to the government ownership people, it will mean cheaper telegrams for the people. The following table, taken from an official document, suggests what might occur here upon the adoption of the European public ownership policy:

	No. of Words	Rate
Luxemburg .....	10	\$0.067
France .....	10	.0965
Japan .....	10	.134
Norway .....	10	.134
Belgium .....	15	.0965
Netherlands .....	10	.1005
Sweden .....	10	.134
New Zealand .....	12	.12
Great Britain .....	12	.1217
Switzerland .....	10	.0579
Germany .....	10	.119
Italy .....	15	.193
Denmark .....	10	.130
Austria .....	10	...
Hungary .....	10	...
Russia .....	10	.075
United States .....	10	.25
" .....	10	.30
" .....	10	.35
" .....	10	.40
" .....	10	.50
" .....	10	.60
" .....	10	.75
" .....	10	1.00

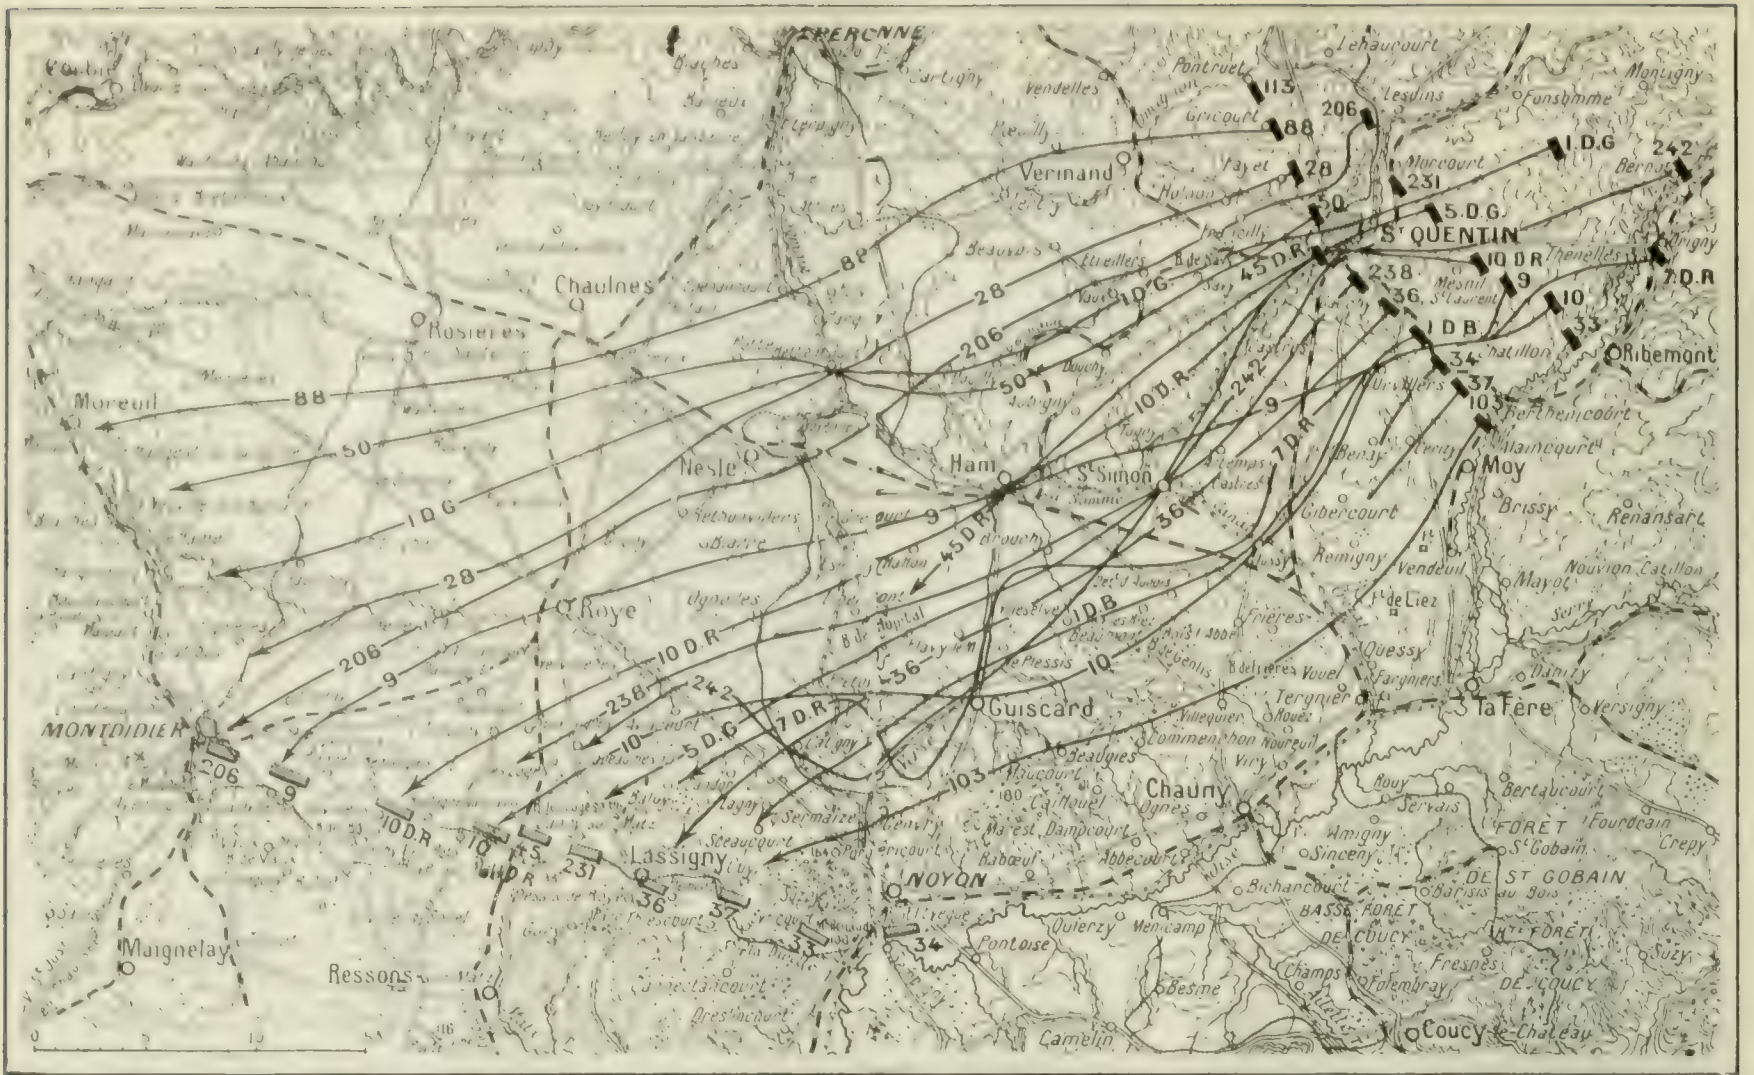

In other words, telegraph rates in the United States apparently run from two to four times as high as those in the postal-telegraph countries. Part of this cost must doubtless be attributed to the long distances which we have and which Europe does not have, necessitating miles of wire stretched thru desolate landscape, a prey to winds, snow and sleet.

It may be recalled that advocates of public ownership of the railroads argued that such a policy would lower rates. That argument has been defeated by recent events, as every traveler knows full well. But as nearly as can be gathered today from consultation with those who are trying to secure control for the Government of the wire systems, the purpose is not so much to reduce rates as it is to create an efficient system. [Continued on page 103]

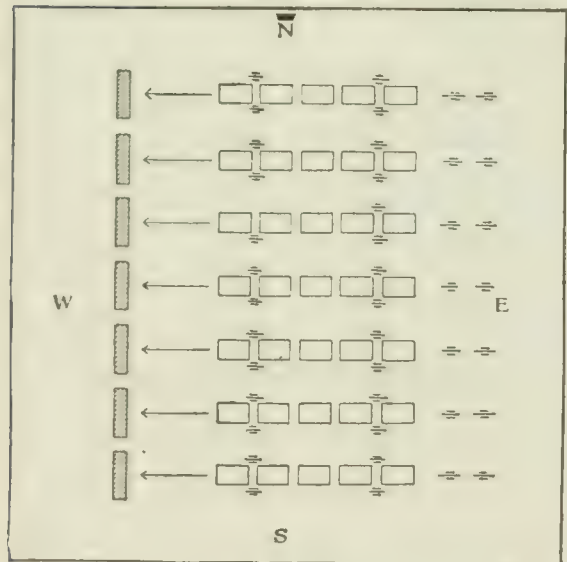

Postmaster General A. S. Burleson, one of the chief advocates of a government-owned telegraph and wireless system

This map shows the actual success of German strategy. From the black oblong which marks its starting point the line of advance is traced for each of twenty or more German divisions in the recent offensive. Their routes hardly deviated from their original orders

# GERMANY'S MACHINE OF WAR

Seven divisions in parallel formation ready to advance, baggage and artillery behind each

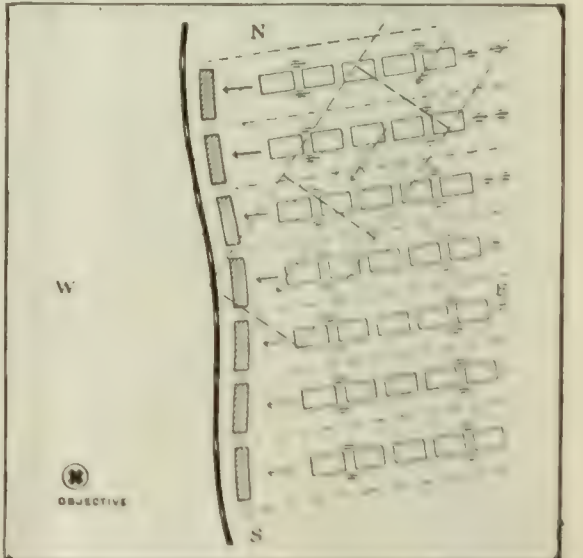

The beginning of a turn that advances only the troops. The baggage trains are left

**T**HE recent advances of the Germans in France were largely achieved by their success in moving forward the columns of a wide front on parallel lines in spite of irregularities of the ground and local opposition. The efficiency of a modern army is dependent upon keeping its long supply train straight and clear. The small diagrams show that any movement to right or left is likely to cause confusion and entanglement of the lines running to the rear. Any natural obstacle or defended post causes a concentration of the columns at one point and an equivalent thinning elsewhere that must be filled in with reserves to keep the front continuous and straight. Consequently it is the aim of every commander to keep his divisions evenly spaced.

We have an opportunity of seeing in how far this ideal can be carried out on the battlefield. The accompanying map, which we reproduce from the *Paris Illustration* and *London Sphere*, gives us an actual view of a part of the flood of German troops which poured down the valley of the Oise and endeavored to thrust a wedge of separation between the French and British armies. On March 23 twenty-one German divisions—that is, 189 battalions—were in action about St. Quentin. Four of these, the 1st Guards, the 28th, 58th, and 88th, followed the retreat of the Fifth British Army, while seventeen rolled forward into the widening gap between British and French. Ten of these were identified six days later as in action between Montdidier and Noyon, when the French front had been consolidated, while others were in close support. At first there was a convergence of the advancing columns upon the chief points of passage of the Somme and the Crozat Canal. Three divisions converged on Bethencourt, three on Ham, four on St. Simon, and three upon Jussy.

If the divisions attempt to pivot there is bound to be a tangle of supply trains

The only way to get the divisions to A is by direct advance in parallel formation

# DO WE BELIEVE IN GOD?

BY WASHINGTON B. GLADDEN

*Dr. Gladden's death on July 2 ended a career of over fifty years of leadership in the Congregational press and pulpit. From 1871 to 1874 Dr. Gladden was an editor of The Independent, writing at that time some of the plain-spoken, hard-hitting editorials that laid the groundwork for his later books. This is the last article to come from Dr. Gladden's pen.*

THE fundamental question of the war is a religious question—the religious question, indeed; for all religious questions are at bottom one—the question whether we believe in God. This is a matter that we should settle in our own minds, without delay, for it is vital and urgent. About small matters we may think our attitude toward God is negligible, but it is of tremendous consequence here. It makes all the difference in the world with us whether or not we believe in God.

It is easy to reply that there are "gods many and lords many," and to insist that our deities be defined. We shall be reminded that every nation has a God of its own, and we shall hear the boasts of the Kaiser and the war-lords and the German professors, about the German god and his superiority to all the other gods. This is not what I mean by believing in God. The German god is no god. People who talk about believing in the British god, or the French god, or the American god are atheists or blasphemers.

Even if they refrain from giving their god the national name—if their constant implication is that their god is a tribal deity—and that they have special claims on his patronage, they are not truly believers in God.

This distinction needs emphasizing, because not one in ten of the people who profess to worship God are really monotheists, believers in one God. They do not believe in any real God, they have a sort of sentimental attachment to the deity of their own tribe, from whom they pretend to expect favors. But faith in such a fragmentary god is no faith. We cannot have faith in any being whom we cannot respect. It is a psychological impossibility to believe in any being calling himself god whom we convict by our own confession of being petty or partial or deceitful or unjust.

Now we know by reports that reach us of the hymns and prayers of German worshippers, that many of them believe their deity to be partial, petty and deceitful; that they are sure that he is unfair, and a bitter partizan; that is the kind of god that they believe in; therefore it is absurd and monstrous to speak of them as believing in God at all.

When the Kaiser talks very piously about the help that his god is giving him, we have to remember what kind of things his god has been helping him to do. For it is just as true of gods as of men that we know them by their fruits. A god who approves the sharp practise by which Austria was forced into this war, who sanctions the inva-

sion of Belgium, and who smiles on the sinking of the "Lusitania" is not a god in whom respectable people can believe. In fact, this tribal god whom the Kaiser patronizes and brags about, whom the Junkers worship, and whom the German professors have been trying to get the German people to believe in, is a god that no rational man can believe in. The human mind is stultified when this kind of credulity is required of it.

The Kaiser has made the German people believe a lie about the origin of this war, about the rape of Belgium, about the motives of the American people in entering the war. He knows that this is a lie, and that when he implicates god in the falsehood, he is simply talking about the German god, whoever he is, and not about the Universal Father of mankind.

TO believe in God, then, is to believe in perfect justice and truth, and benevolence, and purity; in a God who loves all men with an equal love, but is kindest to them that are neediest; whose central purpose it is to establish in the earth the kingdom of good will and to bring into it all men and nations, from the least unto the greatest.

Faith in such a God as that is an overcoming faith. To believe that the universe is in the hands of infinite and perfect justice, of boundless kindness, of unfailing sympathy, of unwearied patience, who will fail not nor be discouraged till He has set righteousness and truth and peace in the earth—to hold fast to that as an inflexible and unswerving conviction, to shape our

public policy and our private conduct by this assurance, is victory.

These are the elements that ought to prevail and that will prevail:

For Right is right since God is God,

And Right the day will win;  
To doubt would be disloyalty,  
To falter would be sin.

The centuries may be challenged to show where this faith has failed.

If any one shall say that it has not often been tested we shall have to assent; the full measure of such fidelity is seldom reached; yet we may claim that the nearer we come to fulfilling the conditions the closer we get to realizing the reward. To hold this ideal of perfect justice and goodness steadily before us and push toward it is for all men and for all nations the way of life.

I am afraid that we sometimes fall far below this ideal.

We hold in our minds conceptions of God that are not much better than the Kaiser's. We are fain to think of Him as an American god, and we sometimes

pray to Him to damn the Kaiser. People who pray such prayers have probably learned them from the Kaiser. Prayers such as those have no place in the true conception of God. They belittle the worth of our faith by belittling God and so postpone the day when true faith shall finally triumph over petty doubts.

Really to believe in God is a great achievement—a triumph of faith. If all the people believed in God—I will not say implicitly, but practically, in the same way that ordinary men believe in the bank statements or the weather reports—our life would be completely revolutionized.

I will not try to describe or catalog the changes which must inevitably follow the practical recognition of the supremacy and regnancy of good will in the earth. It is the day for which the world has been waiting for many generations.

What can be done to deepen and strengthen belief in God in this nation in this time of war when our faith is being tested? Now is an opportunity such as we have never had before to prove to the utmost our belief in God.

Faith in God, like all other great elements of character, is developed by living in it. Life is the soil in which human virtue grows. A great woman, struggling with the problem of God's existence, seemed to hear a voice saying, "My daughter, act as if I were and you will know that I am." To this nation, seeking to confirm its life in God, the same voice comes, "Share my life and you will know that I am alive forevermore."

# A PRIMER OF RUSSIAN PSYCHOLOGY

BY EDWIN E. SLOSSON

THE Russian situation is the most serious and perplexing of the problems of the present. While in France and Italy half a million men are fighting to the death over the possession of a few hundred yards of barren ground, the late Czar of All the Russias has bequeathed his empire, comprizing a sixth of the land on the globe and including a large part of its most valuable resources, "to the strongest," as did the dying Alexander the Great. All of us want to help Russia but none of us can see just how to do it. We have read Russian novels ever since Howells told us we ought to some thirty years ago, but still we do not understand the Russian psychology. Intervention, if it is not to do more harm than good, must be based upon accurate knowledge of the situation. But the little information we get comes mostly from Moscow by way of Berlin and London, so it has been expurgated and colored by three censorships, the Bolshevik, the German and the British. What sifts thru to us is only what all three agree is innocuous news.

What puzzles us about Russia is its indefiniteness, its fluidity. We cannot fix it to our gaze. We cannot classify it. We cannot map it. It is neither autocracy, constitutional monarchy, republic, federation, nor socialistic state. Villages set up as independent entities. Class fights against class, city against

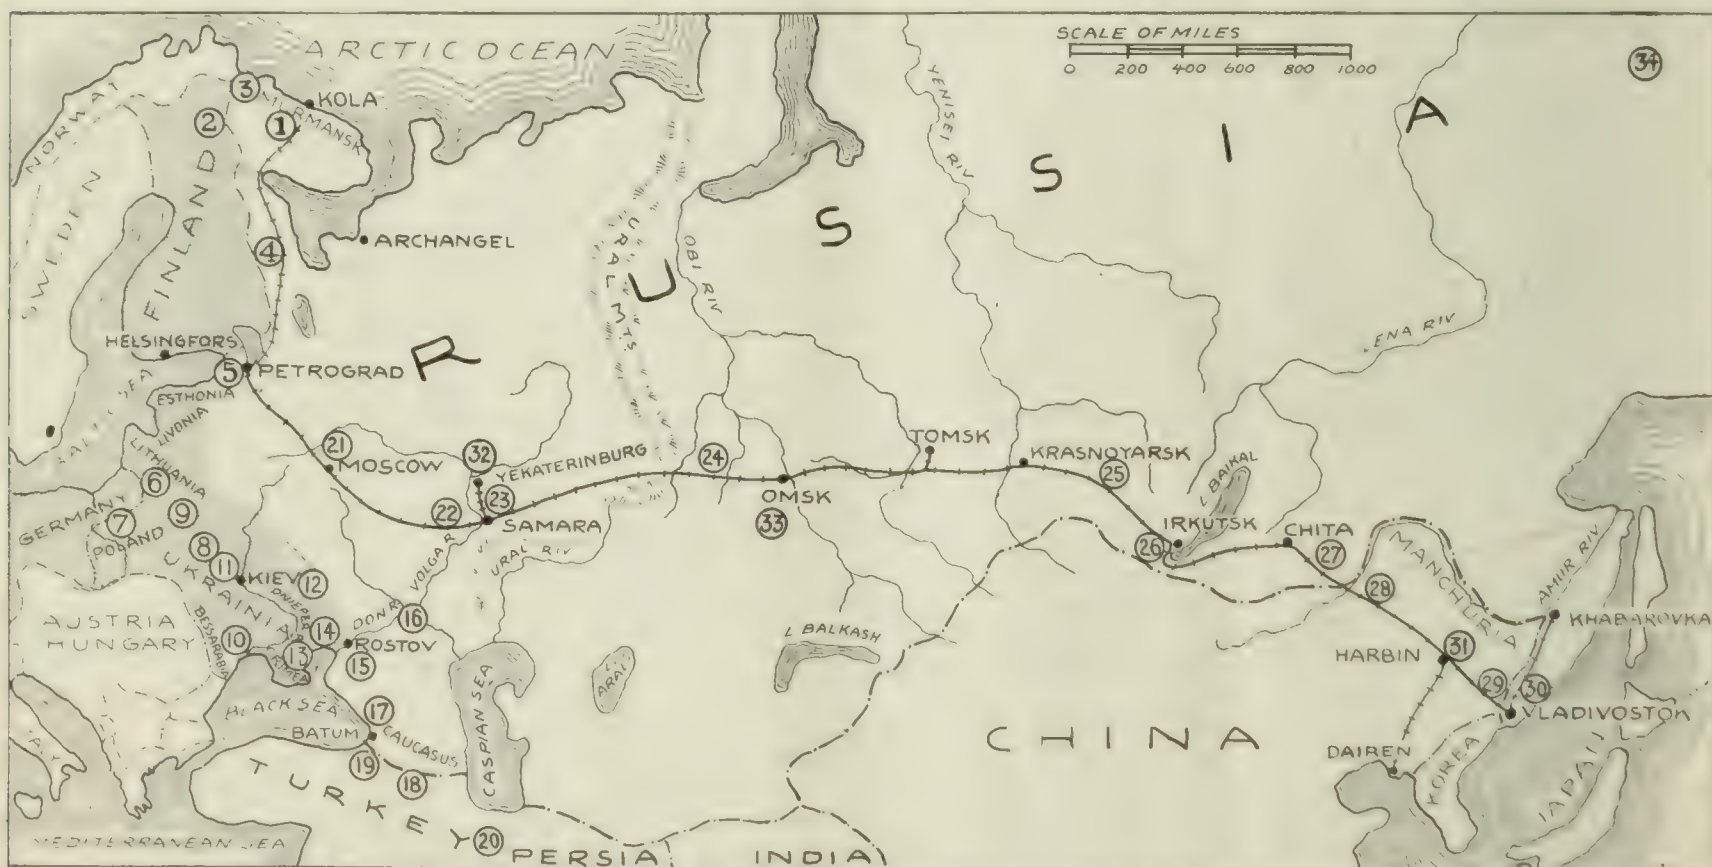

city, race against race. Armies of no acknowledged allegiance roam over the land. Dictators, delegates, commissioners, agitators, pretenders, generals, presidents, demagogues, tyrants, rise and fall. Nobody knows how far the authority of any particular government extends. Nobody can tell whether a particular conflict is a foreign war, civil war, class war, revolution, pogrom, rebellion, insurrection, riot, or robbery. Commerce has become barter. Each community seems to run its own affairs and each individual to do whatever is right in his own eyes.

Such a state of affairs seems to us strange, abnormal, unendurable, transitory. We naturally tend to look upon Russia as in a critical condition of unstable equilibrium, which cannot last but must soon give way to something recognizable and tangible. The books and articles now coming out bear such titles as "The Russian Crisis," "Russia in the Balance," "Russia at the Parting of the Ways," "Russia in Upheaval."

It would be more correct to think of Russia as settling down, as relapsing into the primitive and prevalent condition of humanity. We devoutly hope that Russia will not remain in her present disorderly and disintegrated state, but we must recognize that such a state has prevailed over the greater part of

the world for the greater part of human history. For ten thousand years or more up to the last two or three centuries Australia and all the islands of the Pacific, both Americas, Africa south of the Sahara, most of Asia and part of Europe have been in this condition. If we apply the majority principle to the world at large and to history as a whole, we must regard this, not as abnormal, but as the normal state of mankind, for it is the customary. The unified and thoroughly organized state is quite a modern invention. The continental or world-wide commonwealth was an impossibility until the introduction of rapid transportation and communication by railroad and steamship, telegraph and telephone. We are apt to forget that thruout the universe chaos is the rule and cosmos the exception. This planet of ours is mostly made up of amorphous material and it is rare to find a crystal with clear cut faces and geometrical form. There are more invertebrates than vertebrates in the animal kingdom. The force of gravitation in the political world always tends toward anarchy as a permanent condition and it is only occasionally and by strenuous coöperative exertion that certain peoples have been able to rise above it for a time.

Now we do not expect the Russians to lapse into savagery, but we do an-

A KEY TO THE RUSSIAN PUZZLE

In this map, reproduced from The Independent of July 13, are explained thirty-four important points that complicate the Russian situation of today. The numbers on the map correspond to those in the caption: 1. Bolsheviks and British and French marines defending Murmansk coast against Finnish White Guards and Germans. 2. Germans have occupied Finland, are running railroad to Arctic Ocean. 3. Soviet government cedes port on Arctic to Finland. 4. Finns claim Karelian territory from Russia and attack Petrograd-Kola railroad. 5. Petrograd famine stricken thru failure of transportation. 6. Independence of Lithuania recognized by Germany. 7. Independence of Poland recognized by Germany. 8. Independence of Ukraine recognized by Germany. 9. Shaded area shows territory occupied by German troops. 10. Bessarabia ceded to Rumania. 11. Kiev, capital of Ukrainian People's Republic, under pro-German Cossack dictator, General Skoropadski. 12. Revolt against Ukrainian dictator. 13. Crimea asserts independence as the Tauridian Republic, but is occupied by German troops and is claimed by Turkey. Germans seize Russian fleet at Sevastopol. 14. Bolsheviks under Czech officers reported defeated by Germans at Taganrok. Dreadnaught manned by Bolsheviks sunk in battle on Black Sea. 15. Cossack General Krasnov, supported by Germans, has headquarters at Rostov. 16. Krasnov fighting against Bolsheviks for independence of the Don Cossacks. 17. German troops landed at Batum. 18. Armenians and Georgians defend Caucasus against Turks. 19. Turks take Transcaucasian Russian territory. 20. Turks penetrate into Persia. 21. Moscow, the capital of the Bolsheviks (Soviet) government. 22, 23, 24, 25. Czechoslovak troops taken prisoner from Austrian army have captured these points on the Siberian railroad. 26. Czechoslovaks defeat Bolsheviks at Irkutsk. 27. Cossack General Semenov defeated by Bolsheviks in attempt to advance to Lake Baikal. 28. Semenov's troops driven back into Manchuria, where Chinese president insists upon disarming them. 29. General Galmakov driven back into Manchuria by Bolsheviks. 30. Japanese troops landed at Vladivostok. 31. Professor Miliukov starts counter-revolutionary movement from Harbin. 32. Ex-Czar confined at Yekaterinburg and reported assassinated by Bolsheviks on approach of Czechs. 33. Grand Duke Michael declares himself head of new Siberian government with headquarters at Omsk. 34. Yakuts of northeastern Siberia declare independence of the Soviet government.

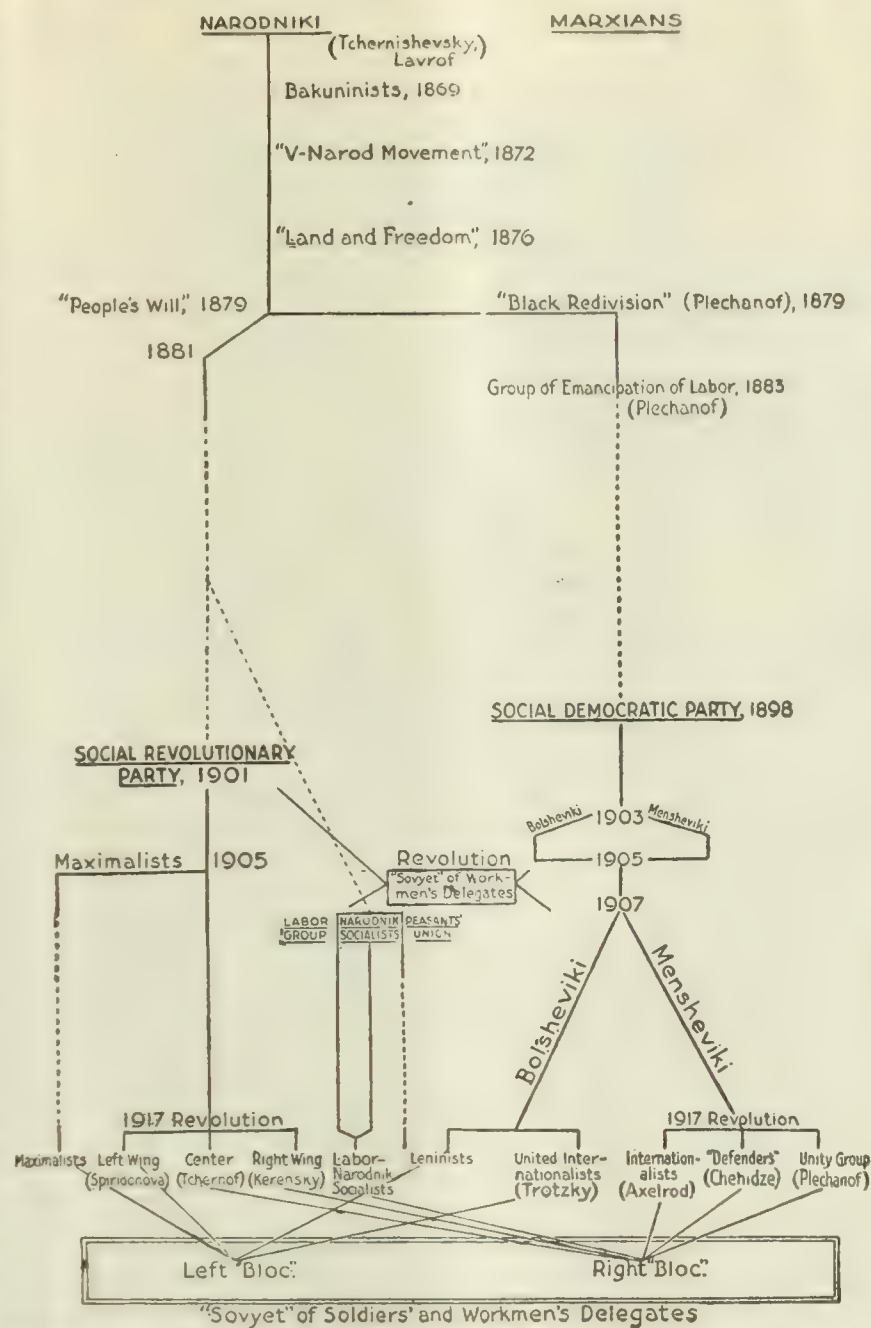

ticipate that, if left alone, they will develop a much more incoherent form of society than western Europe has had of late. If there is anything in racial psychology, that is the Slavic disposition. If there is anything in historical determinism, that is the Russian trend. In the first chapter of Russian history we read how the Slavs of Kiev called in Teutonic warriors (the Russ or Northmen) to rule over them and put a stop to their internecine strife. The latest news from Kiev tells the same story. For a thousand years Russia was threatened with invasion by the Mongols on the east and the Germans on the west. Today Russia is in the same situation.

In so far as we can discern anything thru the thick clouds that now conceal the land from the outside world the new Russia is shaping upon the oldest of Russian institutions, the *mir*. The *mir* is the village community of a type once general in Europe, but surviving only in Russia. It is local autonomy in government, extreme democracy in politics and pure communism in land. It is more like the old-fashioned New England town-meeting than anything else we know. But the Slavs do not believe in the rule of the majority as we do. They believe that every vote should be unanimous. We have a survival of this in our jury system, where the old *liberum veto* still prevails. We have traces of it in our legislatures, where any unusual procedure has to be carried by unanimous consent.

When the *mir* has to take any action all the people come together on the village street and talk it over, men and women on equal terms. If they do not agree they talk it over again and keep on until the opposition is convinced or silenced. Ordinarily no vote is taken. The desire is to get a consensus of opinion. "What the *mir* has settled is God's own judgment" is the Russian version of *vox populi vox dei*. "All for one and one for all—that's the *mir*," says another Russian proverb.

In the Diet of the Polish commonwealth every freeman present had the right by simply saying "Veto!" to prevent any legislation or to adjourn the session and annul all its acts. This *liberum veto* was the death of Poland and it seems utterly impracticable except for small and primitive communities. But this is the way things are being run in Russia. The National Assembly at Petrograd, to whose convocation the western world looked forward with such hope, was adjourned by a sailor who wandered in and after listening a while to the proceedings went up to the platform and told the delegates that they had better go home, for they were not

## REVOLUTIONARY PARTIES IN RUSSIA.

Reproduced from the courtesy of Professor E. A. Ross, from "Russia in Upheaval," published by The Century Company

doing anything worth while. Instead of replying as Mirabeau replied for the States General, the delegates agreed that there was reason in his remarks and they went home. In a Russian court today anybody in the audience who thinks he can throw any light on the case is welcome to get up and argue it or add his own testimony. The revolution in its early stages was largely controlled by mass meetings in Petrograd—not the thoroly organized and well managed assemblages that go by that name with us, but casual crowds that collected on the streets, listened to all that anybody wanted to say, and when they had "got the sense of the meeting" marched to the headquarters of whatever government professed to rule and notified them what the people wanted. In the Bolshevik councils a specious unanimity of opinion is secured by the simple method of expelling those who do not agree.

One of the first acts of the Bolsheviks was to abolish the private possession of land and to prohibit the hiring of labor for working land. They did not buy in and divide up the large estates as the Australian labor party has done. They did not institute peasant proprietorship as the French revolutionists did. They do not declare the land state

property as the Marxian socialists propose to do. They did away at once with landlord, tenant farmer and hired man. What then becomes of the land? Why, it simply reverts to its original condition. It belongs to whoever makes use of it and so long as he makes use of it. It belongs to the people, not individually, not nationally, not coöperatively, but collectively and locally. It is the system of land tenure that has prevailed in Russia from time immemorial. Even when the peasants were serfs they claimed the ownership of the land they worked. "We are yours," they would say to their masters, "but the land is ours." And historically there was some ground for the claim. When they were freed by the Czar Liberator in 1861 they were better treated than our freedmen because they got some land, but they were disappointed in not getting it all. When the revolution of 1917 overthrew the Czar and established the republic we Americans thought that the revolution was over because that is where our revolution stopped. But the Russian people as a whole had no dislike for a king and no liking for a ballot. They do not believe much in voting. What the peasants wanted was the land and what the workmen wanted was the factories. Now they have got them. What they will do with the factories remains to be seen. They seem

to have made a mess at managing them, as we should expect. But what they will do with the land is evident. They will do as they always have, hold it communally. It is an inefficient and unprogressive way. The land is unimproved, since it may change hands every year or so. The use of labor saving machinery is prevented because the holdings are small. But the *mir* system has prevailed generally in Great Russia. Not 1 per cent of the peasants owned land individually. Premier Stolypin tried to break up the *mir*s by ordaining that whenever any peasant demanded his share of the land in severalty it must be given him. But ten years of this legislation resulted in breaking up only about 8 per cent of the *mir*s. The land tenure of the Cossacks was of the same communal type. Up to a hundred years ago no man owned an acre of the 27,000,000 that were possessed by the Cossacks of the Urals. When haymaking day came around every man went out with his scythe and mowed a swath around as much grass as he wanted to cut for his family. Agriculture under such conditions is like fishing in the open sea, hunting in the open forest or pasturage on the open range. It is in fact a sur- [Continued on page 100]

# WHY SOCIALISM IS PRO-ALLY

BY JOHN SPARGO

**T**HERE are many very weighty reasons why American Socialists should support the war. I propose to set forth five which seem to me especially weighty:

*Because the Allies are fighting for socialist internationalism.*

Internationalism means the interrelation of all nations by ties of friendship, sympathy, understanding and trust. It means respect by each nation for the rights of all other nations. It means equal opportunities for all nations, great and small. It means international laws and agreements and good faith in observing them. Socialism is inseparable from this sort of internationalism. The whole genius of America is likewise in full accord with this internationalism.

Germany, on the other hand, is the arch enemy of internationalism. She forced Austria to make war and to reject arbitration—the internationalist method of dealing with disputes. Her brutal assault upon Belgium, a neutral and friendly nation, was an assault upon the very foundations of internationalism. Thruout the war she has manifested a contempt for every law for the restriction of warfare, for the protection of non-combatants and neutrals, and for limiting the savagery of war. Her victory would obviously spell the defeat of all that internationalism means.

The aims of the Allied Nations as set forth by such spokesmen as President Wilson and Lloyd George have been approved by the leaders of socialism in all lands. It is sufficient here to mention the approval of the British Labor Party, the Socialist Party of France and the Inter-Allied Socialist Conference. The Allied cause is the Socialist cause.

*Because Germany is the worst enemy of democratic socialism.*

Notwithstanding the fact that the Socialist party in Germany was numerically strong before the war, it was really very weak in influence. The Prussianized military government had pulled its teeth and made it impotent. Socialism in Germany has never been the aggressive force for democracy that socialism has been in other lands. German Socialists have been cowed and afraid. At the international congresses the German Socialists and trade unionists have feared to approve policies which their military masters did not approve.

There has been much talk in recent years about the wonderful "social legislation" of Germany. That has been part of the sinister propaganda of German *kultur*. We have been inspired to envy Germany and to treat her as a leader in civilization, while the German people have been induced to believe their lot superior to that of the people of other lands. The fact is that the condition of the working classes in Germany has been worse than that of the people of any other great nation. The standard of living of the German workers has been shamefully low. Nowhere does

Mr. Spargo, long active in the Socialist Party, is now the leader of the Nationalist Party. He has written many books on social and economic questions, the latest of which, "Americanism and Social Democracy," has just been published. Mr. Spargo has sailed for Europe with a group of Socialists who are opposed to the pro-Germanism of the Socialist Party, to spread President Wilson's peace terms of democracy

horse-flesh, donkey-flesh and even dog-flesh form so large a part of the diet of the people. Nowhere are so many families crowded into single rooms. In no great country is the death rate of babies so appallingly high.

Germany has long been the center of European reaction. Even the terrible oppression of the Romanoffs in Russia was fostered and inspired by the Hohenzollerns. Prussia dominated Russian bureaucracy.

*Because America cannot maintain her democracy unless the Prussian military system is destroyed.*

It is not a question of crushing Germany, but of crushing the military system which the German Imperial Government maintains. That can only be done by force of arms. There is no other way. But the creation of a military force powerful enough to achieve that result does not mean that we are to develop militarism. When we have attained the destruction of German militarism we shall turn our energies to the arts of peace. Germany, on the other hand, would use a victory as the starting point for new wars of conquest. Militarism means the organization of the human and material resources of a nation and their direction to the ends of conquest. We are in no danger of adopting that principle voluntarily: that principle will never be adopted by a democratic nation, tho in self-defense such a nation may temporarily abandon every other interest save that of war. We are not now and are in no danger of becoming a militarist nation.

With the Allied Nations triumphant, progressive reduction of national armies and navies, and the substitution of international coöperating armies and navies for those of competing nations will be a possibility. On the other hand, should the Central Empires win, every nation in the world, our own included, will have to arm to the teeth. In peace times we shall have to maintain the vast military system we have created for this war. The immense waste of militarism must go on unchecked year after year; the toilers must groan under the burdens of oppressive taxation necessary for the support of vast armies and navies; social reform must be delayed. No sane man can believe that in the event of a German victory the democratic nations would be able to lessen their military burdens: instead, they must increase them enormously and abandon a great part of their democracy.

*Because the triumph of the Allies will give freedom to Jews, Jugoslavs, Armenians, Poles and other oppressed nationalities.*

That the interest of the Jew is with the Allied Nations is beyond question. On one side of the conflict we have the four great nations in which the Jews have enjoyed the greatest freedom, tolerance and equality of opportunity—the United States, England, France and Italy; on the other side the Central Empires, autocratic and militaristic, the nations in which the Jew has been discriminated against, in which anti-semitism has flourished as nowhere else outside of the Russia of the Czars. It is a well known fact that Germany's military successes thus far have had the effect of increasing the antisemitism so long characteristic of the Hohenzollern régime.

The Allied Nations are determined to restore to the Jewish people their autonomous national life. Furthermore, they seek to gain for the Jews in all lands equal liberties and rights with all other citizens. The triumph of the Teuton and the Turk would mean the enslavement of the Jew; their defeat means his freedom.

The Allied Nations have pledged themselves to liberate Armenia from the brutal tyranny of the Turk. The Armenian remnant will be made a free nation under a strong protectorate. The Jugoslavs are to be emancipated from the thrall of Austria. Poland is to be restored. These are the aims of international socialism, avowed by successive international congresses. Germany is the arch enemy of the small nations. Her dynastic vision of *Mitteleuropa* menaces all the small nations of Europe, and, ultimately, of the world.

As a Socialist I believe that there can never be assured democracy and freedom until the rights of the smaller nations are established and guaranteed.

*Because victory by the Allied Nations will set the people of Germany and Austria free.*

It has long been a commonplace of international [Continued on page 103]

## TEACHING OUR ALLIES TO PLAY BALL

English and Scotch and Canadian Tommies are playing our national game, spurred on by boys from the U. S. A. At the left, one of the "Ladies from Hell" is trying to keep his Tam on and connect with a fast one from the pitcher at the same time. The adaptations of military uniform to the exigencies of baseball are various.

© Underwood & Underwood

## FANS ALL LOOK ALIKE

They "kill the umpire" now in practically every dialect on the western front. Heywood Brown in "The A. E. F." tells a good story of how baseball came to France. "In the crowd was a French soldier who had the Croix de Guerre and the medaille militaire. The second or third ball hit came in his direction. He thrust both hands in front of his face. The ball came between them and hit him on the nose, knocking him down. He was up in an instant grinning. But he shook his head. 'C'est dangereux,' he said, and started for his train to the front."

## A PARADE OF ALL NATIONS

The American Fourth of July went on the calendar this year as Liberty Day to the world, celebrated by peoples everywhere who believe in freedom. In the old capitals of Europe—in Paris and London and Rome—and in the new cities of the Dominions—in Sydney and Melbourne and Halifax—our Allies celebrated Independence Day. In the biggest city in the world, of course, was the biggest parade of all, a march that filled Fifth Avenue nearly all day long with a steady stream of troops and citizens. The float "Britannia" (below) won first prize in its division of the parade.

### VIVE LA FRANCE!

The American crowds on the sidewalks remembered Lafayette in their cheers for the contingent of sailors from the French navy, in their tri-color uniforms with red tasselled caps, as they marched in our big Fourth of July parade.

Paul Thompson

### ALLIES ALL

Above, a khaki-clad division of seasoned British troops. Below, the big citizens' section of recent Americans just leaving Washington Arch. One of the proudest slogans in the whole parade was "Born in Germany, Made in America."

### THE ARMY OF THE REAR

In this section are the men who are fighting at home with W. S. S., Liberty Bonds, food rations and vacationless summers as weapons.

A group of young students who left college before completing their course in order to attend a military training camp

## DO WE NEED COLLEGE WORK IN WAR?

**T**HE Federal Government has assumed control of fuel, food, ships and railroads on the ground that they are indispensable agencies of national defense. Should the Government, for the same reason, take some responsibility for the administration of universities, colleges and technical schools? Or is it better that the work of these institutions, as far as it concerns the training of male students, should be suspended for the duration of the war?

The extent to which innumerable branches of war service, public, semi-public and private, have been taking students and teachers from our higher schools since the war began is evidence that these institutions have been considered no less important, as agencies of national defense, than mines, factories and common carriers. Of the forty thousand men in the Reserve Officers' Training Corps last summer, above eighty per cent were college men. Each of the larger universities—Harvard, Yale, Michigan, Wisconsin, for example—has sent more than fifty faculty members and more than a thousand undergraduates into war service. Scores of college presidents are giving virtually all their time to war problems. Hundreds of institutions, at the call of the Government, are offering special war-emergency courses. There are courses in food conservation, military orthopedics, civilian relief, Red Cross supplies, camp sanitation, military stores, telegraphy, aeronautics, army camp recreation, and many more; in fact, more than one hundred such courses have been started within the past year.

True to their traditional spirit, these higher schools have responded to every call quickly and eagerly. They have sacrificed recklessly. They are evidently ready to sacrifice themselves out of existence, if that is their best way to render service. Their immediate and grave concern is that, without intelligent officials and central direction, they cannot possibly continue to do all that the Government ought to expect of them. They are subject to urgent calls for aid from innumerable councils, boards, committees, corps and departments, each of which thinks only of its own needs, and usually only of its immediate needs.

BY WILLIAM T. FOSTER

PRESIDENT OF REED COLLEGE

A certain department of the Government wants a thousand volunteers; its only thought is to get the best men for its purposes as quickly and easily as possible. It turns at once to the universities. Another department takes the same course; then another and another. The War Department does this regularly. The Navy Department has found it satisfactory, as has every other office, department, commission and board.

Without official leadership, both the schools and the colleges tend to become indiscriminate recruiting agencies. If the draft age is lowered by two years, it will cover the four classes of the usual college course; and few men, other than physical or moral defectives, will remain in college even a year.

If the colleges are indispensable agencies of national defense, the Federal Government must quickly make definite plans for using them intelligently. The total influence of the Government thus far, except for a few tardy and insufficient provisions for continuing the supply of doctors, dentists and engineers, has tended toward the suspension of men's colleges for the duration of the war.

The educational forces of the nation are without leadership. We have not learned what is perhaps the one great lesson Germany is capable of teaching. Our traditional decentralization in affairs of education and extreme individualism and regard for what we call state rights has had certain advantages in times of peace; but in the crisis of today it means waste, confusion, delay. The volunteer agencies of coördination and the official advisory councils have no more prospect of marshalling the entire educational forces of the country in economical, unified, orderly and timely service than a dozen volunteer governments have of marshalling the Russian Army. We need a Secretary of Education, with a seat in the Cabinet, with funds commensurate with the importance of his work, and with executive powers equal to the emergency of war.

At the University of Michigan, where two hundred students of chemical engineering were about to take up their

studies, the teachers were called to Washington. There was somebody at Washington responsible for an enterprise in which he thought he could use these men. There was no Federal authority to consider the question whether our national defense would require a continued supply of chemical engineers; and, if so, whether it would be wise suddenly to leave two hundred students stranded and well-equipped laboratories unused. As another result of this lack of a Federal executive in the field of education, the anatomy department of the Medical School of Indiana University has lost every man of military age. The same department at the University of Chicago has lost six out of eight men. The University of Texas has lost its Department of Chemistry. Education does not expect to do "business as usual." It asks only that its sacrifices be directed with a view to the future.

It is true that Federal officers, from the President down, have declared that it would be a national calamity if the work of our colleges were to be hampered seriously by the war. The Government has spoken clearly, logically frequently, but not effectively.

If necessary to insure the continued supply of trained men, students should be conscripted to study and teachers should be conscripted to teach. On the basis of proved fitness, they should be selected to prepare to meet the future needs of the Government. From the standpoint of national defense, the only question is what trained men the Government must have in the course of a long war; it must no longer hesitate to take the steps necessary to enable the colleges to do their part.

An example of effective procedure is the recent organization of the enlisted reserve corps, in which students of engineering may enroll and continue their studies. But if it is good public policy to enlist students to study engineering, it is good public policy to enlist men to teach them.

Official measures should be taken for making sure of a continued supply of trained men for every future need. The operation of the law of supply and demand having been suspended by the official calls for men in certain forms of service and by the Selective Service Law, it is not safe to leave any need to chance.

# NEWS OF EFFICIENCY

**E**FFICIENCY community work a most important phase of national thought and effort must have behind it well considered plans, based on a knowledge of how other communities have solved similar problems, and a well balanced conception of what should be done and how to go about it.

The following list of sources is by no means comprehensive either in the branches referred to or in the items under them. It should serve, however, as a groundwork. Those interested should consult the local library and ask for references to books and articles in periodicals covering the special subject in hand. There is a wealth of printed information obtainable which the determined student can unearth. The National Efficiency Society will be glad to make further suggestions to any readers of *The Independent* who have special problems on which they desire advice.

## A Message to the National Efficiency Society

By Major General William Crozier  
Head of the Ordnance Department, U. S. Army

I have great interest in the efficiency of labor, and I hope that the intense examination which the present war causes to be given to the subject of the output of human effort may result in such better understanding between employers and employees as to produce the maximum of effort which is not injurious to the worker, and the suitable and appropriate reward for making it. I do not think that the world's industry is threatened by too high reward for labor. I believe that the matter of the right reward can be adjusted. I am concerned lest any system which may be brought about shall result in the diminished productivity of labor, below that which it can give without impairment of capacity both for work and pleasure.

# WHAT EFFICIENCY MEANS

SELECTED FROM THE PURINTON FOUNDATION COURSE IN PERSONAL EFFICIENCY

WHAT do you most want to BY EDWARD EARLE PURINTON

do in your life? No matter what you can do it. Here is the key to something better. This statement is backed by the experience of great efficiency engineers, and by the achievement records of hundreds of men whom we have watched succeed. There is no limitation or doubt, within reason, that should be responsible to you when you have complete knowledge and use of personal efficiency methods. Base all your study on this fact, this promise.

The best thing to make a new study profitable and enjoyable is to have a clear conception of what you should gain by mastery of the study. The mind of a student must be bent on winning a reward, as the body of a sprinter is bent on winning a race. A man's effort is proportional to his expectation.

What do you want most in life? Put the answer down as clearly and fully as you can.

Keep this answer entirely to yourself. Don't share it with another human being. But refer to your ambition frequently, note how your study and experiment suggested here will help you to attain your goal.

Efficiency rewards are many and diverse. We name a few: increase of output, decrease of cost, elimination of waste, conservation of time, reduction of work, elevation of salary, improvement of service, extension of sales, promotion of health, development of leadership, creation of opportunity, production of happiness. To give you concrete examples, we will cite a few cases from the records of noted efficiency engineers.

The right application of modern efficiency methods has brought such results as the following:

A business office cut down the daily time of filling orders by two hours.

A tool factory raised the production average of employees from 67 per cent to 91 per cent of their maximum.

A mail-order house increased the names written by the addressing department from 3353 a week to 40,779 a week.

A pulp mill producing 12 tons a day was made to produce 36 tons.

A typewriter company building a standard \$100 machine learned how to reduce costs 50 per cent, and thus to undersell competitors while making larger profits than before.

A belt plant lowered the cost of a standard job from 322 machine hours and wages of \$37.50 to 138 machine hours and wages of \$20.09.

A bicycle factory department was able to reduce number of employees from 120 to 35, yet give these employees a shorter day with almost double their former wages, and improve the quality of their work 60 per cent.

A publishing company trained stenographers to lower the cost of typewritten matter from \$7.69 per thousand square inches to \$2.58 per thousand square inches.

A motor-car factory has spent \$5,000,000 in efficiency work, and claims that 10,000 separate costs have been so reduced that the original outlay on efficiency methods and machines has been wiped out in the larger dividends—with future profits doubled.

A big railroad system has effected savings of more than \$6,000,000 in one year by employing a group of modern efficiency engineers to overhaul the entire business of the company.

These cases are but a few out of hun-

dreds that might be named. And personal efficiency puts a man, as well as a business, clean at the top. I know a man who, by adopting efficiency methods, raised his earning capacity from \$10 a week to \$50 a day. I know another who failed three times in business before he knew efficiency, but is now a millionaire, and the most famous man of the world in his line. A certain corporation president managing 10,000 employees—was a broken down wreck of a man in the early fifties; today, past seventy, he is a marvel of health and vigor, and a power for good in the world. Efficiency, and efficiency alone, makes leaders.

The purpose of this course is to make you a leader—in thought, action, power, knowledge, skill, finance, productiveness, resourcefulness, character. If you are a leader now, you should become a leader of leaders. When you have carried out for yourself the principles of personal efficiency, you should be at the top of your business or profession, with supreme command of your time, talent, work, health, money, ambition, energy, circumstances and opportunities.

Every one was born to achieve something great. Science and experience both declare that the average man can train himself to do finer, bigger things than the man of genius ordinarily accomplishes. More than half the men who have gone beyond you in your line of work are probably less gifted than you are. They merely found where their greatest power lay, then learned how to develop, train, use it.

Biologists tell us that the brain of a Shakespeare, Napoleon, or Lincoln does not differ in chemical substance from your brain or mine. These men simply worked their brain beyond the average—and so we can work ours. Not the cells of a man's brain, but the sinews of his ambition put him high among the immortals.

A man can do or have or be almost anything he wants to—when he wants to hard enough. The real aim of efficiency study is to show you how to do the biggest thing you can do, in the best way it can be done. We emphasize this now because we want you to get from the start an overwhelming sense of your own power—a conviction that you positively will succeed in a large way—a determination to become a winner all along the line.

Personal efficiency is, broadly speaking, the science of man power. We know what candle power is, what horse power is. But not one person in a thousand has the least conception of what man power is. The average American is about 25 per cent efficient. Probably the most successful men you know are not more than 40 per cent efficient. Therefore, as a means of measuring yourself, your possibilities and limitations, we must create a personal efficiency standard, with an all round test for determining your efficiency percentage. To secure data, we will first draw comparisons.

Only one man in five has an income of more than \$1000 a year. Should this amount be the gage then of your earning capacity, merely because four men out of five never get a better? Decidedly not. For the time of such men as Morgan, Vail, Vanderbilt, Gary, Schwab, and others is said to be worth approximately a thousand dollars a day. Who shall say what your earning

capacity may become? Your danger will be in setting the mark too low. Have you fixed in your mind a maximum income, that you hope and expect to reach by a systematic method known to be correct?

This financial goal should represent a yearly income from 200 to 500 per cent greater than you now possess. If you have not yet settled on such a definite goal, do so at once. From a broad survey of the whole field of large and small incomes, we estimate that the average man can train himself to earn at least twenty dollars a day net, no matter what his trade or profession may be. Any good field of work should produce this amount when rightly cultivated.

Out of every ten men who go into business for themselves, only one succeeds. The other nine fail, sooner or later. Yet industrial experts declare that 80 per cent of all business failures are absolutely needless, and that most of them occur in lines of commerce where fortunes have been made by men who follow the right principles and methods. Your efficiency study will help you to avoid failure or profit by failure, to prevent mistakes or capitalize them by turning them into assets of experience. What has been your most serious failure or mistake in the work that you are doing? What did you learn from it? How are you going to avoid it hereafter? How are you making your work better because of it?

The typical American dies under forty-five, whereas he should live to be ninety and do much of his best work after seventy. Physicians affirm that the simple matter of eating efficiently would prolong the average life ten years, and by study and observance of the general laws of health anybody can live, and enjoy life, about as long as he wants to. Are you planning to reach eighty? Have you a good lot of work laid out to do after you are seventy? What hereditary weaknesses run thru your family history—how are you guarding against them? Do you commission a first class doctor to go over you once a year, and make sure that health conditions are normal? Have you been successfully examined for life insurance?

Most people are not willing to work more than eight hours a day. If you ask them to, they grow tired, faint or ugly. Why? What of the hundreds of big men of the country who work ten or twelve hours a day—and are as much healthier as they are wealthier than their employees? Last summer a terrific heat wave rolled across the country. The temperature was about 100, many factories had to shut down, among them that of Thomas A. Edison. The strong young fellows of thirty and forty went home to lie in the shade and drink ice water. Edison himself, past seventy, worked seventeen hours that day, snatched a bit of sleep, and was up early the next morning looking fresher than the young fellows who had spent the previous day fauning themselves! Like most of the great world figures, Edison has learned how to work, how to relax, how to sleep, how to plan, how to eat, how to dress, how to order his own life, how to regulate his whole mental-physical-social-industrial-moral machinery so as to produce three or four times as much work as the ordinary man can turn out. Do you enjoy your work so much that you would keep on doing it, if you were not paid to? Can you work ten hours a day, five days a week, without injury to your health or temper? Would you rather stay on your job at the close of the day and finish a masterpiece or solve a hard problem, if it made you late

to dinner? Are you in the habit of looking for more work, instead of less? Have you the reputation of one who "eats up work" as the saying goes?

But the average person who puts in eight hours on an eight hour job stays there about three hours too long. Scientific tests by efficiency engineers have shown that almost any kind of labor, whether physical, mental or mechanical, can be reduced in time 30 to 50 per cent by application of the many short cuts known to efficiency specialists. Can you finish in five hours or less a day's work that formerly took eight hours as originally specified by your employer or yourself? In your business or profession have you put into effect the results of time study, motion study and other phases of scientific management? Do you practise rotation of work, to avoid fatigue? Do you regularly watch your professional or trade journals for new ideas to reduce waste of time and money, or increase output and improve quality?

The American worker loses an average of nine days a year from illness, and probably a total of six more from slight indispositions that impair his work. Do you know how many days you miss work, each year, on account of illness? Do you know what foods and exercises will help to put and keep you in fighting trim?

The first move toward supreme efficiency is for a man to look himself in the face. He must know just how efficient, or inefficient, he really is, before he can think, study, plan, work, intelligently for advancement.

The first mark of greatness is a question mark.

The two favorite words of the man born to get ahead are *why* and *how*. "Why is a thing done as it is? How can it be done better?" Answer these two questions properly, habitually, and you guarantee a great future anywhere.

A job is worth not what it pays, but what it teaches. There are in America today a number of men with salaries of \$50,000 or more who held jobs not so long ago at \$15 a week. How did they gain such promotion?

For every dollar in money each man took from his job he took fifty or a hundred dollars' worth of knowledge. Thus each man ultimately fixed his own salary. The way to make an occupation valuable is to look on it as an education.

The call of the business world is for the man who knows. It also he is a man who thinks and who works, a thousand doors of opportunity swing wide before him. He has but to choose, to enter, to command.

There are in business education three principal studies: How to get a job, how to hold it, how to reach from it to a higher one. If every employee had learned these primary lessons of good workmanship, there would be no problem of unemployment.

I think I have found the master key to the problems of unemployment. The president of a great corporation gave it to me and I pass it on to you. It should unlock every problem of industry, also, and that of promotion in particular. For when a man makes himself so valuable that his company would discharge him, then will promote him; he is the type of man who belongs among the directors.

I was speeding to my work in the early morning when, upon changing cars, I observed a long line of men reaching from the doors of a big industrial plant far out into the street and back around the corner

Mr. Furinton, Director of The Independent Efficiency Service

A policeman eyed them closely. "What's the meeting, officer?" I queried. "That's no meeting," he grunted, "that's only a bunch of down-and-outs looking for a job."

"And will they get it?" I asked him. "Not on your life," he boomed—"not with that company. You have to know too blamed much to get on their payroll. Friend of mine went there for a job once. They put him thru a regular third degree, made him answer questions about himself and his trade that his mother, doctor, parson and old boss couldn't answer all together. My pal got an all-day headache just thinking about their questions. He wasn't classy enough for such a high-brow concern. These guys won't any of them land—you can go to the other door and watch 'em pass out."

"And what's your pal doing now?" I mused. "Driving a truck—that's all he knows," was the answer.

I did not go around to the other door—I will not see failure anywhere.

But here was a great industrial concern with a real educational test for employment—and I had to see the president!

I chanced to know something about the president. He came to work before his employees, he liked early risers and it wasn't yet 8 o'clock. He was mathematical to a fault, yet one of his hobbies was sociological investigation. He loved promptness and preciseness. Thinking over all these points, I sent to his office a memorandum like this:

"One hundred and fifty-six men are at your doors, looking for a job. Will they get it? If not, why not? Can you spare 3 minutes and 30 seconds for an answer? I will put your advice in a magazine article, sure to reach and likely to help several hundred thousand employees."

The messenger was back: "The president will see you."

I had quickly drafted a list of questions, to economize every second—the answers of the president appear below.

The great man looked me over, looked me thru, by one swift, comprehensive glance. I also looked him thru, but not over when you have looked a man thru, looking him over is a waste of time. Having reached a mental under-

standing with me, the president opened up.

"We shall engage perhaps 20 per cent of the men outside. The other 80 per cent we cannot use. Of the 20 per cent engaged, probably half will leave or be discharged under six months. That is, only 10 per cent of the men who apply for a job are able to get and keep it."

"What is wrong with the 90 per cent? I will tell you. They *don't know* literally hundreds of things that good workmen ought to know, but that most men will not take the time and pains to learn."

"They don't know how to work; we have to teach them."

"They don't know how to think; we try to teach them, but as yet have no reason to be proud of our success."

"They don't know what they can do best; we may have to transfer a man a half a dozen times before he happens on a line of work that really interests him."

"They don't know what or when or how to eat; I figure that the average employee's working capacity is lowered 20 per cent by foolish meal habits."

"They don't know how to live in their homes, and keep well for their work; this company loses \$40,000 a year from preventable illness of employees, and the employees themselves lose more than that."

"They don't know where to look for technical knowledge and the solution of their trade problems; our educational department has to answer for them hundreds of questions they ought to answer for themselves, or find answered in a book or magazine they should have on file."

"They don't know how to plan their future in this company or elsewhere; I judge that perhaps one man in fifty has clearly in mind a purpose, plan, picture, of his own life work—the other forty-nine men are drifting, empty-eyed, empty-hearted."

"They don't know why they are living at all, these men who come here for a job; and looking for work without feeling the joy of work is like picking roses in the dark—you get more thorns than flowers."

"Lately we put in the newspapers two advertisements—one for laborers to take jobs at \$15 a week, the other for a manager to fill a \$5000 executive position. Hundreds of men have begged for the \$15 job—and not one has applied for the \$5000 salary. Why? Because a \$5000 man must possess five thousand dollars' worth of knowledge to sell this company every year, and the men having the right kind and amount of knowledge are, so far, altogether absent."

"Our employment bureau is conducted more or less scientifically. To get a position here, a man must know certain things, and prove his knowledge at the first interview. Among other things, he must know how to look an official straight in the eye; how to keep his nerve when looked at; how to tell briefly what he can do, what he has done, what he hopes to do; how to answer questions promptly, truthfully and concisely; how to be deferential without being servile; how to size up the requirements of a new job; how to dress neatly and becomingly, yet not flashily or in the so called high of style; how to take small pay with big chance of promotion; how to do the least thing as well as tho it were the greatest. Our test for a man is really this: Does he know how to *work for his company*, and how to *think for himself*?"

A sample of how freight piled up on the New York docks under the old system of waiting for the consignee to call for it

# DELIVERING THE GOODS

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**T**HERE has just been inaugurated in New York a plan for handling freight over the city streets, which, when it is generally adopted thruout the United States, as it was long ago in Europe, will materially reduce the present high cost of food products and other necessities, and hasten the substitution of motors for horses in city street haulage. This plan, which was introduced by order of Director General of Railroads McAdoo, is a modification of what is known as "store door delivery" of freight.

This system, as long established in England and on the Continent, and in several Canadian cities, especially Toronto, provides the same service on freight shipments that is customary in the case of express shipments in the United States. Under it freight is handled by the railroads directly from the shipper to the consignee, instead of being delivered by the shipper to the railroad station and on the other end taken from the railroad station by the consignee. The pick up and distribution of freight over city streets and country highways is generally done by fleets of motor trucks either owned by the railroads or by contractors working for them. In England it was the former case as the railroads many years ago recognized the competitive possibilities of the motor truck and were the first to establish motor transport lines, these being so arranged that they did not parallel the railroad lines but rather crost them at right angles so that they served as feeders.

Without Government control of railroads in this country the new plan with all that it promises would hardly have become an actuality for a long time to come. As previously mentioned this plan is a modification of the "store door delivery" system, in that it is at first to be applied only to the handling of incoming freight which will be done by truckmen licensed by and operating under the direction of the Government, and at the expense of the consignee, the railroads paying the cost and expenses of the Government's participation. The plan is also limited to the lower half of Manhattan Island, but even with these important modifications it is a step in the right direction.

This country and especially its large commercial centers have good reason to be thoroly ashamed of the methods attending the handling of freight over city streets, methods which stand out in comparison with the remarkable development along efficiency lines which rail freight transportation has undergone. It is estimated that freight transportation costs annually in the United States \$7,000,000,000, of which

about half is for vehicular haulage over streets and highways. A recent Government investigation in the city of Washington showed that more money was being spent for street cartage than for freight receipts.

Organization and operation in large units under the direction of specialists tells a vastly different story in the case of the railroads. In 1857 the cost of transporting freight on the railroads was three cents per ton mile; in 1913 it was two-thirds of one cent. This was accomplished in the face of a constantly rising market for railroad materials. If a dollar in 1913 would buy as much of this material as it did in 1857, then the 1913 cost would be four mills, or one-seventh of what it had been sixty years before. Beyond the introduction of a comparatively few motor trucks, some hard, smooth pavements, and larger piers and terminals, nothing has been done in this same period of time to improve the methods of vehicular haulage of freight to and from the railroads. As a result the cost of street transportation in the case of New York is \$1.60 per ton mile, or two hundred and fifty times greater than for the railroads. Experts estimate that a properly organized "store door delivery" system in New York would cut the cost of street transportation in half, thereby saving some twenty-five million dollars annually.

Before discussing the salient features of the Government's new plan for distributing freight in lower Manhattan it would be well to understand the method, or rather lack of method, previously en vogue. Freight arrives on the East and Hudson River water fronts, whether by steamer or railroad. (In the latter case the cars are ferried over on big floats, except those coming by New York Central which are run down along the Hudson River waterfront.) On its arrival the consignee is notified by postcard which takes an average of twenty-four hours for delivery. An average of another full day intervenes before the consignee's truck or a truckman engaged for the purpose calls for the shipment. Meantime the freight arrivals of two more days have been piled on top or in front of the first shipment and the delays in locating and loading means a long line of waiting vehicles and hours of time lost. The Government's investigation showed many instances of where these waits ran to sixty hours and over. Herein is the reason why so few motor trucks were to be found in this work, for when it comes to standing still most of the time a horse truck is just

as efficient and somewhat more economical.

Under the new plan lower Manhattan is divided into a number of zones. As fast as freight arrives it is sorted out according to the zone location of the consignee. As soon as there is a truck load for any zone it is sent away and the consignee receives his shipment at his store, warehouse or residence in shorter time than he previously received the postcard notification. The cartage is done by truckmen who are virtually licensed by the Government, or if the consignee is permitted to use his own vehicle for less than a full load shipment, he must fill up with other shipments for his particular zone. The Government is to be represented by a drayage director, with an assistant at every pier and terminal.

Proposed extensions of the plan include the "pick up" of outgoing freight by the trucks serving the various zones, extending the service to the entire city and its inauguration in other cities, so these points may be dismissed in considering its shortcomings. It is provided, however, that the drayage director utilize all the equipment previously engaged in this work. In other words the ten thousand and one small truckmen whose lack of organization and archaic methods are so largely responsible for the existing high cost of street haulage in New York, whose general irresponsibility resulted in the estimated theft from trucks during 1917 of over three million dollars worth of goods. A real store "door delivery system" would place the entire distribution and collection of freight in the hands of a single organization like the express company merger (which by the way offered to undertake this work in New York). Thus the methods which have accomplished so much in developing rail transportation and reducing its costs, could be applied to street transportation.

However, it is my belief that the plan as at present constituted will tend to weed out the small truckman. According to an investigation the average load for all vehicles operating in lower Manhattan is only about twenty-two per cent of capacity. By providing for full loads the new plan should reduce by nearly one half the number of vehicles using the streets of downtown Manhattan. This will materially relieve congested street traffic conditions, which with the elimination of delays at terminals, will favor an extensive employment of motor trucks. This will bring responsible contractors into the field with large fleets of motor trucks, whose high efficiency will command preference from the drayage director.

# The Amazing Experience of Victor Jones

## How in One Evening I Discovered the Secret of a Good Memory and in Six Months Increased My Business One Hundred Thousand Dollars.

As I look back on it today, I can hardly believe that it is only six short months since I first met David M. Roth, the famous memory expert, and learned from his course—in one evening—how to make my memory do wonderful things, which I never dreamed were possible.

That first meeting, which has meant so much to me since, was at a luncheon of the Rotary Club in New York where Mr. Roth gave one of his remarkable memory demonstrations. I can best describe it by quoting the Seattle Post Intelligencer's account of a similar exhibition:

"Of the 150 members of the Seattle Rotary Club at a luncheon yesterday not one left with the slightest doubt that Mr. Roth could do all claimed for him. Rotarians at the meeting had to pinch themselves to see whether they were awake or not.

"Mr. Roth started his exhibition by asking sixty of those present to introduce themselves by name to him. Then he waved them aside and requested a member at the blackboard to write down names of firms, sentences and mottoes on numbered squares, meanwhile sitting with his back to the writer and only learning the positions by oral report. After this he was asked by different Rotarians to tell what was written down in various specific squares, and gave the entire list without a mistake.

"After finishing with this, Mr. Roth singled out and called by name the sixty men to whom he had been introduced earlier, who in the meantime had changed seats and had mixed with others present."

It was just such a meeting that I attended at the Hotel McAlpin, when Mr. Roth started me on the "Road to Better Memory."

My own progress in memory building since that time seems like one of those pleasant dreams about picking up baskets of money. You know the kind—when you lie still and try to stay asleep so you can keep on dreaming (and picking up money). But it is reality all right for I have the *proof*. I can now go into a room with from 30 to 50 people, and one hour from being introduced to them—or a week after or a month—call their names instantly, almost without a single mistake on meeting them again wherever it may be or however unexpectedly I may run into them.

But I find I am not the only one who has had this strange and quite unbelievable experience.

Only yesterday I was sitting at the desk of Mr. Roth's publisher, the president of the Independent Corporation, when we were interrupted by the ring of his telephone. I had come to discuss some of the finer points in Mr. Roth's code for linking up numbers with names and business facts. When the Publisher hung up the receiver he said, "That was Terence J. McManus speaking, of the law firm of Olcott, Bennett, McManus and Ernst. You have heard of him of course—a striking figure in many famous criminal trials in New York City and a hard man to beat when it comes to a test of wits or memory."

He says he regards our service in giving this Roth Memory Course to the world as a public benefaction. The wonderful simplicity of the method and the ease with which its principles may be acquired appeal to him tremendously. He says he has already had occasion to test out the effectiveness of the first two lessons in preparing for trial an important action in which he is about to engage. (You see I am pretty good myself at reporting telephone talk—thanks to Mr. Roth!)

"But that is an everyday occurrence now. We have just received this letter from E. B. Craft, Assistant Chief Engineer of the Western Electric Company. He says:

"At one sitting I succeeded in learning the list of 100 words in Mr. Roth's first lesson forward and backward, and to say that I am delighted with the method outlined is putting it very mildly. I feel already that I am more than repaid in the real value and enjoyment I have gotten from the first lesson."

"The gratifying, and inspiring, part of it is," continued the Publisher, "that they all say substantially the same thing. Here is a basket of 1000 letters from Roth enthusiasts received by us in the past 30 days—selected at random from the many thousands who have written in ordering the course. One man says, 'It can't be true!' and returns the course. The other 999 tell in glowing terms what the Roth method is doing for them, in many ways, and how quickly and delightfully they have mastered the big idea.

"A good composite of the general type of these letters is furnished by this letter received several months ago from C. Louis Allen, who at 32 became the President of a million dollar corporation, the Pyrene Manufacturing Company, makers of the famous fire extinguisher. You know the letter but read it again. He says:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure *pleasure* all the way through. I have derived much benefit from taking the course of instructions and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

"I tell you, Mr. Jones, it is a great experience to read these letters that pour in every day from every corner of the land—especially when I think how simple this method is and how few people among those who need it so badly have imagined before that such a thing could exist."

\*\*\*\*\*

All this was no surprise to me. In fact it seemed rather "tame" compared to my own experience with the Roth Course—which was as follows:

It sent me ahead in my business like a twin-six "on high" and to a degree that I would not have believed possible. And all in *six months*!

I know it was the Roth Course that did it. I will take my oath on it. Because I cannot account for the change in my whole business life in any other way.

I had suspected that the letter I saw from "Multigraph" Smith (H. Q. Smith, Manager Multigraph Sales Company of Montreal) was over enthusiastic. But I know now from my own actual experience—that he didn't put it a bit too strong when he wrote:

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with *one hour* a day of practice, anyone I don't care who he is—can improve his memory 100% in a week and 1,000% in six months."

The cold fact is that my new grip on business came in the six short months from the time I took up the Roth Memory Course.

In that brief period—and my cashier will vouch for this—I increased my sales by \$100,000—and that in war time, mind you,

with anything but a "war bride," and with German drives sending cold shivers down the public spine and submarines knocking holes in business confidence and buying habits.

The reason stands out as brightly as a star bomb. Mr. Roth has given me a firmer mental grasp of business tendencies and a better balanced judgment, a keener foresight and the ability to act swiftly and surely that I never possessed before.

His lessons have taught me to see clearly ahead; and how to visualize conditions in more exact perspective; and how to remember the things I need to remember at the instant I need them most in business transactions.

In consequence, I have been able to seize many golden opportunities that before would have slipped by and been out of reach by the time I woke up.

You see the Roth Course has done vastly more for me than teaching me how to remember names and faces and telephone numbers. It has done more than make me a more interesting talker. It has done more than give me confidence on my feet.

It has given me a greater *power* in all the conduct of my business.

Mr. Roth's course has endowed me with a new business *perspective*. It has made me a keener observer. It has given me a new sense of proportion and values. It has given me visualization—which after all is the true basis of business success.

Now, dear reader, do you not think you can use this Roth Memory Course in *your* business? It doesn't cost a penny to try it out. I am willing to lay a large wager—right now—that if you will send for the course and spend *one evening* on that fascinating first lesson, they won't be able to get it back from you with a team of horses. And you will vote that \$5 (which I know you will send eventually) the best investment you ever made.

VICTOR JONES

Send No Money

So confident is the Independent Corporation, the publisher of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes, triple your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

## Stop the Leaks that Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

### New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, read page 479 of the June 22 issue of The Independent or write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

## A PRIMER OF RUSSIAN PSYCHOLOGY

(Continued from page 89)

vital of the pastoral stage. The *mir* is a Muscovite institution. It is unknown or less common in the Baltic provinces, Lithuania, Poland or Ukraina.

When industrialism was introduced and the peasants came to town to work in the factories they took along their communal notions and formed themselves into *artels*. These correspond to trades unions or guilds but keep the same familiar and informal character as the *mir*. The *artel* may take the form of a simple partnership, or a co-operative enterprise, or a stock company. In Russia the tendency is toward the syndicalist and I. W. W. type of organization by industries rather than organization by trades or state socialism. That is to say, all the workmen of a particular factory aspire to manage that business instead of all the engineers of the country joining in one union and all the electricians in another, and so forth, or instead of all the industries of the country being owned and run by the government.

The social revolution in Russia is the outcome of two forces; one indigenous, a development of this primeval communism; the other imported, the Marxian socialism. When the autocracy was abolished it was soon apparent that the real power lay not with liberals of the type of Prince Lvov and Professor Miliukov, not with republican socialists like Kerensky, not with any leaders at all, but was to be found lower down, in the communal councils or *soviets*. The *soviet* is the political aspect of the *mir* and the *artel*, the agricultural and the industrial community. These two sections of the population, the peasants and the proletariat, are at present assigned equal representation in the national council or the *soviet* of *soviets* altho the latter, the town wage-earners, form only 15 per cent of the population. But on account of their better organization and greater activity in the revolution they have secured a larger representation than their numbers warrant.

The present Russian Government styles itself "The Russian Socialistic Federated Republic of Soviets." This cumbersome cognomen shows its composite ancestry, but the accent is obviously on the last word. A pure democracy, that is direct rule of the people, is possible only for a small community which may all assemble together. The *soviet* then must resort to federation and representation of the republican kind in order to extend its range of action.

The local *soviet*, which may be all the people in a village or all the hands in a factory, will elect delegates in proportion to its numbers to a more general *soviet* and this to the congress of *soviets* at Moscow. This congress or Soviet of *Soviets* elected an executive committee, the People's Commissaries, to run the Government, in the same way as the stockholders elect directors. It was the Council (*Soviet*) of Workmen's and Soldiers' Delegates at Petrograd that, under the leadership of Lenin and Trotzky, became the dominant force of the revolution, and they are now at the head of it. Foreign residents in Russia and the outside world thought that this Government would not last, but after eight months it still holds out against internal and external enemies. The *soviet* Government may rightfully be called tyrannical, undemocratic, intolerant, incapable, unpatriotic, and various other things, but it cannot be called weak or unstable compared with other revolutionary governments. Lenin and Trotzky may be deposed at any time, the Bolshevik rule may be overthrown, but the *soviet* is likely to be the

mainstay of any native popular government.

Bolsheviki and *soviets* seem almost synonymous to us, but in reality they represent different and indeed antagonistic movements. The *soviet* is a native Russian product. Bolshevism is "made in Germany." Whether Lenin and Trotzky are pro-German or not is in dispute, but it is unquestionable that their socialism is of the German rather than the Russian type. German socialism, orthodox Marxianism, tends toward centralization and regimentation. It is materialistic and irreligious. It is doctrinaire in its theory and rigid in its party discipline. It looks with favor upon the introduction of machinery, the accumulation of wealth, the growth of big business, the formation of trusts, for it looks forward to the time when these industries shall all be under state control and this wealth at the disposal of the people.

In contrast to this is another type of what is called socialism, but may be more aptly characterized as anarchistic communism. This sees its ideal not in a powerful centralized state with cities and manufacturing on a larger scale but in village communities leading the simple life. Its disciples would willingly dispense with the luxuries and comforts of modern civilization in order to get rid of the noise of the factory and the grime of the mine. This is the sort of idyllic anarchism and industrial communism that was depicted in William Morris's "News from Nowhere," was advocated in Prince Kropotkin's "Fields, Factories and Workshops," was taught by Ruskin and Tolstoy and was tried out at Brook Farm, New Harmony, and other American colonies. Its ideal is renunciation, not acquisition. These early socialists did not, like the Marxians, aim to seize the government; they desired to slough it off.

They did not inspire to the possession of wealth; they discarded it. They did not want to control industrialism but to abolish it. They did not believe in class war but in universal peace. These Utopian socialists generally differed in temperament from the Marxian socialists who succeeded them. Utopianism was country-bred. Marxianism was the city's child. The Utopian was apt to be artistic, nebulous in his theories, impractical, individualistic, pacific, tolerant, mystical, often deeply religious. The Marxian was dogmatic, militant, not at all ascetic, efficient in organization, energetic in propaganda, working for a catastrophic revolution to overthrow capitalism, but in the meantime holding on to what wealth he could get. Whether this type of socialism was any more practical or desirable than the Utopian may be questioned but it was unquestionably stronger.

The anarchist-communist or Utopian type of socialism was more congenial to the Russian temperament than the Marxian or Prussianized type. Living, nine-tenths of them, in the country and engaged in agriculture, they knew little of the class struggle and the problems of modern industrialism and they had not been excited to envy by the wanton display of luxury. The idealistic and visionary side of socialism appealed to the religious disposition of the Russian more than the hard and materialistic form developed in Germany. The native variety of socialists, the Narodniki or Populists, hoped that by retaining and developing the primitive communism of the *mir* Russia could be carried safely over from feudalism to socialism without passing thru the capitalistic stage, and so escape the cataclysm which the Marxians prophesied for its downfall. Instead of

# NEW KIND OF WAR MAP

**WAR MAP**  
OF THE WESTERN FRONT  
SPECIALLY INDICATING SPOTS WHERE AMERICAN TROOPS ARE ENGAGED

**THE AMERICANS IN FRANCE**

Follow every move of our boys "over there." They are now in the "heat of it"—holding important sections on the Western Front.

## There Fight Our Boys!

There—right *there!* And in this spot too! Put your finger on their battle-ground. Isn't it great to have an "American" map of the Western Front! A map that shows just where "we" are "over there." A map that will take you in two seconds from the news headlines to the spot where "it happened." That's the kind of a guide you now have in this new War Map of the Western Front, specially indicating where American troops are engaged! A wonderful map in colors, showing the present fighting zones in detail and over 5,000 villages, towns and hamlets.

### Also a Military Map of the U. S. A.

This new kind of a War Map is really two maps in one. On the one side you have the map of the Western Front, on the other side you have a United States Military Map showing:

Post and Stations of Army	Naval Training Stations
National Army Campments	Marine Barracks
National Guard Camps	Aero Training Stations

**MAIL THE COUPON** A limited number of this new War Map will be offered at the special introductory price of only \$1. There is a great demand for this map and we do not know how long the \$1 price will hold. An increase in price may come any day, so please order promptly to secure the \$1 price. Fill out and mail the coupon or just pin a dollar bill to a letter. If you are not more than delighted with this splendid new map, just return it to us, and your \$1 will be promptly refunded. Order today! NOW! Clip the coupon before you forget.

## Independent Corporation

119 W. 40th St., New York City

Around the margin of the map is printed the various insignia showing the rank of commissioned and non-commissioned officers, and the different branches of the service. Be able to tell a Lieutenant-Colonel or a Major when you see one. Be able to tell the branch of service of every Soldier and Marine you see—a wagoner from a medical man, a coast artilleryman from a cavalryman, etc. You can learn it all from this new map.

### SPECIAL \$1 COUPON INDEPENDENT CORPORATION 119 W. 40th St., N. Y. City

passing thru all the regular grades of slave, serf, communal peasant, peasant proprietor, hired farmhand, landless workman, wage earning proletarian, socialist, why could the Russians not skip from the third to the last? But the orthodox Marxian was as much shocked at this as an old-fashioned schoolteacher at the idea of a pupil skipping several grades. He insisted, as an opponent, Peter Struve, put it, that "the muzik must be cooked in the factory boiler before he will be ready to enter the socialist state as a full-fledged member."

Unfortunately for Russia the Czar's government drove its radical students over the border into Germany and they came back Marxians. In 1898 the Russian Marxians organized a Social Democratic party like that of Germany. The Narodniki developed into the Social Revolutionary party. These two parties united in the abortive revolution of 1905 and the successful revolution of 1917. Both parties split after the failure of the 1905 revolution into a Right and Left wing, or conservative and radical faction.

The radical faction of the Social Democratic party, which insisted upon a purely working class movement, commanded a majority and have ever since been known as Bolsheviki (Majoritarians). The Mensheviki or minority who were a little more tolerant and willing to allow the bourgeoisie some slight share in the movement and the resulting socialist state, joined with the right wing of the Social Revolutionary party while the left wing of that party, the Maximalists, joined with the Bolsheviki. The Bolsheviki secured control of the *soviets*, the workmen's councils, which had been organized during the revolution of 1905 and dominated the revolution of 1917. By that means the Bolsheviki leaders, Lenine and Trotzky, came into power and they have excluded from the councils not only the bourgeoisie but also their former allies of the Social Revolutionary party. To this ostracized party belong Kerensky and the older revolutionists who have lived in England and America, such as Kropotkin, Tschaikovsky and Madame Breshkovsky, and they are now urging intervention to overthrow the Bolshevik rule.

This civil strife in Russia resembles the Great War outside. The intolerant and tyrannical but capable Bolsheviki strongly entrenched in the center, are holding out against various disorganized groups of opponents. And just as the socialists of Germany support the government of the Kaiser because it protects them against foreign foes so the socialists of Russia support the Bolsheviki because they fear the overthrow of the socialistic republic by capitalistic powers. The Bolsheviki have given their people—at least on paper—what they most desired, peace and land—and they will resent any movement that seems likely to take these gifts away. If freed from foreign influence and the dread of it, probably the Russian people would, in the course of time, eliminate the Bolshevik influence and develop an indigenous type of socialism. Already Lenine has had to modify his rigid Marxianism in concession to Russian sentiment, as for instance, in giving the land to the communes instead of putting it under state control.

But Russia cannot be left to work out her own destinies or, as some would put it, to "stew in her own juice." Germany is too powerful and aggressive a neighbor. Even now, with all her preoccupations, she will not keep her hands off Russia. The problem of the Allies and America is how to counteract the German influence without fatally antagonizing the Russian people, how to free them from this new tyranny without restoring the old.

# WHY SOCIALISM IS PRO-ALLY

(Continued from page 90)

socialism that Germany could never realize political and industrial democracy until her great military machine was defeated. As far back as 1896, during the International Socialist Congress in London, I heard August Bebel and Wilhelm Liebknecht both declare their belief that a crushing defeat of the German armies by the armies of some other nation or group of nations would be necessary in order to make it possible for the German people to rise and secure freedom and democracy. Bebel later wrote something of the same sort in his "Memoirs."

The events of this war have shown that the military system of Germany—the diabolical device of Prussianism—is too strong to be overthrown from within the empire. The destroying blows must come from without. The Allied nations will destroy German military power and in so doing they will make possible the freedom of the German people and the people of Germany's vassal state—Austria-Hungary.

The Allied cause is the cause of true international socialism. The American Socialist who does not support the Government of the United States and its allies in this war betrays the Socialist cause and becomes an ally of the Kaiser!

## AFTER THE RAILS, THE WIRES

(Continued from page 85)

This was the underlying object in securing Federal control of the railroads—to co-ordinate more than seven hundred different properties, to eliminate competition, to prevent duplication, to mobilize without waste the freight and passenger carrying agencies of the nation. Similarly the case of the wire companies is to be determined by the Government. Doubtless the separate and privately owned wire corporations have done the best they could under the circumstances in which they have worked. But no man's best and no corporation's best, judged by pre-war standards, is sufficient to combat the evil of today. The best of every one must be pooled and combined for the nation's best good. Money economy is a secondary matter. If it can be effected, so much the better, but it is not an essential.

Unquestionably the nationalization of the wires for the war will make it possible to unearth certain agents of Germanic activity, to facilitate the electrical communication so necessary for the conduct of the war by the Government and by individuals, and to prevent, incidentally, a tie-up from labor troubles. Our postal employees have never yet struck.

WILLIAM LEAVITT STODDARD

One of the most pathetic of objects, just now, is a rolling-pin. 'Tis a sad relic of pre-gone days!—*London Opinion*.

Officer (while examining applicant for Fort Snelling): Got any cigars on you?  
"No, but I got some cigars over there in my coat."—*Augutan*.

Private: the only known creature that has less privacy than a goldfish.

Guard: the only man in camp to whom everybody is a friend.—*Judge*.

It strikes us that there is a more dangerous ailment about than German measles, and that is German round-trip.—*Passing Show*.

He: Why do you call your dog Crystal?  
She: Because he's a watch dog.—*Purple Cone*.

# No More Over-time for Me

There's a big business man in Salt Lake City and he found that he just couldn't keep up with his work. He worked overtime until he was exhausted. One night, wearily turning the pages of a magazine on his way home, he came across an advertisement like this one. He cut out the coupon and sent it.

This is what he says: "I was able to cut out all the overtime very soon and now I am doing a great deal more than formerly and I still quit before quitting time."

But he says that that coupon brought him something even bigger. It gave him a broader view of life—it showed him new possibilities in himself—and it showed him how to turn these possibilities into realities. That's the story of E. Q. Cannon, President of the Salt Lake Stamp Co., Salt Lake City, Utah.

If you want to work fewer hours—if you want to get more money for the hours you do work—if you want more fun—more rest—more money—more work—whatever it is that you want—you can learn how to get it through

## The Emerson Course in Personal Efficiency

R. S. Howland, who owns fruit groves in Florida, found that it gave him 24 hours more a week—a whole day. Suppose you had one day more a week in which to make money, or to play golf?

R. F. Brune, a grocer of California, got \$3,000 a year extra in income.

El Swanson, Secretary of the Fort Pitt Chocolate Company, Inc., got a 33 1/3% raise in salary.

Already 25,000 men are learning how to get the most out of themselves through this course.

Every man in the United States will have to do double his work to take the place of the men who are gone. Every man will have to give his utmost—his best—and his biggest—to win this war.

You can give that best and biggest and still be fresh and able to do service—or you can give your best and find yourself an exhausted wreck. Learn how to get the most out of your brain—your body—your time.

### FREE—This Book

20 Chapters—In Colors—Illustrated

Send for this book. It contains the answer to the most important question of how to make a "Short Cut to Success." Some of the chapters:

What is Efficiency? For whom is Efficiency? How you are taught Efficiency. Are you ear-minded or eye-minded? Find out what you are actually doing with your time. Most failures are due to guess-work. You use only half your power. To what do some men owe their success? Health culture. Personal finances. Mr. Emerson's message to you.

There is no standing still in life. If you are not going forward, you are going back. If life doesn't grow on you, you are not growing. The course will lead you forward to your goal. It will put you on the shortest, quickest, easiest road to success. Send the coupon for information immediately. It costs you nothing and may be the biggest thing you ever did in your life.

## KISKIMINETAS SPRINGS SCHOOL FOR BOYS

Prepares for college or technical schools. High, healthful location. Faculty of experts. Individual attention. Extensive grounds. Golf course and tennis courts. Football and baseball fields. Gymnasium with swimming pool. Address: Dr. A. W. Wilson, Jr., President, Saltsburg, Penna.

## BE AN ARTIST

We can teach you **DRAWING** in your own home during your spare time. 10 Lessons in Commercial and Illustrative Drawing. Endorsed by high Art Authorities. Artistic Outline FREE to Enrolled Students. Write Today for Art Year Book.

**SCHOOL OF APPLIED ART**  
ROOM 8 BATTLE CREEK, MICH.  
OUR BEAUTIFUL ART YEAR BOOK IS FREE

## For Sore Muscles

Here is an antiseptic germicide liniment—one that is healing, cooling and soothing. Absorbine. It is more than a germicide. It is a relief to a sore limb. It means relief from aches and pains; keeps little cuts and bruises from becoming more serious.

**Absorbine Jr.**  
THE ANTISEPTIC LINIMENT

It is especially good for children's hurts because it is so harmless and safe to use—made of pure herbs and positively non-poisonous. Use Absorbine Jr. whenever a high-grade liniment or germicide is indicated. To reduce inflammatory conditions—sprains, wrenches, swollen veins or glands.

To reduce bursal enlargements, wet, weeping sores.

To stop pain anywhere—its anesthetic effect is prompt and lasting.

To heal cuts, bruises and sores. Only a few drops required at application.

Sizes a bottle at druggists or postpaid.

**A Liberal Trial Bottle**

will be sent you upon receipt of 10 cents in stamps.

W. F. YOUNG, P. D. F.

283 Temple Street, Springfield, Mass.

## The Saddest Thing in All the World

**OUT** of her life forever—disillusioned. One more home wrecked! And all because he and she missed the true meaning of the marriage relation.

Could she have held him? What is the real secret of married happiness?

No nobler, more enlightening answer to that question—no loftier discussion of the sex relationship was ever published than

**PERSONAL HELP FOR THE MARRIED**

By Prof. Thos. W. Shannon, A. M.  
and other eminent specialists

Personal Help for the Married has meant the turning point to happiness—the fulfillment of wedded life—for hundreds of thousands of wives and husbands. It has cheated the divorce courts innumerable times and brought complete harmony out of unbearable misery—it is the book you should have. There is no other book like it in the world. Write for Table of Contents—free on request.

**Special price**—as long as the present edition lasts. "Personal Help for the Married" will be furnished—cloth bound, \$1.35 net—Morocco grain, \$1.90 net. Add 15c for postage on one or two volumes. Three volumes in one package free of transportation charges.

Books returnable within five days at full price if not satisfactory to you. Mailed in plain wrapper.

You will never be disappointed in a Mullikin Book.

### Keeping Up With William

**T**HOSE who chortled over "Keeping Up With Lizzie" a few years ago are introduced by the same author to a new pace-maker. But William is ever so much harder to keep up with than Lizzie. In fact there is only one person who even warmed up on William's trail and as that person has been disowned by modern theology, William has the race practically to himself.

As a purveyor of "hot air," William has no equal. He both consumes it and gives it out. He inhales it every time some one assures him that Providence just sat around waiting for him to be born, and he exhales it whenever he tells a deluded multitude that he is the father of democracy and the prince of peace.

Thru the person of Honorable Socrates Potter, Irving Bacheller gives us his opinion of William.

Sentiment and emotion were a needless inheritance. Hohenzollern and Krupp proposed to cut them out of life and abolish tears. Tears were in the nature of a luxury. The poor could not afford them. . . . Life was to be reduced to a merciless iron plan like that of a beehive—the most perfect example of efficiency in nature, with its two purposes of storage and race perpetuation. No one ever saw a bee shedding tears or worrying about the murder of a drone.

*Keeping Up With William*, by Irving Bacheller. Bobbs-Merrill Company. \$1.

### The Flying Poilu

**A** story of the war that is realistic and at the same time delightful, refreshing and thoroughly human is the unusual combination that Marcel Nadaud has achieved in *The Flying Poilu*.

Chignole was only a Paris street urchin who won his way from mechanic into the Aviation Corps. Humor, pathos and charm are as well combined in the writing of the book as in the character of Chignole.

The story was written by an observer-bombarder in the French Aviation Corps and translated by Mme. Frances Wilson Huard.

*The Flying Poilu*, by Marcel Nadaud. George H. Doran Company. \$1.35.

### Soldier Letters

**L**ETTERS from the front which are so intimate and personal that one feels a bit guilty about reading them make up the little volume called *An American Soldier*. Under fire for nearly a year, Lieutenant Edwin Austin Abbey, of the Fourth Canadian Mounted Rifles, tells of his experiences first in the ranks and then as an officer.

The letters carry none of the mysticism common in the writings of French soldiers. They are interspersed with thanks for Christmas crullers and requests for underwear and tooth-paste. Amid the unspeakable hardships of modern warfare and constantly under the shadow of death, the writer's only complaint is that some one stole a pair of socks he had put out to dry. He is pleased at being gazetted a lieutenant, not because of the prestige of rank, but because the washing facilities are better in the officers' quarters.

In these short letters are summed up the simple courage of the American at war, together with his boyishness, his lack of pose, and his dread of trying to appear

heroic. When one reads of how the young officer met death while rescuing a comrade at Vimy Ridge, it comes with a shock, as if a personal friend had fallen.

*An American Soldier*, by Edwin Austin Abbey. Houghton, Mifflin Company. \$1.35.

### A Comedy of Growth

**I**F Justin hadn't been so matter-of-fact and if Laura had gotten her courage up sooner—but then that would have been another story and not this delightful tale of Miss Dane's, this "comedy of growth," in which she proves that "No one can grow for another—not one."

How matter-of-fact Justin was and how unquestioningly adoring Laura was, you can see from the way in which he proposed to her—quite incidentally—when she talked of going away, sometimes, perhaps.

"Will you marry me, then? Naturally I'm in earnest, I'm awfully fond of you—really. And the old lady will be tremendously pleased. Will you marry me?"

She looked at him, breathless, her lips trembling, day dawning in her eyes.

"Oh, Justin—oh, Justin, what do you think? Of course I will!"

"That's all right, then!"

But it was not all right, and why not is the rest of this deftly told story.

*First the Blade*, by Clemence Dane. The Macmillan Company. \$1.50.

### Stories of Adventure

**I**N *Gold and Iron* are collected three stories of adventure by Joseph Hergesheimer: "Wild Oranges," "Tubal Cain" and "The Dark Fleece"—stories far removed from the usual types of fiction, removed even from life as most of us see it, and yet dominantly real in the characters they present. The early blast furnaces of middle Pennsylvania and the sedate white houses of the salty New England coast; the pungent sweetness of orange groves run wild and the slow progress of the canal packets, with their gay loads of women in crinoline and peacock cashmere shawls, and men with prodigious whiskers and varnished Wellington boots, make up the varicolored backgrounds of these tales. Against them in bold relief are sketched the men and women who mastered fate and molded it to their will. In character analysis Mr. Hergesheimer has somewhat the viewpoint and technic of John Galsworthy; in his nature descriptions the author of *Gold and Iron* suggests the quality of somber beauty dominant in Joseph Conrad's tales. Take, for example, this paragraph from "Wild Oranges":

Supper at an end, Woolfolk rolled a cigaret from shag that resembled coarse black tea, and returned to the deck. Night had fallen on the shore, but the water still held a pale light; in the east the sky was filled with an increasing, cold radiance. It was the moon, rising swiftly above the flat land. The moonlight grew in intensity, casting inky shadows of the spars and cordage across the deck, making the light in the cabin a reddish blur by contrast. The icy flood swept over the land, bringing out with a new emphasis the close, glossy foliage and broken facade—it appeared unreal, portentous. The odors of the flowers, of the orange blossoms, uncoiled in heavy, palpable waves across the water, accompanied by the owl's fluctuating cry. The sense of imminence increased, of a genius loci unguessed and troublous, vaguely threatening in the perfumed dark.

*Gold and Iron*, by Joseph Hergesheimer. Alfred A. Knopf. \$1.50.

## A MATTER OF TUNE

BY CAPTAIN LORD DUNSANY

Things had been happening. Divisions were moving. There had been, or there was going to be, a stunt.

A battalion marched over the hill and sat down by the road. They had left the trenches three days' march to the north and had come to a new country. The officers pulled their maps out; a mild breeze fluttered them; yesterday had been winter and today was spring, but spring in a desolation so complete and far reaching that you only knew of it by that little wind.

It was early March by the calendar, but the wind was blowing out of the gates of April. A platoon commander, feeling that mild wind blowing, forgot his map and began to whistle a tune that suddenly came to him out of the past with the wind. Out of the past it blew and out of the South, a merry vernal tune of a Southern people. Perhaps only one of those that noticed the tune had ever heard it before. An officer sitting near had heard it sung; it reminded him of a holiday long ago in the South.

"Where did you hear that tune?" he asked the platoon commander.

"Oh, the hell of a long way from here," the platoon commander said.

He did not remember quite where it was he had heard it, but he remembered a sunny day in France and a hill all dark with pine woods and a man coming down at evening out of the woods and down the slope to the village singing this song. Between the village and the slope there were orchards all in blossom, so that he came with his song for hundreds of yards thru orchards.

"The hell of a way from here," he repeated.

For a long while then they sat silent.

"It mightn't have been so very far from here," said the platoon commander. "It was in France, now I come to think of it. But it was a lovely part of France, all woods and orchards. Nothing like this, thank God!"

And he glanced with a tired look at the amatterable desolation.

"Where was it?" said the other.

"In Picardy," he said.

"Aren't we in Picardy now?" asked his friend.

"Are we?" he replied.

"I don't know. The maps don't call it Picardy."

"It was a fine place, anyway," the platoon commander said. "There seemed always to be a wonderful light on the hills. A kind of short grass grew on them and it shone in the sun at evening. There were black woods above it. A man used to come out of them singing at evening."

He looked wearily round at the brown expanse of weeds. As far as the two officers could see there was nothing but brown weeds and bits of brown barbed wire. He

turned from the desolate scene back to his reminiscences.

"He came singing thru the orchards into the village," he said. "A quaint old place with queer gables, called Ville-en-Bois."

"Do you know where we are?" said the other.

"No," said the platoon commander.

"I thought not," he said. "Hadh't you better take a look at the map?"

"I suppose so," said the platoon commander, and he smoothed out his map and wearily got to the business of finding out where he was.

"Good Lord!" he said. "Ville-en-Bois!"

## REMARKABLE REMARKS

HARRY KEMP—I am a thinker.

GLEN BUCK—It is Bill against the billions.

FOREIGN MINISTER KUEHLMANN—I am sick of it all.

ED. HOWE—I am very human but I have never cared for gossip.

KERENSKY—I know the truth and I will proclaim it without hesitation.

KAISER WILHELM—Wo and death to those who oppose my will.

BENJAMIN D. DE CASSERES—Behold! I am Lucifer.

WOODROW WILSON—I believe in the ordinary man.

SENATOR HIRAM JOHNSON—The Senate is the last free forum.

JOHN M. GOODE—The science of medicine is a barbarous jargon.

CHARLES F. RATTIGAN—Hearst is a political typhus carrier.

VICE-ADMIRAL SIMS—No U-boat could possibly carry an airplane.

ALFRED KREYMBORG—I am four monkeys; how many monkeys are you?

ROBERT C. BROWN—I am so beautiful to myself I must look very ugly to others.

GENERAL PERSHING—Give me 900 men and the Y. M. C. A. and I will have a more effective fighting force than 1000 men without it.

WILLIAM ALLEN WHITE—Why is it that divorcees do not celebrate the anniversary of the granting of the decree?

PRESIDENT ARTHUR T. HADLEY—He who shows sympathy for the weak and courtesy to all men finds himself surrounded by friends who are constant in adversity as well as in prosperity.

ROSE PASTOR STOKES—Because in England, France and every country greedy persons look to Russia to absorb the surplus profits stripped from the workers, we are being lied to about Russia.

## CROSSED SWORDS

They shall not pass till the stars be darkened;  
*Two swords crossed in front of the Hun;*  
Never a groan but God has hearkened,  
Counting their cruelties one by one.

The sword of St. George shall smite the dragon;  
*Two swords crossed in front of the Hun;*  
(Refugees huddled in reeling wagon;  
Hospital shelled by a midnight gun.)

The sword of Roland is still defender—  
*Two swords crossed in front of the Hun—*  
Of France and Christendom, sparkling splendor,  
Blade of a knightly champion.

The sword of St. George and the sword of Roland—  
*Two swords crossed in front of the Hun.*  
(Ruin of Belgium, ruin of Poland,  
Prisoners tortured, maids undone.)

They shall not pass till that bar be riven;  
*Two swords crossed in front of the Hun;*  
They shall not pass till the dark has driven  
The light of the world from the throne of the sun.  
*Katharine Lee Bates in the New York Times*

## WITHIN A SMALL CIRCLE

**C**HANCELLOR VON HERTLING loves peace so much that he would be very happy to have the Allies humbly approach with olive branch in hand whenever they are ready "seriously" to make specific peace proposals. "We will not reject them," says his Imperial Excellency, "and we will speak, to begin, within a small circle."

Within a small circle the plot was hatched that plunged the world into the abyss.

Within a small circle, the conspiracy was made to violate friendly Belgium.

Within a small circle, the decision was taken to manufacture poison gas, to murder women and children at sea, and to drive conquered nations into slavery.

Within a small circle—a very small circle—the medieval monarchs and militarists still strut, parceling out the lives and fortunes of their own deluded people, as they would their enemies if victorious in this war.

It is to the everlasting honor of Woodrow Wilson that he is speaking within a circle wide enough for every free-born man on earth to hear and understand. No locked doors for him! No elderly beribboned aristocrats sitting around a green table shuffling the stacked cards for another deal to preserve rotten dynasties and stifle popular aspirations!

Our President is talking from the housetops to the free air. This and this alone is the atmosphere in which we will meet Germany. No contaminating fumes for us within a small circle.

## OUR NEW ALLY

**I**N giving official recognition to the independence of the Czecho-Slovak nation France has taken a most revolutionary step. The whole territory of the new nation is completely in the hands of our enemies and theirs, and has been under foreign domination for some four centuries. We all remember the sensation in the press when the Entente Allies first made public their terms of peace in response to the request of President Wilson, and the world learned that the liberation of the Czecho-Slovaks was one of the fundamental objects for which the war was being waged. "Who are these Czecho-Slovaks?" was asked in the same contemptuous tone in which Metternich once referred to Italy as a mere "geographical expression." France has now not only declared that the Czecho-Slovaks *should* be independent but that in her eyes they *are* independent.

If it seems rash to recognize the existence of a nation that does not have a foot of ground under its own sovereignty, we must remember that France did not wait until we had established our own independence before recognizing it. The United States might still be an annex to the British Empire if the French had refused us their material and moral aid at a time when it was yet in doubt whether posterity would call our war the American Revolution or the Attempted Rebellion of the Thirteen Colonies. It is one of the paradoxes of politics that the way to make a nation is to deal with it as if already made.

Of course if the materials from which nationhood can be invoked are lacking, foreign encouragement can effect nothing. The Germans have labored for four patient years to divide Belgium into two hostile national fragments, Flemish and Walloon, without other result than welding more firmly the entire Belgian people into a common patriotism. If the people of Bohemia, Moravia and the Slovak countries of Hungary were really devoted to their rulers no amount of "recognition" of their independence would make them a

separate nation. But it is notorious that the Czecho-Slovaks are more emphatically hostile to the Central Powers, and more dreaded by them, than half the nations numbered among the Allies. If the Czecho-Slovaks are a nation of exiles, they have none the less taken an important part in the Great War. The unquiet soul of Bohemia, denied rest in its homeland, has been embodied in her brave thousands who have fought for the cause of the Allies under Russian command in Galicia, under Italian command on the Piave, and now under the American command in France. Unlike the Poles, Lithuanians, Finns and Ukrainians the Czecho-Slovaks are not divided in sentiment between a hatred of their oppressors of Central Europe and a lingering memory of old injuries suffered at the hands of Russia. The entire Czecho-Slovak nation has been under one rule, the Hapsburg; it has had but one foe, Austria-Hungary; it has but one hope, a decisive victory for the Allies.

The military advantage of aiding a revolutionary movement in the very heart of Central Europe is thus unquestionable; the question remains, Are we morally justified in doing so? We hope that in spite of the floods of ink (mingled with very few tears) which certain German propagandists have poured out in defense of "the integrity of Austria-Hungary" no one at this late date considers such a haphazard feudal preserve as the Hapsburg Empire a real nation. What is called the "dismemberment" of Austria-Hungary, like the dismemberment of Turkey, is only the breaking down of the walls of a prison and the liberation of captives. But many who grant the justice of the Bohemian cry for freedom may wonder whether an independent Czecho-Slovak nation is an indispensable part of the peace settlement, since there is no demand of the Allies which the Central Powers will be less willing to grant than this. Many things, desirable in themselves, are not worth an indefinite prolongation of a world war.

London Opinion

## FIGHTING AGAINST TIME

But we may have to choose between a hurried peace and a durable peace, and a satisfactory settlement of the Czecho-Slovak question seems to be an essential condition of the latter. This hardy, stubborn and determined people will never become reconciled to an alien rule which has meant to them racial and religious persecution, the denial of all national rights, economic exploitation for the benefit of German landlords and capitalists and sometimes wholesale massacre. The execution of fifteen Irishmen for their share in the Sinn Fein rebellion has done much to estrange nationalist Ireland; can it be expected that the execution of more than thirty thousand Slavs in Austria-Hungary during the present war (to take one of the lowest estimates) will leave no trace in the memory of these peoples? To leave the Czecho-Slovaks under Hapsburg sovereignty, however modified, will be to leave a burning firebrand in the powder magazines of European diplomacy; like the problems of Macedonia, Poland and Alsace-Lorraine, the Bohemian problem will threaten the peace of the world for generation after generation until it is settled and settled right.

There can be no question of the strength and stability of the new Czecho-Slovak state if independence is once achieved. None of the Slavic peoples have shown in a greater degree the qualities necessary for the establishment and maintenance of free institutions. The Czechs of Bohemia, the leaders in the national movement of the Czecho-Slovak race, are the only Slavic people who can compare with the Germans, English and Americans in the spread of popular education. Unlike the Russians and Serbs they have no burden of illiteracy to weigh down their new commonwealth. Nature has favored them with great resources of grain, coal, iron and other products of field and mine; and the industrial development of their country is far superior to that of the Austro-Hungarian Empire as a whole and comparable to that of any part of Germany. The Czecho-Slovaks occupy a most strategic position on the great highroads of central Europe in immediate commercial contact with German Austria, Bavaria, Saxony, Prussia, Hungary and Austrian Poland. The new state, in fact, will lack nothing that a nation can ask for its economic development except, perhaps, a seacoast, and Shakespeare tried to give it even that! Switzerland is proof that this lack is not a fatal handicap to fullest nationhood; and the Czecho-Slovak commonwealth will be larger, wealthier in natural resources and thrice as populous as the sister republics of the Alps.

The Slovaks of Hungary are less wealthy and less generally educated than their close kinsmen the Czechs, but the national characteristics of the two peoples are similar and their consciousness of a common patriotism absolute. They speak two dialects of the same language, a language

which has become almost a religion to the Czecho-Slovak nation, altho it has not yet had such a literary development as Polish or Russian. Even those who are sceptical of the value of small nationalities to the world's civilization are compelled to admire the tenacity with which this oppressed, dismembered, almost obliterated people has clung to its speech, its institutions and its historic memories. Indeed, the outstanding characteristic of the Czecho-Slovaks is this power of national endurance under adverse conditions. They have not only kept alive their national consciousness in the face of every oppression but they have achieved great triumphs in the development of their national culture. A peasant people, intensely democratic and understanding how to organize democracy as well as to talk about it, their political life is free of the aristocratic tendencies which ruined Poland and the anarchy which ruined Russia. If permitted to do so, the Czecho-Slovaks will establish one of the freest and best administered republics in the world.

Of course the Czecho-Slovak problem cannot stand alone. Unless Poland is at the same time liberated and united, Bohemia will be surrounded by the realms of Hapsburg and Hohenzollern and her political and economic liberties will be in constant peril. Unless some special provision is made for the German minority in Bohemia there will be danger that its conflict with the Czech majority may give Germany an excuse to intervene in the affairs of the new state as the champion of German nationality. A general revolution in Austria-Hungary, with the establishment of a federal republic of the Danube in the place of the Hapsburg monarchy, may reconcile the Czecho-Slovaks to a loose political union with their present German, Magyar and Yugoslav fellow-subjects. But unless our new allies are accorded the national liberties they desire in some form which they find acceptable, the world will never have, and will scarcely deserve, an end to war.

## CONSIDER CONGRESS

TOO many voters will consider 1918 an "off year" politically, not only because the war makes us more interested in foreign than in domestic politics, but because this is not a Presidential year and "only" Congress will be affected by the verdict of the polls. This is a dangerous point of view even in time of peace; it is positively unpatriotic in time of war. It is very doubtful if any single bit of war work which you will do between now and next November will have such importance for victory and a durable peace as your vote on election day.

A patriotic Congress must be chosen. This has been a very patriotic Congress, but some of its members who have taken an attitude of hostility or obstructiveness to the work of the war should never be allowed to reappear in public life. That is your business.

But a patriotic Congress is not enough. If a candidate has no other qualification than loyalty he should, of course, be elected over a disloyalist, but he should never have been nominated. Is loyalty so rare that candidates cannot be found who combine it with capacity? An incompetent, factious, narrowly partizan, ill-balanced or wrong-headed representative or senator can so bungle the necessary legislative work of war time that no emissary of the Kaiser could do more for the German cause if seated in his place. This is a year for the parties to select the unusual man for Congress; the man whose insight, balance and initiative would fit him to be a captain of industry or the vigorous head of some responsible Government department.

Even a Congress competent in routine duty is not enough. The war will probably end during the lifetime of the coming Congress. Will Congress have anything of statecraft to contribute to the conditions of peace or to the immediate readjustments at the end of the war? Will Pres-

ident Wilson alone have to interpret the mind of America, or, worse yet, will his diplomacy be hampered by unintelligent interference? In the present Congress there are not six men whom the American people could imagine in the Presidential chair without a shiver of fear. Perhaps half of Congress thinks first of sectional problems and interests, the rest of the internal needs of the nation. Only a handful have devoted real study to the world problems which America must now solve and which concern legislators as much as they do executives. Is it too much to ask that we may for this one Congress choose broad-visioned statesmen with knowledge, imagination and conviction; Democrats fit to rank with Wilson and Republicans fit to rank with Taft and Roosevelt?

## THE HUNS

**T**USKEGEE INSTITUTE, which keeps tabs on lynchings in the United States, reports thirty-five during the first six months of 1918. The records of Georgia and Louisiana are eight each, of Texas seven. Three of the victims put to death were women.

We notice that General Pershing thought it important to cable the War Department recently denying the statement attributed to an American sergeant lecturing in America that the Germans gave poisoned candy to children and cut off prisoners' ears. "There is no foundation whatever in fact for such statements based on any experience we have had," said the General.

## OUR NATIONAL FLOWER

**T**HE revival of patriotism and the public demonstrations of it have again directed attention to the lack of a floral emblem for the United States. The question was much agitated twenty years ago and a National Flower Convention of official delegates was held at Asheville in 1895 at the invitation of the Governor of North Carolina. The convention deemed it inexpedient to recommend any special flower at that time, but after a two days' discussion it was agreed unanimously that "a plant to serve properly the purposes of a national flower should meet the following conditions":

### REQUISITES OF A NATIONAL FLOWER

1. It should be a native of the United States, and should grow wild over the greater part of its area.
2. It should bloom on one or more of our national holidays.
3. It should be capable of easy cultivation in any garden.
4. It should not be a weed, or in any way offensive, or harmful to health.
5. It should bear what in the popular sense is called a flower, and should not be merely a foliage plant or one chiefly valued for its fruit.
6. It should lend itself readily to floral decoration by variety and purity of color and distinctiveness of form.
7. The features characteristic of its form should combine such simplicity and gracefulness that, when used conventionally in decorative design, the flower may be readily recognized independently of its color.
8. It should be a flower which has never been used by any other people as their emblem, and should not resemble such a flower in general form.
9. It should possess, if possible, patriotic associations plainly connecting it with the best for which our country stands among the nations of the world.

These specifications are well considered, but it would be difficult if not impossible to comply with them completely. The leading candidates are the columbine and the goldenrod. A National Columbine Association was organized in 1895 to push the claims of the former and its advocates have taken the lead in the discussion now running in *Science*. In favor of the columbine is that its common name is reminiscent of Columbia and its scientific name, *Aquilegia*, of the eagle. On the other hand its opponents point out that its specific name, *Canadensis*, would convey the idea that we had to borrow our national flower from our northern neigh-

bors. The admirers of the columbine find in its flower a liberty cap, a horn of plenty and a golden trumpet, while the thirteen lobes of the leaf mark it as predestined to stand for U. S. A. But its opponents claim that the flower falls to pieces so readily that it is unsuitable for decorative purpose.

The partizans of the goldenrod point out that it is more permanent and more universal. There are about as many varieties of it as there are states in the union and our botanists may be depended upon to discover new species as fast as new states are admitted. The scientific name of the goldenrod, *Solidago*, conveys the idea of solidarity, and its family, *Compositæ*, is a living symbol of *E pluribus unum*.

The opponents of the goldenrod say that its adoption would confirm the idea which our enemies have of America that it is a land ruled by millionaires. But the goldenrodians give a different interpretation to its name:

Columbia's flower, the goldenrod, on hill and valley grows;  
The gold is for the one who earns, the rod is for her foes.

What do our readers think of it? Do they have a favorite candidate for the national flower? If so, we should like to hear what it is and what is to be said for it. Perhaps a dark horse may yet win the floral race. If we get a lot of good letters on the question before the middle of August we will publish them and pay for them too. And since it is customary in a campaign to print portraits of the candidates we want some flower photographs.

Speaking of nationalist propaganda, did you ever hear of a nation in Europe which did not lay claim to the gratitude of posterity on the ground that in the Middle Ages it "had saved Europe from the Tartars?"

There never was more striking proof that "big oaks from little acorns grow" than the recent announcement of the Treasury Department that in the first eleven days of July the total receipts from the sale of War Savings and Thrift Stamps in this country totaled \$60,789,657.59—more than two hundred million quarters saved and put to useful work.

### A TRIBUTE FROM OUR NEAREST ALLY

"Behold a great cloud ariseth out of the sea." The "Montreal star" quotes Isaiah to the confusion of our enemies in this cartoon of congratulation to the Americans fighting at the front.

# THE STORY OF THE WEEK

## The Great Blow Falls

For the fifth time this year the Germans have launched a heavy stroke at the battle line in France. The outstanding feature which distinguishes this from previous offensives is the presence on the line of an American army sufficiently large to determine the course of the battle. During the long interval between the fourth and fifth German offensives on this front American soldiers have been pouring into the trenches in rapidly augmenting numbers; so important, indeed, was this increment of man power that students of military affairs wondered that the German commanders dared delay their attack when each day's postponement increased the numbers arrayed against them.

The Germans attacked on the morning of July 15 along the Marne. Their line of advance extended both east and west of Reims. At its western extremity, near Chateau Thierry, the Germans penetrated beyond the Marne, only to be flung back by an American counterattack delivered within a few hours of the German assault. So rapid a reply to the enemy's attack is an unusual event; as a rule several days elapse between a drive and the counter-offensive. Several hundred prisoners were taken by the Americans. Of course, the American victory had its price. Among those who did not return to the American lines was Lieutenant Quentin Roosevelt, whose airplane was sent to the ground by two German assailants.

The German drive won its greatest measure of initial success west of Reims, where the Marne was reached and crossed; east of Reims the French lines remained almost intact. The German losses were very great, but on the other hand the German official report makes the claim of 13,000 prisoners taken during the first phase of the drive. A feature of the attack was the employment of long range naval guns with which the Germans bombarded French towns many miles behind the line of battle. There seems little doubt that this new battle of the Marne is the long-awaited main German offensive.

## Thru German Spectacles

General March, chief of the army General Staff, has announced that the American army in France has been organized into three corps, each consisting of from 225,000 to 250,000 men. These three corps may be taken as the active fighting force from this country now on French soil; the total number of men sent to France is now stated to be more than 1,100,000, but three or four hundred thousand of these are reserved for work behind the lines. The three corps of the active army in France are divided into eighteen divisions, five of the Regular Army, nine of

## THE GREAT WAR

July 11—French capture Corey. Austrians continue retreat in Albania.

July 12—Italians take Berat. General Horthy becomes head of Siberian Provisional Government.

July 13—French cross the Savieres River.

July 14—French capture villages in Albania. Lord Robert Cecil announces after-war economic league against German imperialism.

July 15—Germans begin general offensive in France on a sixty mile front. Haiti declares war on Germany. Czecho-Slovaks capture Kazan.

July 16—Vigorous American counterattacks break impetus of German drive. Baron Burián discusses peace terms from Austro-Hungarian standpoint.

July 17—Germans continue advance south of Marne.

the National Guard and four of the National Army (the drafted men). More than 300,000 Americans are said to be already in the trenches.

The German newspapers still question the statements of the American Government as to the number of men sent to France and also affect to speak lightly of their fighting quality. What the German army thinks is shown in the elaborate report of Lieutenant von Berg, a German intelligence officer who examined American prisoners captured in June on the Bouresches sector, which fell into the hands of our army and was later translated and made public. The German intelligence officer expresses some disappointment in his report that the Americans refused to give him any information of military value, a fact which is in itself a tribute to the discretion of our men. The prisoners were Marines associated with the Second Infantry Division; men of the Regular Army. The German officer thus characterized them:

Darting in New York Tribune

HIS AUGER ISN'T LONG ENOUGH

The Second American Division may be classified as a very good division, perhaps even as assault troops. The various attacks of both regiments on Belleau Woods were carried out with dash and recklessness. The moral effect of our firearms did not materially check the advance of the infantry. The nerves of the Americans are still unshaken.

The individual soldiers are very good. They are healthy, vigorous, and physically well developed men of ages ranking from eighteen to twenty-eight, who at present lack only necessary training to make them redoubtable opponents. The troops are fresh and full of straightforward confidence. A remark of one of the prisoners is indicative of their spirit: "We kill or get killed."

But the final paragraph should make us proudest:

Only a few of the troops are of pure American origin; the majority is of German, Dutch and Italian parentage, but these semi-Americans, almost all of whom were born in America and never have been in Europe, fully feel themselves to be true-born sons of their country.

(Signed) VON BERG,

Lieutenant and Intelligence Officer.

## The Defense of Paris

Altho the Germans are still forty miles from Paris and the French are as determined as ever that "they shall not pass," all the necessary precautions are being taken to put the capital in a state of siege. General Guillaumat, who had charge of the defense of Verdun, succeeding General Pétain, has been recalled from Salonica to become Military Governor of Paris. A Committee of Defense has been formed with locals in every ward. The Paris munition plants are being duplicated in the provinces. Arrangements are being made to remove the art treasures of private and public collections to a safer place and to convey the surplus population, especially the thousands of refugees, out of the city.

In August, 1914, when the Germans first threatened Paris, over a million of its 2,800,000 inhabitants fled from the city within a few days and the congestion of transportation caused great suffering. At that time the Government slipped away to Bordeaux before the population realized the seriousness of the situation and when they learned that the Germans were within twenty-five miles it was feared that Paris would have to endure another siege as terrible as that of 1870. General Gallieni, who had been appointed Military Governor, announced his determination to defend the city to the end and took energetic measures to prepare the city for the impending ordeal. The parks were filled with cattle and stores of food brought in. The houses in the field of fire of the forts were torn down or burned up and new entrenchments prepared.

Before the war Paris was regarded as the strongest fortress in the world. But since Antwerp, the next strongest, was taken within a few days little reliance has been placed upon the old

#### FORTY LONG MILES—THE STALWART DEFENSES BETWEEN THE ENEMY AND PARIS

Altho the latest advances of the enemy are being checked almost at their start, it is reassuring to note that beyond the present lines and thickly scattered around Paris are heavy fortifications, many of them of the very latest design. The region between Paris and the battlefield is shown here in perspective. The black lines mark the railroads

system of permanent fortifications. As Paris grew the ancient bulwarks which used to enclose it were converted into "boulevards" and the present city is encircled by a bastion and ditch twenty-two miles in length. Outside of this is the ring of forts, having a perimeter of thirty-four miles, that stood the siege of 1870. But as the range of artillery increased it became necessary to extend the chain, so forts were erected upon the hills ten miles or more from the center of the city. The circumference of the area thus entrenched is about eighty miles and it would require an army of half a million to invest it.

It is not at all probable that the Germans would tie up such a large force to this purpose even if they could surround the city, but the aeroplanes and long range guns have made it possible to destroy a city without besieging it. The guns with which the Germans have been bombarding Paris from a distance of seventy-five miles were evidently intended as a warning of what might come. These shells, tho falling in the city at intervals of fifteen minutes for a day at a time, have done less damage than the bombs of the airplanes that occasionally get thru. During the last five months the Germans have attempted fourteen air raids on Paris, but of the more than 300 machines used only twenty-two flew over the city.

It is not supposed that the Germans have more than three or four of the 75-mile guns, but they claim to have thirty with a range of nearly half that distance. They have been for a long time bombarding Dunkirk from a distance of over thirty miles with such regularity that the people in between, hearing the whistling of the projectile, say: "There goes the Dunkirk express."

Their recent drive to the Marne

brought the Germans at their nearest point—the sector held by the American marines—to within forty-five miles of the center of Paris, or forty-two from its circumference. The nearest of the outer ring of fortifications, Fort de Vaujours, is thirty-two miles from the German lines at Bouresches. An advance of fifteen or twenty miles either from the east or the north would bring the Germans within a range from which they could do considerable damage to the city and render it of little value as a political and military center. This would interfere seriously with the French operations, altho no German might come within sight of the city.

**Birds of Passage** During the "quiet" weeks since the last great German offensive, the weeks, in other words, in which losses have been reported in the thousands but not in tens of thousands, the aviators on both sides have been incessantly active. Both groups of belligerents claim supremacy in the battles of the planes. Berlin claims that the Germans shot down 468 airplanes and 62 balloons during the month of June and lost only 153 airplanes and 51 balloons. On the other hand, a British report, covering all fronts and the whole year from July 1, 1917, to the end of June, 1918, concedes a loss of 1121 British airplanes and claims the destruction of 4102 enemy airplanes engaged against the British. Of the airplanes "bagged" by the British the majority fought on the western front; but 246 met their fate in Italy, in the Balkans, in Egypt or in Palestine. On the first of July the British destroyed or damaged no less than forty-two German airplanes in the one day's action. A notable and typical German success was the bombing of a Belgian hospital

at La Panne. More than fifty girls, engaged in making hospital supplies, were among the killed.

The main reason for the recent intense activity of aircraft is the necessity of keeping the belligerents informed as to each other's movements behind the lines so that the next offensive, from whatever side and at whatever point it comes, might not be wholly a surprise. This patrol work is now carried out as a matter of course even under the worst weather conditions. So secure a transport is the modern airplane that the King of Belgium was permitted to cross the water by airplane on his recent visit to England, thus avoiding the dangers and discomforts of the Channel boats.

**The Albanian Campaign** The quietest battle front of the war has now blazed out into renewed activity. Along the Salonica front from the Adriatic to the Aegean the composite Allied army, consisting of Italian, French, British, Serbian, Russian, Greek and Albanian troops, is pressing upon the southern entrenchment boundary of that part of Europe held by the Central Powers. The fighting is most intense in the western part of the line which runs thru Albania. Albania, nominally a neutral country, has furnished not only a battleground for the belligerents but many recruits to the opposing armies. Essad Pasha, the Albanian chieftain, is said to be helping the Allies. The Allied army in Albania has swept beyond the town of Berat and gained a firm hold on the course of the Semeni river and its branches.

Progress in Albania is necessarily slow, as Albania is a land without railroads, almost without highroads, rugged, agriculturally undeveloped and

## BRITISH WOMEN ARE BUILDING SHIPS

Although we point with pride to our progress in opening opportunities for war work to women over here, we still have far to go before we catch up with the British workingwomen of today. Here, for instance, is a crew of women riveters in one of the English shipyards

backward in every respect. The Italians have had to create their own roads in southern Albania in order to supply their troops. If the campaign in Albania continues to develop favorably to the Allies it will threaten the Austrian and Bulgarian hold on Serbia, and may even force the Central Powers to concentrate larger forces in the Balkans at the expense of their projected campaigns in France and in northern Italy.

**Under the North Star** The main attempts to reconstitute Russia have been made in Siberia and on the Arctic coast. Moscow and Petrograd and Great Russia generally are still in the hands of the Bolsheviks, who are not only unwilling themselves to take any step to resist the eastward expansion of German influence, but have treated as hostile the anti-German efforts of others. The Bolshevik Government is said to be organizing a proletarian army to fight the Czechoslovaks and to have demanded that the Allies abandon the Murman coast north of Finland. The Ukraine, Lithuania, and the Baltic provinces are even more completely under German domination, altho the Ukrainian peasants are giving the German army of occupation no little trouble to collect the crops which have been confiscated for German use. Some of the German Socialists have ventured to criticize in the sharpest terms the atrocious reign of terror which German authority has set up in the occupied parts of Russia.

But in the far north and the far northeast of what was once the Russian Empire popular sentiment for the Allies dares to show itself. The population of the Murman coast is working in harmonious coöperation with an Allied expeditionary force. The local government here has been repudiated by the Bolsheviks and its existence is threatened by the German army of occupation in Finland. The Bolshevik authorities have also ordered the ar-

rest of several officials of the local government at Archangel. To the east of the White Sea, in the extreme northeastern corner of European Russia, another new republic has been created, rejoicing in the euphonious name of the Wologdaczhe Republic.

A new Siberian Republic, centering at Vladivostok and supported by the Czechoslovaks, has been established. General Horvath has proclaimed himself head of the Government in Siberia, but there is a rival provisional government already in the field which claims the same jurisdiction. Diplomatic representatives of the Allies are trying to unite the two factions, both of them pro-Ally and anti-Bolshevik, into a stable and united state.

**The Czechoslovak War** The formal recognition extended to the Czechoslovak nation by the French Government has been followed by the organization of a Czechoslovak army on the French front composed of volunteers from several of the Allied nations and prisoners of war who were taken to Russia and have since escaped to join the Allies. The French President reviewed the new army unit and presented it with the national red and white flag, bearing on it the arms of Bohemia, Moravia, Austrian Silesia and Slovak Hungary. Italian reports tell of the valiant part played by Czechoslovak regiments in action on the Piave front.

The Austrian Government, ignoring nationality and regarding only allegiance to the Crown, treats as traitors all the Czechs and Slovaks who are captured after having joined the Allies. In retaliation for the wholesale hanging and shooting of prisoners of war, the Czechoslovaks in Siberia threaten reprisals on German and Austrian ex-prisoners of war who have shared captivity with them beyond the Urals. The Czechoslovaks seem to be dominant

thruout a large part of Russian Asia. They have overthrown the Bolshevik Government at Vladivostok and hold a part of the Trans-Siberian railroad. Their number is estimated at anywhere from fifty to a hundred and fifty thousand. Altho there have been several armed conflicts between Bolshevik and Czechoslovak forces, it is denied that the Czechoslovaks intend to start a counter-revolution and many of them desire to leave Russia altogether and find service against Germany on the western front.

Using the Czechoslovak movement as an excuse, the Bolshevik Government is reorganizing the Russian army and planning to introduce universal military service. Like everything else in revolutionary Russia, this will be run on class lines. Only the "proletariat" will have the honor of serving in the Red Army; the "bourgeoisie" will be compelled to do the drudgery behind the lines. Those individuals of the pariah-bourgeoisie class who prove their loyalty to the new order of things are, however, promised eventual promotion to service in the army.

**With the Lion's Brood** Premier Lloyd George has once more promised that the British Dominions will take their part in the formulation of peace terms for the whole British Empire. Addressing some Canadian guests at a recent dinner party, the Premier said:

We have discussed war aims and the conditions under which we are prepared to make peace at the War Cabinet. We arrived at an agreement on the subject last year with the representatives of the dominions, and we shall reconsider the same problems in the light of events which have occurred since—and we shall reconsider the whole of these problems, I have no doubt, in the course of the next few weeks.

Canada and Australia and New Zealand have all contributed their share of sacrifice and they are entitled to an equal voice with the representatives of these islands.

Whether or not the war results in the democratization of Germany, it has already done much to democratize the British Empire. Not only are the self-governing dominions assured a permanent voice in questions of foreign policy but a project of constitutional reform for India has been prepared by Baron Chelmsford, the Viceroy, and Mr. Montague, Secretary for India. The new plan includes the establishment of a viceregal legislature of two houses and the grant of a wide extension of power to the provincial legislative bodies, which will be elected on the most liberal franchise possible under Indian conditions. At the same time the Indian army will be enlarged and strengthened.

The British Parliament is considering a general plan for the internment of alien enemies, the revision of naturalization certificates, the deportation of undesirable aliens, an official ban on enemy banks, the dismissal of persons of "enemy origin" from civil positions in the Government and the transference of enemy businesses to a public trustee. The fact that these measures have not, after four years of war, passed the stage of discussion shows

with how much liberality Germans resident in England have hitherto been treated. There is now a popular clamor for a more rigorous treatment of the enemy alien, based in part on fear of spies and in part on anger at some recent German atrocities, such as the sinking of hospital ships. The Government is unwilling to adopt the more drastic measures which have been advocated, and some individual exemptions will still be granted from the general rule of internment of enemy aliens, tho these exemptions will be fewer than in the past. An interesting index of popular feeling in England today is the resolution adopted by the members of the Liverpool Cotton Exchange to the effect that none of the firms represented on the Exchange should trade with the Central Powers for a period of ten years after the war.

The South African Government has ferreted out a new plot, and Premier Botha has issued a proclamation warning the citizens of the Union that "enemy agencies are at work in this country, and that they are stirring up strife, not only among Europeans but also among the natives." Several labor agitators have been arrested. The Premier even compared the peril of civil strife in South Africa to the situation which existed in Ireland during the spring of 1916, and it is evidently his opinion that only prompt repression could prevent some of the Boer nationalists from imitating the example then set by the Sinn Fein.

#### Germany's Internal Front

Not since the overthrow of Bethmann-Hollweg has the political life of Germany been so stirred as it is today. The situation this July resembles in many respects that of a twelvemonth ago, with marked hostility shown to the Government by important sections of the Reichstag and great freedom of criticism in the press. In 1917 the chief cause of discontent was the Russian revolution, which had not yet resulted in military disaster. This year the food situation, the failure of the U-boats to prevent the arrival of an American army in France and the failure of the German offensive in the west to satisfy all the high hopes that had been built on it, seem to be dominant factors. But the Government is less ready for conciliation than it was before the Russian collapse, or, rather, it is more anxious to conciliate the Pan-German party. Foreign Minister Richard von Kühlmann has been forced to resign from office for declaring that peace could not be won by military effort alone and that ultimately both groups of belligerents would have to find a common basis of agreement. The same thought has recently been expressed by other leading Germans; notably by Dr. Dernburg, former Minister of Colonial Affairs, in the Prussian House of Lords.

Foreign Minister von Kühlmann's successor is ex Admiral von Hintze, a reactionary diplomat with a most unsavory reputation for political intrigue. He was adjutant of Admiral von Diederichs at the time when the hostile at-

titude of the latter toward Dewey's fleet at Manila nearly brought on a war between Germany and the United States. Later he left the sea for the diplomatic service. In recent years he has promoted German interested successively in Russia, Mexico, China and Norway. No appointment could have been made more satisfactory to the chiefs of the army and navy and the Junkers generally, and no more insolent affront offered to all the liberal or pacific elements in Germany.

For the moment, however, von Hintze has consented to subordinate his personal views to the policy of Chancellor von Hertling. The Imperial Chancellor declares that Germany is still ready to make peace if the Allies will make an acceptable offer, but he refuses to commit his own Government to definite terms. On one important point he has spoken clearly, the question of Belgium. "The present possession of Belgium," he declared, "only means that we have a pawn for future negotiations. We have no intention to keep Belgium in any form whatever." He referred rather vaguely to Germany's need for economic expansion and insisted, as a matter of course, on "the inviolability of our territory."

The tone of the Chancellor's statements is notably moderate and in marked contrast with his actual policy in negotiating the Brest-Litovsk treaties and in consenting to the appointment as Foreign Minister of one of the most sinister exponents of Prussian militarism to be found in all Germany.

#### A Record in Ships

Domestic war news during the past week has been almost nil, barring the routine announcements of the arrival of troops in France and the disclosure of the fact that the number of Americans in the trenches approximates 700,000. With the adjournment—tho called by another name—of Congress, attacks on the War Department, the Navy Department and other war agencies of the Government have for a time ceased. In the words of one official, "The Administration has caught up with the war, and we are going to wait and let it show what it can do." This may foreshadow new semi-political attacks later on as the November elections draw nearer.

Meanwhile there is good news from the shipyards. On July 11 the first of the Ford "Eagles" was launched at Detroit. "Dropt into the water" is the phrase used instead of "launched" to describe the process. This is said to be literally the case with these 225-foot submarine chasers. A whole flock of eagles were made ready for taking the water, and the output is planned to reach the minimum of one per day before the current month is over.

What was probably a world's record in ship launching was established at Portland, Oregon, last week by the Standifer Construction Corporation when it released six wooden hulls into the water in the course of a single day. The total tonnage of this launching is placed at 21,000 tons. The vessels were of the twin-screw Ferris type. All the

#### QUENTIN ROOSEVELT SHOT DOWN IN AN UNEQUAL BATTLE IN THE AIR

The youngest of Colonel Roosevelt's sons, a lieutenant in the U. S. Aviation Corps, has been reported killed in a battle with two enemy planes over the German lines near Chateau Thierry. The German airmen came upon Lieutenant Roosevelt from the rear and opened heavy fire. One of the planes, presumably the American, fell almost immediately in flames. Lieutenant Roosevelt's death was not a fortnight after his first action over the enemy lines. On July 11 he brought down his first Boche. He was only twenty years old, and left Harvard in April, 1917, in order to enlist as a private. Colonel Roosevelt's three other sons are all fighting at the front. Captain Archie Roosevelt, wounded March 11, and Major Theodore Roosevelt, Jr., have both been awarded the Croix de Guerre for conspicuous bravery under fire. Captain Kermit Roosevelt is with the British forces in Mesopotamia.

ships were built for the Emergency Fleet Corporation and were named by Mrs. Woodrow Wilson. The launching ceremonies were in honor of Charles M. Schwab, director general. The same corporation is constructing steel ships, the first hole in the first plate for number one of which was personally punched by Mr. Schwab.

**Ships from the East** The Government of China has entered into a contract with the United States for constructing 40,000 tons of shipping and given an option for another 80,000 tons. All of this construction will be done in Chinese yards; it will be the first great service rendered to the Allied cause by the Republic of the Orient, for many months past our associate in the war. Construction work will be started at once on four 10,000 ton ships in the yards of the Kiangnan Dock and Engineering Works at Shanghai. This concern is wholly owned and controlled by the Chinese Government, but R. B. Mauchan, a Scotch shipbuilder, is the chief of the shipbuilding experts at the Kiangnan Works and he negotiated the contract on behalf of the Chinese Minister of the Navy.

Japan has already been building ships for the Allies, and the news comes that Uruguay has turned over to the United States the first of eight interned German vessels in the possession of the little South American republic. This ship, the "Artigas," adds 8800 tons to our available shipping, and its seven mates will bring the total up to 62,000 tons.

Vice-Admiral von Capelle, German Minister of the Navy, has informed the Reichstag that German submarines have destroyed some 18,000,000 tons of shipping and that four or five big ships are being sunk every day. He denied that submarines were lost more quickly than they could be replaced. Any one unduly discouraged by the German account of submarine victories may pre-

fer to turn to the British account as presented to Parliament by Sir Leo Money, secretary to the Minister of Shipping, who states that since January 42,000,000 gross tons had been convoyed to British and French ports, with a loss of only 1.29 per cent.

**Congress Stops for Breath** Having wound up a vast amount of public business, Congress virtually adjourned for a summer vacation last week till the latter part of August. Leading legislators pointed with pride to the record of achievement of the last several months, beginning, in fact, with December 3, 1917. In addition to the adoption of the resolution declaring war on Germany's principal ally, Austria-Hungary, on the 7th of that month, Congress effected the following enactments:

To place railroads under Government control during the war.

Authorizing the President to control telegraph, telephone, cable and radio systems until peace is declared.

Creating a war finance corporation with funds to aid the Government and private business during the war.

Extending espionage and sedition laws.

The Overman bill, giving the President authority to reorganize and coördinate Government departments.

Extending the draft law to youths attaining their majority, and also to subjects of the Allies and certain neutrals.

Authorizing an additional \$8,000,000,000 in Liberty Bonds.

Passage of national prohibition amendment.

Appropriation bills totaling millions of dollars.

With Congress temporarily quiet, the Ways and Means Committee continues to sit and frame the revenue bill, which will be the "big measure" under consideration during the remainder of the summer and probably most of the autumn. Meanwhile there is a truce also in the prohibition fight which at times became quite warm.

The Senate has agreed to postpone till August 26 the \$11,000,000 emergency food production bill containing the "bone dry" clause, effective, if passed, on January 1, 1919, and till August 19 the water power bill.

Concerning the revenue bill there is much speculation. Of it, however, this unique thing may be said: it is the first bill revising the tariff in whose preparation members of a tariff commission have ever participated. It was announced last week that Commissioners Taussig and Costigan, of the Tariff Commission, will join in the executive sessions of the committee, lending their expert administrative advice to the deliberations. It is quite possible that officials of the Treasury Department having to do with the administration of the revenue laws will be similarly invited. Thus the breach between the legislative and executive branches of the Government is apparently being sealed over—for the duration of the war, at least.

As already outlined in *The Independent*, the new revenue bill calls for the raising of \$8,000,000,000. As unofficially outlined, the bill will do its duty by doubling the income tax and increasing largely the excess profits taxes. Substantial increases in some of the tariff schedules are also looked for.

In order to prevent the repetition of frauds practised by importers during the consideration of former tariff bills, Chairman Taussig, of the Tariff Commission, has proposed to the committee that before the bill is brought out into the light of day Congress should enact a "padlock resolution," making the increase in the tariff retroactive. The effect of such a resolution would be to prevent imports of goods on which it is proposed to raise the duties and the consequent holding of them for the expected advance in prices which would follow the proposed increases.

#### KERENSKY EXPLAINS RUSSIA

At the conference of the British Labor Party in London recently former Premier Alexander Kerensky called upon the workmen of England to stand by the workmen of Russia in their enslavement under German tyranny and Bolshevik dictatorship. This photograph of Kerensky (right) was taken during a conversation with the British labor leader, Mr. Arthur Henderson

#### The Price of Wheat

After months of deliberation, the conference committee having in charge the agricultural appropriation bill, fixed the price of wheat at \$2.40 per bushel, and the President promptly vetoed it. The pull and haul over this clause in the measure was a stern struggle between economic forces, and politicians are predicting that the farmers will hereafter have it in for the administration for thus cutting off their profits. On the other hand the administration political expounders claim that the farmers will be given a good price for their wheat anyway, and, further, that the gratitude of the consumers will more than compensate for the irritation of the farmers.

In his veto message the President took the ground that prices, when fixed by the Government, should be administratively rather than legislatively fixed. "I dissent upon principle," he declared, "because I believe that such inelastic legislative price provisions are insusceptible of being administered in such a way that will be advantageous either to the producer or to the con-

Herding in Brooklyn Daily Eagle

## GETTING TOP-HEAVY

sumer, establishing as they do, arbitrary levels which are quite independent of the normal market conditions, and because I believe that the present method of regulation by conference with all concerned has resulted in the most satisfactory manner, considering the complexity and variety of the subject matter dealt with."

The price fixed by Congress would, the President declared, have added \$2 per barrel to the price of flour, and, estimating on the basis of a 900,000,000 bushel wheat crop, would have cost the consumers \$387,000,000. Moreover, said the President, in words which should be remembered in case this veto act should become a public issue, "such an increase of the price of wheat in the United States would force a corresponding increase in the price of Canadian wheat. The Allied governments would, of course, be obliged to make all of their purchases at the increased figure, and the whole scale of their financial operations in this country, in which the Government of the United States is directly assisting, would be thereby correspondingly enlarged. The increase would also add very materially to the cost of living, and there would inevitably ensue an increase in the wages paid in practically every city in the country. These added financial and economic difficulties, affecting practically the whole world, cannot, I assume, have been in contemplation by Congress in passing this legislation."

The veto was subsequently upheld by the House, the Senate concurring a day or two later.

## The Higher Cost of Living

Food will win the war, but food cannot be bought if prices are too high and if wages are too low. These principles were illuminated by several striking events during the past week. Into the hands of the War Labor Board have been placed some twenty cases of demands for higher wages on the part of street railway employees, and an early decision is expected. The wages will probably be

raised. In fact, the managers of the roads admit that they should be raised, and are willing to do so provided the money can be found, whether from increased fares or from reduced operating costs, to pay the higher schedules. Street car patronizers in New York and other cities are having their minds prepared for six cent fares by posters in the subway and on the cars. To the man in the street it may look like a wicked conspiracy between capital and labor to grind the average person down to nothing at all. But in face of the rising food costs, to say nothing of rents, what is to be done?

An attempt to forestall a crisis in an important foodstuff and to keep the price of sugar down to at least its present figure is to be made by the new Sugar Equalization Board. This board will be another publicly owned corporation. Its capital, \$5,000,000, is supplied by the President out of the funds at his disposal for extraordinary purposes. The new business will buy beet sugar factories and maintain them even at a loss. In a statement issued by the Food Administration, announcing the establishment of this board, it is made plain that the public must expect an increase in the price of sugar "in the latter part of the year, in view of the increased costs of overseas and internal railroad rates, and in view of the higher costs of production and manufacture of sugar, particularly in the increased costs of beets, bags, labor and transportation. "The new board, it is promised, will be able to keep the price one cent less than it would be in case there were no regulation.

## Government Control of Smokes

According to an investigation made for the War Industries Board, Government control of the tobacco industry is a more or less immediate probability and rationing of the American population is a possibility. Tobacco being now on the list of necessities for soldiers, a scheme for a regular supply must be framed and enforced. According to an official statement last week, the United States has been supplying England, France and Italy with tobacco which in normal times they would have obtained from Turkey and Bulgaria. The total yearly consumption of these nations, including Belgium, is put at 387,000,000 pounds.

As is the fact in the case of sugar, so also is it true that the United States are the heaviest consumers of tobacco in the world. The War Industries Board gives the following as the per capita consumption of America and the Allies:

Italy, 2 pounds; France, 3½ pounds; Great Britain, 4 pounds; the United States, 7½ pounds.

## More Prussian Poison

Disclosure of German ownership of the New York Evening Mail two weeks ago has been followed by other disclosures and promises of disclosures of the existence of a Teutonic fund of appalling magnitude, ap-

propriated and administered for the purpose of influencing American opinion. Deputy State Attorney General Becker, of New York, who is handling this case for the Government, has not yet made public all the evidence in his possession, but it is known that the fund under investigation ran into the millions of dollars and involved newspapers East as well as West.

In the course of examination of men whose names were obtained by Government agents, it came out that one apparently innocent reporter employed by "a prominent New York newspaper" had been engaged by Dr. Dernberg to send to a German publicity agent certain so-called inside information from Washington.

"It was learned," says the New York World, reviewing the exposures, "that the clique which included Ambassador von Bernstorff, Captain Boy-Ed, Captain von Papen, Dr. Dernberg, Captain Ewald Hecker, Dr. William Bayard Hale, Dr. Karl A. Fuehr and others, planned, early in 1915, to acquire thirty American newspapers in as many cities. Those organs that could not be purchased outright were to be influenced editorially. The scheme did not succeed, tho thirteen papers in various parts of the United States are now being investigated as having yielded to the German group."

Of course, the purpose of the Government in dragging out into the light these sensationally unpleasant facts is plain: to clear up once and for all, at whatever expense of reputation and fortune of American citizens, a situation which lies at the heart of the present strength of Germany in the United States. Once the poisoned wells of public opinion are cleansed, once the writers, editors and publishers of divided allegiance are shown up, a host of anti-American propagandists will be driven out of hiding and usefulness to their alien and anti-democratic subsidizers.

## WHERE THE NEED IS GREATEST

The Government is calling for 25,000 young women to join the United States Student Nurse Reserve and train for service as nurses. Every day of fighting is making more imperative our need for nurses not only in the war zone but in the hospitals at home to fill the ranks depleted by the demands of war. The call is for women from nineteen to thirty-five, intelligent, responsible, well-educated, in good health. They can find no better way to serve

# ONE WHO REJECTED CHRIST

BY JOHN CROWE RANSOM

There's farmers and there's farmers,  
There's many a field and field,  
But none of the farmers round about  
Can haul such harvest wagons out  
As I from an acre's yield.

There's plenty and plenty of farmers  
Who leave the ground by the fence,  
Thinking it's nice that a patch of roses  
Should scratch out the hay and tickle their noses  
With nice little wild-rose scents.

I'm not like other farmers,  
I make my farming pay;  
I never go in for sentiment,  
And since the roses paid no rent  
I cut the stuff away.

A very good thing for farmers  
If they would learn my way;  
For crops are all that a good field grows,  
And nothing is worse than a sniff of rose  
In the good strong smell of hay.

## TEN LESSONS OF THE WAR

*Mr. Mackaye is a lecturer on scientific ethics and political engineering. He is the author of "The Happiness of Nations" and "The Politics of Utility"*

BY JAMES MACKAYE

**T**HE present war is adapted less to teaching new lessons than to reinforcing old ones. How much any one learns from it will depend upon how much previous history has taught him. The only really new lessons of the war are those of technical science. The human reactions are normal, following the well worn lines of history, proving again that human nature does not change. Nothing in nature is more dependable and constant than the reaction of man's free will to the habits of mind which control it. After all it should not surprise us to observe that human nature, like other things, will not change till something causes it to.

The war, however, has emphasized certain lessons in a degree previously unknown. Among these the following seem most worth enumerating.

First: Modern nations are interdependent. What concerns one is likely to concern all. Hence for a nation to claim the right to do what it pleases with its own institutions, irrespective of the effect of its conduct on the rest of the world, is equivalent to the claim of an individual to do what he pleases with his own property, no matter how much other individuals may be injured thereby. A nation which maintains such institutions as militarism and autocracy within its borders is as much a menace to neighboring nations as a man who maintains a bomb factory in his kitchen is to other tenants of the building he occupies. A world which is safe for such institutions is unsafe for mankind.

Second: Whenever the institution of autocracy produces an enterprising and able autocrat ruling over a people trained to carry out his will, the chances are that he will enter upon a career of conquest, and if the conditions look favorable, will try his hand at conquering the world. This has happened so often in the past, that the burden of proof is upon him who asserts that it will not happen the next time the conjunction occurs. The event has proved that an unprepared world

in the presence of twentieth century Germany was living in a fool's paradise because it had not learned this plain lesson of history. Let us hope it has learned it now.

Third: The development of the submarine by German technologists created conditions favorable to world conquest by the German autocrat. Whether the conditions are sufficiently favorable remains yet undecided. Great inequality of resources between combatants can be more than nullified if the side having the smaller resources has the best weapons. Pizarro with a handful of men was able to conquer a whole nation in Peru because the arquebus was a better weapon than the bow and arrow. A disparity of the same kind may decide the present conflict. Modern wars are not to be won by outfighting an opponent, but by outinventing him.

Fourth: Democracy, which means the rule of a people over what concerns it, cannot be completely substituted for oligarchy, which means the rule of oligarchs over what concerns others, by simply permitting the people to vote for their rulers. This is only political democracy, and but a beginning in that. Democracy is a matter of degree, and is proportional to the effectiveness of the machinery thru which a people controls its own affairs. To be in form complete it must be political, educational and industrial, requiring that the people rule over their government, their instruments of education, and the means of production upon which their national well being is dependent, because all these things concern them. Oligarchs in control of any one of these three concerns of the public can usurp the authority of the people, either by their power as magistrates, as creators of public opinion, or as custodians of the national wealth. By an oligarchy, as understood by the world today, is meant a state in which all three of these powers are in the hands of oligarchs. By a democracy is meant a state in which the first of the three has been transferred to the people. Any one who thinks that this highly limited democracy which is all any nation has thus far attained to, will make the

world safe for mankind, has not learned the lesson of history, nor of the present war. Oligarchy, whether in political, educational or industrial form, may become a cause of war. All three forms no doubt had a part in causing the present catastrophe. War cannot be abolished by abolishing one of its causes only. Democracy is not safe until it is complete.

But the completeness of democracy is a matter of extent as well as of form. When the interdependence of nations reaches a point wherein the conduct of one materially affects the conduct of others, democracy requires a union among them in the degree required to permit of common rule over affairs of common interest.

Modern means of intercommunication of persons, goods and intelligence have rendered the nations of the earth mutually interdependent to a degree unapproached in former times, but the corresponding machinery of mutual rule required by democracy remains undeveloped. The world war which has sprung from the absence of this machinery demonstrates the need of it in a manner so emphatic that a federation of the world is becoming a matter of practical politics. There is nothing like pain to teach men what is practical.

The world democracy which should result from this war might well be modeled upon the general plan of union adopted by the United States of America. It should include the principle of state rights as interpreted by Lincoln, called by him the principle of "generality and locality," expressed as follows:

This relative matter of national power and state rights, as a principle, is no other than the principle of generality and locality. Whatever concerns the whole should be confided to the whole—to the General Government; while whatever concerns only the state should be left exclusively to the state. This is all there is of original principle about it.

This is the principle of democracy applied to states in a condition of fractional interdependence, part of their conduct concerning themselves alone, and part affecting other states. It should be applied internationally. In conformity with [Continued on page 136]

### NOT SORRY TO BE SAFE

Rarely do photographs of soldiers captured by the enemy show quite such sunny smiles as this. These Germans, taken prisoner recently, have stopped for food in a village on their way to the prison camp where they will have lighter work and heavier rations than they've been used to

*There's no cure for homesickness like chow*

SOME of the by-products of this war may be worth the price.

This thought was impressed upon me by a recent visit to the Great Lakes Naval Training Station, some forty miles north of Chicago and the largest camp in the world for feeding a navy with man-power.

It was a dull wintry day. An old, faded, wrinkled sort of day, the color of the gray mists hanging over the trenches of northern France; but when I rode through the gates of the Station I came upon six hundred and sixty acres of undiluted youth.

Eighteen thousand Bluejackets from the Middle West. From Duluth and San Antonio, from Toledo and Denver. No conscripted men here, but eager volunteers all of them, led by patriotism, no doubt, but led also by the spirit of youth and the spirit of adventure. The nearer boys live to the Middle of the Dry Land the louder is the call of the sea, so recruiting statistics agree; and there is high naval authority for saying that the very best seamen are being made out of lads who never saw a body of water bigger than a pond till they set out for the Great Lakes Naval Training Station.

Never have I seen a more splendid aggregation of young manhood than those boys—I cannot call them men for all the man-size job they are undertaking—from the schools and the farms and the grocery wagons and the shops of the Middle West. Hardly a hand-embroidered one among them. Alert,

ready, upstanding, their bodies big and strong and clean, their faces like banners, each of them looking equal to licking his weight in wildcats.

Eighteen thousand Bluejackets in training, a thousand miles from salt water, and always new recruits coming. They don't need an ocean until they sail and, in four months' time, their shore-training ended, the lads from the Station are sailing. More and more they are sailing now that our coast line is—everywhere! At the Azores and the Straits of Dover and in the Adriatic.

This City of Youth is in itself a spectacle. Where less than a year ago were rolling farmlands there are now broad avenues and streets and parade ground and ball grounds and long, low barracks clinging to the earth like caterpillars, and rifle ranges and mess halls and drill halls and administration buildings and hospitals and radio towers—with Lake Michigan for a garden wall.

Nor should I leave out of the picture the Hostess House built by the Young Women's Christian Association on the main road close to the gate, with its big, attractive living room, its emergency quarters, and all its other provisions for a gracious welcome to the mothers, sisters and friends of enlisted men and a seemly place for their meeting.

Don't forget that Hostess House. For it is a symbol of new ways and new days. A symbol, no less, of the fact that when Uncle Sam rolled up his sleeves for the war Auntie Sam sailed in also.

With a friendly introduction from the Secretary of the Navy making straight the way for my visit, I was given free range—and convoy—to see whatever I chose at the Station, whether seaplanes or shoestrings.

My first visit was to Camp Farragut, one of the two receiving camps where the new recruits are held in detention for twenty-one days. As in all the camps, the barracks are many-windowed and airy, thoroly damp-proof, with thick concrete floors, well heated and with plenty of shower-baths.

# "SQUADS RIGHT

## Making Sailors a T

BY HELEN I

FORMER STATE

*At the Great Lakes Naval Training Station the Bl*

Soon after new recruits arrive at the Station a "collection" is taken up. All cigarettes and chewing tobacco and knives and pistols and matches except those of the safety variety and patent medicines and liquors must be given up. Then it's Ho, for a hot bath and new clothes aplenty.

Perhaps it was those sailor clothes which made the lads at Camp Farragut all look more boyish to me than even the minimum age for enlistment in the Navy, which is eighteen, with nineteen the average age at Great Lakes. Just dear navy kids, they seemed, with their trousers wide where the civilian's are narrow and narrow where the civilian's are wide, with their perky white caps and their ties and the whole picture-book rig.

The Youngest Looking One of Them All was leaning against a big ditty-bag, looking wistfully away at nothing. "Homesick?" asked the Chaplain who was with me, in kindly tones if not, perhaps, very tactfully. And the Youngest Looking One of Them All straightened himself at salute. "Homesick? No, Sir," with a camouflage of gruffness in his voice to hide the quavers, "I was just thinking about my mother."

Then it was dinner or "chow" time, which was lucky as one of Packy Schwartz's dinners is considered an antidote for homesickness at Camp Farragut. Packy Schwartz, chief of Detention galley, is a famous cook and I am glad to pay tribute here (not so much

*"Crew's quarters" at camp are just like those on shipboard—ditty bags hold all the men's belongings, the high slung hammocks turn into bunks at night, space is scarce*

# SQUADS LEFT!"

ousand Miles Inland

G ROBINSON

TOR IN COLORADO

ts learn all about military drill and navigation, too

for his sake as for the sake of thousands of Middle West mothers) to his large, juicy views on the subject of meals for recruits, his thoughts about a ration running not to calories but to quarts.

His second day in Detention the doctors take the recruit in hand and if there is any "bilge" about him be sure it is discovered. Then he is given the once over, the twice over and the three times over, being inoculated, in succession, for typhoid, for small pox and for diphtheria.

The memory of those accumulated inoculations with their discomfort, fringed with the strangeness of everything, never quite leaves the Bluejackets in training. One of them, graduated from Detention Camp nearly three months before my visit, had been absent from his radio class that day when the Ensign teacher had lectured on hysteresis which, as some dictionaries may tell you, means electrical strain in the air.

"What's the lesson for tomorrow?" the absentee asked a classmate.

"The class has hysteresis," was the answer.

"Oh Chowder!" grumbled the Lad Who Remembered. "Now I bet everybody'll have to be inoculated."

When the doctors are done with the recruit dentists make sure that his mouth is shipshape. He takes setting up drill; with Packy Schwartz's help he puts on weight; he tries out, somewhat self consciously, salt lumps of

language beloved of sailors; and at night, in his high-hung hammock, he dreams, it may be, of criss-crossing over the blue rollers in search of German submarines.

After the twenty-one days at Detention Camp the intensive training of the naval recruit begins, continuing for about three months. Then, under medical inspection, he passes some days at the outgoing Detention Camp, Camp Ross. Then it's a train, speeding East or West to the Fleet and the Fighting Ships and the long guns speaking.

During those months of training, as I had full opportunity to see, the Bluejacket works with his hands and works with his head. There are long hours of military drill, "Squads Right! Squads Left!" He learns how to sight a rifle, how to knot and splice, and launch a boat and think in terms of the sea. He may compete for admission to one of the four specialized instruction schools, the Gunners' Mates' School, the Coxswains' School, the Quartermasters' School, and the Instruction Camp for Petty Officers, where ratings may be won that will lead in due course to promotions and commissions.

But with all this drilling and studying, with face inspection and shoe polishing and "kitchen police" duties and keeping things clean and bathing and writing letters home to break in on a man's day, there is still a margin of play for the Bluejackets. I saw a lively game of football at Great Lakes, with Navy fans punching holes in the air, and I marked with satisfaction the provisions for boxing and for all sorts of games except, possibly, such steam-heated ones as pinochle.

A singing Navy is trained there, too, and there are few more stirring moments than when five thousand Bluejackets in massed formation swing together into the rhythm of "America. Here's My Boy!" or "Mr. Zip, Zip, Zip," or chorus the charms of the two Annies, Laurie and Rooney.

It was, however, the last hour of my

Captain Moffett, commander at Great Lakes

visit I found most fruitful. It began with watching the ways of a boy with a ki-yi.

The ki-yi is a scrubbing brush with stiff back and stiff bristles. The boy had a pair of blue trousers laid on a long board and he was lathering them and sopping them and scrubbing them masterfully with the ki-yi. Then more lathering and more sopping and more scrubbing. Then sopping them again with clean water and hanging them up to dry, while other lads with other ki-yis were scouring canvas bags and hammocks and underwear and jackets and trousers.

This domestic atmosphere gave me a conversational feeling.

"Where are you from?" I asked the boy I had been watching, with his sinewy back and his masterful way with the ki-yi.

"Denver," he answered, "and I've often danced with your daughter."

To be sure! Now he had straightened up from his task I recognized a lad I had met at the "Delt House" of our State University, a student of high promise.

Here was just what I wanted. A visit with this lad from my own home town who had often danced with my daughter. And how that blest Bluejacket, with his earnest face and his simple, sincere ideals, helped me to answer some of the questions that had been harrying me all my day at the Camp—and earlier. [Continued on page 127]

All aboard for the bounding deep. These boys are expert sailors tho they've never been aboard ship. Their next stop after the Great Lakes Camp is on one of our fighting ships

Men on the first line sometimes fight in gas masks. The American mask is a complicated affair good for seventy-two hours' continuous use

## ON THE SPOT

### My First Day at the American Front

*The editor of The Independent has just returned from a tour of three months in the war zone and at the capitals of our allies. He visited the British, French, Belgian, Italian and American fronts, inspected training camps and hospitals behind the lines, and talked with the men over there who are leading our way to victory. In later issues of The Independent Mr. Holt will continue the story of his experiences at the front.*

BY HAMILTON HOLT

and corners of the hotel. The Judge and I found that the two rooms reserved for us had been reduced to one, but there were two good beds in it and we flipped up a coin to see which would have the first choice. I was the lucky man and promptly chose the iron bed, leaving the wooden one to the judge. He afterward guessed correctly the reasons of my choice.

Fortunately there was an admirable officers' club near by, where we were put up for our meals, so we did not have to patronize the hotel restaurant. The Club Lafayette, which the French Government, with that thoughtful courtesy that seems to characterize its every act toward the United States, had erected and presented to our officers, consisted of three connecting huts—one a dining room, one a lounge room, and one a reading and writing room. It was of course the most pleasant place in town, and one was always sure to get the best French cooking there and plenty of good fellowship. We made it our headquarters the entire time we were at the front.

The next morning the Judge and I donned our trench outfit. We were told before we left America that we would be required to wear some sort of uniform, but when we got to England we found we were expected to wear civilian garb. So the Judge and I put on some leggings for trench walking, and then, with our steel khaki-colored helmets—designed, by the way, from old medieval models that the knights of England used to wear—and our gas masks and a stout cane apiece, we were ready to proceed.

But before we could depart, however, we walked down the muddy street to headquarters, where a sergeant was detailed to give us the gas drill. For fully three-quarters of an hour he put us thru the six separate motions by which the mask is adjusted. The rule is that the mask must be al-

ways carried at the side when within ten miles of the front, and when within two miles it must be tied across the chest just under the chin, unbuckled and ready for instant use. The sergeant imprest upon us the fact that the adjusting of the mask quickly was a matter of life and death, and even the taking in of a single breath after the alarm had been given was often fatal. As the gas has a most persistent way of hanging about after the gas shell has exploded, it is a court-martial offense to take off the mask until the signal is given by a competent officer. We were provided with two masks, one an American make and the other French. The American mask was a most formidable looking affair, with a clip to go over the nostrils to prevent one breathing thru the nose and a mouth tube which was held in place between the teeth and lips, and which terminated in a can filled with chemicals in the bottom of the mask. When adjusted, the American mask not only prevented gas from getting to the face but if it should happen to leak thru it could not get to the lungs either thru the nose or mouth. The French mask was simply an emergency one in case of accident to the other. It had no nose clip or mouth tube and one breathed simply thru the mask itself, the lower half of which was made of some damp porous medicated stuff. Even the horses were provided with masks of this kind. But it was only good for about two hours' use, whereas the American mask could safely be worn for seventy-two hours without the chemicals in it losing their potency.

Before we were dismissed, we were taken into the air-tight demonstration house with our masks on, whereupon the sergeant shot against the wall two glass tubes full of compressed gas from his water pistol. I immediately walked over and, holding my mask directly above the fumes, took in several deep breaths, but could detect no odor of the

**I**T was a warm spring afternoon when Judge Wadhams and I left Paris for our first visit to the American front. Our train was packed with officers of all the Allied armies returning from furlough to their commands, and a rather solemn lot they looked. At each stop a few would get out, so that by the time our train had traveled the four hours it took to reach our destination, most had departed.

We were met at the station, which showed numerous signs of having been the recipient of several Boche bombing parties, by Lieutenant Parks, who acts as general censor for the American army on the line and as host for visitors to the American front.

The lieutenant bundled us into a large American car—khaki colored, with U. S. A. painted in large white letters on the side, and red, white and blue stripes on the glass windshield—and then whisked us away at a forty mile an hour clip, over one of those many matchless macadam roads that ribbon the sunny hills and valleys of France. Arriving, after an hour's run, at headquarters, which was situated in a place that was too large for a town and too small for a city, we were taken to the leading and only hostelry, known as the Hotel L'Agriculture, where rooms had been engaged for us. Irvin Cobb in a reminiscent mood later expressed the opinion to me that the hotel was aptly named, on account of the large amount of agriculture to be found in the beds and sundry nooks

gas. Then the sergeant ordered me to take off my mask. As I hesitated to obey, he took his off, and then of course I followed suit. Instantly I was almost overpowered with the fumes, and in less time than it takes to tell it I started toward the door, which I pulled open as quickly as I could and went thru on the run. It was ten or fifteen minutes before the effects of the one whiff I inhaled passed away. I was told afterward that every one is given a taste of the gas in order to show the seriousness of the danger. I venture to say that after one suffocating taste there would not be any one who would refuse to hold his breath to the last minute. I was told that a soldier ought to be able to put his mask on in six seconds, but I doubt if I could have done it in twenty-six seconds if a real alarm had sounded—such would have been the excitement. Fortunately, during my ten separate visits to the various front line trenches from the Channel to the Adriatic, I never had to put on my mask once.

We were now ready to make our first visit to the American trenches. Our company consisted of Judge Wadhams, a young American lieutenant, and myself, besides the chauffeur in uniform. We rode most of the morning over the broad hills and valleys of France, thru fields where the peasants were plowing the earth just as we had seen them in the paintings of Corot, until we reached a little town perhaps five miles back of the line, in which was situated one of the American contingents. The division that held this sector was the Forty-second, known as the Rainbow Division because it is made up of troops from the North, South, East and West. We called upon the Colonel in command of the artillery of that sector, a fine West Point fellow, who invited us to take luncheon with him in his headquarters in a peasant's hut. He occupied the best room in the house, which could only be reached by going thru the kitchen. In it was his bed, desk, dining table, and his inevitable maps on the wall. It reminded me of some of the old steel engravings I have seen of officers' headquarters during our Civil War. As in all French village houses, a stable was across the hall and formed part of the house.

After a real American cooked luncheon, which we hugely enjoyed after our weeks of English and French fare, the colonel himself took us out to visit the

*There is no delaying when this alarm rings out. It means gas attack—and you may take just six seconds to get your masks on!*

trenches. We rode a couple of miles toward the front line and then got out of our automobile just below the ridge of a hill where a couple of American batteries were taking pot shots at the German line three miles away. We first crawled under a large camouflage canopy made of fish netting and covered with green strips of cloth to resemble the meadow about us. Below the American boys, in mud half way up to their knees, were digging impositions for a new battery, singing and laughing as they worked. What a grimy, perspiry, bronzed-cheeked lot of fellows they were! They had got the first emplacement completed and had

put the camouflage over it and they were digging away about ten feet underground, where they were making a bomb-proof cellar to tumble into when the Germans finally discovered their whereabouts.

Our boys keep making these new battery emplacements all the time, so as to be able to move their guns to new homes as fast as the Germans find out where the old ones are. Sometimes the Germans discover them immediately and sometimes never, but as a rule in a week or two they begin to be shelled. So carefully must the batteries be concealed the men are not allowed to walk to them over the same route more than two or three days at a time lest a path be worn. For a path can easily be detected from an aeroplane photograph, and then the battery is shelled the next day. After bidding goodbye and good luck to our mole friends we crost over the top of the hill and came in full view of the German lines some two or three miles away. The Colonel divided our party in half, taking Judge Wadhams with him and leaving the conducting officer from headquarters to follow with me. He told us to keep about 100 yards behind, for, while the Germans will seldom take a pot shot at one or two men walking together, they think four are worth the price of a shell. We hid behind some bushes and watched the Colonel and the Judge walk across an open space of about 100 yards, all pocked with shell holes, to a little clump of trees on a little mound. After they had arrived there in safety the colonel beckoned us to come, and we followed, as you can imagine, with some apprehension as to what the Germans might do. When we covered the open space and arrived at our destination, the Judge and the Colonel went forward again. The American engineers had erected some barb wire entanglements in front of the next wooded mound since the Colonel had been

there, and it took him about five minutes to find his way thru them, all of which added to the excitement. But, by marching carefully where he wound his way thru, we were able to make the next clump of trees in about half the time he made it. Then we turned around the edge of a hill out of sight of the Germans, and after a little descent came upon six artillery emplacements, two of which were occupied by 75-mm. guns in charge of an Illinois battery. The other four had been blown to bits by direct [Continued on page 134]

# THE WORLD OF SCIENCE

## PUTTING THE SUN TO WORK

CIVILIZATION may best be regarded as the utilization of energy for the benefit of humanity. The primitive man had command of no other source of energy than his own muscles. Consequently he could not accomplish much. His first advance was made when he drafted the energy of the lower animals into his service; when he mounted the horse and hitched his wagon to an ox. But so long as man was dependent upon the labor of human or animal slaves he was himself enslaved. He entered upon his era of emancipation when he began to employ mechanical energies, first the wind and the waterfalls, later coal and oil. All these sources of energy are derived, remotely or recently, from the sun, which is the real motive power of the railroad train and automobile. It was only when man learned to hitch his wagon to a star that he became free. These three stages of civilization might be illustrated by three pictures; the first of a gang of slaves dragging a great stone for the building of the pyramid of Cheops, the second of a half dozen teams of oxen or horses straining to pull a heavy load, and, last, a modern power house, clean, cool and quiet, where the engineer sits reading a paper and occasionally glances at a dial and turns a switch which controls the current for a hundred cars. At the exit gate of the Garden of Eden a sentence of perpetual labor was passed upon mankind, but modern science points out a way of relief from the primal curse.

The labor problem will eventually be solved by the complete abolition of labor in the sense of physical exertion. Visit one of our great steel plants where more work is turned out in a week than the ancient world could perform in a century, and you will see only a few men scattered about the building and not many of these are straining their muscles. It will not be long, too, before man strips the harness from the horse for the last time and with a grateful slap on the flank turns him loose in the pasture of a zoölogical garden. If you look out of your window on a wintry day you can see the conflict of the passing and coming stages of civilizations. A toiling team of horses is trying to drag a coal cart thru the slush, but, tho the driver lashes them furiously, they only slip and flounder, while

a stream of motor cars and trucks whizz by with impatient toots. The horses may as well give up. They are out of the race. Art again has vanquished nature. Man in the machine is superman, a veritable *deus ex machina*.

The machines by which man has been enabled to climb to heights of wealth and comfort hitherto unattainable are mostly run by fossil fuel. If man was able to make use directly of the radiant energy of the sun a dozen square miles of Arizona desert would provide all the motive power needed by the United States. But as it is he is obliged to get this energy indirectly by drawing upon the stores of solidified sunshine concealed in the earth. The carbon and the hydrocarbons, the coal and the oil, resulting from the accumulation and condensation of millenia of vegetable growth, are brought again to light and reunited to the oxygen of the air, thus regenerating the heat that formed them. But this supply is limited. The world is now living on its capital. The amazing acceleration of civilization during the last century, the increase of population and wealth, the expansion of industry and commerce, the development of new countries, the improvement of living conditions, and the advancement of the arts and sciences are all due to the fact that the present generation has inherited a fortune accumulated during millions of years and is spending it lavishly with no thought for the morrow. The coal bins of England and France will begin to give out within two hundred years. Those of Germany may last four or five times as long, while the United States and China have still greater reserves to draw upon.

But the oil supply is much more limited and unevenly distributed. The United States is favored above all other countries in this respect, but our navy department prophesies that American petroleum will last only twenty-seven years if the consumption increases at the present rate.

Wealth is produced by the expenditure of energy, by the work of men, beasts or engines, by the oxidation of food or fuel. The vast increase in wealth in recent times is due solely to the utilization of external forms of energy, for man's internal energy, his own muscular power, has not increased and he is no more inclined to use it to the utmost than he used to be.

In 1776 two revolutions occurred in English history. The American colonies declared their independence and James Watt set up his first steam engine to run the bellows of Wilkinson's iron-works. From a financial viewpoint one event offset the other. By utilizing the energy of her coal beds Great Britain was able to bear with ease not only the burden of the billion dollar debt that the American war had placed upon her but the three and a half billion dollars that the Napoleonic wars had added to it. It has enabled her to spend \$30,000,000 a day on the present war.

The Age of Steam lasted just a century, for in 1875 its supplanter was invented. In that year Dr. Otto put his gas engine on the market.

The modern historian devotes more attention to the Industrial Revolution due to the invention of the steam engine than he does to the American Revolution, which was merely a division of administration. The revolution effected by the invention of the internal combustion engine we do not need to be told about, for we are living in the midst of it. We can all remember the day when we first saw the horseless carriage come puffing down the street and that other day, perhaps ten years later, when we first saw the bi-plane rise buzzing in the air.

We have heard how the battle of the Marne was won by the mobilization of the motor cabs of Paris for sudden shifting of troops to stop the German invasion. We read every day how many ships have been sunk by the Diesel-driven submarine. We have watched the rise of a new industry and a new amusement. We have seen the revival [Continued on page 133]

The energy that is sent out from these electrical generators drives the locomotives of the Chicago, Milwaukee and St. Paul Railroad

# How I Invested \$2.00 that Netted Me a Clean Profit of \$900.00 in One Year

The experience of a man who for years could not seem to make both ends meet. Now has saved \$5400.00 and is going to buy a home for his family in the suburbs.

Told by GEORGE P. ELLIOT

"My wife and I were in a state of desperation. It was the end of the year and we sat down and figured that we hadn't saved a single penny of my \$3000 salary—worse than that, here upon the table was a sheaf of unpaid bills amounting to about \$300.

"Where *could* the money have gone?" I said, puzzled.

"I can't imagine," my wife answered. "It's certain we haven't spent much on pleasure. And I've not been extravagant in any way that I can think of in managing the house or providing for the children. And none of us have gotten any more clothing than we really needed."

"And yet the money was gone. Neither of us knew why or where it had gone. There wasn't a single article in the house that we could point to and say, 'Well, there's \$50, or there's \$100 accounted for, anyway.'"

"My wife and I had just cleared the unpaid bills from the table, and half-heartedly agreed to meet them 'some way or other' when William Jordan, my assistant at the office, rushed into the room.

"What do you think!" he cried, excitedly. "My wife and I have saved enough money and we've just made arrangements to buy a little home in the suburbs."

"My wife gazed at me in astonishment. She knew as well as I did that Jordan only made \$2000 a year and, like us, he had two children. 'How could *they* manage it?' we asked ourselves. Jordan and his family enjoyed all the pleasures of life even more so than we, because *we* never went to the theatre without having an unpleasant doubt as to whether we could really afford it and wondering what necessity we would have to cut down on after having that luxury. But Jordan went to the theatre frequently, entertained regularly, had all of the necessities and many of the luxuries of life. All his family were always well-dressed and his children were known as 'two of the prettiest-frocked' children in the neighborhood.

"I decided to put the question squarely up to Jordan and find out how he could manage affairs so that

his \$2000 income would go so much further than my \$3000.

"Well, Mr. Elliott," he answered simply, 'my wife and I long ago came to the conclusion that a home must be run in the same way as a business if one wants to make any money out of it. So we just kept a record of all our expenditures—stopped up all the expensive leaks—laid away a certain amount every week on the budget basis for regular annual bills, such as insurance—determined upon 30% of my yearly salary as the amount that we would bank each year—and then deposited 1/52nd of that amount each week. You can't imagine, Mr. Elliot, what fun it was! We didn't miss any pleasures because we always knew exactly how much we could afford to spend and we spent that amount for pleasure with a free mind. At the end of the first year we had a bank balance of \$500 to pay us for our fun. And every year since we've saved from \$500 to \$600—just by not letting our money dribble away as most couples do. That is how I have the money to buy a home!'

"After Mr. Jordan left that evening, Mrs. Elliot and I talked about applying the same plan to our own affairs. We became enthusiastic about it. We decided to try it out immediately. All that next evening we bent over the dining-room table and made figures talk. We have conducted our home on this plan now for six years and have saved from \$800 to \$1000 each year—despite the high cost of living and without depriving ourselves of one bit of pleasure or any of the conveniences of life. We now have about \$5400 in the bank—or an average of \$900, or 30% of my salary for every year since my wife and I became partners in the fascinating money-saving game. This summer finds me hot on the trail of William Jordan in selecting a beautiful home of my own."

The Ferrin Money-Saving System is built upon the experience of people like the Jordans and the Elliots. It is intended for people who want to save money and have money and yet do not want to tie themselves down to stringent economy and denial of the little pleasures and luxuries which sweeten life. This new Money Saving System

is for those who realize how money dribbles away into nothingness unless some track of it is kept.

The Ferrin Money-Saving System is simplicity itself. It is all in a handsome and handy blue imitation leather bound account book prepared by the Independent Corporation. It is the only device of its kind—because it is based on the budget idea and provides for the income as well as for the classified items of expense. No knowledge of bookkeeping is required to use this new System. Any child able to read will be able to keep the account accurately. Three minutes a day will suffice to attend to the matter. No red tape or technicalities—so efficient that it is automatic—simple to understand and easy to apply.

Make the Ferrin Money-Saving System *your* automatic accountant—give it only three minutes' attention each day. It will keep a watchful eye on your income—check up your expenses—tell you to a penny where your money goes—enable you to put money in the bank regularly and surely—keep you out of debt—free your mind from worry and doubt regarding luxuries, because you will know just how much you can afford—will answer for YOU that tiresome question, "Where does the money go?"—and will prevent you from letting your money dribble away without leaving any trace of itself. Send *now* for the Ferrin Money-Saving System—the Automatic Accountant of Every Income. Examine it—without cost.

## Examine It—Without Cost

Mail the coupon NOW for this "Watch-dog of the Home Treasury." See how efficiently this Ferrin Book works. Examine it thoroughly and if you feel that you can afford *not* to own this remarkable money-saving device, return the book and owe us nothing. But if you feel that you would like to stop up the leaks which prevent you from saving money, if you want to check up your expenses and have a tidy bank balance to show each year, then retain the Ferrin Book and send us only \$2 in full payment.

Send for the Ferrin Book NOW! It's a big step taken toward a tidy bank account.

## Keeping Our Fighters Fit

HERETOFORE the Government's responsibility toward the soldier ceased when he had been fed and clothed and drilled; but the drafting of ordinary citizens in the present war has brought it home to governments that these bare essentials are not even enough for complete physical efficiency, and leave the man a prey to mental ennui. President Wilson expresses his sense of the necessity "to surround our troops with a healthy and cheerful environment" that they may return to their homes and communities "with no scars except those won in honorable conflict."

That purpose is intelligently carried out by the Army and Navy Commissions on Training Camp Activities, which utilize and link up the work of the Y. M. C. A. and kindred organizations, and themselves supply any gaps, so that every camp may have its proper equipment of workers and facilities to keep the men "physically fit" and "mentally interested." Books, "sings," comfortable club-houses, amateur theatricals and vaudeville, boxing-bouts, athletics and camp-sports, baseball, tennis and "stunts" are prest into the service to keep the life of the man in camp as broad and normal as may be, until he is plunged over there into the abnormality of war. A man in the American training camps can now even take college grade courses of study in his spare time.

One of the great influences within the camps to keep the general tone high and normal is the introduction of Hostess Houses, where women relatives visiting the camps can have a pleasant place in which to meet husbands, sons and brothers, and also where the men in camp can always find refined, responsible women with whom to associate.

"I guess a lot of us would be awful reckless if it wa'n't for you people," a young soldier stopt at the (Hostess House) desk to say. "You've kep' some of us out of the guard house." The Hostess House idea is stamped "Made in America," and America is the land where women are partners, not chattels. In carrying this atmosphere of chivalry toward women into the training camps of the Army and Navy, the Government is fostering one of the basic principles of a well-ordered democracy—the sanctity of the home.

*Keeping Our Fighters Fit*, by Edward Frank Allen, Century Co. \$1.25.

## Thru the Ouija Board

DISCRETION seems the better part of valor when criticizing a book whose authorship is claimed by a departed spirit thru the agency of the ouija board.

The book takes the reader back into a bygone day, full of romance, mystery and tears, dreamlike and as far removed from the days and ways we know as the Trans-continental express is removed from the stage-coach. After a while, the writing has a kind of hypnotic effect. We cease to wonder whether people ever did behave like the people in this village, and follow the example of the heroine in taking things as they come, without resistance or question, as one does in dreams. Occasionally tiresome little questions arise, such as—was it really possible then to shoot a man in the open village, in the presence of a large crowd, and not be arrested immediately by the local constable? Or—did gentlemen, as late as the mid-Victorian era, habitually wear swords? But a few paragraphs of the

musical, old-world phrasing lulls critical doubt to slumber, and we follow the "youthed" heroine again thru many a "wet-swept" morning and years of waiting long, with the "ununderstandable mystery" growing ever more tangled about her footsteps and the bewildering events of her life.

The story deals with a girl who did not know her father, and whose mother died in poverty and abandonment, shamed and shunned. The gay, sweet personality of the mother is the best thing in the book. The alleged author, Patience Worth, who when she wrote her first book could talk only an unknown dialect of Elizabethan English, has evidently kept up with her progress of the language since her death and we may expect a later novel to deal with the period of the Great War.

*Hope Trueblood*, by Patience Worth. Henry Holt & Co. \$1.50.

## Lord Northcliffe

"**L**ORD NORTHCLIFFE," says William E. Carson in his foreword, "is today the most admired and the most vilified man in Great Britain." But these conflicting views are due to the fact that in England the real Northcliffe is as little known as in America. So Mr. Carson, who was formerly American correspondent for the Northcliffe newspapers, writes this biography to reveal the true character of Britain's Man of Power.

The stupendous force and courage of this man, who dared to oppose public opinion, the untiring energy and ambition which won him remarkable and immediate success, his incommensurable service and devotion to his country in her time of need—all this reads like fiction. But we shall not attempt to enumerate here the brilliant achievements of Lord Northcliffe from the time when, as Alfred Harmsworth, he started his first paper, to the present day, when he stands alone as the first man in history to hold no public office and yet to be able to make and unmake governments thru the power of the press. His career, recounted

in the light of Mr. Carson's admiration, makes a story of absorbing interest.

The last part of the biography is concerned with Lord Northcliffe's experiences at the front and with his visits to America as head of the British War Mission to the United States in 1917. Lord Northcliffe has been called more American than British in his outlook because of his thoro knowledge of our national aims and problems. Be that as it may, we cannot help admiring the honest vigor of opinions such as this:

If the United States had meant to take up arms in defense of British or French interests, or in the interests of Belgium, or in order to spread democracy, it would not have waited until April, 1917. If its aims had been commercial, it would have been in the war long ago. The motive which brought the United States in was not sympathy with any other nation, was not desire for gain, was not an abstract fondness for democratic government as opposed to autocratic government; it was self-interest, self-preservation, self-respect. The American people are not fighting to make the world safe for democracy, but to make the world safe for themselves.

*Northcliffe*, by William E. Carson. Dodge Publishing Company. \$2.

## Great Britain at War

**T**HURU factories, shipyards, hospitals, training camps and trenches Jeffery Farnol has followed the war work of Great Britain. His impressions, set down informally, portray at once the invincible spirit with which our ally carries on and the tremendous achievements she is making. Take this paragraph, for instance, on munitions works:

Tonight, as I pen these lines, our armies are locked in desperate battle, our guns are thundering on many fronts, but like an echo to their roar, from mile upon mile of workshops and factories and shipyards is rising the answering roar of machinery, the thunderous crash of titanic hammers, the hellish rattle of riveters, the whining, droning, shrieking of a myriad wheels where another vast army is engaged night and day, as indomitable, as fierce of purpose as the army beyond the narrow seas.

Interesting human anecdotes, graphic descriptions, thoughtful opinions, a few brief summaries of facts and figures, are all blended by the skill of the author of "The Broad Highway" into a masterly picture.

*Great Britain at War*, by Jeffery Farnol. Little, Brown & Co. \$1.25.

## If You Want to Talk to Soldiers

**D**O you know what a *cartouche* is or which armies use Lee-Enfield rifles? Can you recognize all the insignia of our officers and men off-hand or understand what an army man is talking about when he speaks of being A. W. O. L. or going up to G. H. Q.?

Even if you pass this test there are several thousand more military words and phrases coming into conversation nowadays that you'll need to have interpreted. The life-preserver for civilians in this sea of military jargon is *A Dictionary of Military Terms*, compiled by Edward S. Farrow, late assistant instructor of tactics in the United States Military Academy at West Point. The book is pocket size and it includes 12,000 definitions of military terms—every thing one is likely to hear concerning guns, arms, aeroplanes, ammunitions, equipment and tactics. It defines trench lingo and army abbreviations and slang, also the French phrases whose mispronunciation we are incorporating into our language.

*A Dictionary of Military Terms*, by Edward S. Farrow. Thomas Y. Crowell Company. \$1.00.

Lord Northcliffe in London

## GOING TO SEA INLAND

(Continued from page 121)

"Pretty democratic here?" I ventured, using the phrase with some hesitation as I have felt overfed with the word "democratic" in recent months.

"Democratic?" the Denver boy repeated. "Yes, I guess so. Anyway we all say us—not them."

I liked that way of putting it. So I led the young recruit on to give me his ideas of democracy in camp.

There was nothing in his talk to remind me of the patriots who discourse on democracy in McGuffey's Fifth Reader, but he said some things worth repeating. I cannot often quote his exact language but at least I do not decorate his ideas and phrases.

"If a man is really democratic," he declared, "he doesn't talk about it. It's like being a gentleman. If you go around saying you are one, you aren't."

"Democracy," he observed sagely, "is just folks thinking together and feeling together and working together, without any swank or privilege and with a chance for everybody. And that's the sort of thing we have here at Great Lakes."

"I'm not sure I agree with you about there being no swank here," I said. "How about all those dots and dashes and stars and other 'hash marks' on collars and sleeves to distinguish all sorts of ranks that are about an inch apart? I've counted up more than a hundred different ranks and I'm sure I haven't reached the end of the counting. Isn't that sort of thing just a remnant from the days of caste and heraldry and other aristocratic monkey-shines?"

"Captain Moffett gave us a straight talk about that when I was in Detention Camp," answered the Denver boy. "You're right, we have no end of different ranks here, with hard-shell officers and soft-shell and 'hash-marks' spilling all over the place. But, as Captain Moffett showed us, these collar and shoulder devices are not the badges of caste and personal glory but of service. That's the only true democracy, he told us, the democracy of opportunity and service. And every man jack of us knows that if we have the sand and the sense there isn't one of these ranks and devices that isn't open to us. (Here he glowed like an incipient admiral.)

"How about the caste of money, the most impudent caste of all here in America?" I asked. "I suppose a millionaire's son slips into your ranks once in a while."

"Yes, and we get a snob, too, now and then. I remember one Sunday, at chow, a yellow chap like that began buzzing about how he'd read in a Chicago paper that a man whose father was worth \$20,000,000 had enlisted and would come to the Station Monday. And that night in barracks he broke out again.

"Aw, cut it out," yapped a man from Montana. "Keep on sleeping. Pet," named a red-headed chap from somewhere. "And he says you give him your grave."

"So then the yellow chap stopped talking?"

"And how did the twenty-million-dollar fellow turn out?" I inquired.

"Oh, I don't know. We never got his number."

Do you get that? A millionaire's son, as certified by a noon newspaper and a snob recruit, comes to the camp and the other Blue Jackets are so little interested in that matter of millions that they never get his number—a most significant illustration of the new democracy of the new navy.

With my visit to Great Lakes in mind, I repeat that notwithstanding its stabbings and its fifth and six stabbings without trace and its "German God" some of the by-products of this war may be worth the price.

# Brushed Teeth Are Not Clean

All Statements Approved by High Dental Authorities

## Film Must Be Removed

Brushing teeth in old ways fails to save them, as millions of people know. Teeth still discolor, still decay. With most people, at some age, pyorrhea develops.

Despite the tooth brush, statistics show that tooth troubles constantly increase. And every modern dentist knows the reason is a slimy, clinging film.

That film is what discolors—not your teeth. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of

pyorrhea. Thus nearly all tooth troubles are caused by that film.

The ordinary dentifrice is not sufficiently effective. So millions of people in brushing their teeth leave much of this tooth-destroyer. It clings and hardens, particularly in crevices, and resists the tooth brush. And nearly every tooth trouble is due to it.

After years of searching, science now has found a way to combat that film. Able authorities have proved it by many clinical tests. Today it is embodied in a dentifrice called Pepsodent. And to let you prove its effects—and quickly—we offer you a One-Week tube to try.

## See the Difference

We urge you, for your teeth's sake, to try Pepsodent one week. Know what clean teeth really mean. See what film-removing does. Your dentist, if you ask him, will join in this request.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

A scientific discovery has made Pepsodent possible. The old forms would not do. Pepsin must be activated, and the usual method is an acid, harmful to the teeth.

Now a harmless activating method has been found. Five government

have already granted patents. This method is employed in Pepsodent. Four years of clinical tests have proved its efficiency. Now thousands of dentists, including many leading authorities, urge its use.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch the results. Note how clean the teeth feel after using. Note the absence of the film. See how teeth whiten as the fixed film disappears. Let Pepsodent prove itself.

One week will convince you, we believe, that old methods of teeth cleaning should be abandoned. Film-removing is the vital matter. You will see for yourself that a new era has come, and will welcome it.

# COME TO FRANCE MEN OVER DRAFT AGE

When our boys come home, you'll be proud to have been at the front and done a man's job.

The Y. M. C. A. needs four thousand of you—business men, professional men, executives—men with backbone and good red blood—for work back of the lines.

—four thousand cheerful men to give the glad hand to the boys after they've done their best in the trenches.

—four thousand men of experience and courage, who can think and smile and do things in all circumstances.

There's big work for you in France—helping our soldier boys.

## POSTAL "MASON AND DIXON LINE"

BY JEANNETTE MARKS

ASSOCIATE PROFESSOR OF ENGLISH LITERATURE AT MOUNT HOLYOKE COLLEGE

THE question of increased postal rates on second class mail matter is too big to admit of special consideration for any one section of the country. Here we have a law which will cut into two of the most vital factors of our life day: First, national education; second, national unity.

There has been an increase in the cost of paper, of ink, of labor. There are plenty of figures on this subject. Now let us add an increase in postage rates of from 50 to 100 per cent. Obviously the majority of the magazines cannot meet this increase. Perhaps, less obviously, the newspapers can. The majority of newspapers are sectional. A few of them have a wide circulation thruout the country. And among those few, some are not rich. For these there must be a financial problem in the proposed increase of rates according to the zone system.

Then it remains for the public to assume the cost. "Passing on" the cost to the public is a favorite slogan these days. How much of this passed-on cost of living the American public can carry becomes a problem. Even Atlas must have had his maximum weight in worlds!

Let us say that this increase will wipe out the profits of the magazines and of some of the newspapers. Let us assume that at this time of crisis, with its tragic losses, that the magazines and newspapers of the country should lose all or much of their profit, and that it does not matter whether they do or do not go to the wall. Let us with sublime indifference to civilization—the equivalent of German brutality, altho more subtle—dismiss all consideration for the plumber, the baker and the candlestick maker. Let us take away from them their trade and technical journal and refuse to consider the convenience of the public they serve. Let us say that it does not matter that hundreds of thousands of men and women employed by the great network of publication should be thrown out of employment, since their labor is so sorely needed elsewhere. Let us say, on the basis of the same argument, that it does not matter that the majority of authors and journalists should lose their sources of earning a living, for war demands its sacrifices. Let us say that it does not matter whether certain members of Congress criticized in these newspapers and magazines repay old grudges or not.

But there are two things which do matter; the first of these is that the public should lose any of its utilities in the way of public education. Now is the time when our education needs more protection rather than less. That our education does need this protection becomes only the more evident as our city councils (not our boards of education!) close the public schools on account of coal shortage and allow the colleges to close or face closing while they permit the saloons, breweries and theaters to "keep open." Even as the value of childhood increases, so does the value of education go up as man power, man-made beauty and man-developed education are being wiped out in this European holocaust.

Such action would mean that the better-class magazines used, especially in the West and Middle West, as textbooks in the English literature courses of many of our schools and colleges, as, for example, the *Survey*, *Atlantic Monthly*, *World's Work*, *Literary Digest*, *The Independent*, *Collier's*, *Metropolitan*, *North American Review*, the *Bellman*, *Chicago Poetry*, and others, would have to go. This would mean a depreciated school or classroom: at the least an in-

creased vacuum, for if Nature abhors a vacuum, the college classroom is the exception to that rule. Aside from school and college, many of the people who would be cut off first from the publication because of the added expense would be the very ones who need most the educational and perhaps the Americanizing influence of the newspapers and magazines.

Such action would mean a decrease in domestic education, the loss of magazines to millions of mothers who thru them have learned how to care for their children, how to save the lives of babies, how to make the home and the town healthful and attractive, and how to conserve food and fuel. Loss of the *Delinicator*, *Pictorial Review*, *Woman's Home Companion*, *Woman's World*, *Ladies' Home Journal*, to name simply a few, would mean inevitably the loss of thousands and hundreds of thousands of babies. A country-bred woman, speaking of this possible loss of the household magazine, writes: "Twenty years ago the infant mortality among us was an agony. A baby born was received with both love and terror, for we saw how few were his chances for surviving his first three years. Today the love is there, but the terror is gone. We have been taught how to guard our babies, not only to guard them after they are in our arms, but before. For this one great thing the magazines are precious to us."

Such action would mean that the farm journals would have to go. These farm journals bring to the farmer all of the latest scientific information about the planting of crops, their care, the raising of poultry and other live stock. Now, of course, is just the right time to see that our vegetables, bushes and trees receive a large increase in scabs and blights, and that the amount of food produced should be lessened! Pro-Germanism this of the efficient variety. The proposed action would hamper the newspapers, which are the greatest power in this country in the construction of an adequate public opinion and in the development of a national life which we can all share in common.

Finally, there is the question of the creation of public opinion. Now of all times is the hour when national unity is of greatest importance to us. The Government could not go to work more efficiently to break down this national unity than by depriving the public of its newspapers and its magazines, and making it inevitable that public opinion should receive its future growth sectionally rather than nationally. What is this new "Mason and Dixon" line which is being set up? A line which will divide this country nationally and in every other way. Greatly to the advantage of the Germans, we would soon become as a house divided against itself.

The American public has been meeting a great crisis in the best possible spirit of generosity and patience—and patience is indeed a new exercise for the average American. It would seem, as one thinks about this extra "rider," that some actual malice, if not worse, were at work in this proposed tax on national unity and on free education. Assuredly, anything which creates sectional divisions and differences at this hour is pro-German, gives comfort to the enemy, and assures them success. It has become a matter of international importance that we, nationally, should be inspired by the same ideal.

Repeat this postal "zone" law, write immediately to your Congressman and protest against the postal "zone" system.

# NEW KIND OF WAR MAP

# There Fight Our Boys!

**Also a Military Map of the U. S. A.**

**MAIL THE COUPON** A limited number of this new War Map will be offered at the special introductory price of only \$1. There is a great demand for this map and we do not know how long the \$1 price will hold. An increase in price may come any day—so please order promptly to secure the \$1 price. Fill out and mail the coupon or just pin a dollar bill to a letter. If you are not more than delighted with this splendid new map, just return it to us, and your \$1 will be promptly refunded. Order today. **WORLD** Map the coupon before you forget.

Around the margin of the map is printed the various insignia showing the rank of commissioned and non-commissioned officers, and the different branches of the service. Be able to tell a Lieutenant-Colonel or a Major when you see one. Be able to tell the branch of service of every Soldier and Marine you see—a wagoner from a medical man, a coast artilleryman from a cavalryman, etc. You can learn it all from this new map.

A second half is on the Map. The  
more you use it, the more you will  
love it.

## TEN LESSONS OF THE WAR

(Continued from page 116)

it there should probably be established a union of states on each continent similar in general plan, tho at first perhaps less closely bound together, to the United States of America. These continental unions should be combined in a United States of the World, embodying in its fundamental law that provision of our constitution which guarantees to each state in the Union a republican form of government. Some such federation of the world is a logical consequence of the application of the principle of democracy to world affairs, and the necessity for it is the most obvious of the great lessons of the war.

Fifth: Efficiency without democracy is, in the long run, a curse instead of a blessing to mankind. Germany and the world with it has paid dear for the efficiency of the Hohenzollerns, even if some of the effects thereof have been beneficent, locally and temporarily. Fortunately most oligarchies are inefficient and the democracies of the world have been protected more by this inefficiency than by their own efficiency, which is generally slight. This is as true of industrial and educational (which includes ecclesiastical) oligarchy as it is of the political form. If we must have oligarchy, let us by all means keep it inefficient.

Sixth: An essential element of the efficiency of nations is collectivism, by which is meant the cooperation of a people to a common end. Owing to its freedom from the dogma of competitive individualism to which other nations were subject, Germany was able to outstrip its rivals in this form of efficiency before the war began, and thus achieve the vast initial advantage over them which wisdom can ever achieve over unwisdom. War is now rapidly teaching the opponents of Germany the lesson of the efficiency of collectivism, a lesson which should not be forgotten when the war closes.

But the beneficent principle of collectivism like such material servants of mankind as fire or electricity can be directed to harmful as well as to useful ends. The principle of oligarchy perverts whatever it touches causing potentially useful means to serve harmful ends, and in the hands of Germany collectivism has been thus perverted to the ends of autocracy. The same principle can serve democracy even better than it has served autocracy if in applying it we permit no departure from the rule of the people over what concerns them.

Seventh: Democracy without efficiency may be as great a failure as efficiency without democracy—perhaps a greater. Efficiency is proportional to success in adapting means to ends, and it is possible to fail as badly by selecting the wrong means to an end as by seeking the wrong end. It is well to recognize the great advantage to mankind of such limited democracies as we have attained, and we should hold fast to all we have of democracy while striving after more; but let us not be blind to the fact that such advantages appear great only by contrast with the dismal failure of oligarchy. They are the advantages of the frying pan over the fire.

Eighth: A bad cause can enlist patriotism just as devoted as a good one. Given the proper education a people will make as great sacrifices to destroy human liberty, including their own, as to defend it. This is a very old lesson of history, and fifty years ago was emphasized on American soil. It is as true today as in the time of Burke that it is impossible to indict a whole nation, for no impartial man can deny that the German people are fighting

with as good a conscience as their opponents. Once again history is teaching, and on a scale vaster than ever before, that wars do not occur between good nations and bad nations, between a group of noble men on one side and wicked men on the other, that despite the mutual recriminations of the opposing parties, a phenomenon of all wars, one side is fighting with as good a conscience as the other.

Yet, tho the issue in great human conflicts is never between good and bad men or good and bad nations, it may be between good and bad institutions, and in the present conflict it seems plain that just such an issue is now joined. The present war is a conflict between the useful institution of democracy and the harmful institution of autocracy—and in such an issue reason can distinguish the good from the bad, even if conscience is unable to do so.

Ninth: Efficiency is present where science is present and absent where it is absent. In adapting means to ends there is no substitute for science, and science is but another name for reason. In the present war nations have used science as a guide to means, and conscience as a guide to ends. They have accepted reason in the material and rejected it in the moral world. This is why the most efficient means have been made to serve the most immoral ends.

Science is not secure from perversion until it is consistently applied. Wherever science has been applied it has been successful. In the present war it has been directed to destruction, and destruction has never been so successfully achieved. It has been directed to destruction because men's consciences have insisted that it shall be. To avoid such perversion reason must be substituted for conscience as a guide to all ends instead of to material ends only. Men will then be as successful morally as they now are materially.

The delusion that science cannot be applied to moral things has kept the world morally stationary since the dawn of history. If this delusion proves incurable it may easily annihilate humanity itself. Let the art of war advance in the next two hundred years at the same rate it has advanced in the last two, while the art of morals remains as it is now, and ever has been, and the twenty-second century may well see the last of wars because it will see the last of men.

The end of greatest interest to mankind is the greatest happiness of mankind. Reason tells us this; whether conscience tells us or not. Conscience cannot guide men to a moral end. It is conscience which is guiding them now, and we see to what it has led them. Both sides in this war are equally conscientious. Both sides are acting on the principle, "My country right or wrong," because their conscience tells them to. In other words conscience may place wrong before right, and in those who are seeking the destruction of democracy it is at present doing so; because the evidence indicates that democracy is a better means to the happiness of mankind than autocracy. Right is a matter of evidence—of reason. Conscience is only a matter of education. Conscience cannot do right until reason shows it how. Conscience unguided by reason is as dangerous as any other variety of madness, and it is just such a variety of madness which has brought on the present war.

Reason has been used to achieve the power of empires and the wealth of plutocracies. The fact [Continued on page 132]

## Don't Wear a Truss

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads.

MR. C. E. BROOKS

### Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. ## Stop the Leaks that Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

### New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, read page 125 of this issue of The Independent or write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

The INDEPENDENT

119 West 40th Street New York City

## TEN LESSONS OF THE WAR

(Continued from page 130)

that reason is no infallibility has not prevented its success in these quests. It can be used as well to achieve the happiness of mankind, or will its fallibility be more an obstacle in this quest than in more material ones. This war should teach mankind that they can attend to their own business better than kings, priests or plutocrats can attend to it for them. Their collective happiness is pre-eminently their business, and they should attend to it collectively. Let them set science to seeking this end, and it will not only be guaranteed against perversion, but will be as successful in securing it, as in securing every other end it has been set to seek. If men would abolish war and the other evil ends of autocracy, let them abolish the institution of autocracy which seeks them, not in one but in all of its forms. This once thoroughly accomplished the united peoples of the world, seeking thru reason the end of greatest interest to them, will secure the combination of democracy and efficiency necessary to convert our material civilization into a moral one. *This is the most important lesson of the war.*

Tenth: In order to learn the other lessons of the war we must first learn the lesson of tolerance. We must judge men and nations not by our feelings, but by our reason; for reason can both learn and profit by learning, while passion can do neither. If on looking abroad over the warring world we note how "the heathen rage and the people imagine vain things," let us at least learn what to avoid. Let us realize how completely passion blinds judgment, and keep in mind the parable of the mote and the beam. If the atrocities of the enemy kindle our imagination, let us not therefore seek vengeance. One atrocity does not excuse another. If we cannot wage a war without hate, let us at any rate wage one in which hate does not emulate the deeds which have caused it. In short, to learn the other useful lessons of the war, we must at the outset learn from it the lesson that Lincoln drew from the war against slavery. We must in his spirit realize again that:

What has occurred in this case must ever recur in similar cases. Human nature will not change. In any future great national trial compared with the men of this, we shall have as weak and as strong, as silly and as wise, as bad and as good. Let us, therefore, study the incidents of this as philosophy to learn wisdom from, and none of them as wrongs to be revenged.

## Pebbles

Education is the track the train of thought runs on.—*Princeton Tiger.*

Profiteering dates back to the whale that swallowed Jonah and got caught with an unreasonable prophet.—*Brooklyn Life.*

She—Generally speaking women are—

He—Yes, they are.

She—Are what?

He—Generally speaking.—*Woop Garoo.*

"That new recruit must have been a bookkeeper."

"Why so?"

"I just noticed him trying to put his bayonet behind his ear."

The Irish recruit was doing his first bit of sentry-go. Just after midnight he pricked up his ears at the sound of approaching footsteps.

"Halt—who goes there?"

"Officer of the day," came the reply.

"Git on wid yez!" cried Pat. "Phwat the blazes are ye doin' out at this toime o' noight?"—*Passing Show.*

## The Boys' Magazine

Great Special  
Trial Offer  
6 months for

**50c**

EXCITE ME

This is my Every Day

NOW is the time to get your boy started to reading this best of all boys' magazines. Only 50c for a half-year's reading—big interesting numbers that will crowd out the trashy, sensational stories and give your boy the kind of reading that will make a man of him.

You can make him no better gift. The Boy's Magazine will give him entertainment, instruction and the inspiration to accomplish things. It is filled every month with the kind of matter that delights boys' hearts and makes good citizens. Articles on Science, Electricity, the World War, Hunting, Fishing and Camping Stories—Travels, Athletics, Games, Contests, Photography, Boys' Clubs, Stamps and Coin Collecting, Poultry and Pets, Anecdotes and Jokes.

### Help Your Boy To Earn

Your boy wants to make money and you want him to learn its value. The book "Fifty Ways How Boys Have Made Money" will be a great help to him. We give this fine book as a special premium with this 50c subscription. The book alone is worth many times the Special Subscription price. Your boy should have it. It may mean starting him on his career in life.

This special Trial Offer of Magazine for six months with book for 50c is for new subscribers only, and is limited in time. Take advantage of it right away. Stamps received if more convenient. Yearly subscription price now \$1.50.

On Sale at all News Stands, 15c a Copy

Will You Help Us  
Get to Sea Breeze?

With the hot sun beating down on their frail underfed bodies—with no hope of relief in sight—the little children and tired mothers of the slums are facing another grim summer in their empty lives.

### Help Us Give These Unfortunates A Chance for Health

Sea Breeze—the Association's fresh air home—gives the one chance for rest, nourishment and care for many of these families each year—but help is needed at once if we are to provide for the long waiting list.

Will you give—just a little? Allow 60 cents a day or \$4.00 a week for each one whom you will send as your guest.

## PUTTING THE SUN TO WORK

(Continued from page 124)

of the country inn and the improvement of country roads. Every shop, however small, can now afford its own engine. Every man—and many a woman—becomes an engineer. This means independence for the individual.

The gas engine was speedily adopted and improved in England, for gas is an English invention and she has plenty of coal to make it from. But when it came to petroleum as a fuel England was at a disadvantage, for she had no oil at home and comparatively little in her colonies. It would seem that Nature was in her most capricious mood when she distributed the pools of petroleum, for she gave this, the most valuable of all fuels for shipping, to the countries that had least shipping. The leading producers of petroleum before the war were the United States, Russia, Mexico, Rumania, Dutch East Indies and Galicia. The leading nations in transoceanic shipping are Great Britain, Germany, Norway and France. The countries that produced nearly ninety-nine per cent of the petroleum possess only about ten per cent of the vessels most in need of it.

Some of the fiercest fighting of the war has been over the oil fields of Galicia, Rumania and Mesopotamia, and Germany in dictating her first peace treaty stipulates that Russia shall surrender Batum, the outlet of the Baku oil fields, that formerly produced half the world's supply.

The introduction of the automobile into England was hindered not only by English conservatism but by the law. Up to 1896 English law prohibited any self-propelled vehicle from running on the highways unless a man walked in front of it waving a red flag. This precaution certainly kept the speed down to the limits of public safety, but did not encourage motoring as a pastime. Consequently it was in France and the United States that the automobile industry was first developed.

The introduction of the internal combustion engine for motor cars and motor boats and stationary power brought a demand for gasoline, which formerly had been a waste product. Suddenly the laws that had been passed in every state prohibiting the sale of kerosene of too low a flashing point became a dead letter, for there was no temptation to violate them. Instead of trying to work off some of the surplus gasoline in the kerosene the oil man devoted his energies to getting as much gasoline as he could out of the heavier fractions of petroleum by various processes of "cracking."

But the invention by Dr. Rudolf Diesel of a new form of engine using crude petroleum instead of gasoline makes distillation unnecessary. A vessel equipt with Diesel engines can go four times as far on the same fuel as one using a coal burning steam engine. It was the Diesel engine that made the big U boats possible, and recently the Germans have adapted this power to big airplanes.

But all these new engines depend upon the oil wells for their fuel and these are being rapidly exhausted. It would seem that man having learned at last how to utilize this incomparable source of energy, might have to give it up in a few years, that his new toy, the automobile, the motor boat, the aeroplane and the submarine, would soon be taken from him and he would have to go back to slow coach ways of coal and steam. But perhaps not. It is possible to make synthetic petroleum by the distillation of wood and the Diesel engine can be run on any of the vegetable oils.

Readers of "The Independent" are given this last opportunity to subscribe to The **WORLD'S WORK** at the present subscription price.

Increased manufacturing costs, zone postage and other expenses make it necessary to advance the subscription price to \$4.00 a year on September 10th.

The **WORLD'S WORK** is now read by more people than at any time in its history, a fact that indicates its value in these days of stress and world war. We will accept subscriptions for one year or two years at the present rate of \$3.00 a year providing subscriptions reach us before September 10th. There is a convenient order blank attached.

## ON THE SPOT

(Continued from page 123)

shots. It gave one a rather realistic sense of the imminence of things to see the whole ground churned up with shell holes in the immediate vicinity of these batteries, the Germans evidently having the range with uncanny exactitude when they opened fire.

I found that one of the batteries was in command of the son of the Hon. Jacob M. Dickinson, of Chicago, who was Secretary of War in Mr. Taft's Cabinet. We were invited within the emplacements. The guns were entirely concealed from the airplanes, nothing but the muzzles protruding from the hollows in the hill side and these were covered over by branches and green camouflage. We squeezed ourselves in between the wheels of the gun and the slimy and dank sides of the cave, where a half dozen mud-caked Yankee boys gave us a royal welcome to their troglodyte abodes. There was a connecting hole of about four feet in height and two feet in thickness and thirty feet long between the battery emplacements, and by crouching low one could walk thru. The commanding officer was accustomed to stand in this hole and give the signal to fire so that both guns could be shot at the same target simultaneously. These 75 mm. guns are the finest guns of their size on the battle front and are furnished to the United States by France. They shoot a shell about three inches in thickness and a foot long and their range is about seven or eight miles. The Colonel sent a telephone message to an observation post on the front line and they told him where to point the gun by a mathematical formula. Of course no one at the battery ever sees the target that the gun is aiming at.

I screwed up my courage to ask Lieutenant Dickinson if he would let me fire the first shot. After an appeal to the Colonel I was told to go ahead. It was a very simple affair. All I had to do was to pull a short rope back that was attached to the trigger and then when the word of command came to let go. They told me to open my mouth so that when the gun went off the pressure on the ear drums could be neutralized from within and without and thus there would be little danger of breaking those rather important membranes. Judge Wadhams went to the adjoining battery so that we could fire together. We got in position. I stood to one side of the gun, the crew scurried back to an alcove behind, the shell was put in and the Colonel called "Ready!" I pulled the string back and at the word "Fire!" I let her go and had the pleasure of hearing my gun go off a second ahead of Judge Wadhams'. The kick was so instantaneous and the concussion followed so quickly that the whole thing was over before one had time to say the proverbial Jack Robinson. The boys then fired three more shells just for good luck, whereupon the Colonel said we had better "beat it" because the Boche had the very unpleasant habit of replying to every shot that came their way and they were as likely as not to suspect from where our bouquets were sent and reply tit for tat. So we lost no time in bidding adieu to the occupants of the hospitable mud hole, shook the grimy hands of the Illinois boys and with the brass cases of the shells we fired securely tucked under our arms as souvenir flower vases, we ran down the hill so as to get out of the range of any return shots with which our friends the enemy might honor us.

We then walked across a field not far out of sight of the Hun observation balloons up a long hill whose once great avenue of lofty shade trees were now mostly blown to splin-

ters, thru a region completely covered with shell holes, over the top of another hill without a camouflage to protect us, down another hill and up to the brow of the final hill, where our trenches commenced. We passed groups of American boys straggling back from the front lines all in their steel helmets, gas masks and trench accoutrements and begrimed from head to foot with the caked earth of France. They looked at our civilian clothes with the utmost curiosity and when we spoke to them in real American accents there was a deep smile and friendly nod of the head that made me feel I had known them all their lives. Before coming to the crest of the hill we passed thru some woods and under the trees were numerous groups of young Americans resting. Two red-headed Irishmen from New York, each of whom had received the Croix de Guerre, showed their medals to us with a sort of humorous indifference, as tho they were of not much account. They sent their regards to their friends on the Bowery, which I herewith deliver. Then we went down into the seven-foot communication trench and zig-zagged for fifteen minutes along the duck boards until we came to the actual front lines. There we found our boys stationed every few feet and ready for any emergency. The guns were stacked every few paces. There were little shelves made in the sides of the trenches full of hand grenades ready for use. An automobile horn was hung up on a post to sound gas alarm and at every twist or two of the trenches there was a hole where a concealed machine gun was ready to pour a literal stream of lead on any advancing Hun.

We crept into a four-foot thick concrete observation post built out in front of the trench where a good view of the German lines was to be had, and there thru a tiny slit not six inches high we looked thru a periscope. Spread out in front of us was No Man's Land, as still as death, while the thin thread of earth on the opposite slope indicated where the German front trenches seamed the earth. Several villages half in ruins dotted the vista and except for them and the pocked earth and the splintered forests one would have thought all was peace and plenty. An officer who was on watch at the post trained the periscope on the exact spot where we had fired our guns. It seemed we had shot at an observation post on the German third line trenches about two miles away, no doubt similar to the one I was standing in.

As I looked thru the glass I saw that there were two little black lines bisecting each other on the lens and their point of bisection was trained on the observation post I had fired at. Then the Colonel telephoned back to the batteries that we had previously visited and told them to fire at the exact same target that we had previously fired at. He sent his message in code, because the enemy has a method of catching all telephone conversations by an underground wireless system. In less than a minute we heard the whining whirr of the shell hurtling thru the sky directly over our heads and before we could hear its detonation we saw it tear thru the side of the trench like cheese and throw up a spray of dust and earth into the air fully fifty feet high. The next shot went to the left and the next over, but the fourth made a direct hit which I am sure must have proved uncomfortable to any one who was within. I was told that the shots the Judge and I fired came each within about ten yards of the target.

After talking with the boys in the front lines for a while we walked back thru

the communication trenches over the two hills past our two batteries and while we did so a dozen or fifteen shells came over our heads. The Colonel told us that they were in response to those we had just been sending at them. After that we walked thru several villages which had been continuously under fire since America took over that sector. At one of them we stopped to pay our respects to the Colonel of the New York troops stationed there. He was billeted in a peasant's house and slept in a room diagonally over the stable where his saddle horse was stalled. He told me he was expecting an attack that night. We then returned to our auto and after paying a hurried visit to an American balloon crew stationed in the depths of a nearby forest, we motored home.

Pebbles

Dollars may not go as far as formerly, but they go faster.—*Florida Times-Union.*

"Papa, why do they call this free verse?" "Probably because it isn't worth anything, my son."—*Pennsylvania Punch Bowl.*

First Printer—Didn't you tell the editor that his work was all set up correctly? Second ditto—Yes, but he said he wanted proof.—*Widow.*

175,000	Jan. 1, 1923	210,000	Jan. 1, 1926	1,455,000	Jan. 1, 1929

Denominations: \$5,000, \$1,000, \$500 and \$100

**BORROWING CORPORATION:** Hotels Statler Company, Inc., capital and surplus, \$5,044,831.98. Operating a chain of hotels, one of the largest and most successful hotel companies in the United States. Since its beginning, eleven years ago, the Company has demonstrated its great earning power. It owns and operates the Hotel Statler, Buffalo, 450 rooms, 450 baths; Hotel Statler, Detroit, 1,000 rooms, 1,000 baths; Hotel Statler, Cleveland, 1,000 rooms, 1,000 baths; Hotel Statler, St. Louis, 650 rooms, 650 baths. The Company will also operate under lease the Hotel Pennsylvania, now being erected by the Pennsylvania Railroad, opposite its station in New York City.

**EARNINGS:** The average net annual earnings for the last three years amount to \$755,000, or more than four times the greatest annual interest charge.

**SECURITY:** The bonds will be the direct obligation of the Hotels Statler Co., Inc., secured by assets valued at \$6,500,000, consisting of land, buildings, equipment, leaseholds and interests in the hotels located at Buffalo, N. Y., Cleveland, O., St. Louis, Mo., and Detroit, Mich. As additional security there will be deposited with the trustee \$2,000,000 preferred stock of the New York Hotel Statler Co. and 29,000 shares non-par value common stock.

**OTHER SAFEGUARDS:** The trust deed contains strong provisions requiring the Company to maintain a surplus of approximately \$1,750,000. It further requires the Company to retire bonds in the amount of \$100,000 in each year in reverse order of maturity before declaring the regular quarterly dividends upon its preferred or common stock. The trust deed further provides that the Company shall deposit with the trustee, either cash or securities, in the amount of \$70,000 per year, before declaring regular dividends on the common stock, until the amount of \$350,000 has been so deposited.

**MONTHLY PAYMENTS:** To insure prompt application of the earnings as they accumulate to the payment of the bonds, the borrowing corporation must make monthly deposits of principal and interest in a sinking fund, which deposits must be one-twelfth of the total amount of principal and interest coming due during the year.

**FEDERAL INCOME TAX:** The mortgagor covenants to pay both present normal Federal Income Taxes (4%).

Price, par and accrued interest, to net 6%.

**AN INCOME FOR LIFE**

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

**DIVIDENDS****PACIFIC GAS AND ELECTRIC CO.**

FIRST PREFERRED DIVIDEND NO. 16.  
ORIGINAL PREFERRED DIVIDEND NO. 50.

The Board of Directors will meet on July 31, 1918, and declare the regular quarterly dividends to that date of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company, payable by checks mailed August 15, 1918, to stockholders of record at 3:30 o'clock P. M., July 31, 1918. The transfer books will not close. D. H. FOOTE, Secretary.  
San Francisco, California, July 10, 1918.

**WESTINGHOUSE ELECTRIC  
& MANUFACTURING COMPANY.**

A dividend of one and three-quarters per cent. (1.75 cents per share) on the COMMON stock of this Company will be paid August 1, 1918, to stockholders of record as of June 29, 1918.

H. F. BAETZ, Treasurer.  
New York, June 18, 1918.

**FEDERAL SUGAR REFINING CO.**

July 9, 1918.

The regular quarterly dividend of One and One-half Per Cent. (1.5%) on the Preferred Shares of this Company will be paid August 1, 1918, to stockholders of record at the close of business July 20, 1918. Transfer books will not close.  
PIERRE J. SMITH, Treasurer.

THE INDEPENDENT

**TAKE UNCLE SAM'S ADVICE**

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**W**HAT we may call a standard of life insurance has been established in this country in the plans adopted by the Government for providing its fighting forces with protection against disability and death. Let us examine the constituents of this standard.

First the principal amount: The persons to be insured range in age from twenty-one to thirty-one. The Government settled on \$10,000 as the maximum amount and while the applicants were left free to take any smaller amount (down to \$1000) or none at all, its representatives among the men worked hard to secure the maximum. There are more than two million men now covered and the average amount per man is in excess of \$8000, which brings the total of principal sum in force to about twenty billion. This is by far the largest amount of life insurance liability ever assumed by a single insurer.

We conclude from these facts that the Government standard as to amount on persons from ages twenty-one to thirty-one is \$10,000.

The vast majority of these men are unmarried. Their dependents consist of mothers, dependent fathers, sisters and brothers. There are many married men with children to support between the ages mentioned. Are they carrying an average of \$8000 of life insurance? All of the statistical information accessible to me warrants the assertion that it is not half that.

Now consider the situation of the men between thirty-one and forty-five. At these ages the responsibilities of men to their dependents is at the crest. At forty there is usually a brood of youngsters to feed, clothe and educate; homes are being paid for; in most cases there are mortgages to be paid off gradually, to say nothing of numerous smaller liabilities. In some cases there is a sickly child or an invalid wife. A total of \$10,000 life insurance to cover these is none too large; in a majority of instances it is not sufficient.

We will now pass to another feature of the Government plan. The amount of insurance granted—say it is \$10,000—is not payable in a single sum. Our life insurance experience supports the wisdom of this policy for it is a fact that in most cases the money is dissipated in a comparatively short time. I quote from a recent bulletin of the New York Life Insurance Company. Commenting on the Government's installment plan, that authority says that "by making its death or disability benefits payable not in lump sums but on a maximum basis of \$50 or thereabouts monthly [\$57.50] for twenty years, or as long thereafter as the beneficiary lives under certain limitations, it has established the principle that incomes or pensions are preferable in form to paying life insurance benefits in lump sums which beneficiaries can waste or spend, and lose the very benefits the insured intended to convey."

And then comes this piece of valuable information: "The experience of life insurance companies is that the average existence of a lump sum payment to a beneficiary is less than nine years."

The standard set by the Government in this respect consists in the establishment of a fund which is payable in fixed monthly instalments.

This is an old principle in life insurance. It was evolved by the leading companies out of their experience about twenty-five years ago. I would not confuse this plan with that older provision in poli-

cies which, after a period of ten, fifteen or twenty years, or longer, permitted the conversion of all or part of a policyholder's cash equities into an annuity. The income policy was a distinct and separate development. It was designed as an instrument in arrest of the dispersal of life insurance benefits by beneficiaries who were incapable or unwilling to conserve them.

The companies knew that tho they might not be numerous, there were a certain number of men of business experience who would avail themselves of a plan thru which their unwise or inexperienced wives, mothers or children would be saved from themselves. They were right in this. Income insurance has grown in favor, altho it is not availed of to the extent it should be. So valuable and useful to the family is it regarded by the companies that all of them now, big, little, good, bad and indifferent, furnish it not only in a specific policy but they make it easy to convert the "lump-sum" policy into an annual, semi-annual, quarterly and even monthly income.

While it would not be advisable in all cases to restrict the payment of life insurance benefits to an income basis, I do not hesitate to say that the greater portion of a man's insurance should be applied in that form. This is peculiarly true if the family includes children, who should be equipt with a proper education.

I am inclined to think that income life insurance was too widely regarded as supplementary to the lump-sum provision. In truth, that attitude is too prevalent among insured persons now. Of course, the income from a small amount of insurance would not be very helpful to a widow with children who is faced with the death of her husband. And yet even then, if she can weather the circumstances for a while, even a surety of \$22 or \$33 a month during her lifetime from a policy of \$2000 or \$3000 is no mean help. But wherever it is possible a man should have in addition to \$5000 or \$10,000 income insurance, a policy for one or two thousand payable at once and as a whole. This plan makes the income provision the principal one and the lump-sum supplementary.

Now add to all policies the disability or, better yet, the disability indemnity, feature provided by all companies, and the protection seems to be what fire underwriters call "a full cover." Under the disability plan a man insures his insurance. If he is totally disabled by sickness or injury he is relieved of his liability for premium payments during the time the disability lasts. Under the disability indemnity provision he becomes the living recipient of a monthly income under his own policy. Both these benefits are provided for small extra premiums, the first costing but a few cents more than the regular premium of the policy chosen.

What the Government has done in the way of handling its life insurance provision, has greatly stimulated the interest of the insuring public in the work the companies are doing. Since their sons and brothers, with a minimum of dependence to protect, have taken lines of \$8000 and \$10,000, fathers and brothers are finding themselves generally underinsured and in numerous cases are applying for more. Agents are finding it less difficult to convince their prospects and names are going on "the dotted line" with ever increasing frequency. This is wise for those who make the provision, for the purchasing power of the dollar has fallen tremendously.

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## BOOKS IN BRIEF

### Good Stories

**CHRISTOPHER QUARLES**, by Percy James Brebner. (E. P. Dutton & Co., \$1.50.) A white-haired philosopher turns his hand to unraveling crime and proves that philosopher's methods are useful in more ways than one.

**BIRD WOMAN**, by James Willard Schultz. (Houghton, Mifflin Co., \$1.50.) A story of the Indian woman who guided Lewis and Clark across the Rocky Mountains. A tale of adventure and loyalty.

**WHAT MEN LIVE BY**, by Leo Tolstoi. (Stratford Co., Boston, 25 cents.) The third volume of the Stratford Universal Library containing four short stories, translated by L. and A. Maude.

**BERTHA GARLAN**, by Arthur Schnitzler. (Boni & Liveright, 60 cents.) Perhaps the most popular book by this famous Austrian novelist and playwright. A realistic story, sometimes ugly, always psychologically keen.

**THE POINT OF VIEW**, by M. G. D. Bianchi. (Duffield & Co., \$1.50.) A novel in which two New Englanders scorn the Puritanism of their ancestors but find happiness eventually thru conforming to convention.

### Essays for Summertime

**CAPE COD, NEW AND OLD**, by Agnes Edwards. (Houghton, Mifflin Co., \$2.) Charming, illustrated essays about Cape Cod and its quaint towns and people.

**THE ART OF AUBREY BEARDSLEY**, by Arthur Symons. (Boni & Liveright, 60 cents.) Excellent reproductions of sixty or more drawings by Beardsley, prefaced by an essay by Symons, with whom he worked on "The Savoy."

**PROBLEMS OF THE ACTOR**, by Louis Calvert. (Henry Holt, \$1.60.) A humorous and tactful commentary on the technique of acting.

**COLOUR STUDIES IN PARIS**, by Arthur Symons. (E. P. Dutton & Co., \$3.) Informal sketches, essays and verse that blend into an intimate picture of the Bohemian Paris whose charm only true artists know.

**APPRECIATIONS AND DEPRECIATIONS, IRISH LITERATURE**, by Ernest A. Boyd. (John Lane Company, \$1.35.) Six studies on well-known Irish men of letters. A relaxation for war-weary nerves, and a stimulant to thought.

### From Men Who Are Fighting

**"No. 6"** by G. de Florez. (E. P. Dutton & Co., \$1.50.) Thrilling sketches of the war, depicting scenes both grave and gay in a vivid, human fashion.

**THE GLORY OF THE TRENCHES**, by Coningsby Dawson. (John Lane, \$1.) An inspiring exposition of the soldierly spirit, by the author of "Carry On."

**LIKE IN A TANK**, by Richard Haigh. M. C., commander of the tank "Bentham." (Houghton, Mifflin Company, \$1.50.) An informal account of how the tank got into the big show and of what it means to serve in one of them.

**THE SINGLE STAR**, by Captain F. D. Garrison. (Dutton Company, 75 cents.) A short history of an aviator who becomes an officer, non-commissioned, but instructive as well as entertaining.

**PSYCHOLOGICAL PHENOMENA AND THE WAR**, by Howard Crosby. (Dodd, Mead & Co., \$2.) A comprehensive discussion of war's effect on the soldier's psychology of after life. It gives numerous instances of mysterious phenomena witnessed by soldiers.

**ROBERT PIERRE FROM FRANCE**, by Paul Myron. (Macmillan Press, Inc., Chicago, \$1.) A personal collection of the soldier's impressions and feelings, both good and bad. There is also a touching study of patriotism.

## P E B B L E S

The Kaiser's crack units are beginning to crack. *Chicago Tribune.*

"Why are you leaving us, Bridget? Something private?"

"No, mum—sergeant."—*Lamb.*

"Our men fought like tigers," says a Rome journal. But more like Ita-lions.—*London Opinion.*

It will cost more to travel this year than it has in many years, but then it will also cost more to stay at home.—*Florida Times-Union.*

No more German dyes in England! In France and Flanders, however, no restrictions on Boche dyeing are contemplated.—*Passing Show.*

Examiner in Physics—What happens when a light falls into the water at an angle of forty-five degrees?

Stude—It goes out.—*Boston Transcript.*

At the Battle of the Marne—Mein Gott, Fritz, can't you run a little faster?

Fritz—Shure, but there's a bullet going right ahead of me and I'm afraid of running into it.—*Froth.*

#### THE SHORTEST VERSE

We  
Do  
Spise  
Flies.

*Cincinnati Enquirer.*

Perhaps this, from F. P. Adams's column in *The Stars and Stripes*, will help us visualize the war: "The difference between American and French automobile driving is this: In America when your tire blows up you say, 'Good Heavens! There goes our tire!' and in France you say, 'Hooray! That was only the tire.'"—*Kansas City Star.*

"Who's dead?" asked the stranger, viewing the elaborate funeral-procession.

"The bloke what's inside the coffin," answered an irreverent small boy.

"But who is it?" the stranger pursued.

"It's the Mayor," was the reply.

"So the Mayor is dead, is he?" mused the stranger.

"Well, I guess," said the small boy, witheringly. "Do you think he's having a rehearsal?"—*Wilestones.*

The more things the draft officials do to baseball here the better it flourishes in London, according to Richard Hatteras, of that thriving community, who is now stopping at the Majestic.

Mr. Hatteras says the game is getting a firm hold on every nationality in the British capital.

"Why recently," quoth he, "I saw a game in which East Indians were playing. One of these approached the plate at a crucial moment and cried aloud, 'Allah, give thou me strength to make a hit.'"

"He struck out."

"The next man up was an Irishman. He spat on the plate, made faces at the pitcher and yelled, 'You know me, Alf! He made a home run.'"—*New York Tribune.*

## THE IMPENDING DOOM OF GERMANY

**G**ERMANY knows that her cause is lost. That is the supreme objective attained by Foch's victory of the Marne.

There is consternation in Berlin. The Kaiser knows, the Crown Prince knows, the German Military Staff knows, that neither guns nor gas, neither assassins of the sea, nor assassins of the air, nor faith in a devil god can save them now. There will be no Mittel Europa. There will be no Pan-German world, nor any Lord of All the Earth.

Another thing, too, they know, and the certainty fills them with a more shuddering dread than military disaster. The German people cannot much longer be fed on lies.

German arrogance and German military power to back it up were at their height in the first days of March, 1918. Treason, treachery and imbecility in Russia had released the German armies of the eastern front for service in the west. Submarines were still destroying shipping faster than it could be replaced. The army divisions had been reorganized.

In humiliating and perilous contrast the Entente Allies were conscious of depleted strength. Russia had collapsed. Italy, it seemed, had well nigh failed. America, after a year of being at war, was not yet in the fight. The councils of the nations were divided. There was no unity of command.

Clearly, Berlin saw, the hour for decision had arrived. In one resistless drive the Channel ports could be reached. In another Paris could be seized and destroyed. Then the remnants of the Allied armies could be crushed and a conquered civilization would accept a German peace.

Such was the reasoning and the dream. With every detail of perfection perfected the offensive began in Flanders on March 21. The scale was tremendous, the impact terrific. British resistance was heroic but unavailing, and soon the British army had its back to the wall. France was called upon for aid and gave it, thinning out her perilously attenuated line. The drive was checked and the situation saved.

No one knew it then, the Allies were too spent and too full of foreboding to realize it: but in that hour the tide of the war had turned. The offensive had been lost. For in that hour Great Britain, France and America admitted what already they had seen, that every consideration of pride and prestige must go by the board, that one council

must be instituted, one army created and one supreme command set up. That decision spelled Germany's doom.

It is understood that President Wilson's insistence was a factor in this determination. America, in turn, promptly responded to the call of France and Great Britain for men, and the transportation of troops across the Atlantic was hastened. New courage and resolution were awakened in France and in England. A second German drive, this time against the French lines, was met and checked. Italy, meanwhile, had pulled herself together and in one of the most sensational achievements of the war smashed the Austrian advance and turned it back in disaster.

Germany of course knew that she was checked. Anxiety began to mix itself with confidence. The situation in Austria was alarming. An important U-boat base had been put out of business, and the submarines were being sunk at least faster than they could be built, and ships were being launched faster than Germany could sink them. A longer time was taken now than before to make everything ready for one more drive. This one should succeed. It should be "the peace offensive" at least. Rheims should be pinched off, the Marne be crost and the line be straightened from Soissons to Chalons. The way to Paris would lie open.

But Foch was ready. His army, reorganized, was ready. The Americans were ready. The shock was terrific, but it was not the Allied line that broke. July 15 was a day of fate. With the swiftness of a whirlwind resistance was developed into counter-offensive. Blow followed blow. Germany fell back.

The moral effect of this substantial victory already is stupendous and it will be cumulative. Germany cannot recover. The American fighting force reinforcing and reinvigorating the superbly organized and disciplined armies of France and Great Britain, flanked by victorious Italy, will press the advantage and drive it home. There will be no boastful rejoicing, no indulgence in delusion that the war is won, but there will be no relenting. The German army will be smashed. The Allies are going east. There will be no "negotiation" with an empire of liars and murderers. The liars and murderers will unconditionally surrender. A peace of civilization will be signed in Potsdam.

## SMALL NATIONS: FEW OR MANY

**T**HERE seems to be a belief in governmental circles of the Entente Allies that when the political map of the world is redrawn after the war, a considerable number of independent nations will be laid out thereon which now are only seething groups of plotting and conspiring nationalities. Not all of the men who hold this belief are convinced that the new political constitution of the world will be a wise one. Not all stand ready to help put the nationality idea into political realization. Rather, they anticipate that

political forces beyond the control of any functioning group of statesmen will bring about the redistribution of political elements and the rebounding of political areas. There are other men, however, who are working consciously to bring about such changes. In their view ideal justice is one of the things that must resolutely be adhered to in fixing the terms of peace, and they identify ideal justice with the political aspirations of small nationalities.

It is not too early to ask that those purposes be more ex-

phletly defined, and that some of the troublesome questions that they raise be taken up for dispassionate consideration. The common-sense mind knows that the establishment of ideal justice is a large order, and that finite wisdom may possibly be unequal to the task. Also, the common-sense mind knows that the identification of political independence with ideal justice is an assumption that may be questioned. The United States are a nation today because the people of the North did not permit the people of the South to secede. Would the interests of civilization really be subserved if we should forthwith withdraw all supervision from Cuba, erect Porto Rico and the Virgin Islands into independent powers, and leave the Philippine Islands to take their chances as a sovereign nation? Will the chances of enduring peace and the establishment of international law with teeth in it be increased if Russia is divided up into as many independent states as there are recognizable ethnic groups and linguistic areas, between Petrograd and Vladivostok? How many Balkan states must there be to lower the insurance rate on world peace?

We seriously question whether the statesmen who hold the most pronounced opinions on these matters have mastered the available information and worked out all the puzzles. There is one consideration in particular which it is evident they have passed over much too lightly. The industrial and commercial organization of the civilized world will be a far more complicated affair after peace returns than it ever was before the war began. The natural supplies of basic raw materials are not distributed evenly or even impartially over the earth's surface. There are coal producing areas and oil producing areas. There are iron and copper producing areas. Even so simple a necessity as salt, to say nothing of that other necessity, sulfur, may not be had by scratching gravel wherever one happens to stand. Whatever the political organization of mankind may henceforth be, one imperative necessity must be met. Every one of the areas within which basic natural resources are found must be under a responsible government with which all the nations of the earth can have reasonable dealings. No such area can be left under the sovereignty of a petty state that, by behaving in a small-minded way, may provoke a more powerful people to take summary action against it, thereby making an unnecessary and perhaps troublesome task for any League to Enforce Peace that may have been created.

There is another practical consideration also serious that, in like manner, has been too lightly brushed aside. Is it certain or even probable that a numerically small people, ethnically homogeneous, can take and keep the pace of modern civilization? A people is not necessarily a good working political solidarity because it is homogeneous in blood. The United States at the present time is an efficient political unit, notwithstanding the amazing diversity of ethnic elements composing the population. There is at least something to be said for the possibility that ethnic diversity is important as a factor of the higher civilization, and that the peace of civilization should be considered when planning the re-drawing of the world map. The more nearly the political entities which enter into the composition of the world league are equal in advancement and general efficiency, the simpler will be the problem.

For these reasons, and many others like them, it is desirable that full consideration should be given to a possible re-constitution of the political world as different from the proposed multiplication of small nations as it would be from existing imperialism. Would ideal justice suffer, or would the political expediences be sacrificed, if a serious attempt should be made to constitute sovereign political entities relatively composite, complex enough to develop a dynamic and progressive civilization and large enough to administer a considerable variety of enterprises, to utilize varied natural resources, and to deal responsibly with other political entities, in a league of nations?

## THE BACKING OF FRANCE

THE question is often asked, How can a small country like France stand the strain of the Great War? The answer is, she isn't. France is not a small country. She is one of the largest in the world. She is not, as is commonly said, "smaller than Texas." She is larger than the United States. This is not a statistical fiction, an illusion of the map. It is a vital factor in the war. Germany is not fighting merely the French nation. She is fighting the French empire.

Germany foresaw this and tried her best to prevent it. Any one reading German literature on international affairs will be struck with a change of tone that took place about the beginning of this century. Previous to that date France was viewed with contempt, for her birth rate was falling and her population becoming stationary. The two antagonists were pretty evenly matched in 1870, but it could be easily figured out that Germany would soon outnumber France two to one.

This, however, was counting European population, for these alone had hitherto taken part in European wars. But when it became realized that France was acquiring an immense colonial domain, larger than Germany could ever hope to acquire without fighting for it, and that this domain was capable of supplying not only raw materials in unlimited quantities but also fighting men in unlimited numbers, then the attitude of Germany took a sudden change. The Black Army loomed up like an avenging specter in German literature. The employment of such troops, it seemed, shocked the delicate moral sense of the Germans; anyhow, it scared them. They appealed to the civilized world to put a stop to such an abomination. They talked of carrying the case into the Hague court. They determined to put a stop to the expansion of France by force if necessary. The Kaiser went to Tangier in his yacht to assure the Sultan of Morocco of his support. The "Panther" went to Agadir to protect non-existent German interests. The Conference of Algeiras was called to prevent the annexation of Morocco by France. To keep the peace France consented in 1911 to cede to Germany a fourth of French Congo territory. In consideration of this Germany consented in 1913 to the French acquisition of Morocco, but in the following year Germany declared war with the avowed intention of seizing French colonies.

But on the contrary, the French have seized half of the German colonies of Togoland and Kamerun, thus getting back what they had been forced to cede to Germany in 1911 and a great deal more. These territories are yielding rubber and palm oil, for which the Germans are perishing.

Tropical vegetation is rich in oil and starch. The former supplies the glycerine and the latter supplies the alcohol necessary for explosives. North Africa under the enlightened régime of the French is again becoming what it was in ancient times, the granary of the Mediterranean region. This saved France and her allies from serious suffering thru the cutting off of the Russian grain. Over half a million tons of cereals a year is now exported by the French North African colonies. Besides this, during the first two years of the war Algeria supplied the armies in France with 60,000 head of cattle and 9000 horses and mules, Morocco with 3000 tons of wool and millions of eggs, Indo-China with 360,000 tons of rice, Tonquin with 30,000 tons of antimony and zinc ores, New Caledonia with 100,000 tons of nickel and 13,000 tons of chrome ore, the West Indies with over 200,000 tons of sugar besides coffee and cocoa, Guiana with 3 tons of gold, the Sudan with 50,000 head of cattle and Madagascar with 110,000 tons of frozen or canned beef and 800 tons of beans. So far from being a burden upon the Mother Country, as pessimists predicted, the French colonies have turned in millions of dollars of surplus revenue to the French treasury.

The Black Army was only in the process of formation when the war broke out, as Germany very well knew, but more than twenty-five battalions were ready for service in 1914. Of course the number recruited since has not been made public, but what the Zouaves, Tirailleurs, Chasseurs and Spahis have accomplished in France is known in part to all the world.

Besides soldiers the French possessions have provided help in other fields. Last year there were more than 30,000 colonial laborers in the French munition factories. Half of these came from North Africa and half from Indo-China.

It is a fine tribute to French colonial administration that the natives have volunteered in such large numbers. In many cases the sons of former adversaries of France are now enlisted in her service. A grandson of Abd-el-Kader is a captain of Spahis; a son of the late King of Guinea is a lieutenant and has received the Military Cross and Legion of Honor. The Moors, barely conquered when the war began, are now fighting on the side of the French.

Thus it is that France, Greater France, is finding herself and achieving a real unity. It is one of the revelations of the war that contiguity and kinship are not the strongest of bonds. India is more loyal to England than is Ireland. Many a Malagasy is more loyal to France than many a Frenchman. France has conceded to Algeria the political rights that England denies to Canada and Australia, the rights of representation in parliament. We are likely to see Moroccans in the Chamber of Deputies before we see Boers in the House of Commons. Americans have been too ready to accept the British opinion that the French were not colonizers and that their attempts to establish a colonial empire were bound to fail. We can now see that the French methods, tho different from the British, have advantages of their own. At any rate it is evident that expansion has not weakened France, but quite the contrary. Under modern conditions a compact and homogeneous country is at a disadvantage because it cannot command a sufficient variety in its products and population. The most extended empire is the strongest. England and France are likely to win thru their colonies; Germany is likely to lose for lack of them. When Jules Ferry in 1881-5 started the expansion of France in Africa and Asia he was called "Bismarck's valet" and accused of playing the German game. For his short-sighted countrymen said that France had henceforth only one aim, *La Revanche*, and must devote all her energies to vengeance upon Germany and the recovery of Alsace-Lorraine. But now it appears that Ferry was taking the straightest road to the lost provinces when he went into Africa and Asia. He could more aptly be called the avenger than the valet of Bismarck, for if France recovers Alsace-Lorraine it will be by the aid of her colonies and the Allies, England and Italy, that they have brought her.

## THE PASSING OF MONEY

NOT that money has had its day, or that the part it will play in human affairs after the war is over will not be a large one, do we speak of the passing of money. What we mean, and what many persons besides the political economists are observing, is that money will not again in a long time be identified with wealth as it was after the American Civil War until 1914.

The identification was much more than an appraisal of an individual's estate or of a nation's resources in terms of dollars, pounds or francs. It was an almost superstitious belief that the media of circulation had a mysterious or magical power not quite accounted for in treasury footings, or in the balance of trade. In particular it was an identification in the minds of many hundreds of thousands of dissatisfied voters of money with capital. Amazing as the fallacy seems to the trained economist, the belief that interest on mortgages and the rates charged for short term

loans in crop-moving times were affected by the actual number of concrete gold and silver dollars and paper dollars constituting the monetary circulation of the country has played a mischievous part in American politics. A man as intelligent in some ways as Mr. William Jennings Bryan apparently held that belief, at any rate was supposed to hold it.

A powerful influence toward correcting popular thinking on this subject was set in operation by the banking legislation stabilizing relations between circulation and banking operations, which, by great good fortune, was enacted before the strain of war finance had to be met. When one compares the financial adventures of the Civil War and the panics that followed upon them with present conditions, the advance that has been made seems almost incredible.

The economic necessities, however, of the war in which we are now engaged, have accomplished more than all other causes in economic history to clarify ideas upon the function of money, and its relation to real wealth, and the nations of Europe, no less than the United States, have been set right upon these fundamental matters.

The warring nations have called for money and have used it lavishly, but for the first time the average man has clearly seen that these vast sums of money have been a means only; a convenience, a contrivance, like railway tickets or tokens of any other kind representative of realities, and not the realities themselves. The realities have been wheat and corn; meat and sugar; artillery, rifles and explosives; clothing and tents; battleships, cruisers, destroyers and submarines; railways, rolling stock, aeroplanes and automobiles; hospital supplies; machinery; and a thousand other things; and these realities, it has been seen, everybody sees now, are the substance of wealth.

Probably conservation measures and food rationing have done most to drive the lesson home. The true nature of economizing has been seen. The humblest individual has been made aware that subscribing to Liberty Loans and buying War Stamps, imperative as these duties are, cannot of themselves win the war, or even support armies in the field. We must curtail our consumption of wheat that the armies may be fed. We must put up with meatless days, and use our coal with the utmost frugality.

Most important of all, the public has come to understand that a nation is not as rich at one time as at another time, or one nation as rich as another nation just because the products in each case are of the same value in terms of money when sold in the markets. The nation that is producing great quantities of luxuries and unnecessary trifles is not as well off as the nation that is producing substantial and necessary goods, altho their balance is the same.

The lesson will not be forgotten all at once when peace returns. The world will realize, as it did not before the war began, the vital difference between essential and non-essential goods, and it will have a vivid mental picture of the strictly limited supply of certain raw materials which are necessary for the maintenance of the world's population. It will not be indifferent to the waste of resources in the production of commodities that are non-essential or even injurious. It will insist that every nation take stock of its resources and conserve them. The supplies of iron and coal, of copper and sulfur, not to mention a dozen other things of basic importance, cannot again be used wantonly in making things that minister only to the varieties of life, or to social arrogance.

And because this lesson has been learned the nations will accept far-reaching changes in the structure and functioning of economic society itself. We cannot return to an irresponsible individualism. Individual initiative and voluntary enterprise we must cherish and conserve, as we must conserve natural resources, but they cannot be permitted to "make money" irrespective of the real utility of the goods that they produce.

# THE STORY OF THE WEEK

## The Counter-Drive on the Marne

The fifth German drive of the year was quickly ended. It was directed toward Paris, as on the line of least resistance. But there was a lion in the path. After a little progress had been made beyond the Marne, French and American resistance stiffened and the drive was halted. Then, on July 18, came the counter-drive. It was a complete surprise. The customary preparation of artillery fire was omitted. Without warning, and in the midst of a hard storm of rain which usually would have restrained troops from action, whole divisions of American and French troops were hurled against the German lines at various strategic points around the great loop of the salient between Soissons and Rheims. In many cases the Germans were found asleep in their trenches and caves, and where they were awake their resistance was brief and vain. In six hours the Allies retook double the ground that the Germans had won in six days of hard fighting.

Nor was this counter-drive confined to the one initial rush. It was maintained day after day thruout the week, with as much success and as much progress after the Germans were fully roused to meet it as when they were taken by surprise. The brunt of the onset was borne by the Americans and French, but important auxiliary operations were conducted with equal success by the British and Italians. When the Prussian Crown Prince found himself threatened with complete disaster, he sent a hurried appeal for aid to his cousin, the Bavarian Crown Prince, who was confronting the British sectors of the line in Picardy and Flanders. The aid was sent to him, but proved unavailing to stay

French Picture

## THE FRENCH MOSQUITO TANKS

In the present offensive the French have used successfully large fleets of these "mosquito tanks," patterned after the big ones, but easier to handle and equally strong in assault. On the nose of each tank is a device for cutting thru barbed wire; they are heavily armed and carry powerful searchlights.

the Allied storm, while simultaneously British levies were sent down to reinforce the French in the Rheims-Soissons sector.

Vigorous and successful attacks were also made by the French at Montdidier, far to the northwest of Soissons, and by the British in Picardy and Flanders, which had the result of deterring any very large movement of troops to the relief of the hard-pressed German salient between Rheims and Soissons.

The net result of the week's operations was a loss to the Germans of many miles' depth of territory on a frontage of more than thirty miles, of nearly a thousand guns, and of not far from 200,000 men. The German prisoners taken by the Allies numbered nearly 30,000, or more than the total of all losses, killed, wounded and prisoners, suffered by the Allied armies. The number of American troops engaged in these operations was probably well over 200,000. This was sufficient to have a material effect simply on the numerical ground. There was also, however, a most beneficial effect in the inspiring and heartening influence of such American coöperation upon the other Allies, who were made to feel that at last America was participating in the war on a significant scale. It is, moreover, to be borne in mind that there was and is a marked difference between the American and the other Allied troops. England and France have been fighting for four years; they have lost many of their best men, and their ranks now contain a considerable proportion of men who are too young or too old for the high-

est efficiency, or whose physical condition, because of wounds or disease, is not of the best. But the Americans are all of the best fighting age, in perfect condition, and not wearied by years of fighting. The addition of this fresh, vigorous quality to the Allied ranks is not less helpful than the mere increase in numbers.

**The Advance in Albania** The campaign in Albania, conducted by Italians with some French aid, is making not rapid but substantial progress, all the way from the Adriatic coast to the Serbian border. Apparently the Allies have concluded that this affords a more promising route for a flank campaign against the Central Powers than a drive from Salonika. It is obvious, however, that much further Allied progress in Albania will compel the Central Powers to withdraw from Macedonia, and will enable the extension of an Allied line across the peninsula from the Adriatic to the head of the Aegean Sea. A vigorous prosecution of the war in that quarter would be a grave menace to Austria-Hungary, and would largely compensate the Allies for the failure and elimination of the Russian front.

**Allied and Hun Air Raids** Aerial activities of the Allies, and particularly of the Americans and British, are increasing not only in numbers but also in efficiency, and much damage has been done to military centers far back of the German line. Tons of explosives have been dropped upon towns along the Rhine for the destruction of arsenals, munition

## THE GREAT WAR

July 18—Germans surprised by Franco-American drive against Soissons-Rheims salient. Great Allied gains.

July 19—Allied drive continued. British take Meteren. Transport "Carpathia" torpedoed off Irish coast.

July 20—Further Allied gains. Germans using up reserves. Former Czar put to death by Bolsheviks without trial.

July 21—Entire line of Marne River evacuated by Germans with heavy losses of men and guns.

July 22—Prussian Crown Prince called for aid from Bavarian Crown Prince. Czecho-Slovak revolts in Austria.

July 23—Allies crushing German salient between Soissons and Rheims. French victory at Montdidier.

July 24—Continued advance of Allies on Rheims-Soissons salient. French gains in Albania. Bolsheviks begin mobilization of Russian army.

factories, railroad depots, and the like. At this the German press is setting up a piteous wail over the "inhumanity" of the Allies in doing such things. It is, of course, oblivious of the fact that German aviators have been bombarding not military centers but unfortified residential places, and deliberately picking out schools and hospitals for attack. Of this latter infamy there seems to be no question. The recent bombardment of a Red Cross hospital has been carefully investigated, and it appears that the institution was marked with Red Cross signs easily visible at a height of several thousand feet, that German aviators came down to within two hundred feet and circled about as if observing the place and making sure of its identity, and then bombarded it.

#### A Low Record for U-Boats

Official reports show that the destruction of Allied shipping by German U-boats and mines in the month of June totaled only 278,629 gross tons, a smaller amount than in any other month since September, 1916. More significant still is the fact that the total of such losses in the quarter year ending with June was smaller than in any other quarter since the third quarter of 1916. There is no undue optimism in regarding this as proof of the declining power of the submarine terror and of the progressive failure of Tirpitz's policy of unlimited frightfulness. This result is doubtless due to a number of causes, conspicuous among them being the blocking of the ports of Zeebrugge and Ostend, which had been the chief centers of U-boat activity, and the multiplication of "chasers" and destroyers with their depth bombs and other devices for disposing of submarines.

How well even transports and mer-

chant ships are now being protected against U-boats was shown this week in the case of the huge transport "Justicia," a 32,120 ton liner, which was setting out on her westward voyage. Off the north coast of Ireland she was attacked by a number of submarines estimated at from three to eight, in a running fight which lasted more than twenty hours. At least nine or ten torpedoes were discharged at her, some of which were exploded before they reached her by well-aimed shots from her own protective guns. Two torpedoes, however, reached their mark and the "Justicia" was finally sunk. But the contrast between this feat and the easy sinkings of innumerable vessels earlier in the war was not calculated to encourage the Germans.

While thus the U-boat peril is being overcome, Allied shipbuilding is proceeding with extraordinary speed, and the volume of entries and clearances at British ports is increasing. The total clearances for the quarter ending with June was much larger than that of either of the two immediately preceding quarters.

#### U-Boats in Our Waters

While the ravages of German submarine boats in European waters have been somewhat abated, and it is probably true that such vessels are now being destroyed more rapidly than they are being built, a fresh outbreak of their activities in American coast waters occurred on July 20, when one or more of them appeared off Cape Cod, attacked without warning, and sank a tug and three barges, on which were women and children, and threw a few shells ashore—the first time in more than a hundred years that hostile cannon shot have fallen upon American soil. The U-boats then made their escape with-

Underwood & Underwood

#### "KILL TILL THEY CRY ENOUGH"

With that grim battle cry General Gouraud, in command of the French and American troops in Champagne, gave the orders to his men that broke the German thrust and turned it into a victory for us

out further action. The purpose of this performance was not clear. If it was intended to terrorize America, it was a ludicrous failure. If the U-boats came over to attack American transports conveying troops and supplies to France, they acted with remarkable stupidity in thus revealing their presence by attacking vessels of no military significance and probably of less value than the torpedoes which were used in destroying them.

It is thought that the submarines most probably came, however, to scatter floating mines in the sea lanes in which our transports travel, a theory which gains support from the destruction of the naval cruiser "San Diego" off Fire Island, either by a torpedo or by a mine, the probabilities favoring the latter.

#### The Killing of the Former Czar

The report is confirmed that the former Czar, Nicholas II, has been put to death by the Bolsheviks, without even the semblance of a trial, and much disapproval and indignation are expressed thereat. Nicholas was not personally an heroic figure; he was a conspicuous representative of the odious system of "divine right" against which this war is being waged; and his course during the war, before his disposition, was not such as commanded admiration or confidence. Nevertheless, it is justly held that to put him to death in any circumstances would have been an unnecessary severity, while to do so without trial was nothing less than murder. Even the French Terror gave to Louis XVI a judicial trial.

#### Intervention in Siberia

The long controversy over the question of Allied intervention in any part of the former Russian Empire appears to have culminated in an agreement for limited joint action by America and Japan in Siberia. It is intimated that an Americo-Japanese

#### THE JAPANESE RED CROSS COMMISSION OVER HERE

On their way to the front the representatives of the Japanese Red Cross visited this country and studied the Red Cross work we are doing. Prince Tokugawa, head of the commission, is in the center of this photograph; Viscount Ishii, the Ambassador of Japan to the United States, at the left; and at the right Henry P. Davison, chairman of the War Council of the American Red Cross

force will be landed at Vladivostok, not large enough to present the appearance of any intent at conquest, but merely large enough to guard the terminal port of the Trans-Siberian Railway and the vast stores there, and to maintain communication with the Czecho-Slovak forces which are operating at Irkutsk and elsewhere in Siberia. These Czecho-Slovaks have shown marvelous military efficiency, and are holding a large part of Siberia against both the Germans and the Bolsheviks. But having no base of supplies they would probably not be able permanently to maintain themselves without outside aid. The Americo-Japanese purpose is, apparently, to provide them with the needed supplies, and thus enable them to continue their thus far highly successful campaign.

Meantime General Horvath, a Serb from Bosnia, long an official of the Russian Government in China, has placed himself at the head of an anti-Bolshevik provisional government at Vladivostok, and his attitude toward the Czecho-Slovaks is yet uncertain.

**No Independence for Lithuania** The attempt of the Lithuanians to select a king for themselves has been vigorously resented in Germany, especially in Prussia, as intolerable impertinence. The semi-official *Vossische Zeitung* roundly declares that "Germany did not occupy Lithuania in order to free the people," and the *Tagliche Rundschau* adds that "Lithuania must not be independent, but must be annexed, preferably to Prussia." This, in spite of the fact that the choice of the Lithuanians is the Duke

of Urach, a member of the royal families of Wurtemberg and Bavaria. The selection of a Hohenzollern would probably have met with more favor at Berlin.

**No Finland Monarch** Finland has indefinitely laid aside the project of choosing a king and organizing a monarchical form of government, and gives hope of the permanent establishment of a republic. This is displeasing to Germany, which has cherished dreams of a Prussian prince as King of Finland, bringing the "Land of a Thousand Lakes" into close alliance with the Central Powers, helping them to transform the Baltic Sea into a German lake, and giving them a frontage on the Arctic Ocean.

**Honduras Joins the Allies** The declaration of war by Honduras against Germany was an event of importance psychologically rather than materially. Had Honduras been pro-German, however, she would have been a menacing spot on this hemisphere which the United States would have had to watch pretty carefully. According to the text of the decree of war as made public in Washington last week, "continental solidarity imposes upon the states of America the duty to contribute according to the measure of their abilities toward the triumph of the cause of civilization and of right." Honduras, it will be remembered, broke off diplomatic relations with Germany some time ago. In the decree declaring war, the Government points out that "the motives which originated the severing of the diplomatic relations of this republic with the German Empire have

become accentuated, being characterized every day by greater gravity for the international life of all the peoples."

The decree is signed by the Council of Ministers and the President and is to be reported to the Congress at its next session.

**Home Rule for India** The British Government announces that it will lay before Parliament at the coming session a comprehensive proposal for Home Rule for India, the outlines of which are disclosed in advance in order that they may be popularly discussed in advance, and that the Government may thus ascertain the attitude of the nation toward them. The plan provides for a national parliament and a number of provincial legislatures. The latter will be elected by popular franchise, and so will a two-thirds majority of the lower house of the vice-regal parliament; but the majority of the upper house of the parliament will be appointed by the Crown. It is intended that this plan shall be adopted for a probationary period of ten years.

**Reform or Boycott for Germany** Lord Robert Cecil, British Minister of Blockade, has issued a statement explaining the position of the Entente Allies in regard to economic policy after the war. He defended the program of the Paris Conference of two years ago on the ground that it was a defensive agreement of eight nations, six of which had suffered the direct ravages of war, to assure for themselves the material means for reconstruction of their injured national prosperity after the war. These objects were still important, but now that "the Alliance of Eight has expanded into the Association of Twenty-four Nations" it was possible to realize a broader program; an international system of economic liberalism and equality, with only such national tariffs as may be necessary for the protection of essential local industry. Only one obstacle remained to such a world-wide economic union; the policy of the Central Powers.

Lord Cecil explained how the German treaties with Russia, the Ukraine, Rumania, Finland, Poland, Lithuania and other national fragments of eastern Europe made them all bondsmen of German trade. Three great highways of traffic, the Baltic, the Black Sea-Dardanelles, and the Danube routes, were now monopolized by the Central Powers. While Germany continued to pursue such policies of plunder and favoritism, she could be allowed no part in the economic system of the Allies.

When peace is restored the place of Germany in the commonwealth of nations will be determined by the test established by President Wilson. If she abandons her old ways and her restless and aggressive policy, if she ceases to use economic policies as a preparation for further war we shall not be slow to recognize the change. The sacrifices for which this war has called are too great and too bitter to permit of our neglecting the President's warning that a complete change of mind and purpose in her Government are the necessary preliminaries to her admission to participation in our economic partnerships.

**Discussing Belgium** The occurrence on July 21 of the Belgian national anniversary has renewed thought of that heroic and martyr nation. The German Chancellor has declared that, while Germany has no intention of arbitrarily annexing Belgium, she will use it as a pawn in the game of peace-making, refusing to surrender it until she is assured of the return to her of her African and other colonies. On the other hand, Professor Hans Delbrueck, one of the most eminent German (Austrian) scholars, and Maximilian Harden, the journalist, have publicly declared that Germany ought unconditionally to restore Belgium to the same freedom and prosperity that it enjoyed before the war, and that there can be no hope of peace in the world until this is done. Mr. Balfour, the British Foreign Minister, has severely criticized the German Chancellor's cynical attitude, while the purpose of the United States to insist upon Belgium's complete restoration as an essential condition of peace has repeatedly been made clear. The Belgian anniversary was publicly celebrated with impressive ceremonies and impressive utterances in this country and the Allied lands.

**Austro-Hungarian Affairs** The Austro-Hungarian Prime Minister in the course of an official address censured the "inhumanity" of the Allies, which he said was responsible for the prolongation of the war. With amazing cynicism he admitted that Russia and Rumania had been sorely oppressed and despoiled in the peace treaties which the Central

#### WHY BOTHER WITH A BALLOON?

An army camp in the United States has tried out successfully this method of sending an observer up to report enemy movements. The man who goes up is strapped securely in a leather seat and the motive power for his flight is furnished by six big kites. A squad of about twenty men are needed to fly the kites.

Powers had forced upon them, but argued that that was the fault of the Allies, because they had refused to make themselves parties to the same negotiation and had therefore abandoned Russia and Rumania to their fate. Finally, he protested against America's taking cognizance of the internal troubles of the Dual Realm, insisting that Austria-Hungary's dealing with the Poles, Bohemians, Slovaks, Croats, Serbs and other subject peoples must not be meddled with by any outside power.

Meantime discontent and sedition in various parts of that realm wax apace, and we hear of the shooting of hundreds and the imprisonment of thousands of revolutionists. Indications multiply of Austro-Hungarian disintegration, and of the probability that a vigorous drive of Allied forces into that empire would cause a demoralization and dissolution equal to that which Russia has suffered.

**A Socialist Peace Drive?** The latest "peace drive" was made on July 21 in the putatively Socialist paper *Vorwärts*, of Berlin. The terms of peace suggested by it were briefly as follows: Germany to have no annexations or indemnities at the west, but to have a free hand to complete her conquest of Russia and Rumania at the east; the principle of self-determination of peoples to be hereafter considered, together with the disposition of Belgium and the Balkan states; Gibraltar and the Suez Canal to be dismantled and all coaling stations to be opened to Germany; and all Germany's colonies to be restored to her. These quite impossible terms savor more of Junkerdom than of Socialism, and it is noteworthy that simultaneously with their utterance the authorities of the Social Democratic Party express strong dissatisfaction with the course of the *Vorwärts* as no longer in harmony with the principles of the party. It is shrewdly suspected that the paper in question has been

brought under Government influence by the means familiar to Bismarck and his "reptile press."

**Hindenburg's Disappearance** The question which has frequently been asked in the last few weeks or months concerning the whereabouts of General von Hindenburg, now seems to be authoritatively answered. He has several times been reported dead, on one occasion the report being so detailed as to tell that he died of apoplexy after a violent quarrel with the Kaiser. We are now told that for the last six months he has been too seriously ill to take any part in military operations, scarcely able to speak, and quite incapable of writing. Thus are explained his disappearance from the public eye and the exaltation of General Ludendorff to the headship of the Hun armies.

**Pernicious Pacifism** Extensive strikes in munition works at Birmingham and Coventry, England, began on July 24. Most of the strikers are said to have been former "slackers," who entered the factories in order to avoid being called to service in the army; and they have been incited to strike over some fancied technical grievances, thru the propaganda of pro-German pacifists, who have told them that "the more munitions you make, the longer the war will last," and "it is our duty to hold up munitions, to bring Lloyd George to his knees, and to compel him to make a decent peace." British labor generally disapproves the strikes, and the workmen at the Woolwich Arsenal have sent a message to the strikers telling them that they are "earning the blessings of the Kaiser and his army of murderers and the condemnation of all those who are fighting and working to gain real freedom for civilization." The message expresses also a wish that the Government would immediately send the strikers to the front of the firing line, and have their leaders shot.

#### PIONEERING IN POLITICS

Mary Gay, turned up in woman suffrage campaign, secured to Mary Gay, Han, appointed chairman of the platform committee at the convention of the New York Woman's Suffrage Party. Mrs. Han is the first woman to be so honored by any party in any State. She is chairman of the New York City Woman's Suffrage Party and was one of the leaders in the campaign that gave New York women the vote.

### Needed Fifty Thousand Doctors

Nearly 50,000 of the 95,000 doctors now in active prac-

tise in the United States will be required for the army, according to an official estimate made public last week. Of the total now practising, it is reckoned that 23,000 are now in the army.

These figures give the meat of a situation which may force the Government to assume control of the entire medical profession in the United States, supplying both the army and the civilians with the necessary quotas. A gigantic enrollment of all active practitioners plus all who are willing and able to resume practise is now under way, and the new "Volunteer Medical Service Corps" is already being organized. Conferences were held in Washington last week at which leading physicians discussed the probable operation of this plan. It is generally recognized that the civilian health must be closely safeguarded if the nation is to arrive at and maintain maximum fighting efficiency.

The surgeon general of the army and navy, together with the surgeon general of the public health service, are considering a plan for commissioning all teachers in medical schools and assigning them to their present duties. This would constitute a means of preventing further disruption of medical teaching staffs and at the same time recognizing the public service of these men.

While no official announcement of it has gone forth, it is quite apparent that "non-essential" illnesses must be barred—for the period of the war at least. There will not be doctors enough to cure them.

### College Training for War

Seven thousand college teachers and pupils have

gone into training at Plattsburg, N. Y., Fort Sheridan, Ill., and the Presidio of San Francisco as a beginning in a vast military training scheme just launched by the War Department. The purpose of the scheme is to make every important college a military post for the training of men for the army, for the navy, and for essential industries. President R. C. McLaurin, of the Massachusetts Institute of Technology, has taken charge of the organization and administration of the work under the Secretary of War.

The plan is to accept students as volunteers enlisted in the United States Army, put them on a furlough status, clothe them in uniform, and guide them into the kind of training most needed and best suited to the individual and national requirements. Daily military drill will be but one item in the announced program. For the rest they will receive technical training of various kinds. Upon reaching the draft age these men will go automatically into the National Army. Those over eighteen but under draft age may be called at the pleasure of the Government.

Details of the plan may be obtained upon application to the War Department.

### Republican Plans

Addressed by two former Presidents of the United States, the "unofficial"

Republican state convention held last week at Saratoga was a meeting of national importance. Both Messrs. Roosevelt and Taft agreed in urging the election of a Republican Congress this autumn as a war necessity. In Mr. Roosevelt's words:

Since the war began the Republicans in Congress have acted in a spirit of the largest patriotism, and wholly without regard to questions of politics. For the administration measures designed for efficiently carrying on the war they have furnished a larger percentage of support than have the Democrats, and where the administration was wrong the bulk of the Republicans ventured to withstand it and have stood by

### DIRECTOR GENERAL OF COMMUNICATION

The Government's decision to take over all telephone and telegraph lines beginning August 1 puts almost complete control of communication systems in this country under Postmaster General A. S. Burleson. As far as possible he will keep the present executive and financial arrangements of the various companies

the country, whereas the bulk of the Democrats have not done so, altho there have been some conspicuous and honorable exceptions.

In Mr. Taft's words:

The nation needs the Republican party to give popular expression to an affirmative, aggressive war policy. Its success at the polls in November will spur the Administration to adopt one. A Republican Congress will enact legislation to initiate and carry it on.

Mr. Taft said in another part of his speech:

The President has said, "Politics is adjourned." He is certainly right, in so far as politics is to be used for personal ends or party triumph. But popular government, even in war, must be carried on by parties. Party spirit must, of course, be suppressed where it hampers or embarrasses. On the other hand, party organization of public opinion may be the best way to secure needed government action.

The convention was intended to be not only an old time gathering of the clansmen, but a reunion of disaffected elements, and the reports are to the

effect that success crowned the efforts of the leaders. Of the many speeches, those of the former Presidents have been taken by the press and political observers as the most significant.

At the close of the convention there was a movement to bring about the nomination of Colonel Roosevelt for Governor of New York. Attorney General Merton E. Lewis, chief rival of Governor Whitman, announced that he would withdraw if the Colonel would become a candidate. But Colonel Roosevelt refused to consider the nomination and explained his position:

My work is for the men who are fighting in this war. My mind dwells continually on the problems of the war, on the international problems of the peace which is to close and justify the war, and on the tremendous problems, social and industrial, with which we shall be faced after the war is ended.

An equally unofficial Democratic state convention was scheduled later in the week, resulting largely in the stirring up of interest in the forthcoming campaign and in the launching of the nomination booms of various candidates.

### Standardizing Wages

With strikes for higher pay springing up daily the Government is now

facing a situation similar to that which threatens the industrial peace of Great Britain at almost the same moment. Most of the strikes are caused by the desire of the workers to receive the highest current rate of wages—usually that paid in the shipyards, in aircraft factories, or in other governmental plants. Add to this the fact that the cost of living is still going up, and present industrial disturbances are easily explained.

An attempt is being made by one Federal agency, the War Labor Policies Board, to standardize or stabilize wages. This attempt, not wholly understood by labor, has added to the unrest the fear that the Government was going to hold wages down to the lowest level of subsistence. And to put more fuel into the fire, last week it was discovered that a joker had been inserted in an appropriation bill limiting the amount of wages to a standard fixed by the War Labor Policies Board. Meanwhile, the National War Labor Board, under the joint chairmanship of Messrs. Taft and Walsh, was going about the country making wage awards in war industries—raising wages in fact, to new and unheard of levels: common labor in one locality asked for thirty-five cents an hour and was granted forty. The apparent, if not real, conflict between these two Federal boards brought the situation to a head.

Out of the confusion one or two things seem clear: the War Labor Policies Board, by specific announcement, adopted the policies of the National War Labor Board. The "standardization" of wages which may now be expected to take place will be, therefore, on the basis of the cost of living plus a reasonable sum for maintaining health and comfort. And the National War Labor Board, at the time of going to press,

is about to deliberate on the living wage and issue a decision which will, for the period of the war, standardize and stabilize the weekly industrial pay envelope.

#### The Child Labor Act

In spite of the fact that the United States Supreme Court has declared the Child Labor Act to be unconstitutional, the Department of Labor will enforce its provisions with respect to the placement in employment of boys from thirteen to sixteen years of age. Instructions to this effect have been sent to all officers of the United States Employment Service, which, incidentally, on the first of August is scheduled to begin to assert a Federal monopoly of placement work. These instructions, as officially explained, mean that:

Children under sixteen would not be sent to work in mines or quarries.

Children under fourteen would not be supplied to mills, canneries, workshops, factories or manufacturing establishments.

Children between fourteen and sixteen would be supplied to the above industries only if they are to work not more than eight hours a day or more than six days a week or before 6 a. m. or after 7 p. m.

Affidavits from parents as to the age of a child, the memorandum adds, are not reliable and should be supplanted by bona fide documentary evidence.

#### The Loyalty of Building Trades

A notable conference, called at Atlantic City by the Chamber of Commerce of the United States, brought together last week more than 225 representatives of many billions of capital invested in the building trades industries thruout the country. A temporary organization of the trade associations was effected, including labor organizations in addition to "capital" organizations. In a telegram dispatched to President Wilson the conference thus explained itself:

We are glad to bear our share of the burden of the war for liberty and shall cheerfully accept whatever sacrifices and readjustments may be essential to its vigorous prosecution.

The Government has a perplexing problem in the endeavor to restrict construction activities where necessary, while keeping employed labor and materials not needed for war purposes.

To solve that problem successfully in an industry of such magnitude, such ramifications and such large influence on general trade and prosperity will immeasurably strengthen the nation for the support of taxation and loans which must continue as long as the war lasts.

We are assembled to devise an instrumentality thru which the building industry may give united and effective aid in solving that problem.

We pledge you and those officially associated with you the fullest cooperation within our power.

#### More Lightless Nights

The resumption of lightless nights, by specific order of the United State Fuel Administration, was a sudden midsummer warning that the winter is coming and that coal is short. Monday, Tuesday, Wednesday and Thursday are to be lightless in New England, New York, New Jersey, Delaware, Pennsylvania, Maryland and the District of Columbia; for the remainder of the United States, Mon-

Fitzpatrick, in St. Louis Post Dispatch

THE FACE THAT LAUNCHED A THOUSAND SHIPS

day and Tuesday each week will be lightless. "Lightlessness" means the elimination of all unnecessary outdoor illumination, street lights essential to safety being of course excepted.

Half a million tons of coal will be saved by this order, it is estimated. But the Government authorities do not regard the actual economy in fuel as the most important result to be achieved by the order. The order is for moral effect, as much as for anything else—to drive home, in other words, to every man and woman the great necessity for conserving coal. In a

Underwood & Underwood

THE WORLD'S CHAMPION RIVETER

"Big Tom" Horn broke the world's record for shipbuilders when he sunk 6915 rivets in eight hours during the nation-wide contest of American shipyards. A British riveter in the Clyde yards held the record previously.

statement explaining the order, Administrator Garfield had this to say:

In resuming lightless nights with the miners of the country responding loyally to the appeals of the Fuel Administration for increased production, the weekly output of bituminous coal is surpassing all previous records. The efforts of the Fuel Administration, operators and miners to increase production must be supplemented, however, by the elimination of every wasteful or unnecessary use of coal. The enormous war demand for fuel makes it imperative that the country make the most economical use possible, even of the constantly increasing output.

#### Taking Over the Wires

War time governmental control of all telegraph and telephone systems in the United States was proclaimed by President Wilson to take effect after midnight on July 31.

Albert S. Burleson, Postmaster General, will become the directing head of all lines, thus acquiring control of every means of communication, both wire and mail, thruout the country, with the exception of the wireless systems, which are already under the Navy Department.

Mr. Burleson at once issued the following order:

"John C. Koons, First Assistant Postmaster General; David J. Lewis, Commissioner United States Tariff Commission, and William H. Lamar, Solicitor for the Post Office Department, are hereby appointed a committee for governmental management, operation and control of the telegraph and telephone systems covered by the proclamation of the President dated July 22, 1918, of which committee the Postmaster General shall be chairman."

Postmaster General Burleson and the Executive Committee will be confronted at the outset with the task of settling the labor disputes which threatened a nation-wide strike of operators on the Western Union lines on July 8. The strike was averted, it is generally understood, only by the fact that the President asked Congress to give him authority to take over the lines.

The principal cause of discontent was the refusal of the officials of the Western Union to recognize the union the operators had formed and which was affiliated with the American Federation of Labor. The policy which the Postmaster General will take with reference to this question will be watched with peculiar interest, for the reason that in the hearings in Congress on the joint resolution for governmental control, Mr. Burleson stated that, while he recognized the right of Government employees to organize, he did not believe they should affiliate with any outside organization.

It is believed here that the Postmaster General will follow the same course that was followed by the Director General of the Railroads when he assumed control of transportation lines, by appointing a wage commission to make a full investigation of labor conditions in the various systems, and then act on their findings. It is also believed that governmental control will lead to a general increase in the wages of all employees.

# THE SHOT HEARD 'ROUND THE WORLD

## America's First Victory in France

BY HAMILTON HOLT

© Harris & Ewing

Americans with rifle grenades ready to fire thru the peepholes of the trench

Last week the editor of *The Independent* told the story of how he fired his first shot at the boche and visited the trenches held by Americans of the Rainbow Division. Here he continues the tale of his experiences on the American front and in later issues he will describe also his visits to the sectors held by Great Britain, France, Belgium, and Italy. Mr. Holt has just returned from a tour of three months in England and Europe as the guest of the British Government.

THE one American division above all others I wanted to visit was the Twenty-sixth. It ranked as the first National Guard division in France. It was the first American division to engage in a battle in this war. It was made up entirely of New England troops. And the 102d Connecticut boys of that division, upon whom devolved the honor of holding the line against the German shock troops at Seicheprey on April 20 and 21st, were the boys who came from the hills and valleys in the neighborhood of my summer home, from the region where for over 200 years all my ancestors have lived and died.

Accordingly, it was with the anticipatory delight of returning for an "Old Home Week" festival that I started out from American headquarters on May 12, exactly three weeks after the battle of Seicheprey, to see my home boys in the trenches and to hear from their own lips some account of how, as Irvin Cobb would say,

they took the mania out of Germania. Our party consisted of Judge Wadhams, an adopted son of Connecticut on account of his four years at Yale, two escorting American lieutenants, and myself.

Our objectives were, first, an American aviation field, and then General Edwards's headquarters, where we were to receive final instructions before proceeding to the front lines. I shall reserve comment on the various aerodromes I visited till another paper—suffice it to say that after mess with the American aviators we motored to Toul and thence on to a little village where we found General Edwards at his headquarters, in a beautiful old twelfth century chateau that I was informed belonged to the French general who commanded Verdun during the great German drive in 1916. Major General Clarence Edwards, commanding the Twenty-sixth Division, received us in a noble room furnished with rich draperies, gilt and pink antique furniture, and old French portraits on the walls of periwigged gentlemen and lace-collared ladies. General Edwards is evidently a "character." I have come within the spell of very few soldier personalities that impressed me more. He seemed to be a man of great personal dash and decision, and yet withal full of humanity and even tenderness. In one breath he would damn the Germans and in the next exhibit the most fatherly solicitation for his troops. "Heart and guts,"

he said, were the prime ingredients of a true soldier, and he looked as though he had both. He was especially concerned for the morale of his boys, which he said depended as much on proper food, sleep and clothes as dry powder. He even insisted on my reading aloud to Judge Wadhams his recent orders for the "delousing" of the troops, and his eyes twinkled with merriment as I proceeded.

Then the general asked his aide to bring us a map of the sector he was holding and proceeded to explain to us the battle of Seicheprey.

From the general's account and also from the stories, more or less conflicting, of a dozen other participants, I take it the Americans' first real battle went about as follows:

Altho there had been two or three skirmishes between our troops and the Germans immediately after we took over the sector, it was several weeks before the enemy finally planned to go over the top and attack us. When they eventually launched two attacks we dropt them in their trenches. The Germans then summoned 600 shock troops and sent them over to teach us a lesson. But only three got to our front trenches, and of these two were killed and one was captured. The next morning the barb wires in front of our lines were full of German dead. On the 20th, 3500 Germans started for us and the French on our left. They came over in close formation and drove us out of the front trenches. We fell back and reformed. The boys could hardly wait to get the orders to counterattack, but finally permission was given and in two tries we regained all our lines. The 102d Connecticut boys got badly cut up, losing 123 men, about the same number gassed, the same number captured and some 500 wounded. They fired during that fight between 5000 and 10,000 rounds of ammunition. Three of our batteries were rolled out into the open and fired at the enemy for over five hours, tho under a severe bombardment. Major Rau met a counterattack with cooks, signal men and every one available. Our machine gun squad was nearly annihilated. When we regained our line our doctors found the Germans had left there poisoned coffee for our troops.

General Edwards then said, "The best thing for you to do is to have a talk with the boys themselves. Come with me and you shall hear them tell their story in their own words. I'll tell the officers to keep away, so they will talk to you freely."

So he ordered his car and we jumped into ours. He led us a pretty chase up and down the hills at a clip of forty miles an hour till we came to a two-mile stretch alongside of a ridge of hills in full view of the German trenches not two miles away. We now lay up

the pace to at least fifty miles an hour, but the day was misty and either the Germans did not see us or they decided not to take a pot shot, for we received no reminder of their presence. I was not in the least unhappy when we shortly turned behind a hill out of sight of the German observation balloons and quickly drew up at a little crossroads village. The boys who were lounging about came swarming out of the yards and billets to meet us, for the General and two civilians, the first they had seen since the fight, were as much objects of curiosity to them as would be General Pershing walking down the streets of any inland American town. The boys collected about the car in a circle twenty deep, and I instantly established friendly relations by calling out: "I'm from Connecticut, too. I have a home in Woodstock. Is there any fellow here from there?" One private had an uncle who lived in town, and wished to send his regards. Then I asked if there were any who came from Pomfret, Thompson, Eastford, Danielson, Willimantic, etc., and as boys replied "That's my home," "I come from there," I said, "If you will give me your name I will be glad to write to your family, saying that I've seen you and that you're still determined to get the Kaiser." And before I knew it I had 242 soldiers hand me names of parents, sweethearts and friends at home, for me to send letters to. One of the boys gave me a German bayonet that he had taken off the body of a dead German. Another gave me a German water bottle which had been jabbed thru with an American bayonet, and another a belt of cartridges which he wished me to give to his parents in Torrington. The boys were in superb spirits and yelled frantically and affirmatively when I asked them if they wanted to get back at the Germans. "Only let us get another crack at them," they shouted. Without any request on my part they told me that they had the best officers in the American Army and that they would do anything that their officers asked.

I have only space to tell one story of the many the boys gave us from their personal experience. Private Clyde Thompson, of New Haven, said: "The battle started at 3 a. m. I was in my dugout at headquarters 350 yards behind the lines. The Boche came over from the flank and not directly behind their barrage—a very pretty trick. When I came out of my dugout there were five Boches yelling 'heraus mit.' I shoved the door back. They threw grenades at the door and blew it in. I came out the other door, drew my revolver and opened fire. One threw up his hands and fell backward. Two carried him away. The other two fell back. I threw two grenades at them and killed one. The other ran away. I then went to headquarters, picking up the major's orders on the way; we joined Lieutenant Ingersoll and we held the reserve trench with one squad of eight men until 5 or 6, when the Boche left town. While carrying in wounded men I saw three Boches com-

ing up the side of a fence. I opened fire and killed one of them; the other two disappeared. I am recommended for a cross."

After listening to the various experiences, I walked across the street to where the officers were waiting in a group and talked with them. They told me they had the best boys in the United States Army. Lieutenant-Colonel Dowell said, "They boys will do more than you ask them to. They never have to be driven." I then said to the Colonel, "When I get back to my summer home in Connecticut the people will probably ask me to stand up in the village church and tell them something of how their boys are getting along. Can you give me some message that will interest them?" The Colonel thought a moment and then said, "Tell them this." And then he related the following story, which I wish every American could have heard him tell: "When the Germans made their great attack on that fateful night, one of our boys, First Lieutenant Lockhart, a Yale graduate and a school teacher in New Haven, was isolated with a band of thirty-seven men when the command to retreat was given. The report got thru that they had been badly cut up, but we heard no more from them and we thought the entire lot was killed or captured. On the evening of the 21st, after two days of fighting, when we regained our trenches, I went to Colonel Parker, in command of the 102d, and suggested that he and I go out and look for Lockhart and his command. Just as we left the trenches we met Lockhart coming back. The first thing he did was to draw himself up and salute, apologizing for his two days' growth of beard and his dishevelled appearance. In response to our requests as to how he had fared, he replied, 'I am glad to report, sir, that we are all here. We have eight men alive, the others are dead in the trench with us.'"

Just think what this story of Colonel Dowell means. Here was the first fight in the Great War in which America took part on the soil of France. The honor of representing America fell to a band of Connecticut boys. When the order was given to retreat, this lit-

tle group being isolated did not receive it. They therefore stayed in their trenches for two days, altho completely surrounded by the Germans. And when they were finally relieved, there they were, every single man, dead or alive, at his post. There was not a man who had been captured; there was not a man who had run away. Our histories tell us that America probably never produced a braver soldier than old Israel Putnam. I cannot help feeling that were that old gentleman alive today he would not be ashamed of these boys from his native state.

That evening we were invited to dine at the field hospital run by the Yale unit, which is the closest to the front line of any American hospital in France. There were fifteen physicians and over eighty Yale boys under them, and fifteen trained nurses, all from Connecticut. After supper we adjourned to one of the hospital huts,

for vesper services. Judge Wadhams and I, both Yale men, made addresses. The meeting ended with the famous Brek-ek-ek-ey Yale cheer, which must have astonished the Germans if they heard it in their trenches over the hills not far away.

## ON THE HOME STRETCH

### A Review of the Fourth Year of the Great War

**S**HOULD a war prophet wish to estimate aright the present chances of victory for the two belligerent coalitions which have confronted each other for the four bloodiest and bravest years in human history, he would be well advised to forget the exaggerated hopes and fears which have come with the events of recent months and think himself back to an earlier period of the war. The memorable occurrences of the past two years will leave an everlasting impress on the political future of Europe and the world, but their immediate military effect is to nullify each other. America has come in. Russia has stepped out. Had America held to her neutrality after the Russian revolution it seems most probable that France, Italy and Great Britain would have been forced to agree to a stalemate peace with Germany and Austria-Hungary. Had the Russian revolution found statesmen to guide it and enlightened citizens to defend it, the Central Powers must soon have succumbed to the blockade which cut them off on every side from the resources of the world and to the growing superiority of the Allies in man power on the western front.

The United States is already in a military sense the equivalent of Russia. Our army is not and may never be so large, since Russia could concentrate troops on her own frontier, while ours must be sent across the Atlantic. But the Russian private was almost the worst paid, worst educated and worst treated soldier in Europe, and many of his commanders were incompetent men of doubtful patriotism. The American soldier is fed, equipt and cared for on a generous scale unknown to any European army, he is trained by officers

BY PRESTON SLOSSON

whose integrity is above suspicion, and he fully understands the cause for which he fights. The economic resources of the late Russian Empire are perhaps even more extensive than those of the United States, but they have never been so adequately developed to meet the demands of modern warfare. The diligence of our navy, in conjunction with the British, has cut in half the world's shipping losses as compared with those for the months immediately following the inauguration of unrestricted submarine warfare. British and German official estimates of shipping losses and of new construction vary widely, but it seems probable that construction has already overtaken destruction and that hereafter the shipping tonnage available for ourselves and the Allies will continually increase. Conditions as regards transportation will soon be quite as good as they were before Von Tirpitz convinced the Kaiser that the shortest way to end the war was to starve England into submission by a submarine blockade.

If both sides seem as far from victory as in 1916 it does not therefore follow that the war is indefinitely distant from its end. Four years have not brought a decision, but they have brought internal strains which threaten to wreck both armies and governments. This has already happened in Russia, and it may happen any day in Austria-Hungary.

Germany upholds by her single strength the whole structure of the alliance of the Central Powers, and many signs of demoralization are not wanting even in this virile empire. Food is insufficient for health, the birth

rate is low, crime is increasingly frequent and popular discontent breaks forth from time to time in strikes, naval mutinies and pacifist demonstrations. In France, Premier Clemenceau has had to root out of existence a stop-the-war propaganda which involved even cabinet ministers. In Italy, revolutionary intrigue involved the nation in temporary military disaster. In Austria-Hungary, the Slav population is openly defiant of the Government and famine has robbed even the dominant nationalities, the German Austrians and the Magyars, of all desire to continue the war. Great Britain, with the resources of a world empire to support her, is less exhausted than any of the continental belligerents, but her military strength is now fully mobilized and her casualty lists have reached enormous proportions. The United States alone is able to throw fresh armies into the scales of victory.

#### THE RUSSIAN COLLAPSE

July 1, 1917—Russians assume the offensive in Galicia.

July 19, 1917—Beginning of the Russian retreat.

September 3, 1917—Fall of Riga.

September 10, 1917—Korniloff breaks with Kerensky.

November 7, 1917—Bolsheviki overthrow Kerensky government.

December 16, 1917—Truce between Russia and Germany ends campaign.

On the first of July, 1917, the Russian army under the inspiring instigation of War Minister Kerensky began its third offensive, seeking the victory which in 1915 and again in 1916 had eluded its grasp. The armies of the Empire had failed; might not the armies of the new-born Republic succeed? The situation of Russia in the summer of 1917 curiously parallels that of France after the downfall of Louis Napoleon. On both occasions an autocratic government had been overthrown after

plunging a country into a bloody series of military disasters, largely brought about by its own incompetent and corrupt administration. On both occasions a republican orator and statesman attempted to organize new armies to fling back the invader. And on both occasions the military forces raised by the provisional government were broken by the disciplined might of Prussia. It would be tempting to pursue the parallel yet farther; to compare the Bolsheviks with their creed of embittered class warfare to the Communard insurgents who terrorized Paris in 1871, and to compare the annexationist peace by which France lost Alsace-Lorraine with the peace of Brest-Litovsk by which Russia lost her territories on the Black Sea and the Baltic. But the last word in regard to Russia is not yet spoken, and it remains to be seen whether Russia, like France, will emerge from defeat and civil war to republican liberty.

Once the German counter-offensive in Galicia had begun the war on this front degenerated into rout and massacre. In order to save his army Kerensky was compelled to a general retreat and the abandonment of all that Russia had conquered or reconquered at any time during the war. Indiscipline in the Russian navy permitted the Germans to seize the islands of the Baltic and to land, almost unopposed, upon the Russian coasts. Some Russian regiments fought stubbornly and delayed the German advance for weeks; among these were the Cossacks, some Czechoslovaks who had deserted from the Austrian ranks, and "battalions of death" composed of women volunteers. Other regiments forgot military disci-

pline entirely, disobeyed orders, slew their officers and left the trenches to the enemy. For a time the eastern front held firm in the north, where the Germans were halted by the defenses of Riga, and in the extreme south, where the Austrians made very little progress against the Rumanians. But the capture of Riga and the isolation of Rumania from Russian aid destroyed the last hope of any military recovery until the entire reconstruction of the army could be achieved.

No respite for this necessary work of reorganization was granted Russia. Kerensky as chief of the provisional government had to bear the responsibility for the disastrous collapse of the campaign on which he had embarked. Royalists and conservative republicans blamed him for socialistic experiments in civil administration and for abolishing the death penalty for misconduct in the army. The Bolsheviks, on the other hand, demanded an immediate peace and the exclusion of all "bourgeois" elements from the government. The discontent of the conservatives found expression in the rebellion of General Korniloff, the Cossack commander. His uprising was speedily repressed, but a few weeks later the Bolsheviks were more successful. Kerensky was driven from office and into exile, the Constituent Assembly was forcibly dissolved almost as soon as it had met, and all power was placed in the hands of the Bolshevik party majority on the popular labor councils or Soviets. At the head of the new government were two dominant figures, Premier Nikolai Lenine and Foreign Minister Leon Trotzky, both convinced advocates of an im-

mediate peace. One of the first acts of their administration was the conclusion of a truce with the Central Powers and the opening of negotiations with them. The eastern front had vanished from the war map.

#### BREST-LITOVSK AND AFTER

February 9, 1918—Ukraine agrees to a separate peace.

February 10, 1918—Russian army disbanded.

March 1, 1918—Finnish independence confirmed by pact with Russia.

April 5, 1918—Japanese land at Vladivostok.

May 7, 1918—Rumania makes peace.

July 16, 1918—Execution of ex-Czar Nicholas II reported.

The Bolshevik government has never been complete master even of Great Russia, and the outlying portions of the far-flung empire once ruled by the Tsars have broken away from its authority altogether, but the Bolsheviks were sufficiently in power by the opening of the new year to carry out their own domestic and foreign policy in defiance of every opposition. The domestic policy of the new government was "the dictatorship of the proletariat," namely the total exclusion from political power of the educated and propertied classes in order that the Soviets might accomplish the redistribution of the wealth of Russia. As agents of the proletariat will a new revolutionary army was organized, the so-called Red Guards, and a reign of terror established thruout the country to prevent any attempt at counter-revolution by the plundered bourgeoisie.

The foreign policy of Lenine and Trotzky consisted in the publication and repudiation of all the secret treaties concluded between Russia and her allies, the opening of peace negotiations with the Central Powers, and the prolonga-

French Marshal Foch

The man at the helm—General Foch, appointed in the fourth year of the war to command the Allied armies on the western front

tion of these negotiations in order to spread revolutionary propaganda among the German and Austro-Hungarian soldiers still stationed on the eastern front. At the town of Brest-Litovsk peace negotiations were carried on between Trotzky and other commissioners representing Russia and the diplomatic representatives of the Central Powers, including Count Czernin for Austria-Hungary and Foreign Minister Richard von Kühlmann for Germany. The diplomatists of the Central Powers, fearing that prolonged discussion might weaken the morale of their armies, presented the Russians with their ultimatum. Trotzky attempted to refuse assent to the proposed peace terms, broke off negotiations and demobilized the Russian army. This appeal to the Tolstoyan weapon of passive resistance was of no avail. Russia was compelled to accept all of the demands of her enemies without obtaining a single concession. The Central Powers also concluded a separate peace with the new Republic of Ukraina, and thus separated the southwestern provinces of Russia from the rest of the country.

By the peace of Brest-Litovsk and special agreements with Ukraina, Finland and Rumania, the Central Powers obtained a free hand in remaking the map of eastern Europe. Poland, Lithuania, and the Baltic states of Courland, Livonia and Esthonia have been promised independence or autonomy in some form, but the exact details of the relationship to exist henceforth between the new states and the German and Austro-Hungarian empires are still unsettled. In principle, it is decided that they will have rulers connected with the royal families of these powers and be brought into the economic system of central Europe by one-sided commercial treaties. Ukraina received her independence and was even permitted to retain her republican form of government, but was required to sell surplus crops to the Central Powers. Rumania received harsher terms. The Dobrudja (on the Black Sea coast) was severed from Rumania, the Austro-Hungarian frontier was advanced for several miles into Rumanian territory, and the resources of the country were thrown open to the exploitation of the Central Powers. Kars, Batum and Erivan, torn from Russia, went to the Turks, who promptly celebrated the recovery of their "lost provinces" by wholesale murder of the Armenian population of that region.

Finland, which had insisted on virtual independence ever since the Russian revolution gave the people a chance to assert themselves, attempted to make this independence absolute when the Bolsheviks seized the reins of government at Petrograd. But, far from escaping the horrors of foreign and civil war by independence, Finland brought upon herself a double invasion. Russian Red Guards, allied with some revolutionary Socialists in Finland, swept over the unhappy country and committed all manner of atrocities. The Allies being unable to send aid, and Sweden fearing to do so lest she be drawn into

## NEW NATIONS AND WOULD-BE NATIONS

Arabs  
Armenians  
Circassians  
Cossacks  
Czecho-Slovaks  
Danes of Slesvig  
Egyptians  
Esthonians  
Finns (and Karelians)  
French of Alsace Lorraine  
Georgians  
Irish  
Jews (Zionists)  
Jugoslavs (Serbs and Croats)  
Lapps  
Letts

White Russians

the current of the Great War, the Finns called on Germany for help. Germany responded only too promptly, seizing the Aland Islands, occupying Finnish garrisons and punishing the revolutionists by massacre and deportation. The victorious faction in Finland (known as the "White Guards") contained many republicans and even some Socialists, but the experience of the Red Guard invasion and the influence of German intrigue strengthened reactionary political sentiment thruout the nation. Finnish imperialists demanded the conquest of the Arctic coast (Murmansk coast), Karelia, and other parts of northwestern Russia inhabited by people of Finnic race. To achieve this they were willing to accept a German alliance and even a German monarch.

On the map everything is arranged to suit German policy, but the war map conceals many disturbing political complexities. There are boundary questions between Ukraina and Rumania (Bessarabia), between Ukraina and Poland (Kholm), between Bulgaria and Turkey, and between Turkey and the peoples of the Caucasus and the Crimea which have given the Central Powers much anxiety. An expeditionary force of the Entente Allies holds the Murman coast and is supported by popular sentiment in several provinces of Arctic Russia. Siberia is virtually independent of the Bolsheviks and is making experiments in government on her own account, supported by a Japanese expeditionary force in Vladivostok, Russian armies in Manchuria and perhaps a hundred thousand Czecho-Slovak ex-prisoners of war along the Trans-Siberian Railroad. The Cossacks in southeastern Russia and the myriad tribes of the Caucasus are practically independent of any external authority. Even in Great Russia there have been explosions of discontent at Bolshevik rule

and German exploitation, culminating in the assassination of the German Ambassador at Moscow. Crop levies in Ukraina and Lithuania are carried on by the Germans, but are made possible only by the employment of armies of occupation and methods of terrorism. The greatest military and political question now confronting the Entente Allies is whether or not the time is yet ripe to send an army into Russia to rebuild the nation and reestablish the eastern front.

### ITALY'S FORTUNES

August 19, 1917. Italians begin Isonzo offensive.

October 24, 1917. Austrian and German counter-attacks in the Julian Alps.

November 10, 1917. Italian retreat reaches the Piave.

June 15, 1918. Austrians begin new offensive along the Piave.

July 7, 1918. Italians begin drive in Albania.

The military reverses of Russia set free hundreds of thousands of German and Austrian soldiers previously employed on the eastern front, even while Russia was still a belligerent. There was much anxious speculation among the Entente Allies as to where these men would be used: in France, in Greece, in Asiatic Turkey or against Italy? Italy was selected as the victim because of the very critical situation which had developed along the Isonzo. General Cadorna's armies, pushing on from the Isonzo valley across the Carso and Bainsizza plateaus and capturing the highest mountain peaks in the Julian Alps, threatened the vitally important cities of Laibach and Trieste and menaced the very existence of the Austrian army.

But the hour of greatest triumph was quickly followed by disaster. The long line of battle, winding deviously over rugged highland country from Switzerland to the Adriatic, was open to attack at many points and rather inadequately supported by lines of communication to the rear. Ammunition had been used up freely in the Italian offensive and was not sufficiently replaced. Worst of all, a stop-the-war propaganda, partly the reflection of labor unrest in the Italian cities and partly the result of enemy intrigues at the front, had undermined the morale of a few regiments stationed at a critical point. An unprecedented concentration of artillery and poison gas and a vigorous drive at Caporetto in the Julian Alps broke the Italian line. The Italian army on the lower Isonzo had to be withdrawn at once to save it from being cut off by the German advance in the north. From the Isonzo the Italians retreated beyond the Tagliamento and Livenza rivers and finally to the Piave. Few expected that this new line could be held, especially in view of the German attacks on the Asiago plateau, which threatened to sweep the Italians altogether from the highlands and force a retreat across the Venetian plains to the Adige or the Po. In the course of their rapid retirement the Italians lost nearly a quarter of a million prisoners and a large part of their artillery.

At the Piave, however, the advance halted and Venice was saved from the invader. [Continued on page 13]

GETTING RID OF THE COOTIES

This boiler-like sterilizer bakes into thorough cleanliness the vermin-filled clothes of men from the trenches. Trench fever comes from cooties

#### GETTING THE LATEST WAR NEWS

These are the men who are making the war news keen in the rest between periods of trench duty to get a paper and find out how the war is going. A soldier in "The A. E. F." expresses the general feeling. "Those guns were going like that all night, but mostly around two o'clock," he said. "Nobody around here seems to know anything about it. I wish I could get hold of an American paper and find out something about that fight. I've sent to Memphis for 'The News Scimitar,' but somehow it don't seem to get here."

#### THE ROLL OF HONOR

The boy at the right, Jack Bamforth, eighteen years old, was killed in the advance of the Marines on June 15, the battle in which the Germans fighting opposite paid reluctant honor to our Marines by calling them the "Teufelhunde." These official citations, awarding the distinguished service crosses, help to show how the name was earned. Corporal Ray W. Chase, Marines. "Assumed command of his platoon in the attack on enemy gun positions in the Bois de Belleau on June 8, 1918, during which they captured two machine guns and killed their crews. He did not retire from the action until all his men had been killed or wounded." Major Edmund B. Cole, Marines. "In the Bois de Belleau displayed extraordinary heroism in organizing positions, rallying his men, and disposing of his guns, continuing to expose himself fearlessly until he fell"

#### FIRST CALL FOR SLUM!

To battle weary men the kitchen is a landmark of cheer. Hot slum is a heartening stimulant. "slum," we hasten to add, is beef stew

# SAVE UP NOW FOR THE NEXT LOAN

STAFF CORRESPONDENCE FROM WASHINGTON

**T**HE campaign for putting over the fourth Liberty Loan has begun, and the date of the opening of the sale of the bonds has not yet been announced. The posters tell us to begin to save for the loan. The admirable publicity division of the Treasury Department is recruiting writers and artists to write and draw in the great cause of extracting

American dollars out of non productive or selfish investments and into the pocketbook of Uncle Sam, who has already scheduled staggering expenditures for the year which will end, fiscally speaking, on June 30, 1919. At this mid-summer moment, then, it is particularly desirable to understand the why and wherefore of the new loan, coming, as it will come, close on the heels of the passage by Congress of a record-breaking revenue bill.

The facts are few and simple.

During the twelve months just begun the Government needs \$24,000,000,000.

In taxes already laid and to be laid the Government will collect \$8,000,000,000.

From loans, in round figures, must come \$15,000,000,000 or \$16,000,000,000.

Put in the terms of the family budget, the average person will have to pay about 100 per cent more this coming year in taxes, and in addition buy bonds to an amount somewhat more than 50 per cent greater than during the past year. Express in cold dollars and cents, this is what we are "due for." Short of an unexpected, impossible and probably undesirable peace, this is what we shall have to do to help win the war with our money.

The fourth Liberty Loan campaign will in a sense be a repetition of the first, second and third drives. There will be the appeal to patriotism, the governing, controlling appeal. There will be the appeal to the fighting spirit; there will be the appeal to the careful investor for whom tax-free Government securities are a welcome relief from tax-burdened industrials. But most of all there will be the appeal to every American to help set the house of the world in order by setting his own house at home in order—the appeal to efficiency in handling domestic finances.

"A great many people," says John Price Jones, assistant director of the Liberty Loan press bureau in Washington, "spend more money than they need to spend simply because they do not know from day to day how much money they actually are spending. The experience of a great many successful busi-

ness men has proved that a simple system of setting aside the surplus in your check book will solve your problem in a very satisfactory manner. The system for our present purposes should be described as the war account. If you are earning enough to permit a surplus in the bank above immediate needs, open a war account in your check book. When you receive your salary, or your income, meet your current debts, allow for a necessary working balance at the bank, then deduct immediately from your regular account as large an amount as you possibly can and place this to the credit of your war account, kept in a parallel column in your check book.

"Keeping your regular balance down in this manner to current needs prevents wasteful spending. It may seem in a way superficial and yet in thousands of cases it has proved itself in practise that if a man looks at his regular account and finds that it is low he will refrain from some expenditure which he would make if there were in his regular bank account a substantial balance over immediate needs. Your war account should be regarded as an account of honor held in trust for the war uses of the Government and drawn on only to meet taxes, payments on Liberty Bonds, or War Savings Stamps, or Y. M. C. A. or Red Cross, or some definite Government purpose. Whether you have a bank account or not your surplus over immediate needs belongs to your Government."

It might be said that the fourth Liberty Loan campaign will be the most truly education of all. The first campaigns awakened the people to the fact of the war, to the needs of the Government during the war, to the immensity of the war. The fourth drive takes it for granted that the people are awake and in earnest; that, moreover, they realize the dire necessities of democracy in this crisis; and that, realizing this, they are ready to go ahead and accept the new campaign as a more or less regularly recurring incident in their financial existence—a compulsory savings system, as it were, comparable to putting aside for a rainy day, or

making allowances for the big expenditures of the year, like insurance and the mortgage. What the Government is seeking to do in this campaign is to get the American people accustomed to thinking in terms of a national and family budget—in terms of both at once.

"It may be safely assumed," says Mr. Jones, in a notable sentence, "that the great majority of the

American people realize that the real truth of the matter is that in war time income does not really belong absolutely to the individual. The individual receives it in trust, every dollar of it, subject to the superior war needs of the Government."

An old issue raised and made in some quarters rather acute as a result of the earlier campaigns is easily met from this point of view. This issue can best be explained by a story.

A certain New England factory girl has received for the last year or two a weekly wage of eleven dollars and some cents. The wage may or may not be too low—probably it is. At any rate, from that wage, ever since the first Liberty Loan campaign, the management has deducted one dollar each week as an installment payment on Liberty Bonds. This girl claims that the management gave her practically no choice but to subscribe—told her that everybody else was subscribing, and indicated that she had better "come across" if she wanted to be considered patriotic. One dollar from eleven leaves ten, and the girl says that ten dollars a week is not enough to live on and support a mother.

It accordingly came about that when the second Liberty Loan fell due, the girl was behind with her bills, and, feeling that she must subscribe, borrowed money on her first bond. Then, with the coming of the campaign for the Third Loan, illness befell her mother, and it was necessary to sell everything at a loss to pay the hospital and the doctor. I believe this story to be typical of thousands of purchasers of Liberty Bonds, and while stories like these have been used to discourage the purchase of Liberty Bonds, to many officials in Washington they carry quite a different significance.

Liberty Bonds represent savings. At the rate of one dollar a week in one year it would be possible to save a little over fifty dollars. This does not seem an unreasonable sum to require of every adult American workingman or woman. Granted that at times the means used by a patriotic foreman or shop superin- [Continued on page 148]

# BRINGING IN THE BOCHES

**W**ITH the American Army on the Marne, July 18.—A survey just completed of the woods south of Mézy, thru which the Germans advanced against the Americans on Monday morning, and subsequently were driven back across the Marne, revealed that more than 5000 Hun fighters had been killed there. The officers who made the survey tell me that the bodies at some spots were three and four deep where in close formation the Germans tried to go ahead against our machine guns. According to the usual ratio between the killed and total casualties, this would mean that we inflicted more than 20,000 casualties on the boche.

Practically the whole of the Kaiser's famed 10th Guard Division came across the Marne against the Americans, and very few of them got back. Prisoners taken from the 6th Grenadiers said one battalion was annihilated in the woods, and of the other battalion about one company was left.

A general review of this operation shows that one reason why the Germans suffered such heavy losses in the woods forming the triangle from Fossoy, to Mézy, to Crezancy, was that the Americans were overwhelmed by such large numbers that the line could not hold, but nevertheless refused to retreat where it could possibly hold a place in the woods. This sent the German advance sweeping over large numbers of nests which sheltered ten, five, or two Americans, and sometimes one, who stuck while the boches passed by and then opened up on them.

Last night tales of heroism of these men were being told. I believe that of all of them the story of Sergeant J. F. Brown was most notable. Brown commanded a detachment of eleven men when the German onslaught came. They had shelter, which saved them under the heavy German bombardment, and when the advancing boche came along they let him pass, and then got ready to turn their machine gun loose. But just then a hundred or so more Germans came along. Brown ordered his men to scatter quickly. He ducked into the woods, and saw the Huns put his beloved machine gun out of the war. The Germans passed on. Brown looked around and seemed to be alone. He started toward the Marne, away from his own lines, and met his Captain, also alone.

These two Americans, out there in the woods in the dark, the Captain with an automatic pistol and Brown with an automatic rifle, saw that the boche barrage kept them from getting to their own lines, and so decided to kill all the Germans they could before they themselves were killed. They lay in the thicket while the Germans passed by in large numbers. According to Brown's report, they heard two machine guns going back of them, and decided to go and get them. The two crept close and charged one of the machine guns, which killed the American Captain. Brown got

BY EDWIN L. JAMES

the lone German gunner with his rifle. Then up came an American Corporal, also left alone in the woods, and Brown and the Corporal started after the second German machine gun, behind a clump of bushes.

They got close, and Brown with his automatic rifle killed three Germans, the crew of the gun. Then, attracted by the shooting close at hand, up came the eleven men Brown had commanded, each looking for Germans. Brown resumed command, and led the party to where they could see more Germans in a sector of trench taken from the Americans.

These thirteen Americans performed a feat never to be forgotten. The Germans evidently were left in the trenches with machine guns to meet a counter-

*Drawn by Gustav for the New York Evening Post*

attack should the Americans make one. Brown posted his twelve men about the Hun position in twelve directions. He took a position where he could rake the trench with his automatic rifle. At a signal the twelve Americans opened up with their rifles from twelve points, and Brown started working his automatic rifle. Brown said he didn't know how many Germans he killed, but fired his rifle until it got so hot he couldn't hold it, and had to rest it across a stump. The Germans, then thinking they were attacked by a large party, decided to surrender. A German Major stepped out of the trench with his hands high, yelling "Kamerad!" Brown laid down his heated rifle, and while three of the hidden Americans guarded him, advanced toward the Major. Then all thirteen Americans moved in and disarmed the Germans. Brown said he didn't know how many there were, but it was more than 100.

Then, with Brown and the Corporal at the head, and the other eleven Americans in the rear, the procession started thru the woods, guided by a doughboy's compass, toward the American lines. It wasn't plain sailing. They were behind the German advance, and had to pass

it and a space between the fighting Germans and the Americans. On the way thru the woods several parties of Germans saw the advancing column, with Brown and the Corporal at its head, and hurriedly surrendered.

Beating thru the thicket, Brown led his party to a place where the German advance line was broken. Just as he started over the American lines the Germans laid down a barrage. This got four of the Germans, but didn't touch an American. Brown and his twelve comrades got back with 155 prisoners. The four killed made a total for the thirteen Americans of 159.

American officers were almost dumfounded at the strange tale Brown brought back, but doubt vanished when, soon after he reached regimental headquarters, a military policeman showed up with a large bundle of maps and plans Brown had taken from dead German officers killed by his automatic rifle, and handing them to Brown, said: "Gimme my receipt."

Brown, who is twenty-three years old and last year was a shipping clerk, had met this man on the way back, and, turning over the maps, which made a heavy bundle, had stopped while he scribbled out the receipt he demanded. Meanwhile barrage shells were falling all around. This receipt is part of the records of the American Army.

The prisoners included a major, one captain, two lieutenants, and a number of noncommissioned officers.

It is this individual fighting of Americans lost in the woods that dumfounded the Germans. Many prisoners actually complained of it as unfair warfare. Generally the rule for soldiers cut off from their command and isolated is to surrender. The Americans evidently knew nothing about such a rule, but kept on fighting. Some of them, of course, were killed, but, hiding out there in the woods, they played havoc with the advancing Germans.

This story shows how the Americans fight: A certain machine gunner rigged his gun alongside a thicket thru which he hoped to get advancing Germans. Just then a stray shell blew off his right hand. The German column, to his despair, he saw passing out of range of his gun, which he was unable to move with one hand. He drew his automatic, and, firing it with his left hand, guided the German column to the line of his machine gun, which he turned loose with telling effect.

Two other Americans, lost in the woods, came up, attracted by the firing, and got the wounded gunner back to his own lines.

Here's another little story that sounds like fiction, but every word of it is true. An American corporal was captured by a German captain at the head of his detachment. The captain sent the American, in care of two German privates, back across the Marne in a canvas boat used by the boche in crossing the river. The corporal rocked the boat, upsetting it, and, swim- [Continued on page 169]

# The Countryside

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## A FRIENDLY HALL

BY ABBOT McCLURE AND HAROLD DONALDSON EBERLEIN

THE hall should always be inviting: it sounds the keynote to your whole house. Don't skimp it in the share of thoughtful attention and planning bestowed. As a matter of fact, the hall far too often comes out at the little end of the horn when furnishing schemes are put thru; it really ought to be one of the first things thought of and not the last. It is usually the hardest part of the house to furnish well, it is quite true, and doubtless just because it is difficult and its interest restricted it is so often slighted, presumably from much the same spirit that prompted the man in the parable to hide his one talent because he hadn't imagination enough to see what could be done with it, nor push enough to make the effort.

From the expression "furnish well" one is not to infer any allusion to cost, much or little. The writers have seen halls, on which money had been lavished without stint, that were veritable monuments of expensive ugliness; they have also seen halls on which practically nothing had been spent, that were models of good taste and interest. And let it be plainly stated, before going any further, that it is altogether foreign to the purpose of the present discussion to counsel any expenditure of cash in carrying out these suggestions. For obvious patriotic reasons all unessential expenditures should be eliminated now. The only expenditure that is advised is the expenditure of mother wit and average ingenuity. An open mind and intelligent planning will be sufficient.

Just how or where to begin the task of compassing hall improvement "without money and without price" need not be a perplexing problem if we are willing to do two things—banish the tyrannical bogey of convention; reduce our procedure to fulfilling certain definite principles. The first step in avoiding stupidity and producing interest is to steer clear of the obsession for having exactly what everybody else has. Time was when every correctly appointed hall boasted a hatrack as its *pièce*

*de résistance*. The bigger the hatrack, the better. Nothing could have been more abjectly ugly than those hatracks, with their miscellaneous accompaniment of hats, coats, sticks, umbrellas and overshoes, and nothing more stupid than those halls. They were thoroly conventional and thoroly depressing. That day has happily passed. Freed of timorous deference to conventionality, we may go on to apply constructive principles.

First, however, let us fix clearly in our minds just what is the nature of the hall and what its function. Four types of halls concern us—(1) the hall that gives access to the various ground floor rooms and contains the stair or gives direct access to it; (2) the long, narrow hall of the city house or the hall that is merely an enlarged vestibule and shut off, as far as possible, from stair and rooms; (3) the long gallery, either on ground or upper floors of country houses, that connects with the entrance and stair halls and gives immediate access to the rooms; and (4) the stair hall, sometimes within the house and having no direct connection with the house door. The hall that is virtually a living-room plus a stair at one side or in one corner, such as one finds in numerous suburban and country houses of informal type is, of course, treated as a living-room and does not here concern us. The function of the hall is to serve as the main artery of the house, to afford ingress to and [Continued on page 158]

*This entrance strikes the right keynote in combination of utility, simplicity and charm*

*Stair walls present an awkward space that may sometimes be relieved by pictures*

# AN ARCHITECT'S HOUSE ON A HILL TOP

THE FORD BUNGALOW  
LAKE MAHOPAC, N. Y.

IT is not enough that a house on a hill should keep from sliding off. It misses its opportunity woefully if it does not fit unobtrusively and easily into its situation, a result to which both material and contour must contribute. In both these respects the summer bungalow designed by Mr. George B. Ford for Mrs. Ford and himself carries the stamp of architectural insight. Stone walls nearby, aged into a beautiful weather-beaten color, furnished the material for the walls of the main part of the house, and the unstained red cedar shingles that cover the wings blend quietly with the stone and help to create the impression that every informal house should give—that the building is an outgrowth and inherent part of the earth. By skilfully placing a broad stone gable at the upper end of the rambling little house and slightly dropping the lower wing, the architect has adequately echoed the contour of the hill.

The house is built like a cliff dwelling, on a promontory above the water, with a sheer drop of seventy feet at the rear and an outlook of thirty miles, sweeping over the hills of Sharon, in Connecticut, and the Catskills in New York State.

Besides the white-painted entrance the

only color is supplied by the red lead of the front door and the picturesque "kick-ups" at the terminals of the ridge-pole.

GEO. B. FORD, ARCHITECT  
BY H. S. GILLESPIE

It was the aim of Mr. Ford, who is an architect and city planner, and his wife, whose ability as an efficiency engineer is unquestioned, to provide a place for rest and relaxation, hence every detail was planned with that end in view. The big living-room, 20 by 30 feet, with its mammoth fireplace and groups of French windows opening onto a terrace, sets the pace for a comfortable house. Gay chintz hangings contrast interestingly with the unstained wood. To the right opens the bedroom suite, composed of three chambers and bath. They are cleverly divided by banks of shelves which contribute closet and shelf-room on both sides of the partitions.

Each room has a closet with low boot-shelf, hooks and a clothes-rod. Innumerable shelves and inclosed recesses in the living-room form receptacles for the disposition of household utilities, and in the hall leading from the living-room to the private suite are linen-closets and other conveniences. Few summer homes are as efficiently planned as the Ford cottage, for every possible built-in closet, cupboard, table and chest has been supplied. The house contains every convenience customary in all-the-year houses.

## YOUR DOG IN DOG DAYS

BY WALTER A. DYER

MANY of our dogs, particularly the long-haired sorts, are naturally cold-weather animals, and in the heat of summer they suffer not a little discomfort. Physically they are liable to become slightly debilitated, so that they need to be watched to be kept in good health.

In the first place, there is the dog's temper, proverbially uncertain in dog days. A healthy dog is as good natured in hot weather as in cold, but one in poor condition or in discomfort may forget his manners occasionally and become as peevish and irritable as an overheated man. Keep up his vitality with proper feeding and treatment, get rid of fleas and worms, give him plenty of drinking water (a dog may become mad with thirst) and never tie him out in the hot sun.

In feeding the dog in hot weather, omit all sugar, starchy food, and cornmeal; French potatoes from the diet. They are all heating and may upset the digestion, and cornmeal may, in addition, produce skin eruptions. Avoid overfeeding. Stale bread, oatmeal, etc., combined with a moderate amount of meat (be sure it is not tainted) and well-cooked green vegetables such as onions, cabbage, etc., and the beans

and peas left from the family table, all moistened with skim milk or soup, makes the safest diet and a balanced ration. Cut down on oatmeal, rice, and green vegetables if they prove to be too laxative.

In summer the dog needs to be bathed occasionally, for his own comfort and that of his human companions. Rub in a thick suds of tar or carbolic soap, rinse, and dry thoroughly before allowing him to run.

Fleas attack nearly all dogs in summer, especially the long-haired breeds. They

make their victims nervous and cross, keep them in poor condition, and cause constant scratching that may result in sores and skin trouble. The best remedy is a coal-tar preparation such as creolin or cresoleum. Mix a tablespoonful with each gallon of warm water, add a little washing soda, and wash the dog thoroly. Try also to destroy the eggs by burning the bedding frequently, and thoroly cleansing the box or kennel.

Hot weather may cause an upset in his digestion. First try a laxative—castor oil, compound cathartic pill, syrup of buckthorn or epsom salts—to remove any cause of irritation. Then, if his stomach seems not to be acting properly, give him a digestive tablet after meals, containing pepsin, pancreatin, and nux vomica, or pepsin, bicarbonate of soda, and charcoal. Summer skin eruptions are likely to be a form of eczema. Be sure the dog has no cornmeal, dress the sores with a good lotion, and give the dog a tonic. A good tonic for this purpose is a pill, three times a day, made of quinine sulfate  $\frac{1}{2}$  to 3 grains (according to the size of the dog), iron sulfate  $\frac{1}{2}$  to 5 grains, extract of hyoseyamus  $\frac{1}{4}$  to 3 grains, with extract of taraxacum and glycerine enough to make a pill.

# What to Do in August

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## THE FLOWER GARDEN

**Perennials** Sow the seed of phlox, delphinium, Canterbury bell, digitalis, hollyhock and pinks this month for bloom next year. The seedlings should be transplanted and protected over winter. Sow the seed in the cold frames and protect the seed bed from heavy rains or the burning sun. Water when necessary and keep well ventilated.

If a green background for your perennial beds is desired, transplant the evergreens this month. The ball of roots should be wrapped in burlap and should not be allowed to dry out. Water after planting.

Gather all withered flowers and cut out any sickly branches from your shrubs. Sprinkle a little bone meal over the surface and work it into the first inch of soil. Never spray the shrubs in the heat of the sun.

**Roses** A mulch of decayed cow manure chopped up fine will aid in securing a good bloom in the fall from the teas and hybrid teas. If cow manure cannot be secured, apply pulverized sheep manure or fine bone meal. Spray the ramblers frequently to keep in check the red spider. Spray the (Aphis Rosae) plant lice with Black-leaf 40. Spray the rose hoppers or thrips with a strong suds of whale oil soap, after which the foliage should be dusted on the underside with hellebore. If mildew appears, dust the foliage with flowers of sulfur. After the enemies are destroyed spray the plants with clear water.

**Cuttings** Have the cutting bed level and composed of clean sand. Give the propagation bed plenty of ventilation during the night and protect the cuttings from the sun until they make root. Cuttings of all the soft wooded plants such as fuchsia, colons, heliotrope, geranium, etc., may be made now. Select only strong, vigorous plants free from disease. Keep all bloom pinched off while the cutting is making root. Cuttings should be shifted into small pots filled with a rich garden loam within three to four weeks after planting in the propagation bed.

**Late Bloom** Stir the soil frequently about the fall blooming asters, cosmos, chrysanthemums, etc.; allowing the air to get into the soil makes it warmer, liberates plant food and hastens the bloom. When it is available, there is nothing better for these fall blooming plants than liquid cow manure. Bone meal and phosphate stirred into the soil are also good.

**Seed** Dry the seed of dahlias, poppies, pansies, sweet peas, etc., before placing them in a dry, cool place. Seed should be well matured and from healthy plants if the desired results are to be expected. Keep the seed from mice, moisture and frost.

## VEGETABLES

**Spinach** New Zealand spinach is the best hot weather variety of spinach. In the North it may be sown from April to September 10 and South from August to October. One ounce will plant one hundred foot row. It should mature in fifty to sixty days and yield about one bushel of spinach.

**Beans** Sow the seed, one quart to one hundred foot row, twice this month.

The soil should be very fine and rich. As soon as the plants appear, start to cultivate and keep a dust mulch over the surface of the soil. They should mature in from forty to sixty-five days and yield twenty to twenty-five quarts.

**Late Peas** Sow the seed of the dwarf varieties from three to four inches deep in a rich, mellow soil. Pack the soil firmly about the seed with the back of the rake or hoe. Never soak the seed before planting or water after planting. Both practices cause sudden germination and should a drouth follow the crop is practically destroyed. One quart of Early Morn or Little Marvel seed will sow one hundred feet. They should mature in seventy days and yield about four peck.

**Onions** Top dress the soil with a little pulverized chicken manure mixt with sand, or pulverized sheep manure if the bulbs are poorly formed. Just before a rain a little nitrate of soda or sulfate of ammonia may be scattered at the rate of two pounds per square rod. Cultivate freely after applying any of the manures.

**Early and Late Celery** Start to bank or board early celery by the middle of the month. Banking with soil in order to blanch the celery often causes heat rot. A heavy paper may be wrapped about the plant, leaving a little of the top leaves sticking out. All celery while blanching should be well ventilated. Late celery should be planted out the first of this month. The soil should be very rich and the texture fine. It takes about two hundred plants for one hundred foot row. Stocky plants should mature in one hundred days. Transplant in the evening and water freely. Shade for two to three days with boards, shingles, etc. This practice will give the plants a start during this dry month.

**Salsify** One ounce of seed will plant one hundred foot row. The soil should be mellow to a depth of eight inches. Leave the plants in the soil over winter and they will be twice the ordinary size next spring. Seed should be sown one-half to one inch deep.

**Chinese Cabbage** This type of cabbage is gaining favor in many sections of our country. The plants may be set out in August in rows twenty-four inches apart, the plants fifteen inches apart in the rows. They mature in the cool fall in from one hundred and twenty to one hundred and thirty days.

**Vegetables for Fall and Spring** Sow the seed of turnips and rutabaga the last of the month. To have vegetables the early part of April sow the seed of corn salad and mulch. Welsh onions may also be planted and harvested in March. Lettuce (loose leaf) sown the early part of the month in a cool shady place will mature before frost.

**Thinning** Give the winter root crops, beets, carrots, parsnips, etc., room to develop. Nothing is gained by crowding the plants. Crowded plants never reach the proper size or mature sufficiently to keep all winter.

**Cultivation and Watering** Cultivate the land frequently. A dust mulch will eliminate weeds, keep the soil sweet and conserve moisture. Cultivate after a rain but never when the soil sticks to the implement. Water only when the plants are suffering from drouth. Watering every day and only sprinkling the surface has a tendency to check a healthy growth. Water in the evening and get the water to the roots. Do not over water: puddling and washing the soil are both bad.

**Pests** Dust the cabbage with hellebore if attacked by the green worm. A little salt may be used after the heads are formed but it sometimes burns the tips

of the foliage and is not generally recommended. If the leaves are lousy with plant lice, spray with kerosene emulsion or whale oil soap.

If the foliage of the asparagus is disappearing and short furrows are eaten in the tender growth, dust the plants when wet with dew with powdered arsenate.

Spray the late potatoes two to four times with Bordeaux mixture to prevent the late blight. Add three pounds of arsenate of lead to check the potato beetle.

If the tomato leaves are eaten, the tomato worm (large green caterpillar) is at work. Hank picking or poison (Paris green or arsenate of lead) will destroy them.

## FRUITS AND BERRIES

**Apples** If the harvest apples are picked before they are fully ripe, they have a better flavor and keep longer. Keep wind falls raked up and destroy those not fit for use. Remove and burn the fall web worm. The leaves are brown and bunched together with a web. Make a systematic inspection of trees. If you find a blighting and blackening of the leaves and tips of shoots with the bark depressed, remove with a sharp knife. Cut well below infected parts and disinfect wound and knife.

**Cherries and Plums** If you have failed to cut out all black knot, see that it is removed and burned before fall. Have the neighborhood clean it out from domestic and wild stock and the disease will be eliminated.

**Raspberries and Blackberries** If you detect a gray crack on the stems (Anthracnose), spray with Bordeaux and cut and burn badly infested canes. If orange colored spots appear on the leaves, the plants have the red rust. Burn infected plants and then start a new berry patch in another part of your garden.

**Currants and Gooseberries** The crop for next year is forming in the buds this month. Keep the plants free from aphid (Greenfly) by spraying with Black-leaf 40. Mulch the plants with decayed manure after cultivating the soil and destroying all weeds.

**Strawberries** Potted plants should be shifted to their permanent bed early this month. The soil should be free from weeds, deep and rich in humus. If the roots are bound in the pot, loosen them a little before planting. Be careful not to bury the heart of the plant in transplanting it. Cultivate frequently until the plants are mulched in the fall. All weeds should be kept out.

## IN THE GREENHOUSE

**Fern House** Keep the walks moist and the plants shaded. The house should be well ventilated. Ventilators should be closed during a rain. Soil should be stirred. Mosses should never be allowed to form on the soil. Sprinkle lime over the drainage bottom of the benches before placing the pot ferns. Keep the ferns and palms free from scale by washing the foliage in a strong suds of whale oil soap.

**Carnations** Whitewash the benches with lime and mix in a little carbolic acid and sulfur in order to destroy all pests. Fill the benches with a rich garden loam, chopped decayed sod, decayed horse manure and considerable lime mixt in. Transfer the plants from the field to the benches early this month. Water freely. All bloom should be picked off until the plant becomes well established.

In teaching gear shifting, watch the road

Explain simply how the motor works

Devote plenty of time to spark and throttle

# TEACHING THE YOUNGSTER TO DRIVE

BY C. H. CLAUDY

EVERY parent with young hopefuls in a car is constantly combating the plea "let me drive—I know I can!" And most of us shake our heads and say "No" to nine hundred and seventy-three beggings! But at the nine hundred and seventy-fourth, or thereabouts, we weaken—and once we weaken, we are lost!

As every one knows who can do it, driving an automobile is not a particularly difficult task. But knowing how to do it, and knowing how to teach others how to do it—whether a child or a wife, a sister or some other fellow's sister—is, if not a horse, at least a motor-car of another color altogether! If we told the truth it would often be that we decline to teach Master Bob or Mistress Nellie how to drive, not because we really fear their unskilled fingers on our precious wheel, but because we distrust our own ability to impart our own knowledge.

As a matter of sober fact, children learn to drive much more easily and quickly than do their elders, just as they master skates and bicycles, skis and tennis rackets, baseball bats and partial payments with greater speed and aptitude than do grown-ups. The rub comes in the fact that twelve-years-old lacks judgment, and his imagination is not trained to the foreseeing of the terrific financial results which may follow a collision.

But judgment can be trained, and few things will develop self-reliance, quick decision and quick wit more than driving Dad's car, even if Dad is always along and ready to grab the wheel if things go wrong.

Commence instructions with the steering. Let Master Bob or Mistress Nellie sit beside you and steer, reaching across you to do it. It's an awkward position, but a safe one. You will be surprised how quickly little hands and minds master the peculiarities of the wheel and how readily they learn to "straighten her up" before the curve is completed, how quickly they discover the secret of "the bag wheel" in and out of traffic. Almost with the first five miles the car stops wobbling.

Even this point, change seats. When the young pupil sits in the driver's seat for the first time, let it be on a long road with little traffic. Shifting seats will give you more full control of the steering and the speed, and while your foot can

reach the service brake but awkwardly, you have the emergency right at hand.

Don't undertake to teach clutch, foot-brake, accelerator, spark or throttle until steering is second nature. If the average demonstrator and teacher of new purchasers had time to follow that rule, we would have more grown-up drivers worthy the name. Half the trouble in learning to drive a car comes from trying to master everything at once.

When the boy or girl can steer the car fearlessly and anywhere, then, and not until then, is the time to take the next step, which should be in the use of service brake and clutch, the latter only in relation to the former. Make a hundred little spurts and let Bob bring the car to seven or eight miles an hour with the service brake. Let him get the feel of it, and teach him that pushing out the clutch when applying the brake is a rule made to be broken on occasions. But teach him to do it, nevertheless; otherwise he will stall the engine—a bad thing to do in traffic.

Let him learn to let the clutch in gently—very gently. And don't be impatient if the car jerks at first, for little legs will be tested with a strong spring clutch, until they learn its weight and pressure.

Having progressed so far, which should mean at least three half-hour lessons and more, rather than less, for safety, the hardest part of learning to drive lies right ahead—gear shifting. If you know, explain what the gear-set is, why it is what it is. Nothing will help any one more in learning to shift gears noiselessly and effectively than to see a gear-set with the lid off and get a clear mental picture of those cog-wheels sliding into each other with every movement of the lever.

Next spend half an hour shifting gears with the motor still and the car motionless. Get the pupil to fix firmly, not only in his mind but in his muscles, the little formula "To start car—press clutch—lever left and back—clutch released, gently, accelerator prest. Accelerator released, clutch prest in, lever forward, right, forward, clutch released, gently, accelerator prest. Accelerator released, clutch prest in, lever straight back into high, clutch released." Yes, written down, it seems complicated, but that is what has to be done to get from a standstill into high, and only practise will do it. Practise with the car stationary will do much to save gears and nerves.

Shifting gears for the first time with the car in motion, let Bob practise with only one gear at a time. That is, having the engine running, gear in neutral, have the pupil depress clutch, slip gear to first, and start the car. Then have him stop it, slip gear to neutral, and try again. Do it a dozen times or more before trying the shift from first to second, and master that before trying to get into high. It is all so simple, once the muscles coördinate, but it takes a little practise and a little patience.

Meanwhile, be either behind and leaning over or at his side, both to prevent accidents and to be guide, philosopher and friend. Incidentally, you will be steersman, because your pupil will put all his attention on his gears and go blissfully into the ditch if you don't watch the road, one hand at least on the wheel, while these first principles are being mastered.

One writes of it at length and in detail as if it were really a difficult job. But it isn't. Any bright boy or girl of ten or twelve will learn it in half the time you or I did—and show a lot more courage about trying it alone than either of us possess! But, for the sake of their future driving and your own peace of mind, let the steps be slow and sure and each one well learned before the next is taken up.

Once the clutch, accelerator (in its relation to gear shifting), brake and gear lever are mastered, the rest is easy. But because it is easy doesn't mean it should be hurried over. After all, it's *your* car, and you don't want it driven as if it were an ice wagon! So devote plenty of time to the spark and throttle on the wheel, and make sure

Back, the car very carefully. Make Bob understand that "slowly does it"

[Continued on page 161]

# POULTRY HOUSES FOR WAR TIME

BY E. I. FARRINGTON

HUNDREDS of people having been induced to raise chickens this summer as a part-time duty, are now confronted with the necessity of finding quarters in which to keep them after they have developed into laying pullets. Only a little house is needed for chickens when they are small, but it is useless to keep a flock of laying hens unless they can be given a comfortable and fairly commodious house. This doesn't mean an elaborate or expensive building. On the contrary, the fewer frills a poultry house has, the better.

No poultry house will give good results unless it is absolutely dry and free from drafts. It isn't necessary to have a warm house, as poultry keepers used to believe. Double walls and double windows are no longer considered even advisable. It is very much more important to have the house well ventilated. Poultry does not suffer from the cold, if the atmosphere is dry, unless the temperature drops well below zero. Of course, tho, something depends upon the breed. Hens like Leghorns and Anconas with long combs are likely to have them frosted in extreme cold weather, and so need more protection than Wyandottes, Plymouth Rocks and Rhode Island Reds having small combs.

The house suitable for a farmer's flock may not be best adapted for the few hens kept by the town dweller in his backyard. Thoro ventilation, however, is indispensable, whatever the location, so that open front houses, or some modification of this type, are in favor among poultry keepers everywhere. No house should have the front entirely open unless it is at least twelve feet deep, for otherwise the wind will blow on the fowls at night while they are on the roosts.

The most satisfactory type of house with an open front is one which has a double pitch roof, with a longer pitch in front than at the rear. The amateur will be better satisfied, probably, with a house which has the front partly enclosed. Perhaps there is no better design than one which calls for a long opening two feet above the floor, with one or two long glass windows extending almost from the roof to the sills. Then there is no lack of fresh air, yet the wind does not blow on the hens and the sun is allowed to reach a large part of the interior. The advantage of having the windows low lies in the fact that the hens can bask in the sun very early in the morning.

Some poultrymen consider the double pitch roof the best of all. Others like the monitor type and still others the semi-monitor type of roof. Yet the shed-roof type is adopted in the majority of cases because easy of construction and generally satisfactory. The shed-roof house cannot well be deeper than ten or twelve feet, for otherwise the roof would have to be too high in front in order to get the proper pitch. Indeed, there is hardly enough slope in a twelve foot house, and unless the construction is strong there is some danger that the roof will be broken down by an accu-

mulation of snow. No poultry house should be larger than is necessary for the convenience of the person who works in it. Four feet is high enough for the rear wall and seven feet for the front.

The shed-roof house naturally carries all the water which falls on the roof to the rear, a decided advantage. When a double roof house is used there should be troughs in front. The shed-roof house admits the maximum amount of sunlight because the highest part comes in front. In some sections, tho, where the climate is naturally damp, it is found advisable to build a house with a double pitch roof and to make a little rack of boards under the peak to hold a thick layer of straw or hay, which helps to absorb moisture.

The size of the house must depend naturally upon the number of hens to be kept. The extent to which the hens must be confined is also to be considered. In some sections it is possible to allow the hens an outdoor run almost every day in the year. In other places they must be kept inside for several months. Some poultry keepers with only a small backyard keep their hens housed all the year round. This is perfectly feasible if the birds are given plenty of room and if the house is thoroly ventilated. When this close confinement is necessary five square feet of floor space for each bird is none too much.

If the house is to be permanent, and especially if the ground is rather damp, it will be worth putting in a cement floor. A board floor will be fairly satisfactory, tho, if rats can be kept out. In point of fact, earth floors are used more commonly than any other kind, and some poultry keepers prefer them. The floor must be six inches or a foot higher than the ground outside to keep it dry. Sometimes it is possible to make a cement foundation even when a cement floor is not used. If carried two feet under the ground it will exclude rats. Another plan is to sink closely woven poultry netting into the ground all round the house. Unless there are some special reasons for making separate pens it is best to keep the hens in one flock. They will lay just as well as when separated, and less labor will be needed to care for them.

Keep the interior fittings as simple as possible, and elevate them from the floor. Nest boxes and perches should be constructed so that they can be taken out at any time for cleaning. Dropping boards are ad-

visable in a small house, but are not needed in a larger building.

Have your perches level. If they are arranged one higher than the other in the old fashioned way, you will find your birds having a nightly contest for the highest roosting place. The American breeds need about nine inches of roosting space for each hen. When there are several parallel roosts, have the first ten inches from the wall and the others eighteen to twenty inches apart. Don't have more roosting space than is required in cold weather. There is no reason for having the roosts more than three feet from the floor, and two feet is high enough for the heavier breeds. Bumble foot is apt to result if the hens are compelled to descend from highly elevated perches, especially if they alight on a hard floor. Nothing better can be found for a perch than a two by four inch scantling. Some poultry keepers advocate putting it the broad side up, but the majority prefer to have the small edge at the top, the corners being rounded off a little.

When warm weather comes shed-roof houses may become so hot at the rear, where the roosts are located, that the hens suffer and become debilitated. Relief can be obtained by making openings in the rear walls just under the roof, for in this way a circulation of air will be established. Tight shutters are needed to close these openings when it gets cold again.

Two very good nests can be made by using an orange crate with a narrow board nailed across the front. Dark nests are not necessary but hens prefer them, and when they are given there is less danger of the egg-eating vice. A new type of nest consists of a long box without partitions and with an opening at each end. This box is partly filled with hay and the hens walk thru it, making their own nests wherever they choose. The front of the box consists of a hinged board which can be lowered to permit gathering of the eggs.

If one is keeping hens of the American or Asiatic breeds which are almost certain to develop broodiness when spring comes, some kind of breaking up coop will be almost indispensable. It can be made of any light boards or of wire with a slatted floor, and hung on the side of the house where it will not be in the way.

It is advisable to have the floor of the house covered with litter several inches deep, but if the feeding dishes or the watering dishes are placed on the floor this litter will be scratched into them. Accordingly practical poultry keepers have elevated platforms for them.

The cost of the materials should not greatly exceed one dollar for each hen in the house. By sending to the Agricultural Department at Washington for Bulletin No. 889, one can get the complete bill of materials for a house eight by eight feet, which would be big enough to house twenty hens. Of course dry goods boxes can be utilized, but it is difficult to get satisfactory results from poultry unless they have a good house.

*This type of house is one of the best for backyard flocks*

# *Pictures from Home*

## Maintain the Morale

### As seen by the RED CROSS

W. Frank Persons, director general of the Bureau of Civilian Relief, is just home from France and has a word to say about those letters from home.

"It is very important" he says "to keep the American home a Living Reality to those boys over there. Write your letters regularly and frequently, giving complete news.

"This serial story of home life should be illustrated with plenty of snapshots and pictures. News and frequent pictures of children are peculiarly important. Those at home see the children daily; but from a distance of 3,000 miles, and in a war environment, it is difficult to imagine a satisfactory picture of how a child who was left wearing curls really looks after his first hair-cut, or how he looks with his little fists pushed down in the pockets of his first pair of pants."—*From an interview published in the Lake Division News of the American Red Cross.*

### As seen by the Y. M. C. A.

"There are two things the soldiers *always* carry with them; photographs of the 'home folks' and letters from the 'home folks.' The pictures, often with a small Testament, are always in that breast pocket over the heart. I think they sometimes are put there as a kind of charm to ward off bullets. Anyway, that's where they always are. And the look in a man's face when he shows you the picture of his mother, his wife, his children, and you say—as you always do—they are very beautiful, will bring tears to your own eyes."—*Charles W. Whitehair, an active Y. M. C. A. worker in France, in the American Magazine.*

### Pictures and Letters

Our great benevolent organizations are looking to the physical comforts of the boys "over there." Their mental comfort, that cheerfulness of spirit that so far controls the "will to dare and do" comes best from home.

The chatty, newsy letter with its touch of humor, simple little snap-shots of the home and of the home town doings—these are the things that keep the sacred fires burning in their hearts;—that give them the strength and courage to smile, smile, smile as they battle for the cause that we all hold sacred.

Eastman Kodak Company, Rochester, N. Y.

# SHALL WE RETURN TO HORSES?

BY JOHN R. EUSTIS  
DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

**R**ECENTLY there appeared in the daily press a news item which seems to add in significance the more one considers it. This item went out by telegraph from Newport, Rhode Island, the summer resort of America's aristocracy, and had to the effect that as the summer season took up their abode there, a marked increase in the use of horse drawn vehicles was evident. The item ended with a quotation from the leading carriage and harness dealer who said that the demand for horse drawn carriages, victorias and phaetons, and for harnesses, exceeded that of any season for many years and presaged a general abandonment of the automobile in favor of the horse.

This may or may not be an indication that people are beginning to consider it politic if not really advisable, to curtail their use of passenger automobiles during war time.

Motor vehicles of all types have been classed as luxuries by Congress and singled out for special taxation, present and prospective, while the Fuel Administration and other war born Governmental agencies class the passenger car as "non-essential" or at least "less-essential." At present there is ample evidence that the production and use of passenger cars is to be taxed severely and curtailed in forthcoming Federal legislation. Prognostications range all the way from a horse power tax to one on gasoline, by way of special consideration for the passenger car owner, and recommendations from the Treasury Department include both, with the addition of a 20 per cent tax on the sales price of automobiles.

On the other hand the horse drawn vehicle, whether classed as a pleasure carriage or a commercial conveyance, is entirely without the pale of special taxation or regulation.

Therefore, people may argue, it cannot be unpatriotic to substitute horses for motors, particularly as freedom from special taxation and unrestricted use of city streets and country highways are also secured.

**T**HIS attitude, in view of the foregoing, is not unnatural, but there are other factors which warrant very careful consideration.

First in the matter of food conservation, which is said to be necessary to win the war, or at least to relieve the famine conditions prevailing among our European allies.

There are about five million motor vehicles in use in the United States now, of which fully four and a half million come within the classification of passenger automobiles. Each of these cars is doing the work of at least two horses, so if the latter are substituted for automobiles nine million more horses will be needed. Statistics compiled by the Department of Agriculture show that it takes an average of five acres of tillable land to raise enough food to supply each horse in the country each year. Therefore some forty-five million acres of tillable

farm land now raising food for human consumption, either directly or by feeding meat and dairy animals, must be devoted to supplying these additional nine million horses. This land is at the present time, according to Government statistics, feeding about fifteen million people each year.

In view of these facts it can hardly be considered patriotic to substitute horses for automobiles.

Rather it would seem advisable for the Government as well as individuals to promote the number and use of automobiles in order to decrease the number of horses. There are now about twenty million horses in the United States, and one hundred million acres of tillable land are devoted to feeding them. Seventy-five per cent of the work done by these horses can be done better by motor power, thus releasing sufficient land, seed and labor to feed annually about twenty-five million people.

It would therefore seem that a campaign to encourage the substitution of motor vehicles for horses would be an important part of the program of the Federal Food Administration. Oats and hay require tillable land, seed, and labor for their production; oil for motor fuel is contained in the earth in inexhaustible quantities, and is readily pumped out and easily refined. At the present time gasoline is a by-product in the refining of fuel oil which is so extensively used by naval vessels.

**T**HE reason why the Federal Fuel Administration demands a radical curtailment in the production of passenger automobiles is principally that coal may be conserved for the operation of railroads and the manufacture of munitions. As a matter of fact an increased use of automobiles for travel will save far more coal than is needed for their production. The estimated annual passenger mile service of automobiles in this country is sixty billion against thirty-five billion for all our railroads combined. The seating capacity of passenger automobiles in this country exceeds that of all our railroads. Consequently it is evident that anything which curtails the use of automobiles, will tend to add to the already too heavy burden which is carried by the railroads.

The principal difference between horse travel and motor travel is in the factor of speed; in other words, time. In the present national emergency time stands at the head

of the list of those things which we must conserve.

For example, there are about six and a quarter million farms in the United States, and out of the four and a half million passenger cars in use 2,700,000 are owned and driven by the people living on these farms or in rural communities closely adjacent to them. It would be most conservative to figure that in the necessary traveling between farm and town or railroad station each of these passenger automobiles saves two hours each week for its owner. This alone means more than five million hours a week which the farmers of this country will lose from productive labor if they go back to horse travel. This is equivalent to the labor capacity of a hundred thousand men.

**T**HE time of men in other walks of life is hardly of secondary importance to that of farmers in the present emergency. Doctors remaining at their regular practise must multiply their efficiency to meet the decrease in their number due to military service. This is largely possible thru motor travel, and conditions that tend to handicap the use of automobiles by medical men are to be deplored. Men in other professions, in business and even laboring men, whether directly or indirectly engaged in work essential to carrying on the war, must conserve their time in order to add their mite to the national efficiency which spells victory. The idea that much of the use of passenger automobiles is for pleasure and therefore not necessary, is largely erroneous. Canvasses made in this and other countries in the last two years show that approximately 80 per cent of this use is for strictly utilitarian purposes.

The expediency and reliability of motor travel is attested by the extent of the employment of passenger cars in our army, both here and abroad, by producers of munitions, military supplies and ships, all the way from executives to machinists; by department chiefs and subordinates at Washington, and by the very officials and legislators who seem determined to take steps which will curtail the use of automobiles thruout the country.

**T**HERE is another factor in this curtailment of passenger automobile production and use which must not be lost sight of. This is the effect on the automobile business. The making of motor vehicles ranks third among the manufactures of this country and it is estimated that more than 5 per cent of our population is dependent upon the production, sale and maintenance of motor vehicles for its livelihood. Such a gigantic business can hardly be curtailed without the results being felt thruout the entire country.

Further — a nation's prosperity is largely governed by the extent of its foreign commerce. The automobile industry has built up a tremendous export business, which for the year 1917 almost equalled the combined exports of agricultural machinery, electrical machinery and apparatus, and all locomotives and railroad cars.

*With Newport leading, other summer resorts may abandon motor cars and return to horse drawn vehicles, costing the country more than automobile manufacture and travel*

# A 4-Minute Lesson In Personal Efficiency

To Help You Discover the Biggest Ambition of Your Life and How to Achieve It Quickly

By Edward Earle Purinton

The Famous Efficiency Expert

**R**ECENTLY I talked with the highest salaried man in the world. I asked him how he had succeeded. He quietly answered, "I have not succeeded! No real man ever succeeds. There is always a larger goal ahead."

This multi-millionaire has outrun every rival on earth. But he has not reached the goal of his own satisfaction—any more than YOU have. But he is efficient. He began by wanting something so hard the whole world couldn't stop him.

## What Do YOU Want?

What would you like to be more than anything else? Look back ten years. How would you like to live that period all over again? If you could have known then what you know today, how much time, health, money, faith, energy you could have saved!

I have believed for many years that the right kind of a course in practical, every-day, human efficiency, would supply an effective and much needed, short-cut to highest achievement and would save many grinding, discouraging and *expensive* years of haphazard experience.

It is much better to learn and profit by the mistakes and false moves of others than to waste valuable days and years waiting for experience. Don't rely on your own bitter experiences in the hope of doing better "next time." With the proper knowledge you will save mistakes.

It has been my privilege to act as teacher and counsellor for thousands of ambitious men and women—from the million dollar corporation head to the most humble beginner in the ranks.

And I have concluded that the average man engaged in a large enterprise who has not yet applied efficiency methods to himself and his associates has been losing from \$1,000 to \$100,000 a year—while the individual, professional or industrial worker has been losing from \$100 to \$5,000 a year.

For twenty years I have been studying at close range, the exact reasons for these people's failure to get ahead. And into my new Foundation Course of Seven Lessons, I have put the results of this study of individuals and business concerns.

By showing you in my lessons what other men and women—just like yourself—have learned and done and been. I believe sincerely that I can save you about ten years of costly experimenting and can show you how to save your strength and energy and special abilities for clean-cut, economical and success-bringing work.

Efficiency is nothing less than the difference between wealth and poverty, fame and obscurity, power and weakness, health and disease, growth and death, hope and despair. The step from one of these extremes to the other is a short and easy one—if you **KNOW HOW**.

Take one of my pupils whom I shall call Mr. X because if I ever met an "un-

known quantity" he was one when he first came to me.

He has increased by about 500 per cent his daily output of work, his optimism and will power, his health reserve and his financial resources.

How did he do it?

First, he analyzed *himself*. Have you ever done this—thoroughly? If not try it.

I can tell you I never saw such a change in a man.

For the first time he knew what he wanted to do, what he wanted to be, what he wanted to have in life.

Then he went boldly at the attainment of his ambition.

He studied his possibilities—physical, mental and spiritual. He learned that his

ambitions lay within reach of his natural gifts.

Finding that he was out of gear in certain ways—he set out to repair his faulty machinery. He made the most of his job. He learned to save two hours a day. He talked with men higher up.

He studied and tried every conceivable way of improving his work. He was always planning his *line of advance*. Every opening higher up found him prepared to fill it ably.

He changed his living habits and increased his daily output of energy about 200 per cent.

He stopped being a pessimist and grumbler and became the most cheerful man in the whole organization. Having grown friendly-minded, he attracted a host of new friends. He prospered. He advanced. He became a leader. He developed courage.

But remember this: Mr. X was not an exceptional man by any means. He was just *average* to begin with. When I first knew him he was making \$15 a week. Today he is probably without a rival in his chosen field—and his name is known throughout the business world. You can do the same or better.

EDWARD EARLE PURINTON

## Mr. Purinton's Entire Course on FREE Examination

For several years, at the request of the Independent Corporation, Mr. Purinton has been at work, codifying his vast experience, compiling it into a course easy to follow, fascinating to study, and—more than all else—beneficial in a concrete practical way to every man and woman who takes it up.

This course of instruction has been called the Purinton Foundation Course in Personal Efficiency. So confident are we that you will see the tremendous value of this great Course that we are glad to send the **ENTIRE** Course of seven books containing over 125,000 words to you on approval. Keep the Course five days. Read the first lesson or two. See what a splendid work Mr. Purinton has completed after twenty years of study. Compare it with others costing much more. See if you can afford to be without it. Consider whether this Course will improve your health and increase your pleasures and salary. We say it will. Let us prove it.

You assume no obligation except to return it within five days if you decide not to keep the Course. The Purinton Foundation Course in Personal Efficiency may be worth thousands of dollars to you. Be efficient **NOW** and send the coupon before this introductory offer is withdrawn.

## MR. PURINTON IS A WORLD-FAMOUS

**AUTHORITY** on Personal and Business Efficiency. After spending seventeen years learning how to increase human health, energy, productiveness and happiness, he has put into his new Foundation Course in Personal Efficiency the result of his rich experience.

He has been teacher, editor, lecturer, hygienist, psychologist, social service leader, efficiency engineer, and counsellor for men and women in every walk of life.

His best known previous work, "The Triumph of the Man Who Acts," has been read throughout the world. His works have gained more than a million readers. His help has been sought in every state in the Union and in twenty foreign countries.

This great audience includes bankers, business and professional men, educators, manufacturers, railroad executives and heads of million dollar corporations. They all have something to learn from Mr. Purinton.

A thousand important business houses and institutions have already ordered Mr. Purinton's works for their friends, patrons, clients or employees.

## A FEW OF THE MILLION AND WHAT THEY SAY:

**MELVIL DEWEY, President of The National Efficiency Society, says:**

"I have never yet picked up this work for five minutes without getting direct practical value from some new thought or some unusual or more telling presentation of an old one. These stimulating pages bristle with epigrams and sparkle with the texts of a thousand sermons. No man can read his work without getting ideas and better suggestions that will enable him to improve the greatest and most complex and most important of all machines he will ever use—Himself."

**IRA J. STEINER, Educational Director, Camp Cody, says:**

"Mr. Purinton has rendered a great service to the present cause by bringing out this wonderful Course in Personal Efficiency, which is the first of this particular type of Courses in practical, applied efficiency, and nothing I feel is more needed in this present conflict at the front, in the camp, in the shop, in the office, on the farm and in the school than the matter of being personally efficient."

**TRUMAN A. DE WEESE, of the Shredded Wheat Company, says:**

"If I were rich I could distribute about a million copies of Mr. Purinton's Efficiency Work among the million Americans who I think need the sound wisdom and advice it contains."

**JOHN H. PATTERSON, President of the National Cash Register Company, says:**

"I began to mark passages in your writings which I wished especially to remember. I found after I had completed my reading that I had practically marked up the *entire work*."

## To do one thing well—

Each Yale product is made to do a particular service,—and to do that service *better*.

And as evidence that every Yale product will live up to that standard of superiority, it bears the trade-mark "Yale," the maker's guarantee of fitness, quality and durability. See the trade-mark "Yale."

**Prof. I. Hubert's  
MALVINA  
CREAM**

is a safe aid to a soft, clear, healthy skin. Used as a massage it overcomes dryness and the tendency to wrinkle. Also takes the sting and soreness out of wind, tan and sun burn.

Send for testimonials. Use Malvina Lotion and Ichthyol Soap with Malvina Cream to improve your complexion.

At all druggists, or sent postpaid on receipt of price Cream 50c, Lotion 50c, Soap 25c.

**PROF. I. HUBERT, Toledo, Ohio.**

## A FRIENDLY HALL

(Continued from page 158)

gress from the house, privacy to the rooms from those entering, and protection from the draft. As it is a place to pass thru conveniently, it ought also to be pleasant enough to invite one to linger on the way. It ought to have an aspect of breadth and space and give no suggestion of stuffiness.

The five principles to steer by in hall furnishing may be tagged *Utility, Reserve, Consistency, Restraint* and *Scale*. They are universally applicable and trustworthy. As to background and movable furnishings, certain cardinal desiderata are here given which may or may not be indulged in according as the conscience of the individual dictates or disapproves outlay at this time, but greater stress is laid upon what may be accomplished without expense as a policy that may now be unreservedly commended. This qualification should be borne in mind and if some item suggested is not already among the possessions of the reader, a little reflection will probably discover a suitable substitute. Under the conditions, it is evident that *rearrangement* must be one of the chief factors in the task.

The principle of *Utility* and convenience prescribes that the items of furniture included in the hall furnishing scheme shall have a definite and obvious use. "Very well, then," says the hatrack apologist, "why do you exclude the hatrack?" Because the hatrack is ugly and awkward, the articles it accommodates can be and are much better bestowed elsewhere, and its use encourages careless, slouchy habits and puts a premium upon the accumulation of unnecessary impedimenta. Therefore it is one of the very first things to eliminate. Coats, hats, umbrellas and overshoes should be put in a cupboard. If there is not one built into the wall conveniently near—there almost always is, however—then use a row of pegs or hooks in some inconspicuous place under the stairway, put a shelf above and hang curtains in front. It is not seemly to thrust the family wearing apparel in the fact of every one entering the house. If you are fortunate enough to have one of the old English or Italian hanging cupboards (about the height and depth of a bookcase) all the articles mentioned may be therein disposed and the piece itself adds a valuable decorative touch. For the accommodation of messengers, delivery people and others who have occasion, from time to time, to wait in halls, some unobtrusive form of bench, settle, stool or chair is essential. A low chest answers the same purpose very well besides affording ample space for overshoes and similar articles. A stand, table or console, placed somewhere conveniently near the house door, is necessary for a card salver and for the hats and gloves of callers. Their coats can go on chairs, bench or chest. If a convenient and protected place can be found for it, a small dressing table with a vanity box on top of it, having a mirror in the lid (or else a mirror hung on the wall) will prove a thoughtful and much appreciated provision for the comfort of guests arriving by motor who may be a bit blown about on their way to call. The drawer of the table is a useful place for gloves and clothes brushes. There is no reason why a low chest of drawers may not be made to serve this very purpose or some other equally useful in a hall. Common sense is an excellent touchstone by which to test work and if the furnishing of a hall displays proper consideration for utility, no matter how unconventional its treatment, it will probably have sterling merit and interest as well.

The principle of *Reserve* dictates that

while everything possible should be done to create an air of hospitality, all evidences of personal and thoroly informal treatment should be kept for the rooms which are necessarily of more intimate character. A hall altogether lacking in reserve and crowded with a profusion of all sorts of things that afford an intimate personal index to the tastes and habits of all the occupants of the house is about as agreeable as an effusive "hail fellow, well met" sort of person who slaps you on the back after an hour's acquaintance.

*Consistency* requires that the furnishing be in keeping with the character of the appointments in the rooms into which the hall opens. It is not to be expected that the hall equipment should indicate the specific *kinds* of furniture to be found in the rooms, but the *manner* in which the furnishing there has been done. If the house is simply and quietly furnished, the hall should promise such a further development; if elaborate elegance and formality are the ruling notes elsewhere, then the aspect of the hall should give some intimation of what is to follow. Especially in small halls where so little furniture can be used, it is of the first importance that that little be chosen with the most punctilious regard for thoro suitability.

*Restraint* should be shown first in the quantity of movable furniture used and second in the extent of the movable decorations employed. Use no more movable furniture than utility, or, perhaps, a certain concession to symmetry, requires—table or console, chest, chairs, mirror, and the like—and be sparing and severe in the amount of movable decorations. Let such decorations as are admitted be altogether appropriate and let them have vigorous, concentrated interest. Long galleries in country houses and inside stair halls, separate from the entrance, admit of somewhat more intimate and less restrained methods of treatment, and a greater number and variety of pieces may consistently be used there, with due provision for seats.

*Scale* requirements forbid the use of large and conspicuous pieces in a hall of small dimensions where their size will be unduly accentuated and overpowering; on the other hand, do not put small and insufficient looking pieces in a space where they will seem lost. In a hall with low ceiling, give preference to low pieces; in a high-ceiled hall it is well to consider the furniture's vertical emphasis. In a narrow hall, where every inch of space counts, be careful not to use pieces that project. For instance, in the matter of tables, it is better to use the long narrow kind, such as the high Chinese teak tables, a narrow standing Sheraton hat shelf, one of the Queen Anne drop-leaf tables with leaves down, or a tall, long and narrow Empire console.

Apart from interest of composition, which is always to be considered, two of the chief desiderata in the background of a hall are light and a due amount of agreeable color. Light sand-finished or painted walls or walls covered with a light paper of inconspicuous pattern are to be recommended.

In the matter of movable decorations a great deal of interest can be secured by a few well-chosen articles—a bowl or two of good vigorous color to enliven the ensemble; a few plants or flowers, either growing or in bowls; a hanging, perhaps, to ingly—of purely decorative character.

If the landings of the stair be broad enough, it will add both interest and dignity if a chest, cabinet, table, tall clock or some equally appropriate piece of furniture be placed there.

## TEACHING THE YOUNGSTER TO DRIVE

(Continued from page 161)

your pupil understands thoroly not only what to do with the spark lever but why to do it. Force your motor enough to let the sharp, metallic knock be heard which comes from too high a spark. Let your young driver get the sound well in his ears, and see that he understands *why* he hears it—that the explosion in the cylinders is occurring too soon, and that all the lost motion in main bearings, piston bearings and wrist-pins is being taken up in a sharp blow which we call a "knock." Teach him that as the spark lever is pulled down to the bottom of the quadrant (or up, as the case may be in your particular car) the explosion occurs later and later in each cylinder. Let him understand that with the throttle (which controls the amount of gasoline gas and air taken from the carburetor into the cylinders) in the same place, the *lower* the spark, the *less* the power. Teach him that slow driving in high, especially in traffic, means a retarded spark, and that the best drivers never force the spark to its highest, except for great speed.

Explain the uses of hand throttle and accelerator. Both do the same thing—open the butterfly valve in the carburetor—but the hand throttle *stays* open, where you put it, while the foot accelerator is closed by a spring when you take your foot off. Teach your boy or girl to drive with the foot rather than the hand, because so doing leaves both hands free, and also insures the closing of the throttle whenever the right foot is wanted for the brake. The accelerator spring can't *forget* to work!

Stop the car, open the hood, and follow out the connections of spark and throttle so the young driver can know not only what each does, but how. Give a little talk on the motor and how it works, and explain the carburetor, the manifold, the water system, and the electrical system. Nothing scientific or difficult—just the same general information your instructor gave you. What? Yes indeed, he will understand it—any boy who can master driving a car can master the principles which underlie its working!

Finally, teach your lad to back the car. Nothing is more important—as far as the car is concerned—than proper backing. But be at the wheel yourself the first time, and let your boy *feel* the proper motion of the steering wheel in going backward about a curve. A car backs differently from the way it goes forward, and it is confusing at first. But twelve-years-old gets used to new sensations in the most amazingly quick time, and—if you'll let him—in a week he'll be backing your car into your garage for you more surely and with less nervousness than you displayed six months after you bought your motor!

The fine points of driving can well be left for experience to develop. No new driver—whether he be six or sixty, or anywhere between—learns really to *drive* a car under six months or a year. We all learn to move our cars around in an hour, a day, a week, but there is a vast gap between just making it go and really driving it.

But the points of fine driving will come with practise, particularly if you spend a little time and patience in showing your pupil. Teach him *Safety First* from the beginning. No one ever caused a front-end collision by driving slowly. But lots of rear-end bumps have happened from slowing up too quickly without the warning hand thrown out. Make your pupil observe the rules of the road more scrupulously than you do *yourself*. Show him by practise as

## Who Was the Real Criminal?

There he stands. Boyish escapade has led to crime. Only a few years ago he was a clean, bright, little chap of whom his refined parents were justly proud.

Being bright, he was an inveterate reader. He read, not wisely, but too much, without discrimination—or supervision.

His parents had forgotten what a tremendous influence book heroes and heroines have upon the mind and character of the young.

He found and devoured books that created false ideals—a false conception of life. His *Ivanhoe* was a Jesse James; his *Joan of Arc* was a "Powder Nose Annie."

And so he drifted, deeper and deeper into the under currents of life and he, who had once been a bright, clean, eager lad, followed the footsteps of his depraved heroes, beyond the pale of the law.

But—who was the real criminal? The boy's father—or mother?

## What Do Your Children Read?

Childhood days are the plastic days—when the childish mind can easily be molded and shaped to high ideals, when the directing influences of later life are indelibly formed.

You can safeguard the future of your boy—and girl, if you act promptly in securing for their entertainment and inspiration the

## Young Folks' Library

These wonderful books represent an idea—a truly great idea, evolved by a coterie of splendid men and women—men and women who never forgot the viewpoint of youth.

Between the covers of these books are to be found all a child may need from alphabet days to maturity. The subjects run the complete gamut of life, from fairyland to college days.

HOW THE LITTLE ONES WILL DELIGHT in having you read to them the wonderful fairy stories—the very best fairy stories in the world. And, as they grow older, they will find in this library, splendid characters, delightful stories to suit every mood and every age, from childhood up to manhood and womanhood. Romance, adventure, history—all intensely interesting—and clean.

## The Young Folks' Library Has Gone Into More Than 75,000 American Homes

There is not space enough here to begin to do justice to The Young Folks' Library idea—its splendid plan of Character Building. Let us tell you all about it. Let us send you—free—an exquisitely prepared book, replete with illustrations in color, describing The Young Folks' Library. Best of all, let us show you how the possession of this Library will safeguard and develop the morals and ideals of your children. You, yourself, in reading these books, will find new gems of thought and gradually the idea of The Young Folks' Library will dawn upon you—and you will be glad.

## But You Must Act Promptly

The cost of producing these books is advancing rapidly. The present edition is limited. The next edition must cost more money. Let us tell you how easily and at what a remarkably low cost you can now have The Young Folks' Library. Write today. Do this for your children. Every passing day closes one more door of opportunity—opportunity for you to bring your children into touch with the greatest influence for good ever devised by man. Write NOW!

University Research, Milwaukee, Wis.

## Some of the Editors of the Young Folks' Library

Thomas Bailey Aldrich, Editor in chief, Hamilton Wright Mabie, LL.D., Ernest Thompson-Seton, Joel Chandler Harris, Mary Hartwell Catherwood, George A. Henty, Caroline Ticknor, Henry Van Dyke, D.D., LL.D., The Rev. Thomas J. Shahan, Abbie Farwell Brown, John Townsend Trowbridge—and 17 other prominent authors and educators.

## Send for Free Book!

It is important that you forward the coupon immediately and obtain a handsomely illustrated booklet—free—with complete description of The Young Folks' Library still obtainable at last year's prices. The demand is great. The present edition is limited.

Pigeon House

## HODGSON PORTABLE HOUSES

Room 341, 71-73 Federal St.  
Boston, Massachusetts

E. F. HODGSON COMPANY

6 East 39th Street  
New York City

This sanitary poultry house is an egg record breaker for 12 hens. The setting coops keep the hens by themselves while setting. The pigeon house (with its flight cage) is fitted complete for 10 nests. Hodgson poultry and pet stock houses are the most scientifically constructed on the market. Made of painted sections that can be easily bolted together by anyone. Send for illustrated booklet.

Base and Floor  
one continuous  
piece.

Imperial Sanitary Floor

Put On Like Plaster—Wears Like Iron

It is a composition material, easily applied in plastic form over old or new wood, iron, concrete or other solid foundations—1/8 to 1-2 in. thick—Does not crack, peel or come loose from foundation. It presents a continuous, fine grained, smooth, non-slippery surface, practically a seamless tile—No cracks, crevices or joints for the accumulation of grease, dirt or moisture—Is noiseless and does not fatigue.

### The Best Floor

for Kitchen, Pantry, Bath Room, Laundry, Porch, Garage, Restaurant, Theater, Hotel, Factory, Office Building, Railroad Station, Hospital, and places where a beautiful, substantial and foot-easy floor is desired. Your choice of several practical colors. Full information and sample FREE on request.

**IMPERIAL FLOOR COMPANY**  
985 Cutler Building, Rochester, New York  
On the market 10 years.

## Danersk Decorative Furniture

We announce a new exhibition of complete sets in charming schemes. You buy more than furniture in Danersk settings; you buy ideas. Where else can you make your choice of just the right bed, desk and dressing table, with small upholstered chair, for a particular room, all finished specifically for you as a unit set in charming old Venetian tones to go with your choice of fabrics?

The beautiful things of the past were made for those who used them, and not to meet a commercial demand. Consultation without obligation to purchase. Buy direct or through your decorator.

First Door West of Fifth Avenue—4th Floor

well as precept that a good driver sees how much space, not how little, he can leave in any passing of another vehicle. Teach him road courtesy—the horn which warns of passage from the rear without demanding it—the passing a standing car on a muddy road slowly, the cutting off of glaring lights at night on meeting another car, the hand indicating a turn.

Explain the advantages of coasting down hill and the dangers of doing it when the hill is steep or curved. Show him that second gear was made to use, not for ornament, and that to force a good car on high merely because it will do it, is like driving a blooded horse at a gallop up a steep hill.

Instruct your pupil so that he drifts up to danger, an obstruction, a congestion in traffic, rather than runs up to it, depending on brakes to stop him. Let him learn to use the emergency brake, but teach him, too, that the good driver seldom has to use it because he doesn't have emergencies of his own making. Teach him to leave his car on a hill with a gear engaged and the front wheels turned, so that if the brake slips the car will not slide away. Show him about cold weather starting, and make him see for himself, before taking the car out, that water, gasoline and oil are present in sufficient quantities.

There are few better ways—if any—to give a child self-confidence and self-reliance, than by giving him the chance to control a great piece of mechanism and make it do his will in safety. And there is one and only one way to do this—by proper, careful, patient, enthusiastic and complete instruction.

## SAVE UP NOW FOR THE NEXT LOAN

(Continued from page 156)

tendent to secure subscriptions may partake somewhat of duress, in the long run is not the compulsion a good thing? The Government has declared itself in favor of granting to workers in war production a living wage, defining that term to include reasonable standards of health and comfort. Should not that wage be sufficient to enable every laborer to set aside, in Government securities, a hundred or half a hundred dollars against old age and bad weather? And if not, to use the old phrase then, why not?

I merely put the question because it is one which has arisen in connection with certain immediate situations involving industrial unrest and affecting the lives and happiness of a goodly proportion of the population. I know perfectly well that the managers of the Liberty Loan campaigns do not favor compulsion: when the Government compels, it taxes. I know that the war savings stamps were devised to take care of the pennies and dollars of people whose purses do not permit larger investments. It is also a demonstrable fact that the wage-earners as a whole are sincerely patriotic and are buying bonds to the limit of their ability to a greater extent than many folks who are better able to. The New England girl put in about ten per cent. of her entire income; supposing we all did that?

If Liberty Bonds are to be a permanent part of our domestic fiscal problem thru the years till the war is won, they will require of us several things. One is budget-making and sane domestic financing. Another is sustained faith in our Government and its cause. And another is the setting not only of a minimum standard wage, but the allowance, in that wage, of a minimum standard savings account. The whole war would be worth fighting for that.

WILLIAM LEAVITT STODDARD

## Democracy's Final Battle Ground

With America's active participation in the World War, the battle areas during the past few months have become more concentrated. Interest from now on to the end will center on the Western Front and the Italian Front, where the principles at stake will be bitterly contested and the safety of the World's Democracy finally gained.

Our boys are "over there" in hundreds of thousands. Our infantry are in the trenches. Our artillery are behind the lines. Our engineers are building railways and bridges. Our aviators are bombing the German lines. Our Medical Corps and Red Cross are within the sound of the big guns. Our activities are everywhere.

### The Superiority of These New War Maps

I. 8-3-18

ILLUSTRATED  
WORLD

Drexel Ave. and  
58th St., Chicago, Ill.

Enclosed find \$1.00 for which send me the World War Atlas described on this page and five issues of Illustrated World starting with the August issue.

The need of complete maps is manifest to the most casual observer of the newspapers, for it is the small, obscure towns that are more frequently mentioned. Accordingly these new maps have been especially prepared within the last few months so that every small town for many miles on either side of the American, French, British, Canadian and Italian Fronts is included.

To get all of the above in one big folder  
Atlas, mail the coupon today

BRINGING IN THE BOCHES

(Continued from page 157)

ming back to the south bank of the river, made his way unharmed to American regimental headquarters. As he was reporting to an American colonel in walked one of our men with the German captain who had captured the American corporal three hours before. As they recognized each other the corporal broke into a laugh and the German captain said: "You must be a brave man."

Three American doughboys captured and sent back across the Marne killed their three guards with their bare hands and got back to their own lines after swimming the Marne.

Seven other Americans, including a lieutenant, were taken over the Marne by the Germans. The lieutenant knocked one guard down with a stick of wood, got his gun and disarmed the other guards. The seven Americans started to swim the Marne, when a boche machine gun opened on them. The lieutenant and one American were killed. The others got back by swimming under water.

I give these instances because nothing else tells so well the spirit of the American fighters. They haven't got all the training of seasoned veterans, they don't know how to retreat, but they have "guts." They don't know when to quit. Caught out there in the woods by the Germans advancing three ways, they didn't try to get back, but stayed where they were because that's where the Germans were, and they came to France to kill Germans. There in the woods, without food or water in most cases, and swept by a merciless shellfire, often wearing gas masks for hours at a time, hundreds of Americans stuck, fighting sometimes singly, and generally in bunches of three or four. They fought until their ammunition gave out, and then fought with captured guns.

The Germans made their first advance thru the woods at three o'clock Monday morning. It was nine o'clock that night before the Americans came back, with the boche fleeing before them, and were joined by their comrades, who had borne their part so well.

Perhaps our boys would have driven the boche back on the Marne anyhow, but I happen to know that the knowledge of the presence of their comrades still fighting in the woods against such odds lent a punch to their successful counterattack. It must be remembered that these soldiers never saw a battle before. They do not know many of the rules, but they do know one—fight as long as the fighting is good, and then fight some more. In Broadway parlance, the show staged by the Americans east of Château-Thierry has been a howling success. It may be remembered that the show they staged northeast of Château-Thierry was the same sort of a performance. The French have now changed the name of Bois Belleau to Bois de la Brigade de Marines.

Man in Passing Car—Have an accident, old fellow?

Man Under Car (grimly)—No, thank you, just had one. *Au revoir.*

The Commanding Officer—Close on first company!

The Cadet Officer—My company is already dressed, sir. *Purple Cow.*

It must be very difficult to be a German cartoonist, and not be allowed to call attention to the fact that the Crown Prince looks exactly like a dachshund. *Cleveland Plain Dealer.*

THE INDEPENDENT

## ON THE HOME STRETCH

(Continued from page 152)

General Diaz replaced Cadorna, aid was hurried to the Italian front from France and Britain, all unpatriotic intrigues were suppressed by a government at last awake to its peril, and everything was done to refit the Italian army with needed supplies and to restore its shaken morale. A long period of comparative quiet along the Piave permitted full recuperation for Italy. When an Austrian army attempted in June to repeat the triumph of the previous autumn it found a very different Italy barring its way. The Austrian drive was unable to break the Piave line, and such troops as did obtain a foothold beyond the river were cut off from their supports by serious floods. Caught between the victorious Italians and the rain-swollen river they surrendered by the thousand. The retreat from Caporetto was at last avenged.

The Italians have also made some recent progress in Albania. From the Adriatic to the Aegean a composite army of Italians, Greeks, Serbs, French and British holds the Balkan front, but for some unknown reason there has been no important offensive in this theater of war during the past year. Perhaps the Italian advance in Albania may forecast an end to this long deadlock.

### HINDENBURG'S HAMMER

November 20, 1917—British make surprise attack toward Cambrai.

December 1, 1917—German counter-attack halts British progress.

March 21, 1918—Germans open campaign by great drive toward Amiens.

April 9, 1918—Germans attack south of Ypres.

May 27, 1918—Third German drive strikes south to the Marne.

June 9, 1918—Fourth German offensive.

July 15, 1918—Germans attack east and west of Rheims.

Thruout the year 1917 the Western Allies kept the offensive on the entrenched line from Switzerland to the Flemish coast. The Central Powers, bent on crushing Russia, Rumania and Italy, could not at the same time throw their full force into the campaign in France and Belgium. The Allies, with both numbers and munitionment in their favor, compelled the Germans to abandon one position after another. Hindenburg's great retreat in March was conducted with little loss, but later in the year the British made gains east of Arras and east and south of Ypres in the face of stubborn German resistance which involved heavy losses to the defenders as well as to the assailants. The French were more successful in their advances from Verdun and near Craonne than were the Germans in their costly attacks along the Chemin des Dames. In December the British gained much ground near Cambrai by a sudden attack, not preceded by usual artillery bombardment but carried out with the aid of a large number of "tanks." On the whole, the Allies had cause to be satisfied with the year's work in spite of the heavy rains which had halted the British drive in Flanders and the recapture by a German counter-attack of some of the territory won in the Cambrai drive.

The new year opened with much gloomier prospects. Russia and Rumania were virtually out of the war and Italy's campaign had closed in disaster. Germany was free at last to settle accounts with France and Britain. It is an open question whether or not the Germans had, as was alleged, an actual superiority in men and artillery on the western front, but they had a very decided advantage in position. The battle front from Flanders to Verdun sweeps thru northern France in a great curve, with the result that the Germans who have the "inside track" can shift men and supplies from one part of the line to another in much

shorter time than can the Allies, who are compelled to travel around the outside of the bend. The Germans, moreover, had devastated the country over which they had retreated with such ruthless thoroughness that the Allies had to build new lines of communication for the use of their armies, whereas the Germans had undamaged roads and railroads to supply their lines. The German armies also enjoyed the advantage of absolute unity of command, which was not the case with the Allies until the appointment of General Foch to supreme command after the spring campaign had opened. Finally, the Allies could afford to wait until their armies had been strengthened by American aid; Germany had no America to draw upon and would never again find herself relatively so strong on the western front.

In the spring of 1918 the Germans made five successive drives at the Allied lines, spending lives recklessly in each advance but shifting to a new sector of the front whenever an attack was halted by the arrival of reinforcements for the defenders. The first blow (characterized by the war correspondent, George Periss, as "in design and execution the most powerful operation in the history of warfare") recaptured the territory which had been lost in the German retreat of the previous year and approached almost to Amiens. The second blow won for the Germans the hilly ground south of Ypres, but not the city itself. The third attack drove a deep wedge between Reims and Soissons with its base north of the Aisne and its apex at Chateau Thierry on the Marne. The fourth drive, along the River Oise, aimed directly at Paris, but did not achieve much progress and a surprise attack on Reims a few days later failed altogether. Unable to reach Paris with their armies, the Germans bombarded it with new long range cannon from a distance of more than seventy-five miles.

For about a month after the close of Germany's fourth offensive there was a comparative lull in the campaign. The Allies took advantage of this respite to improve their positions by local raids and to bring into the trenches a large American force, hitherto held in reserve. The fifth German drive opened to the east and to the west of Reims. East of the city little was gained, but to the west the Germans forced their way beyond the Marne. On this occasion the Allies were ready to parry the blow. They forced the Germans from their positions south of the Marne and crushed in the western side of the German salient near Soissons. Americans took an important part in this action.

### AMERICA IN THE WAR

April 2, 1917—President Wilson makes the decision for war.

June 5, 1917—First registration for compulsory military service.

October 27, 1917—American soldiers enter French trenches.

December 7, 1917—War with Austria-Hungary.

July 4, 1918—Merchant fleet launched from American shipyards. More than a million American soldiers in France.

July 18, 1918—Americans take part in great battle near Soissons.

The American achievement may quite possibly be the decisive factor in the Great War. We have increased our army from about two hundred thousand to more than ten times that figure, we have carried over a million men across the Atlantic and taken over several miles of trench line from the Allies, we have oversubscribed three Liberty Loans and financed the Entente Allies, we have added about five million tons of shipping to our merchant marine, and, in spite of U-boat warfare, we have increased our shipments of food and munitions to

Europe while supplying our own army with all its needs. For the year following July 1, 1917, our Government spent more than \$12,600,000,000; a dozen times the normal expenditure in time of peace. Last but certainly not least, our army has seen active fighting in the greatest battles of the year and has contributed not a little to breaking the force of Germany's offensive.

It is not yet possible to speak of an "American campaign" as the army contingents under General Pershing have been scattered along the western front at various points, the location of which has been carefully concealed until the enemy discovered it in the course of fighting. The most important actions in which large American forces have been engaged center around Chateau Thierry, where the trench line bends farthest south between Rheims and Paris. Our engineers and aviators have been everywhere on the western front and even in Italy. Among the American aviators who have paid their last full measure of devotion to the common cause are ex-Mayor Mitchel, of New York City, killed in a trial flight, and Quentin Roosevelt, killed in action. Our aircraft production has been seriously delayed by controversy over methods of construction but is now proceeding satisfactorily. The American navy has done useful work in hunting down German submarines in both European and American waters.

#### OUTSIDE OF EUROPE

August 14, 1917—China declares war.

October 26, 1917—Brazil declares war.

December 10, 1917—British enter Jerusalem.

During the past year several nations have joined the Allies; Brazil, China, Costa Rica, Guatemala, Hayti, Honduras, Liberia and Nicaragua. None have joined the Central Powers, altho some neutral nations, notably Ukrainia and Finland, have fallen more or less under German influence. Difficulties of transportation have prevented Japan, China and the Allied nations of Latin America from actively sharing in the fortunes of the battlefield, but they have been of much assistance in supplying shipping tonnage and in giving their fellow belligerents preference in the export trade. Japan may play a more active role should the Allies determine to intervene in Russia.

If we except the chaotic civil war which rages thruout Russian Asia the only important theater of war outside Europe at the present time is the British battle line in Asiatic Turkey. The destruction of Russian military power not only permitted the Turks to reconquer Armenia, invade the Russian Transcaucasus and occupy northwestern Persia, but it also endangered the British army in Mesopotamia. The advance from Bagdad to Mosul was halted and the British placed on the defensive. In the west the British were more successful. After repeated failures they advanced thru southern Palestine and entered the city of Jerusalem, which thus passed under Christian sovereignty for the first time since the days of the Crusaders.

#### THE POLITICAL FRONT

August 1, 1917—Pope Benedict proposes peace to the nations.

October 29, 1917—Count Georg von Hertling becomes German Chancellor.

November 15, 1917—Clemenceau appointed French Premier.

January 2, 1918—President Wilson details American peace term.

April 17, 1918—Foreign Minister Czernin of Austria-Hungary resigns.

The fourth year of war was marked by a growing hunger for peace on the part of all belligerents, particularly those who had been in the struggle from the first. It is true that the Central Powers have not, even to this day, issued any such detailed statement of their war aims as did the Entente Allies in their joint answer to President Wilson's note. It is also true that the En-

## Shelltex Rimmed Shur-on EYEGLASSES AND SPECTACLES

## How To Change Your Life

ELIZABETH TOWNE  
Author of *NEW THOUGHTS*

in eight chapters. It explains: How to Awaken Latent Powers; The Supreme Truth which Joyous, Successful Living is Founded; How to Remove the Fundamental Cause of Inharmonious; How to Increase Efficiency in Your Work; How to Enter the Silence; The Cumulative Results of Using New Thought; How to Use Affirmations to Heal Yourself; The New Thought Way to the Realization of Desires; How to Connect with your Spiritual Supply.

**For 10 Cents**

we will send you this booklet and a month's trial of *New Thought*, leading New Thought magazine. Elizabeth Towne and William E. Towne, editors. Dr. Orison Swift, Swedenborg and Edwin Markham are among its contributors. Send now and we will include "What I Know About New Thought" by Lily Wheeler Wilcox.

**THE ELIZABETH TOWNE CO.**  
Dept. E-2 Holyoke, Massachusetts

There are a hundred little enemies of achievement in your home, social and business relations.

They are fear, worry, jealousy, anger, habit, etc.

They divide your energies and undermine your happiness.

They cloud your reason and cripple your mental processes.

They shatter nerves, discourage effort, and damage the controlled wisdom of parents.

New Thought is the power to use against these underminers of achievement.

### New Thought Ways

"The Gist of New Thought," by Paul Ellsworth, is a practical working manual of New Thought

tente Allies have not yet revised their declaration of January, 1917, altho the changes which have taken place in Russia have made some clauses of that declaration obsolete. But spokesmen of individual countries have made frequent public statements of the terms on which they would consider peace.

The Pope took advantage of the end of the third year of war to outline a plan of settlement which might prove acceptable to all the belligerents. He proposed a general diminution of armaments, the restoration of conquered territory, the abandonment of claims for indemnity, the liberation of Poland and a territorial settlement by agreement between France and Germany and between Italy and Austria. The German Government, which had evaded returning a direct answer to President Wilson's request for a statement of terms and to the Reichstag resolution favoring a peace without conquests, answered the Pope's peace overture in a very sympathetic manner. On territorial questions the German reply said nothing definite, but it placed great emphasis on the advantages of limitation of armaments; rather strangely in view of the fact that at the Hague conferences and on other occasions it was the opposition of Germany that prevented the powers from adopting a program of partial disarmament. The Austro-Hungarian reply was on similar lines. President Wilson replied to the Pope that greatly as America desired peace it was impossible to "take the word of the present rulers of Germany as a guarantee of anything that is to endure."

The next round of diplomatic statements was called out by the Russian peace negotiations at Brest-Litovsk. Premier Lloyd George spoke for England on January 5 and President Wilson for the United States three days later. The substance of the two statements was almost identical, but President Wilson's remarks were somewhat the more definite and concrete in form, being summarized in fourteen enumerated propositions. The American terms included: (1) the abolition of secret diplomacy, (2) the freedom of the seas, (3) no commercial discriminations, (4) reduction of armaments, (5) adjustment of colonial claims with reference to the welfare of the native populations, (6) evacuation of Russian territory and freedom from foreign interference for her people, (7) the restoration of Belgium, (8) the righting of the wrong done to Alsace-Lorraine, (9) the settlement of the Austro-Italian frontier on the principle of nationality, (10) autonomy for the peoples of Austria-Hungary, (11) the settlement of the Balkan question on national lines with free access to the sea for a restored Serbia, (12) freedom for the nationalities under Turkish rule and international guarantees for the free use of the Dardanelles, (13) the restoration of an independent Poland with access to the sea, (14) a general association of nations. Chancellor von Hertling, for Germany, and Foreign Minister Czernin, for Austria-Hungary, replied to the President's peace proposals in an unsatisfactory manner.

The ungenerous peace terms imposed on Russia and Rumania by the Central Powers put an end to the period of negotiations. President Wilson has more than once restated the American position, but has not substantially altered any of his fourteen proposals, nor has any statesman of the Allies proposed a definite alternative policy. President Wilson's statement of January 8 may therefore be taken as the minimum peace basis of the nations at war with Germany; the individual nations reserving, no doubt, certain additional proposals of their own for the peace conference. From statements by spokesmen of the Central Powers it is apparent that they would sacrifice their military conquests in the west in re-

turn for the free hand in the exploitation of eastern Europe promised them by the peace of Brest-Litovsk.

All nations unite to give public condemnation to "secret diplomacy," and yet there is nothing more certain than that peace negotiations float like icebergs, mostly below the surface. Premier Clemenceau, of France, wrecked the political career of Count Czernin, the adroit Foreign Minister of the Austro-Hungarian Empire, by revealing the secret negotiations of the Emperor Charles who, presumably without the previous consent of Berlin, acknowledged "France's just claims regarding Alsace-Lorraine."

The Bolsheviks, by publishing the confidential papers of the Russian Foreign Office, have thrown a flood of light into some dark corners of diplomacy. The "secret treaties," now no longer secret, provided for the partition of the Turkish Empire into spheres of influence for the benefit of the Allies; the expansion of Italy to the east of the Adriatic; the solution of the Polish question, and therefore the determination of Germany's eastern frontier, by Russia, and the determination of Germany's western frontier according to the wishes of France. Various documents which were unearthed show that the Russian military clique plotted the betrayal of Rumania, that Italy asked her allies to agree not to accept peace mediation from the Pope, and that the German Emperor at the time of the Russo-Japanese war had attempted to bring about an alliance of Russia and Germany against Great Britain without the previous knowledge of France, altho Russia at that time was bound to France by a treaty of alliance.

Not less interesting have been the recent disclosures of German intrigues and plots in neutral countries. The correspondence of the deposed King Constantine of Greece shows that only the military pressure of the Entente Allies—much criticized at the time—kept the King from betraying his country to Germany. The seizure of papers belonging to the German Embassy in this country revealed a widespread plot to wreck the industries of the United States which were exporting to the Entente Allies and to cover the country with paid spies and propagandists. In Rumania, while that country was yet neutral, German official agents smuggled explosives into Bucharest and phials of disease germs for the inoculation of horses. The intercepted telegrams of Count Luxburg, the German diplomatic representative to Argentina, contained the famous advice that Argentine ships for Europe be "sunk without leaving a trace."

Prince Lichnowsky, German Ambassador to London at the opening of the Great War, wrote in 1916 a narrative account of the German diplomacy which led up to the war, but it was not made public till the present year. In this memorandum he shows that Great Britain had made concessions in both Mesopotamia and Central Africa which satisfied all of Germany's demands for colonies and open markets; that Sir Edward Grey worked constantly for peace with Germany; that the crushing of Serbia even at the risk of war with Russia was determined at a secret conference held in Potsdam on July 5, 1914, and that Germany's commercial future had been sacrificed to the hunger of the military oligarchy of the Empire for conquests on the continent of Europe. A letter from Dr. Mühlton, a former director of the Krupp company, confirms Prince Lichnowsky's account of the aggressive plotting of the German war party during July, 1914, to make peace impossible. It may be said that never before in history has a conspiracy to bring about a war been so thoroughly exposed within so brief a period.

## A TALK WITH CORPORAL X

BY THE PARIS CORRESPONDENT OF THE NEW YORK TIMES

An American soldier, just from the front, carrying his rifle and forty-one pounds of equipment, trudged up three spiral flights of stairs in the New York Times office in Paris to see the American papers. He stayed nearly all day, poring over files, thus devoting 25 per cent of four days' leave to catching up on home news.

"France is a great country," he said, "but two things get on my nerves. I never can find out the name of the village in which I am fighting, and you would never know from the French newspapers that there was such a place as Glens Falls, New York. Now, Glens Falls is a regular place. I come from it."

He was searching *The Times'* files as he talked. Suddenly there was a grunt of delight.

"Now, there's something about Glens Falls right here," he said. "I knew there would be. It says that the paper mill men are not going to strike. Well, they'd better not. This is a hell of a time to strike in America. They're getting a lot more now than I got in the paper mills. But you would think that the French papers would say something about Glens Falls once in a while."

"About that other thing that bothers me—not knowing the names of the places where we fight—some French villages are just one street and two long rows of houses. Sometimes the name of the village is painted on the last house. We were fighting thru one of these streets the other day when I saw the name, but before I had time to spell it out a shell blew off that corner of the house and I never knew where I was."

"I felt kind of sore, because I had got this cross of war just outside that village the day before for taking a message thru shellfire. Now, somebody will ask me where I got it and if I don't know they'll say I'm a faker."

He showed me the cross of war on his coat, with a silver star added to the ribbon. The cross was for making his way from one shell hole to another under heavy fire with an important communication. The silver star had been added because the soldier had risked his own life to bring in a wounded French lieutenant. He also wore a ribbon showing service in Mexico.

"I want to get all dolled up in these crosses and things like a regular Frenchman before I go back home," he admitted. "Some fellows say they don't care, but all are crazy for 'em. I was hoping I'd get something all the time, crawling among these holes."

"Of course, the star was different, because you don't think of medals when you've got a wounded man across your back."

He turned from medals to equipment and thrust his rifle into my hand.

A Business Man in the Garden.. 204

By Frank Farrington

"That's the best rifle in the American Army," he said, "just lift it. Balance it. I've used sixteen all told in Mexico, the United States, and France, and that's the best of the lot. I believe it would load, aim and shoot all by itself if I was too busy. It never gets heavy because it has such a good balance, just like a garden hoe after you get used to it."

"That's a beautiful gas mask, too. Best I've ever had, it fits comfortably, and when you get the knack you can spit out of it. I'd like to keep the same gun and mask all the way to Berlin. There's a village I'll know the name of."

Then the soldier resumed his search of the files for home town news.

## REMARKABLE REMARKS

THE KAISER Wilson should have his throat cut.

MARY ROBERTS RINEHART—The American woman is a pampered woman.

DOROTHY DIX—There is no way of gagging the intelligence of a debutante.

SKIPWICH CANNALL—I am Jehovah the Great. Nothing is as great as I am.

SENATOR HIRAM JOHNSON—There is a cowed press today and you know it.

GLEN BUCK—War makes widows, but oh Algernon, widows also make war.

EZRA POUND—In an uninterrupted night one could get a good deal of kissing done.

WALT MASON—The pants I drew in Father's will are fit for ample service still.

GENERAL VON HINDENBURG—The country suffers. It is deplorable but it is for the best.

PREMIER LLOYD GEORGE—The British mercantile marine is the windpipe of the Allied armies.

H. D. COX, M.D.—The fewer remedies you employ in any disease, the better are your patients.

ENID BAGNOLD—When a woman says she cannot come to lunch, it is because she doesn't want to.

BUGS BAER—Crowns are dropping off royal skullpieces like ripe huckleberries in a Missouri gale.

THE POPE—Nothing is more powerful to placate the Divine Majesty than the holy sacrifice of the mass.

GENERAL FOCH—The victory always goes to those who win it by superior force of intelligence and will.

HARRY KEMP—Must it always be one of life's big ironies that the poet and artist is regarded as a loafer?

OLIVE WADSLEY—The only truth that ever matters to a woman is that told by some one who cares for her.

JOHN HASTINGS TURNER—They say we come naked into the world; it is untrue. A woman is born with a kiss in each hand.

ED. HOWE—Had Lincoln failed of the Presidency and become a Chautauqua lecturer I sometimes think he would have been a dangerous disturber.

EDWARD A. FILENE—The man who doesn't spend his money and himself in this war will spend the rest of his life explaining why he didn't—or lying about it.

VICE-PRESIDENT MARSHALL—I would require every American citizen to repeat each waking hour, "Patience, Patience, God reigns, the Government at Washington still lives."

ROSE PASTOR STOKES—Theodore Roosevelt in the Kansas City *Star* has attacked the Administration and said things any Socialist would have been sent away twenty years for saying.

JAMES JOHNSON, M.D.—I declare as my conscientious conviction that if there were not a single physician, surgeon, man, midwife, chemist, apothecary, druggist or drug on the face of the earth, there would be less sickness and mortality than now prevails.

## THE MEANING OF THE GERMAN RETREAT

THE Franco-American counter-offensive from the Marne, started July 18, had at the end of ten days recovered about half of the territory gained by the Germans in their last offensive. The Germans went forward about thirty miles; they have fallen back about fifteen. The ground regained is not of so much importance as the fact that the German plans for a final offensive this summer have been disarranged if not altogether frustrated. These plans had been worked out, prepared for, and rehearsed with all the military science that the German General Staff had at its command and in the first three offensives of the season they had worked better than their authors had hoped. When the Germans started their southward drive from the Aisne they only expected to get to the Vesle, but finding resistance unexpectedly weak they pushed on swiftly to the Marne. This put them in a deep and dangerous salient and their efforts were next directed toward widening its base toward the west and east. The first of these offensives, the attempt to extend the base line west of Soissons, was foiled by the stubborn resistance of the French. The second offensive, the attempt to extend the eastern side of the salient by taking Reims and Epernay, was countered very cleverly by Foch's offensive on the western side of the salient. This plan is said to have been devised by General Pétain and his staff. It was submitted to the Commander in Chief of the Allied armies on July 12 and approved by him the following day, that is, two days before the Germans began their movement up the Marne toward Epernay.

The ingenuity of the plan may be seen when we consider the difficulty of the situation. By their spring offensives the Germans had brought their lines within forty or fifty miles of Paris both on the north and the east. This compelled Foch to keep the bulk of his reserves in the angle between these lines in order to protect the capital. The Germans, having thus pinned him down to this position, rashly assumed that they would have freedom of action and could throw the weight of their forces wherever they pleased. By their drive from Soissons to Château Thierry they had cut the principal railroads leading from Paris to the eastern front. How then was Foch to meet the menace of the eastward drive? To check this he would have to subtract a considerable contingent from the troops defending Paris and send them by roundabout routes to the eastern side of the German salient. This diversion of forces might perhaps save Reims and Epernay, but at the risk of losing Paris.

But instead of remaining on the defensive in either quarter Foch decided to take the offensive, so as soon as the Germans were across the Marne and well on their way toward Epernay from the eastern side of the salient, Foch launched his attack on the western side. The Germans were not expecting this, for during the last four years the Allies had mostly confined their efforts to holding such portions of the line as the Germans chose to attack. The enemy did not

realize that the armies of the Allies were "under entirely new management." But Foch has always taught as a fundamental principle of his system of strategy that the best defensive was a strong offensive. He had, besides, been recently reinforced by a million young Americans anxious to win their spurs and fighting with a dash and recklessness very different from the war-weary and over-aged soldiers who now make up a large part of the armies of all the European belligerents.

These fresh forces interspersed with French veterans, thrown against the German west front between Soissons and Château Thierry, completely turned tables on the Germans. They were forced not only to abandon their advance toward Epernay but to withdraw from the southern half of their salient. They were driven from the Ourcq as they were driven from the Marne, and it remains to be seen whether they will be able to make a stand on the Vesle or will be obliged to fall back to their original line along the Ladies' Road north of the Aisne.

The German retreat has been conducted with sufficient skill to avoid disaster. The flanks have held in spite of heavy pounding on the side of Soissons and Reims, so the Crown Prince's army was not "pocketed" as some of our oversanguine journalists anticipated. The Franco-American troops took some 25,000 prisoners in the first few days and found in the woods north of the Marne immense stacks of big shells intended for the attack on Paris. But since then the captures of men and supplies have been less and it seems that the seventy divisions which occupied the salient have mostly been withdrawn together with their guns. The losses on both sides have been heavy, but we do not know whether the offensive or defensive have suffered most or how it leaves their relative strength. Neither side has been obliged to draw upon the forces which face one another on the Amiens-Ypres front and this battle can be fought on much the same terms—so far as numbers go—as before the Germans gained and lost the Marne.

But if the fight for the Channel ports is renewed the Allies will have one immense advantage over the former conditions. They have gained confidence and in the only rational way of gaining confidence, by experience. They know now that a German advance is not invincible. German strategy is not infallible. The Germans have not only been out-fought; they have been out-thought. The American troops have demonstrated their courage and—what was more in question—their discipline and training. The Germans now know that their new foes are equal to any they have encountered. They have suffered the most severe setback since the first battle of the Marne. At Fère Champenoise on September 7, 1914, Foch struck the first blow at German power. At Fère-en-Tardenois on July 28, 1918, he has perhaps delivered the decisive stroke.

## THE RESTRAINT OF MOB-MINDEDNESS

THE President has discharged an important duty and rendered a substantial service to American civilization in his strong declaration against mob-mindedness.

It is a humiliating fact that the declaration was called for, but when a fact has become notorious nothing is gained by denying or ignoring it. Mob-mindedness is, all in all, the worst thing in America. It is the sin of which we should be most deeply ashamed. The record of lynchings in the United States since the Civil War is long and gruesome.

Race antagonism has given excuse and provocation to mob-mindedness in the South, but we make a profound mistake if we assume that it has been the one cause of mob-mindedness. There have been too many terrible manifestations of collective violence in northern states and against white men to permit us to adopt that explanation. Lawless violence against I. W. W. men, rightly or wrongly accused of criminality, and more recently against men rightly or wrongly accused of disloyalty, have warned us that mob-mindedness has many provocations, can find material of many kinds to work on, and may break out anywhere.

Mr. Wilson's word will be influential. It will actually be a powerful deterrent. No man in this country or in the world is listened to at the present time with so much deference. In the South he is respected as no other public man has been for a generation by the men who have mistakenly defended lynching as an unfortunate social necessity. Thruout the North he is respected by all the elements that are sternly for carrying on the war. The considerations that he has urged against lawlessness are unanswerable. Lawlessness is the negation of that very civilization which we profess to defend. It makes our allies grieve, for it is a manifestation of the same spirit that thru the Hun has ravaged France and Belgium and assassinated women and children under the plea of necessity.

For, we must remember, the mob spirit is practically always a product of more and other psychological forces than mere vindictive rage. More often than not a lynching is conducted as systematically as a legal execution. It is planned and put thru by grimly resolute men who return quietly to their occupations as if they had discharged a public duty. Usually it is in large measure a product of resentful dissatisfaction with the slow processes and the uncertainties of the criminal law. It is this fact which makes it necessary for those who deplore mob-mindedness to make an intellectual as well as a moral appeal. The men who justify lynchings must be made to see that social order loses infinitely more than it gains when the formal procedures of the law are flouted and violence is resorted to.

When Teutonism has been destroyed, a task quite as formidable as the war will confront a liberal civilization. The menace of destructive revolution must be faced and the struggle will be long and bitter. The philosophy which justifies cruelty, destruction, sabotage, waste and lawlessness in every form must be exposed and put out of business. Only so can social order, justice and happiness be made secure. The task will be an impossible one unless we in America clarify our thinking on these matters, impose upon ourselves the self-discipline of enlightened free men, and sternly repress all outbreaks of the mob spirit.

## GETTING ON WITHOUT GENIUSES

IT has been often noted as curious that the Great War has produced no great warrior. Most of the generals of both sides who figured in the despatches of 1914 are now little heard of. The wooden idol which the German people raised in honor of Hindenburg is not yet nailed up, but already he is being eclipsed by Ludendorff. Foch, who is regarded as the greatest strategist on the side of the Allies, has now for the first time an opportunity to show what he can do. These or some man of less prominence may

turn out to be equal to the most renowned commanders of history, but the noteworthy fact remains that a war involving twenty-five nations has lasted for four years without the appearance of any superlative military genius, such as has characterized the wars of the past. At any rate, armies greater than Cæsar, Napoleon, Charles XII or Frederick the Great ever commanded are now being successfully managed by men who in most cases are obviously not of that magnitude.

But it has not been so often noted that what is true of modern warfare is true of modern life in general. It does not necessarily require great genius to manage great affairs in business. Some of our "captains of industry" are men of undeniable genius, but financial and industrial enterprises of unprecedented extent are nowadays maintained, even launched, by men of quite ordinary ability. The organization of an office force, the planning of a factory, the erection of a building, the construction of a ship, the financing of a corporation, the running of a newspaper, the management of a publicity campaign, the equipment of an exploration party, the feeding of a working force, the purchasing for a department store, are all operations so well understood now that it is not difficult to find men who can carry them on competently if not brilliantly.

It is questionable if the average brain capacity of the human race has increased within historic times or if individuals of superior natural endowment are any less rare than formerly. Certainly the achievements in which the moderns surpass the ancients are due not to superior ability but to education and organization. By learning how to do things in the best way and then training others in that way a great deal more can be accomplished than by an individual genius. It takes an athlete to jump a ten foot ditch. Probably not one man out of a thousand could possibly do it by any amount of determination or exertion. But the other 999 could, if properly organized, fill up the ditch. It required a great genius like Columbus to discover America, but if by some chance America had remained undiscovered up to the present time the captain of any ordinary tramp steamer could have done it. Darwin was a genius, but much more has been found about evolution since his time than he ever knew and most of it by men of less intellectual ability. The great discovery of modern times is that it does not require a genius to make discoveries. No one less than a Copernicus or a Galileo could in the discouragements and confusions of their times have elucidated the constitution of the solar system and the laws of falling bodies, but in our well equipt observatories and laboratories problems of much greater difficulty are worked out by men who are not necessarily endowed with their exceptional originality and will power. Modern painters and sculptors of mediocre ability can do as good work as the old masters. This is proved by the fact that it is so easy to forge antiques or to mistake an imitation for an original. Even an expert like Dr. Bode of the Berlin Museum pays \$25,000 for a wax bust of Flora on the supposition that it is by Da Vinci and is only undeceived when it is found to be stuffed with Manchester rags. In literature it is the same. There are many living scholars who would be capable of fabricating a missing play of Shakespeare, ancient epic, book of Aristotle or chapter of the Bible and if the forgery were discovered it would be thru some accidental anachronism, not by any inferiority of style or thought. Imagine the sensation that would be produced by the discovery of a Greek or Latin romance equal to the average of the five hundred novels published every year in America. We see that even in the fields of the creative imagination as in art, literature and science the many can do what was formerly possible only to the few.

Since the war began there has appeared in France and

England and more recently in this country a large number of books and articles aiming to show that the Germans did not deserve their reputation for scientific, scholarly and technical ability, that they were mere imitators and plodders, that they have had no great men of late and that all the great inventions and discoveries of recent times had been made in other countries. Of course polemical literature produced under such circumstances is not to be taken too seriously, but let us assume that it is all true, that Germany has been devoid or deficient in original genius. How then shall we explain the rapidity with which Germany had been gaining on her competitors in commerce and industry and the disproportionately large share that she has contributed to the world's fund of historical and scientific knowledge? How can we account for the fertility of invention and ability of adaptation that she has shown during the years that she has been cut off from the rest of the world? Obviously the only explanation is that Germany has found a way of using mediocre men to do the work that formerly could be accomplished only by exceptional men. Whether Germany actually grows fewer geniuses per acre than France and England is a question which it is impossible to determine and on which it would be rash to express an opinion. But at any rate it seems clear that Germany's achievements have been rather due to her knack of getting more out of the ordinary individual than to any superiority of natural endowment.

Germans of the saner sort would go far toward agreeing with those who decry German genius. Professor Ostwald in analyzing national psychology claims for Germans only one point of superiority, the power of organization. Friedrich Naumann in his "Central Europe" says also:

What is distinctively German is not a new quality, non-existent elsewhere in the world, but the methodical increase of a capacity which other peoples have too, but which they do not develop in so scholarly and deliberate a fashion.

Now this view of the matter is decidedly encouraging. If the Germans were really supermen, as some of them claim and as some of their enemies seem inclined to believe, then we should have to lie down and let them walk over us or wage a hopeless warfare like African savages against the whites. If they had chemical brains and we did not, then we might as well give up and buy our dyestuffs from them. But one graduate who went over to Germany and gained entrance to one of the great chemical plants that led the whole world in coal tar products was surprised to find the laboratories no better equipt and his associates no better chemists than those he knew in America. But there were more of them and they worked harder, that was all. In England a rich man like Lord Rayleigh taking up science in his leisure time might make a brilliant discovery like argon. But for one such there would be in Germany a score of men grubbing away all the time and in the long run their contributions to science might amount to as much. So in this war we do not know that Germany has any military genius of the highest order, but we do know that she has a staff of well trained and business-like men that serves her purpose quite as well.

Genius is an erratic thing. We do not know of any way of increasing the crop and we cannot depend on "the man of the hour" coming to time. But fortunately we have found out that everything or nearly everything that genius can do can be done by common men. The need of great men is as great as ever. The opportunity for great men is greater than ever. But we can, if necessary, get along without them.

## DEMOCRACY BEGINS AT HOME

### President Wilson's Challenge to Americans

MY FELLOW COUNTRYMEN:

I take the liberty of addressing you upon a subject which so vitally affects the honor of the nation and the very character and integrity of our institutions that I trust you will think me justified in speaking very plainly about it.

I allude to the mob spirit which has recently here and there very frequently shown its head among us, not in any single region but in many and widely separated parts of the country. There have been many lynchings, and every one of them has been a blow at the heart of ordered law and humane justice.

No man who loves America, no man who really cares for her fame and honor and character, or who is truly loyal to her institutions, can justify mob action while the courts of justice are open and the governments of the states and the nation are ready and able to do their duty.

We are at this very moment fighting lawless passion. Germany has outlawed herself among the nations because she has disregarded the sacred obligations of law and has made lynchers of her armies. Lynchers emulate her disgraceful example. I, for my part, am anxious to see every community in America rise above that level, with pride and a fixed resolution which no man or set of men can afford to despise.

We proudly claim to be the champions of democracy. If we really are in deed and in truth let us see to it that we do not discredit our own. I say plainly that every American who takes part in the action of a mob or gives any sort of countenance is no true son of this great democracy, but its betrayer, and does more to discredit her by that single disloyalty to her standards of law and right than the words of her statesmen or the sacrifices of her heroic boys in the trenches can do to make suffering people believe her to be their savior.

How shall we commend democracy to the acceptance of other peoples if we disgrace our own by proving that it is, after all, no protection to the weak? Every mob contributes to German lies about the United States, what her most gifted liars cannot improve upon by the way of calumny. They can at least say that such things cannot happen in Germany except in times of revolution, when law is swept away!

I therefore very earnestly and solemnly beg that the governors of all the states, the law officers of every community, and, above all, the men and women of every community in the United States, all who revere America and wish to keep her name without stain or reproach, will coöperate—not passively merely, but actively and watchfully—to make an end of this disgraceful evil. It cannot live where the community does not countenance it.

I have called upon the nation to put its great energy into this war, and it has responded—responded with a spirit and a genius for action that has thrilled the world. I now call upon it, upon its men and women everywhere, to see to it that its laws are kept inviolate, its fame untarnished.

Let us show our utter contempt for the things that have made this war hideous among the wars of history by showing how those who love liberty and right and justice and are willing to lay down their lives for them upon foreign fields stand ready also to illustrate to all mankind their loyalty to all things at home which they wish to see established everywhere as a blessing and protection to the peoples who have never known the privilege of liberty and self-government.

I can never accept any man as a champion of liberty either for ourselves or for the world who does not reverence and obey the laws of our own beloved land, whose laws we ourselves have made. He has adopted the standards of the enemies of his country, whom he affects to despise.

# THE STORY OF THE WEEK

From the Marne  
to the Ourcq

The attack of the French and Americans on the Marne was so sudden and unexpected that the Germans made a precipitate retreat. More than five hundred cannon and thousands of machine guns fell into the hands of the pursuers and German soldiers surrendered by the score on the slightest excuse. The prisoners taken in the first week numbered over 25,000. But this demoralization was soon checked. The German retreat became orderly and gradually slowed up until now north of the Ourcq it seems to have come to a standstill. Altogether some seventy divisions have been identified in this field, which means that the Prussian Crown Prince had to extricate from the Marne salient about a million men with all the munitions and supplies accumulated for the Paris drive.

In order to check the advance of the Allies while the war material could be removed several divisions of Bavarian troops were borrowed from Prince Rupprecht and sent to the front on the Ourcq together with some of the Prussian Guards. Large numbers of airplanes were hurried to the scene of conflict and sent in fleets of five or ten over the Allied lines to bomb the troops and fire the observation balloons. All told, forty-six airplanes were brought down in this sector within four days. The resistance offered by the Germans has been chiefly due to their lavish use of machine guns. Each division of 12,000 men has 400 machine guns, which means about one to every five yards of front. A third of these may be in action at one time.

In the woods near Fère-en-Tardenois the Americans discovered the emplacement of two of the superguns with which the Germans have been bombarding Paris from a distance of sixty miles. A branch track ran from the railroad into a pit forty feet across and fifteen feet deep. This pit was nearly filled by a steel cylinder made of inch and a quarter armor plate and weighing over a thousand tons. Upon this was mounted a rotary gun carriage moving on ball bearings ten inches in diameter. The projectiles are 15.2 inches in diameter and weigh 1600 pounds. The gun had been removed, but the Germans did not have time to take apart and hoist out the carriage.

The Germans lay their defeat on the Marne largely to the employment by the French of a new type of tank, smaller and swifter than those of the British. These maneuver in among the advancing troops with great agility and have in many cases charged and captured artillery positions. According to German estimates the French have 800 tanks in use here. The French also were able to employ cavalry in pursuit of the retreating foe.

The number of American troops engaged in the Marne salient is given out as 315,000, of whom 189,000 are actual combatants. The Germans claim the capture of 4000 prisoners within the last few days and of 24,000 altogether since their offensive started July 15.

**Crossing the terrain on which the Ourcq** present campaign is fought are the four rivers that traverse it from east to west between five and ten miles apart, the Aisne, the Vesle, the Ourcq and the Marne. These in all wars from Cæsar's time to the present have formed the successive barriers to invasion of Germanic hordes from the north. Of these four only the Aisne and the Marne are of any considerable size; the other two are their tributaries. The Ourcq is a short and shallow stream

Cassel in New York Evening World, © Press Publishing Co.  
THE CUTTING EDGE

which provides Paris with part of its water supply thru a canal sixty-seven miles long. At the beginning of the war when General von Kluck, instead of advancing on Paris as was expected, swung past it to the east in order to reach the French army on the Marne he left his right flank on the river Ourcq exposed to an attack from the Paris side. Joffre seized the opportunity and a body of troops motoring out from Paris, September 6, 1914, struck such a heavy blow at the German flank that the German troops were obliged to withdraw from the Ourcq and the Marne to the Aisne, leaving all their impedimenta behind.

History repeats itself. Now, nearly four years later, the Germans have again been defeated on the Ourcq and the Marne and are retreating toward the Aisne. They abandoned the Marne on Friday night (July 26) and retired behind the Ourcq, leaving a rear guard with instructions to hold their old positions. The French and Americans pur-

sued as soon as they found the trenches in front of them evacuated.

The chief point in the new German line was the small town of Fère-en-Tardenois, a station on the railroad leading from Paris to Fismes and Reims. It lies in the middle of the German salient and so served as a storage and distributing point for the troops on the Marne. The French captured Oulchy-le-Château, on the Ourcq six miles west of Fère, and the British captured Chaumuzy, fifteen miles east of Fère, but the center at Fère was still stoutly held in order that the guns and supplies along the Ourcq might be withdrawn beyond the Vesle.

To dislodge the Germans from Fère-en-Tardenois, the keystone of the German line, fell to the lot of the Americans. The Germans had taken their new positions at midnight of Saturday, but before daybreak on Sunday morning the Americans were at them. The first to wade the Ourcq were Lieutenant Patrick Dowling, Corporal James McGowan and Thomas Lyden, all of the 165th Infantry, which was made up of the old 69th New York. Three times the Americans waded the river, which is about two feet deep, but they were unable to hold the northern bank in the face of the German machine gun fire. But finally our engineers had got two bridges across and a fourth and final rush at eight o'clock carried them securely into Fère.

The contest for Sergy, a village three miles up the Ourcq from Fère, was even more fierce. Here the Crown Prince did us the honor of sending forward some of his choicest shock troops, the Fourth Division of the Prussian Guards. These were passed to the front between the retreating troops and recaptured Sergy. But the Americans returned to the charge repeatedly and the village changed hands nine times in the first day, remaining at the end in ours. The Germans had placed their machine guns among the houses and trees and on the hills commanding the river and the open slopes over which the Americans had to pass. The German artillery showered the rear ranks with high explosives and gas shells. But in face of the murderous fire and in spite of repeated repulses the Americans charged the Prussians with the bayonet and drove them out of their strongest positions. It was a fight to the finish with no quarter granted on either side. The second time the Americans entered Sergy they found that the wounded Americans had been killed. The Germans also have been using the white flag to entice our soldiers within gunfire. Consequently the Americans make few prisoners. The village of Seringes, two miles east of Fère, was as hotly contested as Sergy but finally taken by the Americans.

**Intervention  
in Siberia**

Last week it was reported that Japan had come to an agreement with the United States as to the extent and character of the proposed joint intervention in Siberia and that a body of American engineers had been ordered from Nagasaki, Japan, to Vladivostok, Siberia, in order to begin the reconstruction of the Chinese Eastern Railroad leading into the interior. But a later reply from Tokyo indicated that Japan was not willing to comply with the conditions insisted upon by President Wilson as necessary to prevent the expedition from taking the aspect of an invasion. The actual impediment to joint action is not disclosed, but it is known that Japan, regarding the protection of the Pacific as her own peculiar duty, would have preferred to undertake the task of restoring order in Siberia without assistance from the Allies or America, and was willing to extend her military control of the transcontinental railroad as far west as the Urals. From Berlin and Bolshevik sources it is rumored that Japan has demanded as the price of her assistance in this crisis the cession of the Dutch East Indies. But this is officially denied from London and is doubtless invented for the purpose of sowing suspicion of Japan in the minds of the Dutch, Australians and Americans.

It is proposed to send American, British, French and Italian contingents

**THE GREAT WAR**

July 25—Baron von Hussarek becomes Austrian Premier *vice* Dr. von Seydler. Strikes in British munition works.

July 26—Railroad strikes and peasant risings in Ukraine. French take Oulchy-le-Château.

July 27—Duke Adolf Friedrich of Mecklenburg-Schwerin accepts crown of Finland. Czecho-Slovaks take Simbirsk on Volga.

July 28—Americans capture Fère-en-Tardenois. Famine and revolt in Rumania.

July 29—Australians take village of Merris on Lys River. British strikers return to work.

July 30—French take Grand Rozoy. Field Marshal von Eichhorn assassinated in Kiev.

July 31—United States Government takes over telegraph and telephone lines. Marquis of Lansdowne urges peace negotiations.

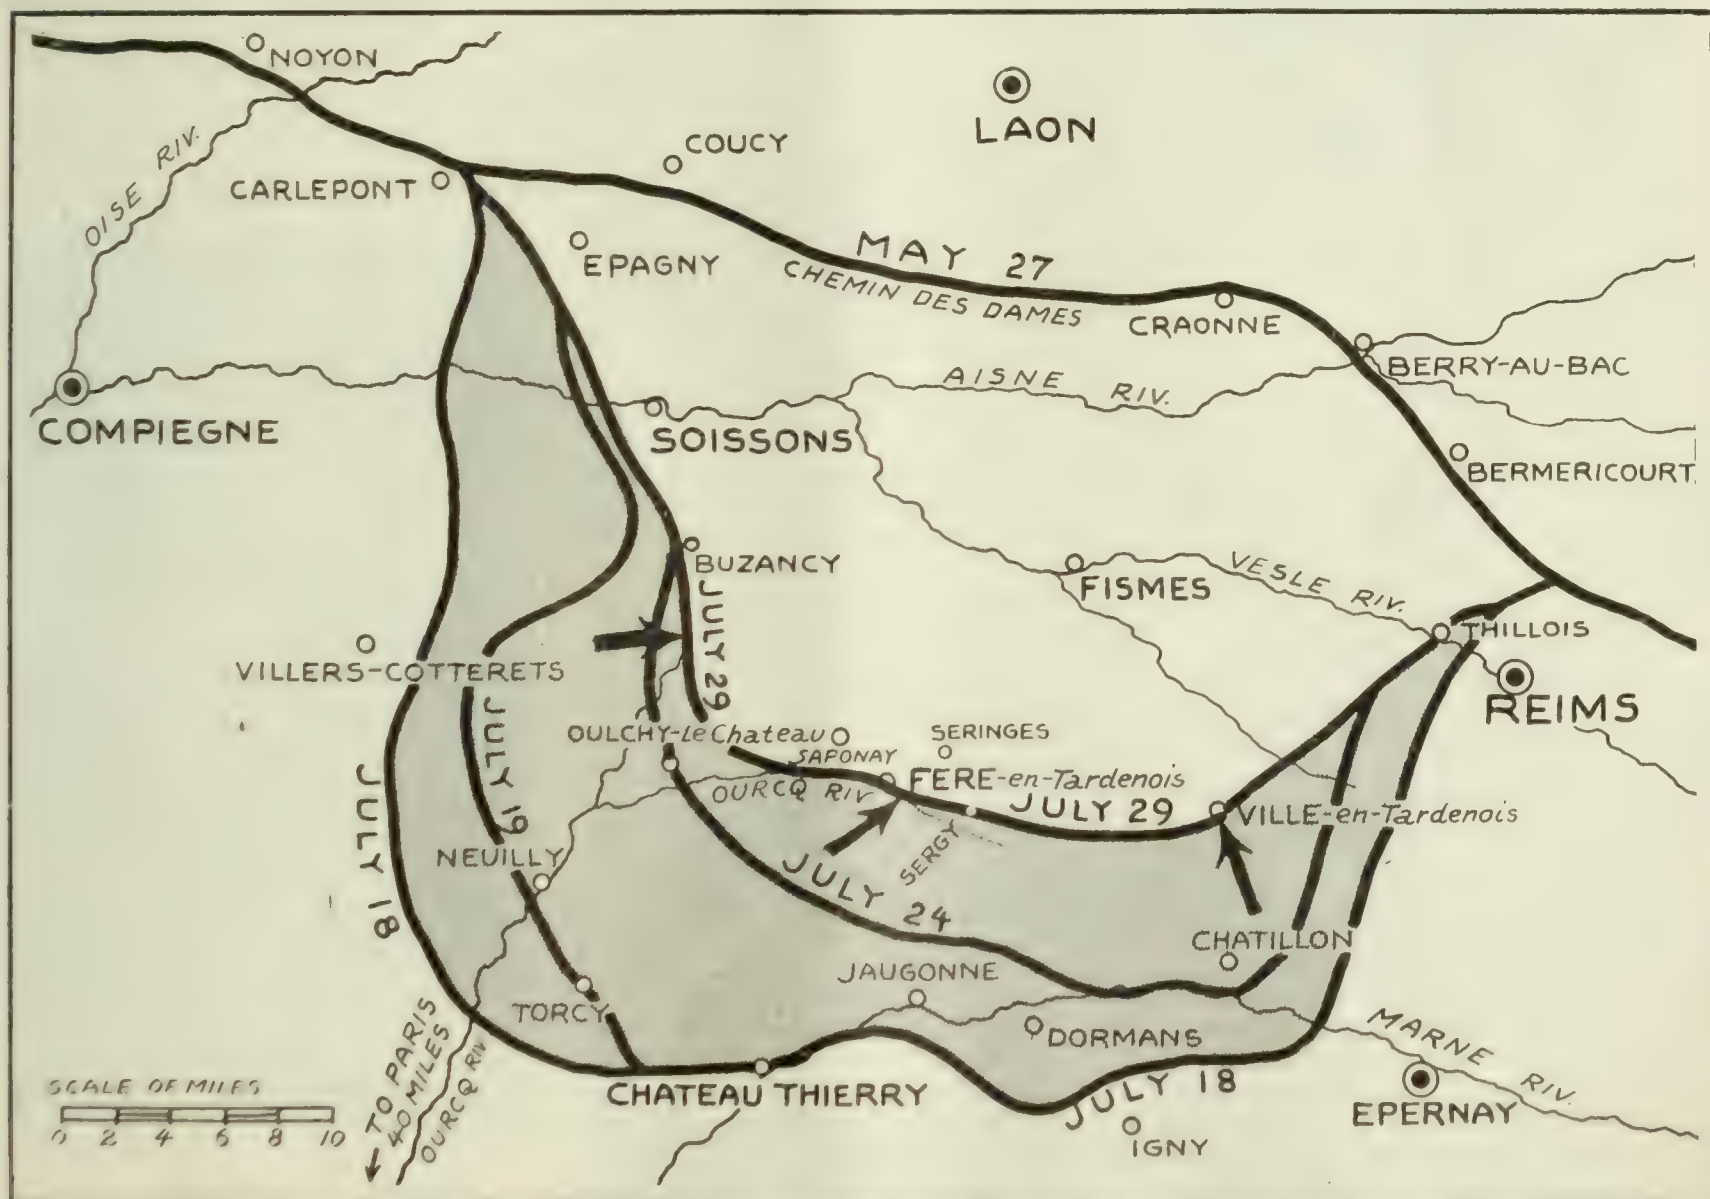

along with the Japanese. They will carry supplies and arms for the Czecho-Slovak forces now holding large stretches of the Siberian railroad. The munitions manufactured in the United States for the Kerensky government before its overthrow by the Bolsheviks are available for this purpose. It is intimated that Justice L. D. Brandeis of the United States Supreme Court may head the commission to be sent to Russia to reassure the people as to the peaceful intentions of America.

**The Siberian  
Situation**

Once the joint expedition has been launched the difficulty will be to determine which of the various factions to support. There appear to be a half dozen claimants for sovereignty in Siberia. The Soviet or Bolshevik government of Moscow views the proposed expedition as a capitalistic conspiracy of the imperialistic powers of Japan, America and the Allies to overthrow the socialistic republic. There are said to be 12,000 Bolshevik troops on the Manchurian frontier ready to repel any invasion or counter-revolution. They are aided by German and Austrian soldiers who have been imprisoned in Siberia.

On the other hand the Czecho-Slovaks or Bohemians who also had been captured during the war have been fighting the Bolsheviks to force their way out of Russia by Vladivostok. But now that intervention has been decided upon it is perceived that they are much more useful where they are than they could be on the French front, so Professor Masaryk, the head of the Czecho-Slovak National Council, now in Washington, has cabled to them to remain in Russia and aid will be sent them.

An anti-Bolshevik government for Siberia was formed by a Duma meeting at Tomsk, February 10, 1918. This, unlike the Soviets, includes representatives of various classes, the municipalities and the zemstvos (provincial assemblies).

**SWEEPING BACK THE GERMANS FROM THE MARNE SALIENT**

The dated lines show the advance and recession of the German wave. The shaded area is the ground regained since Foch took the offensive on July 18. On the 24th the Americans crossed the Ourcq River and took Fère-en-Tardenois, an important distribution center. They have also, after hard fighting, secured possession of the neighboring villages of Sergy and Seringes. The Germans may have to fall back to the Vesle or even to the Aisne

Kirby in New York World

THE REFUGEES

Another provisional government has been established at Omsk, Siberia, which also repudiates the Bolshevik legislation and claims to be the supreme authority of independent Siberia. The government of Vladivostok, however, refuses to recognize the authority of either Moscow, Tomsk or Omsk, and asserts that it alone stands for Siberia.

General Horvath, who was originally associated with the Tomsk government, seems now to have set himself up at Harbin as an independent power in Siberia and Manchuria for the purpose of overthrowing the Bolsheviks. With him are allied certain Russian railroad men and financiers and they have provided large sums for the purchase of agricultural machinery for harvesting the crops. The Allied ministers at Peking have refused to recognize the authority of General Horvath.

General Semenov, who headed a Cossack counter-revolution to rescue Siberia from the Bolsheviks, was defeated by them and driven back to Manchuria, where he is held on the other side by Chinese troops determined to prevent the war from extending into their territory.

### Troubles of the Soviet

Nikolai Lenine, the head of the Soviet or Bolshevik Government at Moscow, in an address that has just reached this country, said:

All the energies of the Soviet power must now be concentrated in prolonging the breathing spell, in exploiting the antagonisms among the imperialists, and in maintaining and strengthening the Soviet power until the interposition of the international proletariat. We are the defenders of the Socialistic Fatherland. But for its defense we need a standing army, an orderly hinterland, and established order in the system of supply.

In accordance with this conception of his duty, Lenine has ordered the mobilization of a Red Army to defend the Soviet republic against its external and internal enemies. He regards both the landing of Allied troops at Vladivostok on the Pacific and at Kola on the Arctic as invasions of a neutral and peaceful country in contravention of international law. But the landing of the British, French and American marines at Kola was carried with the cooperation of the local soviets and by the permission of Secretary of War Trotzky. Its purpose is to protect the stores and railroad of the Murmansk coast against the Finnish White Guard and Germans with whom the Red Guard was recently at war.

The Allied representatives who left Vologda because they were warned by the Soviet Government that the city was to be bombarded tried to go to Archangel, but the Soviet there compelled them to go on to Kandalaska.

In the place of Count von Mirbach, the German Ambassador at Moscow, who was assassinated on July 6, the German Government has despatched Dr. Helfferich, a distinguished financier and former Vice Chancellor. In order to protect him from the fate of his predecessor two battalions of German troops will be stationed at Moscow as an embassy guard. The Soviet Government has taken advantage of the assassination to rid itself of its enemies of the Social Revolutionary Party. More than two hundred of these have been executed for complicity in the crime, among them the revolutionary heroine, Miss Spirodonova.

Counter-revolutionary movements are being put down with great severity by the Reds. When they recaptured Yaroslavl several thousand of the White Guard were drowned in the Volga while trying to escape and 350 of those taken prisoner were shot. The lower Volga, the chief artery of Russian grain traffic, is under the control of the Czechoslovaks who have seized Samara, Kazan and Simbirsk, in spite of the opposition of the Bolsheviks.

### German Ruler of Ukraine Killed

Field Marshal von Eichhorn, the German military commander in the Ukraine, was assassinated on July 30. He and his adjutant, Captain von Dressler, were driving thru the streets of Kiev when a bomb was thrown into their carriage from a passing cab. Both were mortally wounded. The assassin was a Russian of twenty-three who had come to Kiev

the day before from Moscow, commissioned by his commune to kill the Field Marshal. Following so soon upon the assassination of the German Ambassador, Count von Mirbach, in Moscow, it shows the rising tide of hatred of German domination in Russia and the powerlessness of the Bolsheviks to maintain order. General Eichhorn had aroused especial animosity in the Ukraine by the confiscation of the peasants' grain for the use of the German armies. When the Rada, the Ukrainian National Council, which had made peace with Germany at Brest-Litovsk and had invited in German military aid, proved not sufficiently subservient he dispersed the assembly with German troops and set up a Cossack Hetman as dictator.

A movement to undo the work of the revolution and reestablish the autocracy with Grand Duke Nicholas as Czar has been started by a monarchist congress at Kiev. There was a bloody street fight between the monarchists and Bolsheviks on the adjournment of the congress. Prof. Paul Milukov, leader of the Constitutional Democrats, has been expelled from Kiev by the Ukrainian government.

All of the railroads of Ukraine are held up by a strike and the peasant rising against the Germans who have been commandeering food has assumed vast proportions. Over 75,000 peasants are now said to be armed and determined to overthrow the pro-German government.

### The Czech Revolt

The encouragement given by President Wilson and the Allies to the national aspirations of the Czechoslovaks has greatly strengthened their resistance to

Press Illustrating

### FINLAND TAKES A KING

Most countries nowadays are trying to get rid of kings—but evidently not so Finland. A deputation sent to Duke Adolf Friedrich of Mecklenburg-Schwerin to ask him to accept the throne received his prompt acceptance and he set out at once for his new kingdom.

German domination. Dr. von Seydler, the pro-German premier of Austria, took office the last of June, but before July was over he was forced to resign and was threatened with impeachment. Dr. Stransky, the Czech deputy who moved the impeachment of the premier, denounced him in the following language in the Austrian parliament:

One of the greatest hindrances in the way of peace is the oppression of small nationalities. Not only has President Wilson put that clearly in the foreground in his peace utterances, but Burian has also recognized it by pointing to the necessity of Austria reforming herself.

Instead of endeavoring to reconcile the various races, von Seydler proclaimed the German policy and seeks to crown fifty years of German terrorism by throwing those nationalities as chained slaves to the vengeance of the German Moloch. The Germans indeed are beginning to perceive that their hegemony is approaching its close and they wish to set seal on their brigandage by the foundation of the German Province of Bohemia, and the partition of that country is to be the first step toward that end.

Austria is simply a century old crime against the freedom of humanity. It is the greatest national duty of the Czech people to damage that Austria wherever and whenever possible.

Austria is not a state, but a hideous dream of a hundred years; an Alpine load of tyranny, and nothing else. Austria is a state without patriots and without patriotism. It is an absurdity. It is a state the Czechish soldiers of which have thrown themselves against the enemy—to embrace them, to make common cause with them.

But the motion of indictment was voted down by 215 to 162, for the Ukrainians and some of the Yugoslavs supported the Government. The Social Democrats attempted to introduce a motion demanding that Austria break away from the imperialistic policy now dominant in Germany and take immediate steps to secure a democratic peace on the principles of no annexations or indemnities and the self-determination of all peoples. The resolution was rejected.

Baron von Hussarek, former Minister of Education, has been appointed premier and promises a business administration without political issues for the present.

**British Munition Strike** The strike in the British munition works, which seemed likely to be a serious impediment to the prosecution of the war, has been brought to an end partly because of the indignation voiced by the public against such unpatriotic action and partly by the firm attitude of the Government. The strike was precipitated by an embargo issued by the Ministry of Munitions to "restrict the engagement of additional labor by firms already having as large a proportion as their munition work warrants, having regard to the present labor shortage." This was interpreted as an attempt to reduce still further the employment of skilled labor and curtail the power of the unions. At Birmingham, Coventry, Leeds and other industrial centers the workers determined to resist the embargo and many of the works were closed down for a few days. The strikers claimed to have over 100,000 men out, but according to the Government the actual workers did not

#### SISTER GETS HER CHANCE TO SERVE

The War Department's decision to rescind its rule that the sisters of men in the army shall be forbidden service overseas has just been made after urgent requests from the Red Cross and the Y. M. C. A., in view of their increasing need for women workers in canteens, camp libraries, entertainments and Red Cross activities. These girls are canteen workers of the Red Triangle, serving hot soup to the men in a field hospital.

number over 15,000. Premier Lloyd George issued a statement that

They have ceased work, not in pursuance of a trade dispute, but in an endeavor to force the Government to change a national policy essential to the prosecution of the war. While millions of their fellow-countrymen hourly are facing danger and death for their country, the men on strike have been granted exemption from these perils only because their services are considered of more value to the state in the workshops than in the army.

This was accompanied by the threat that all men who wilfully absented themselves from work after the following Monday would be deemed to have placed themselves voluntarily outside the munitions industry and would therefore become liable to conscription under the military service act. At the same time the Government offered to appoint a committee of inquiry, including representatives of the unions, to investigate the alleged grievances. This offer was accepted by the strikers and most of them returned to work on Monday.

**U-Boat Warfare** Sir Eric Geddes, First Lord of the British Admiralty, gave an encouraging view of the shipping situation to the House of Commons. A year ago, he said, ships were being sunk faster than they could be built; now they are being built faster than they can be sunk. Then the world's net loss of shipping amounted to 550,000 tons a month, but during the last quarter there has been an average net gain of construction over destruction of 100,000 a month. The sinking had been reduced and the building had been increased. In Great Britain 150,000 men are now employed on new construction of warships and auxiliaries and 120,000 on merchantmen. Nearly two-thirds as many men were employed on merchant ship repairs as on new mer-

chantmen. On account of the shortage of skilled men the Admiralty had decided to adopt the American custom of concentrating upon a simple standardized ship that could be put together with a minimum of skilled labor.

The total losses for the month of June amounted to 275,629 tons, which is the lowest of any month since September, 1916. Of these British shipping totaled 161,062 tons and Allied and neutral shipping 114,567 tons.

These figures and especially the fact that a million Americans had been safely brought over aroused criticism in the German press against the German Admiralty for failure to keep its promises as to U-boat performances. In reply to these complaints Admiral von Holtzendorff, chief of the German Naval Staff, stated that "the Americans have at their disposal debarkation ports all the way from the north of Scotland to the Mediterranean coast of France" and U-boats could not be expected "to lurk off all these harbors on the chance of being shot at by the strongly protected transports, convoyed by fast naval vessels. The convoys do not come with the regularity and frequency of railway trains but irregularly at long intervals and often by night and in fog." It was, the Admiral said, more profitable to cut down the cargo space and destroy war material by attacking merchantmen rather than troopships. The losses in shipping and supplies inflicted by the U-boats up to July 1, 1918, amounted to \$12,000,000,000.

It was Admiral Holtzendorff who in February, 1916, assured the Chancellor that unrestricted U-boat warfare would force England to sue for peace in six months.

The list of losses for July will doubtless be higher than for June, since it

## APACHES ON THE KAISER'S TRAIL

These Indian scouts, who served with the American army in the Mexican expedition against Villa, are going after Germans now. They were trained directly under General Pershing

must include as one item the 33,000 ton "Justicia," the fourth largest ship in the world. Various and diverse accounts of her destruction have been made public by passengers and sailors of the ships in the vicinity. According to some the "Justicia" was pursued and persistently attacked by a squadron of eight U-boats for more than twenty-four hours and that ten torpedoes were discharged at her before she was sunk. But the British Admiralty denies that the U-boats attack in squadrons and that it was a mere accident that one or two U-boats happened upon her.

**Quantity of troops reached the Production 300,000 mark** came last week as a big piece of news which occasioned no surprise. Had it been made public four months ago it would have been highly sensational—even the prophecy of it. But the nation is now fully aware of the fact that the great American war machine is practically in stride—airplanes being the single main exception. American troops have long been in France—some have arrived in Italy, and Russia may be next to receive quantities of the polyglot companies which we are turning into the fray.

Coincident with this news comes an announcement by the Shipping Board of the year's progress not only in ships but in the completion of a chain of shipyards upon whose products rest in large part not only the success of the war, but the prosecution of the great after-the-war trade program. One hundred and eighteen yards are now fully finished, and forty-four are partly done, twenty-three of the latter being more than three-quarters finished. One review says:

Many of these yards have been built from the ground up, while the others have been extended and enlarged to such a degree that many of them amount almost to new yards.

The building of ships has been such a fascinating problem to Americans that they have been quick to lose sight of the herculean task of organization and development which had to precede the construction of new vessels to beat the submarine. Back of the weekly outputs of tonnage has been a long stretch of work, sometimes discouraging, always necessary, which only just now is nearing completion. Thirty-seven steel yards, which the United States had when the war began, have grown to seventy-two. The old yards have been increased from 162 ways to 195, and more are being added. Eighty yards for building wooden ships are now in operation or nearing completion. The rest are for the building of concrete ships.

**Ways and Means**

With Congress practically doing no business except in so far as its committees keep the wheels turning, the central fact of interest in legislative Washington is finance—past, present and to come. The present necessities grow out of past obligations and mortgage the future. Discussion of the new tax bill continues in the chambers of the Ways and Means Committee, and everyday new light is thrown on the complex problem as a result of investigation. For example, it was found last week that the total revenues likely to be derived from income and excess profits taxes will amount to only \$4,340,000,000 instead of the \$6,000,000,000 contemplated by the Treasury Department as capable of being raised from these sources. This means that the schedules so far tentatively agreed on must be revised.

A leading member of the committee is quoted as follows on this very important point:

It simply means that with the highest taxes on incomes and excess profits we have been able to agree on we are still \$1,500,000,000 short of the amount that everybody thought would be raised from those taxes. How we are going to make up the deficiency is more than the committee knows at this time. If the Treasury insists on an \$8,000,000,000 bill, it means that we will have to look for new things to tax or will have to dig deeper into the incomes and excess profits of business.

The Ways and Means Committee is reported with apparent reliability to be considering these proposals:

Tax of 80 per cent on all net income in excess of the 10 per cent exemption, estimated by the Treasury to yield \$2,400,000,000.

Tax of 40 per cent on all net income in excess of exemption of 10 per cent and not in excess of 20 per cent, and 80 per cent on all net income in excess of 20 per cent estimated by the Treasury as possible of yielding \$1,750,000,000.

Tax of 60 to 80 per cent on the difference between the average per cent of profits for the best four of the six years from 1911 to 1916, inclusive, the years to be selected by the corporation, and the profits for the taxable year, with a deduction of 10 per cent for capital put in since 1916. No estimate of the revenue to be raised under this scheme was made by the Treasury, but it was said this tax would affect concerns that made large profits before the war as well as since the beginning of the war.

**Extending Government Control**

The first step in the Railroad Administration's

operation of the Cape Cod Canal will be the dredging of a 25-foot waterway and the restoration of towage facilities so that, according to calculations, within two months water-borne coal for New England can be moved thru this important short-cut. Coastwise vessels will be routed thru the canal, thus shortening their trips north and south and at the same time rendering them less likely to suffer from the depredations of submarine and weather.

To the War Industries Board falls the control of the turbine engine industry for the period of the war. The pressing need for this governmental action was the necessity of allocating to the various war-making agencies requiring land and marine turbines the product as soon as manufactured and ready for installation. Twenty-one manufacturers are affected—all making turbines over 700 tons.

**Strikes Averted**

The Mooney case led the labor news of last week. Governor Stephens, of California, in order that all persons thruout the United States might be assured that the fullest consideration is being given the matter, granted a reprieve to Mooney, which will operate as a stay of execution till December 13. The case is in the Supreme Court of California, having been in state courts for more than two years.

Other labor cases of less sensational interest have been that of the Lynn, Massachusetts, works of the General Electric Company, where a general strike has been in effect for more than two weeks. According to the strikers, the trouble started because several employees were discharged for union activities. The employees have laid their case before the National War Labor Board, which was scheduled to announce a finding in the case of two other plants of the General Electric Company at Pittsfield, Massachusetts, and Schenectady, New York.

By requiring the Lake Carriers' Association to grant certain concessions to the seamen of the Great Lakes who have been threatening to walk out un-

less their grievances were attended to, Chairman Hurley, of the Shipping Board, last week apparently settled what promised to be a menacing industrial situation.

### The Coming Campaign

Politics, with the nearer approach of the autumn campaign, is assuming a prominence in the public prints which few expected it to have in this year of war. Among the leading issues are prohibition, woman suffrage and government ownership. Even in the extreme wing of the anti-Administration party the conduct of the war by the Administration is not, apparently, being used with marked success as an issue. More emphasis is now being laid on after-the-war problems, and the magnificent record of the military branch of the Government in transporting trained troops in unprecedented quantities to France has staggered the politicians who hoped to make failure to prosecute the war vigorously.

With Congress not in session, outcroppings of political warfare have been more in evidence of late than for some time. The President, roused thoroly to the necessity of a Federal amendment for woman suffrage, last week took an active part in the drive on the Senate by making public certain correspondence between himself and Senator Shields of Tennessee, in which the President declared that he was writing to urge the measure because he considered its passage at the present time "an essential psychological element in the conduct of the war for democracy."

Among the places where prohibition is a very live issue is Missouri. Former Governor Folk in his campaign for senatorship has raised this issue against his opponent. And those in Congress who have placed themselves on record as against the nationwide amendment are being kept busy explaining in their districts or states, as the case may be.

### Our Plans to Cure Disabled Soldiers

Surgeon General Gorgas has announced the completion of plans for the physical reconstruction of disabled soldiers in the general military hospitals. These plans are formulated with a view to close coöperation with the War Department Committee on Education and Special Service in the work of restoring men to full or limited military service, and with the Federal Board of Vocational Education, which is authorized by law to provide vocational training for disabled men after their discharge from the army and navy.

The records of 516 cases treated in four hospitals show 134 men able to return to full military duty; 210 fit for limited service, and 172 who are eligible for discharge. In the last group 12 are classed as helpless or institutional cases, 121 are able to return to their former occupations, and 39 will need further training to fit them for earning a living.

General Gorgas states his plan as follows:

The policy to be followed in these hospitals is that hereafter no member of the

military service disabled in line of duty, even tho not expected to return to duty, will be discharged from service until he shall have attained complete recovery or as complete recovery as may be expected when the nature of his disability is considered. In furtherance of this policy, physical reconstruction is defined as complete mental and surgical treatment carried to the point of maximum functional restoration, both mental and physical. To secure this result all methods recognized by modern medicine as conducive to cure will be utilized. In other words, not only the ordinary means of medicine and surgery, including all specialties, will be utilized, but also physical measures such as are employed under physiotherapy, including hydro, electro and mechanotherapy, active exercise, indoor and outdoor games and passive exercise in the form of massage. Provision in the form of adequate buildings and equipment for physiotherapy shall be adopted in each of the hospitals.

### Women to Fill Shore Jobs

In accordance with the prearranged plan for the navy to take over control of all shipping engaged in transporting troops and war supplies, orders have been issued by the Navy Department calling several thousand reservists into active duty, the number called being limited only by the available facilities for handling them at the naval training stations.

After undergoing a few weeks' intensive training the men will be organized into crews and will replace the civilian sailors now manning the troop and supply ships, and the vessels that are constantly being turned over to the navy under its own construction program.

At Marine Corps Headquarters orders have been issued to detach every man whose place can be filled by a woman. The men will be sent to one of the corps' stations for duty. Similarly Rear Admiral McGowan, Paymaster General of the Navy, has started a campaign for the reduction in the number of petty officers, yeomen and enlisted men who are filling clerical jobs in the Bureau of Supplies and Accounts. The Bureau of Navigation, un-

der Rear Admiral Palmer, was the first to undertake this step, as a result of which several hundred men will be added to the force available for service at sea.

### More German Propaganda

More revelations of the activities of some German propagandists in the United States came to light last week in a statement issued by Deputy State's Attorney General Alfred L. Becker in New York. Most of these revelations dealt with George Sylvester Viereck, editor of the *Fatherland*, and alleged to have received \$100,000 for assisting the Kaiser in his American publicity campaign. Interesting items in these disclosures, which form a remarkable and hitherto unknown chapter of the history of the early days of the war, are as follows:

A series of code letters was written to persons in Germany by George Sylvester Viereck, editor of the former pro-German *Fatherland*, which, since the United States became a belligerent, has been known as *Viereck's Weekly*. These letters were intercepted before the American declaration of war. Since that time, according to Viereck's own admission, he has sent mail to Germany thru neutral countries. This action, according to the authorities, is a violation of the trading with the enemy act.

The Viereck code letters, some of which were dated in 1916, apparently were innocent communications on family and personal subjects, but, according to Mr. Becker, they contained information of political conditions in this country.

Mr. Becker declined to say whether Viereck's letters since this country entered the war contained code messages. Of the earlier communications, he said, one letter dealing with the personal affairs of the correspondents gave in code a description of American feeling toward Germany.

### RECOVERING FROM WOUNDS AND SHELL SHOCK

The fans who believe that baseball will cure anything have a forceful argument in this snapshot of American soldiers, invalided home and recuperating at Fort McPherson, Georgia.

# THE BLACK SNAKES

## A Visit to Bullard's Boys at Cantigny

BY HAMILTON HOLT

*The editor of The Independent has just returned from a tour of three months in the war zone and at the capitals of our allies. He visited the French, British, Belgian, Italian and American fronts and inspected training camps and hospitals behind the lines. In the two previous issues of The Independent Mr. Holt described his experiences with our boys in the first line trenches. Here he tells of his visit to the Yanks at Cantigny. In later issues he will continue the story of his tour.*

IN last week's issue of The Independent I recounted my experiences back of the lines at Seicheprey in the Toul sector, where the 102nd Connecticut boys repulsed the Germans in a two days' fight and drove them back to their original lines with a loss of 2000 dead and wounded. That was the first real battle that America fought in France.

Five weeks later our 1st Division, under the command of Major General Bullard, engaged in America's second battle of the war. This was not a battle of defense, but a battle of offense. A little salient in front of the village of Cantigny in the Montdidier sector made a dent in our line, but on May 28 our boys went over the top, took it by storm and held it despite seven counterattacks by the Germans.

No wonder this victory sent a thrill thru France. The next morning the French communiqué spoke of our feat as "magnifique," for had not France when she held the sector twice taken the town and twice lost it?

The fight took place while I was making a tour of inspection of the American communicating lines in the south of France. Three days later I happened to be at one of the largest American hospitals—a hospital that then had 5000 beds and was planning to have 15,000—when I learned that some of the wounded from the battle of Cantigny had

arrived the night before and completely filled one of the wards. I asked permission of the major in command to talk with the boys and he readily consented. I found them all, even those badly wounded, a cheerful lot. They spoke in the most glowing terms of the valor of their comrades, and all praised their officers. One young fellow with a wounded thigh said they went over the top ten paces apart in three lines, the third being a mopping line to clean up the machine gun nests after the first two waves had gone thru. The Germans, he said, were great fighters until their machine guns were taken away and then they quit. They would hide their guns in haystacks or even in the tops of trees. Our boys used rifles more than the French or British. "And do you know," he added, "when you shoot a German he jumps up in the air like a rabbit before he falls. But if you want a real story just ask that fellow up in the third bed to tell you what he did with his knife. It will give you an idea of the way Germans and Americans fight."

I walked up to the bed in question and there was a tall, rangy looking fellow with a broken arm who at first seemed a little hesitant to talk about himself. But after a little urging he untied a handkerchief at the side of his bed and took out a bloodstained knife. "We went over the top," he said, "and after we had been fighting a while a small group of us came upon a German machine gun crew. Instantly they all raised their hands and shouted 'Kamerad!' We advanced to take them prisoners but when we got within a few paces of them they suddenly opened fire on us. Then I saw red. I took my knife and tried it first on a wounded German and found out it worked and then I tried it on four live ones. I killed every one."

"Where are you from?" I asked.

"From Texas, sir," he said.

"I thought so," I replied.

I then walked across the aisle and talked with another of the boys, who showed me the place where a German shell took away part of his ankle. "But I got five of them," he said, "before they put me out of action. We Americans are the fairest men in the world in a fight, but when the Germans play unfair, then we give no quarter. The Germans now call us boys of the 1st Division the Black Snakes."

These were but typical samples of the stories told me by these wounded Americans at Cantigny. As I left the ward I said, "Boys, do you want to get back in the trenches and fight some more?" and instantly every face in the room lit up, while half of the poor fellows actually sat up in bed with excitement as they chorused their determination to get back to their brothers in the front line.

If that was the spirit of our wounded boys, what was the spirit of our troops still holding the line? I determined then and there to visit our renowned Black Snakes at Cantigny before I sailed for home, and arriving in Paris two days later I forthwith made application to American headquarters for permission to go to the Montdidier sector.

It was with the liveliest satisfaction that the word came back that General Pershing would put an American car at my disposal to visit Major General Bullard and his troops, and that my cousin, Captain Gardner Richardson, would be assigned to escort me.

We left Paris June 7, ten days after Cantigny had been captured. We soon passed the outskirts of the city and struck the main road to Beauvais. It was crowded with marching poilus and fleets of automobile trucks, some packed with food and ammunition going to the front and some empty coming back. We stopped at Beauvais for luncheon, where we visited the old cathedral, which is the tallest and one of the finest in France and has a wonderful old clock which seems to register everything that can be timed—not only seconds, minutes and hours, but days, weeks, months, years, centuries, the tides, sunrise, sunset, etc.

Beauvais, we learned, was bombarded almost every night and the entire population moved out into the neighboring country districts each evening, sleeping in limestone quarries or in the houses of friends, and returning again early in the morning. We passed a group of people on the main street gazing at one of the stores that had been smashed into splinters during last night's bombardment.

At Breteuil we reported at headquarters for instructions. We were told to go on to General Bullard's headquarters and then to return to Breteuil, where we would be put up for the night. On leaving the town we entered at once the war zone with all its incessant move-

From this switchboard at headquarters the operator can call the front line trenches

ment of troops and supplies which had grown so familiar to me by this time. First we would pass by an aerodrome, then little hills of ammunition in the open field, each pile separated by mounds of earth so that in case one pile was hit by a shell it would not explode its neighbors. We passed woods where cavalry horses were tethered under the trees and each little village we went thru was crowded with soldiers. We finally came to the village where General Bullard made his headquarters. He occupied a large, handsome old chateau, approached by a broad, stately gravel walk from the gate. The guard would not permit us to walk up the path, as any activity there would be noticed by German balloons, but he told us to walk under the clump of pine trees that flanked the approach. We found the usual orderlies waiting at the door. They ushered us up the great winding staircase in the hall to the second floor, and there General Bullard's aide met us and said the general was in consultation with the commander of the French division next to ours.

While we sat waiting a young lieutenant joined us and we soon engaged in conversation. He had been in the thick of the battle of Cantigny and most readily answered our inquiries about it. He said the whole American 1st Division, supported by five 75mm. batteries, 240 guns in all, thirteen tanks officered by the French, and a group of French flame-throwers to flush the Germans out of their cellars and dug-out, began before daylight the attack, which was preceded by a box barrage. The Germans were caught in the barrage and could not get out nor could they be relieved by their comrades outside. We were completely successful in taking the town, tho our casualties were over 1500 men. The Germans instantly reformed and during the next two days counterattacked us in seven successive waves, but we held them every time. I asked the lieutenant if he could give me any personal incidents of the fight and in response he told me the following stories. While in the midst of the battle two of his boys were shot thru the leg. He ordered stretcher bearers to take them back to the field hospital, but they pled so hard to be permitted to go on with their comrades that he finally said, "Well, if you feel that way, go ahead." He said the Americans use their rifles with terrific effect. One American actually killed fifteen Germans with his gun, and then, hiding behind a rock, killed five more with his pistol. Another soldier shot so many Germans that he actually went crazy with excitement. As showing the courage of one soldier under the supreme strain of battle, he told of an American boy who came into the field hospital, trembling with pain and weak with the loss of blood. His arm was shot in two and was hanging by the flesh. He asked the doctor if he could be saved and the doctor replied that he thought so. The doctor then put the arm in splints so that he could stand the journey back to the base hospital. But no sooner was this done than the soldier folded his arms, his bandaged

General Bullard (center) and General Pershing (right) talking over with some French officers the necessary orders preparatory to an early attack to surprise the enemy

arm resting on the well one, and stepping out into the street where the shells were bursting all about, drew himself up and said, "Richard is himself again."

The French general and his aide then came out of General Bullard's room and passed us on their way down the stairs, whereupon we were ushered into the American commander's presence. He was a tall, handsome, wiry Alabaman with a bronzed, leathery complexion betokening many days spent in the open. A more agreeable man on first acquaintance it has seldom been my privilege to meet. He was sitting at his desk studying maps. His room, which served as office and bedroom, was furnished in the best French style, with fine old portraits on the wall and a great bed in the middle with rich curtains hanging down from the canopy above. The enormous maps pinned on the walls and the general's saddle and riding boots in the corner gave a decidedly military aspect to the room. I wish I could adequately express my admiration for the American generals I have met in France. They all seem to be young West Pointers. General Pershing has apparently been very wise in selecting them. They were mostly all colonels when the war began—none of the old bald-headed, pot-bellied type of generals who have been strutting about the clubs at Washington, D. C., for the past ten years, but lithe young fellows with stout legs and durable stomachs—soldiers who could hike with the best of the men and live on hardtack if necessary.

After General Bullard had explained to us with the aid of the map the sector

that he was holding, he asked us where we were planning to spend the night and when we informed him that they had told us at headquarters to come back to Breteuil, he said, "That is only passing the buck. We will keep you here with us." So his aide got a couple of cot beds from the attic and put them up in the telegraph room and after the general's own orderly had brought us a ewer of hot water and we had got some of the white dust of France off our hands and faces, we went down to dinner. As we walked thru the grand salon of the chateau to get to the dining room, I noticed that the two great gilded mirrors on either side of the room were smashed in bits. I was told that when the Germans came thru the town in 1914 they committed this act of vandalism. The general and his staff dined around a great oblong table. An enormous piece of tapestry depicting a hunting scene covered the entire side of the wall over the sideboard. What a fine American dinner we had, all washed down with the native light wine.

I found that the general and his officers were expecting the Germans to make their third great drive right toward our division that night. Information from recently captured prisoners indicated that it was coming. The general had moved up all his reserves near the front and had ordered the artillery to increase their fire from 200,000 to 400,000 shells that night so that they might pepper the whole German back lines and prevent them, if possible, from forming for the advance. That little act of prepared- [Continued on page 197.]

# CHARLIE SCHWAB TALKED TO ME—

A shipyard is the noisiest place in the world. At least I think so. As soon as you pass one of the numerous oficers and enter the yard all is purposeful noise. The plate shop with its rushing fires, giant punches, and cyclopean cranes crawling from one end to the other contributes its share. And the blacksmith shop and the two material yards where thousands of pieces of steel are flopped into one pile like the parts of a picture puzzle before it is solved contribute their share.

From out a half dozen tall wooden scaffolding enclosures the great steel things rise, slowly, surely; ships, big ships a block long, being born, and the noise from each of them is louder than the noise from anything else. From eight in the morning till twelve at night, each ship literally shouts from its riveters, caulkers, reamers, fitters.

It is a glad noise, this song of the shipyard, and we workers soon get used to it. If we didn't we wouldn't be able to contribute to it ourselves.

One day they told us Schwab was going to speak to us; they had also told us the day before at our bi-weekly band concert that there was to be a double launching.

Neither, I think, troubled us much. The fact is that when five thousand men go to a single place day in and out for months to work, it becomes a sort of habit. It usually takes a fire, storm, noon whistle or some other bit of fatalism to stop us. So we worked.

But it was Saturday (and Saturday is Pay Day!) and flags were going up and the bow of Hull 7 was being swathed in a mass of red and white and blue, and how could there help but be a gay spirit in the air!

The afternoon whistle blew before we knew it. As if they were out of breath from their strenuous race to get to their home in the sea and had to rest a while, the row of unfinished ships calmed down and was quiet. The sun warmed the cinders under our feet; and the crowd gathered. That breath of salt air swept over us invigoratingly, and the crowd gathered. Then one of the tooting engines slid by pulling the band along in its gala carriage. The band struck up a tune—and the crowd gathered.

And along came Schwab. Then the crowd cheered; much as they cheer any one they have expected for some time. But to most of us "Schwab" meant simply a strange man who had been inordinately successful in life and had made oodles and vaults full of money. We wanted to see this man who had somehow pulled himself up above the rest of us. Full of curiosity, we crowded up to the platform.

But Charles Schwab was not

BY ONE OF THE SHIPBUILDERS

the man we expected him to be. We anticipated a person who would address us magniloquently from the front of the high platform, and Schwab refused to speak from there.

We expected Charles Schwab to address the gathering. Instead Charlie Schwab talked to me!

The platform was filled with distinguished and well drest guests. But Schwab deserted them, came down off the platform and stood on the steps surrounded by a bunch of us and shook our hands. We were greasy, but it didn't seem to matter.

"I tell you, boys," he began, "you're doing a great work here! I know today's pay day and I won't keep you long! Wish it was my pay day." It wasn't two minutes before we were laughing with him.

He was talking to us in our lingo, man to man; and he was talking to each one of us, all the way thru.

"No man has ever worked for me—but many men have worked with me," he repeated. And then: "If this job is to be done, you have got to stand by me. Will you do it?"

"You bet we will, Charlie!" "Sure!" "Right!" And it was whole hearted!

It was not the Director General of the Emergency Fleet Corporation that was speaking, but a man we knew. I had never seen even a picture of Schwab before, but after hearing him for ten minutes I believe I could pick him out of any crowd. He looks like a glad friend of all the world, and the hard years that went into his manufacture do not show on the completed product.

Substantial in build, medium in height, smiling, jovial, bright-eyed and strong-handed, you would not take him for a man working fourteen hours a day at a salary of a dollar a year!

Perhaps that is the secret of his remarkable success, the fact

that he has no time to worry, that when he works he works and when he plays he plays, and all the time knows that nothing has ever withstood an amiable smile provided it was amiable enough.

I have a sneaking idea that just such a smile has dug its way to the very bottom of the shipbuilding problem. And the very bottom of that problem is capital and us—labor. The feud, until the war growing more bitter each day, has reached its climax in this generation. Of course the struggle between the workers and employers is foolish. But neither labor which is worthy of its hire nor capital would budge an inch, and so a government which has only lately come to believe in efficiency has simply taken the matter into its own hands and said that there shall be no more fighting.

I don't know how much the amiable smile has had or will have to do with it, but the other day we were handed a circular signed by the "Ship Building Labor Adjustment Board" which read in part:

War conditions have made it necessary that all matters relating to wages, hours and conditions of employment in all shipyards doing work for the Emergency Fleet Corporation or the Navy Department be referred to the Ship Building Labor Adjustment Board for final settlement. *There is nothing to be gained by the owners of the yards or the employees arriving at any agreement.* All questions, therefore, should be presented to the Labor Adjustment Board for adjustment. Such a radical step as the establishment of a Government board to fix wages at the beginning naturally may result in confusion. Misinterpretation of its award and misapplication of classifications are likely to cause trouble, but the board wishes to assure every employee that the awards will be put into effect in their entirety, with justice to all, at the earliest possible moment.

And that, to my way of thinking, is going to be the solution of the long fight between labor and capital in the United States in each industry. If there are going to be any exorbitant profits made, the Government is going to be the one to make them, "with justice to all!" It is the beginning of the new era. The old internal strife is on its last legs, unless all expectations fail. Just as the day of each nation for itself without thought of its neighbor has passed, so is passing the day of each employer and employee for himself.

This was the tone underneath the smile of Charlie Schwab and perhaps the real cause for the prolonged applause the men gave him as he finished speaking. Then the sawing began, and in a little while without effort the great gray ship that towered above us began to move with ever increasing speed. Charlie was cheering with us.

#### WHY WE CALL THEM "JOLLY TARS"

The rule laid down a long time ago that "all work and no play make Jack a dull boy" has never needed to be taught to the Jackies of our navy. Sailors are proverbially a happy lot; these boys, facing the immediate prospect of a leave on shore, seem determined to make it unanimous.

#### NO NEED FOR AN INTERPRETER

Here is a happy interval in the work of winning the war—the French girl with the rule over her shoulder and the soldier carrying the gun don't speak each other's language, but smiles can say a lot.

#### THEY LIKE MUSIC WITH THEIR MEALS

Tho there's nothing left of the piano but the strings, one ingenious Scotchman has found a way to pick out the chords of "Keep Your Head Down, Fritz! Boy," and the other men are getting good fun out of his impromptu performance and joining in on the chorus lustily between their mouthfuls of hardtack and hot soup.

(c) Canadian Official, from M. E. Berner

#### A HAPPY SEND-OFF FROM THE "Y"

Packed up for a "Blighty" leave these men have just stopped at a canteen of the Canadian Y. M. C. A. for a farewell feed. In supplying comfort and good cheer the Red Triangle probably ranks first among all the various agencies that are putting a smile in the war. From the time the men enlist until they get their furloughs after service at the front the "Y" is everything in catering to their comfort.

# THEY WANT TO BE SOLDIERS

*Their older brothers are in cantonments or in France, and their younger brothers play soldier, so the nation's high school boys, too young for the one and too old for the other, have a camp which meets their own needs*

CAPT. F. L. BEALS,  
COMMANDANT

*Under his direction more than 1500 boys are being trained this summer at Lake Geneva, Wisconsin. The discipline is exacting and the hours are long, but the boys leave Steever determined to have military training in their home high schools. Attendance at Camp Steever is purely voluntary and entails no obligation for further service. But the boys leave with a good foundation for more advanced instruction and a desire for more*

READY—AIM—

*Even in the summer camps for boys not yet of draft age, the training is of the trench and dug-out variety. Military regulations begin immediately upon the boys' arrival and are strictly enforced*

# DOWN WHERE SHELLS ARE THICKEST

BY WILLIAM L. STIDGER

Mr. Stidger is a Y. M. C. A. secretary who has just returned from France, where he was a member of "The Brewery Gang," the pet name that one crowd of Y. M. C. A. Secretary Truck Drivers gave themselves. They themselves said, but nobody else dared say it, "To belong to this gang you have to be a man with a strong back and a weak mind. None others eligible." It was made up of college professors, teachers, preachers, business men and truck drivers. They lived in an old French brewery; hence the name.

Mr. Stidger when he is at home is the pastor of the First Methodist Episcopal Church in San José, California. He was enlisted in the Y. M. C. A. service to speak to the soldiers, because he had done so in western cantonments. But when he got to Paris, to use his own words, he "didn't have the nerve to preach to boys who were enduring dangers and suffering and death for me and mine. I felt that I had nothing to say to them. If they would give me front line work where I could at least in part live with the men, I might preach later."

And so he came to drive a truck down on the front line instead of preaching in the camps. With other Y. M. C. A. men he worked as stevedore on the big trucks, sometimes unloading box cars, sometimes building stone roads, sometimes down under the trucks repairing them, sometimes building huts under shell fire; always wearing a gas mask at "Alert" and a steel helmet everywhere.

Several of these secretary drivers were gassed, one or two seriously, and two died from the effects in France. Mr. Stidger himself got a touch of it one night coming home after having taken a load of supplies down to the front line huts.

The first time Mr. Stidger entered the mess of "the Brewery Gang," "the Count," knowing he was a preacher, arose and said, "Gentlemen, 'Angel Face' is with us." He admits that he didn't like the name; and wonders why they gave it to him. But he didn't complain. He just went to work.

Three weeks after he had entered the "Brewery Gang" and had won his way with them a new worker came into the division. He had been recruited as a chauffeur. He was assigned to Mr. Stidger's truck.

The first morning it was pouring down rain and the newcomer was told by the chief that he must ride outside on the load. He didn't like this, so he said, with considerable profane emphasis: "I'm sick of seeing a lot of preachers sitting around doing nothing! Why don't you make them ride out in the rain?"

Mr. Stidger took a turn around the truck to cool off and then came back, took the six-foot bully by the throat, backed him up against a wall, and said: "You've got to take back what you said! I've been around here for three weeks now and I don't kick when the rest of

this gang kid me. I take my medicine just like the rest of them, for they're men and they have won the right to kid. But you have just come and your vile remark about the ministers is indication that you think we're a lot of molly coddles. You can't get by with it. Take it back, every word of it, or I'll knock you into that snow and mud. Then when you get up I'll knock you down until you do take it back. Speak quick!"

"Ah, that's all right. I didn't mean it. I take it back," came from the bully.

"All right, we'll be friends then," replied the secretary.

Mr. Stidger says that he was ashamed of himself all day. He was ashamed that he had lost his temper, even with the provocation that he had. He didn't get back from "down the

line" until late. The rest of the gang were at mess when he came in. He did not like to face them.

Evidently the word had been passed down the line that "Angel Face" was all off, for when he entered the mess hall that night, muddy and dirty from a twenty-mile drive, "the Count" arose and said, "Gentlemen, Gyp the Blood." The name stuck.

SOME of the experiences that one has in France stand out like the silhouettes of mountain peaks against a crimson sunset.

Among the physical silhouettes there was that morning, when the news came that the first division of American troops, in answer to Pershing's offer to the Allies in the big drive, was to march overland into the Somme line. Our allies needed us. They called. We answered.

It was a thrilling sight to come upon suddenly. We were looking down upon its marching columns from the brow of a hill. Then after seeing it from this eminence, we drove along this winding unbroken column of humanity all day long until darkness fell. All day long in a Ford Camionet, riding past that division's ammunition wagons, past its machine gun "outfits," past its great artillery units, past its thousands of "doughboys," past its crunching trucks, past its cleancut officers astride their horses, past its supply trains, past its flags and banners, past its kitchen wagons, past its office trucks with men busy at their clerical work as the army marched overland; seeing it stop to eat by the roadside; seeing it shoulder its rifles; seeing its ambulance and Red Cross groups; seeing its khaki clad American boys, winding thru the valleys, and up the hills and over the white stone bridges, thru the villages, many in which American soldiers had never been before, welcomed by the weeping people as the "saviors of France"; seeing its pathway strewn with the flowers of spring by countless little French children, and with the welcome and the tears of French women in black; seeing it march along the French streams; this was a sight to stir the pride of any American to the point of reverence.

There it was, the American army, marching to its place at the focus of the history of democracy; marching with head up, with eyes to the fore, unflinchingly; but silently.

All day long we heard no singing; no shouting. Men may sing as they are marching into cantonments, or as they board the transports for France; they may sing in rest billets, but they were not singing that day as they marched into the Somme line. One heard no loud talking. One heard only the tramp, tramp, tramp of marching feet, and the rumble of the great trucks, the patter of horses' hoofs on the hard French roads. That army of American men knew that the task on which it was entering was a man's task.

"ANGEL FACE"

Mr. Stidger on his way to the front

"GYP THE BLOOD"

How he looked after three weeks' service

Another physical silhouette. A silhouette of silence: It was after midnight on the Toul line. We were driving back from the front. The earth was covered with a blanket of snow. Everything was white. We were moving cautiously, because, with the snow over everything, it was hard to tell where the icy road left off and the ditches began; and those ditches were four feet deep and a big truck is hard to get out of a hole. Then there were no lights, for we were too near the boche batteries.

"Halt!" rang out suddenly in the night and a sentry stepped into the middle of the road.

I got down to find out what he wanted.

"There are fifty truck loads of soldiers going into the trenches tonight and they are coming this way. Drive carefully, for it is slippery."

In a few moments we came to the first one and passed it. A hundred yards farther we came to the second one, loaded down with American boys. Their rifles were stacked in the front of the truck, and their helmets made a solid steel mass over the trucks. One by one, fifty trucks, loaded with American soldiers, passed us. One can hardly imagine that many American boys anywhere without some noise, but the impressive thing about that scene was that not a single word, not a sound of a human voice came from a single one of those fifty trucks. The only sound to be heard breaking the silence of the night was the crunching of the chained wheels of the heavy trucks in the snow. We watched that strangely silent procession for an hour, as it crept up over a snow-covered hill and disappeared. Not a single sound of a human voice had broken the silence.

But these physical silhouettes are not the only ones that stand out. There are the memories of the men who serve.

A newspaper paragraph in a Paris paper said of a Y. M. C. A. secretary,

"Dale was last seen just before the Germans entered the village, gathering together a crowd of little children, trying to get them to a place of safety."

Dale has never been seen since and that was two months ago at the beginning of the last German drive down near Noyon, but those who knew this manly American lad best say unanimously, "That was just like Dale. He loved the kiddies. You could see him any time with a bunch of French children around him or with one on his lap. He was always talking about his own kiddies and showing us their pictures and telling us about their cute doings back at home as his wife wrote to him."

No monument will ever be erected to Dale, but most of us would rather have the monument of that simple paragraph in the French dispatches, "The last seen of Dale he was gathering together a crowd of little children"—most of us would rather have died in such service than to have lived to be a part of the marching army which is one day soon to enter the streets of Berlin. That was a man's way to die!

I know a Y. M. C. A. secretary who in America is the General Secretary of one of the largest Y. M. C. A. organizations in one of the largest eastern cities. He has always had two hobbies. One is seeing men made whole; and the other has been fighting cigarettes. Never bigger fists or more determined fists pounded down the walls that were building themselves up around American youth in the cigaret industry. He was militant from morning till night in his crusade against cigarettes. Some of his friends thought he was a fanatic. He even lost friends because of his uncompromising antagonism to the cigaret.

But the last time I heard of him he was in a front line dugout. This was near Chateau Thierry. The boys were coming and going from that awful fight.

Men would come in one day and be dead the next. He had been with them for months and they had come to love him in spite of his fighting their favorite pastime. They knew him for his uncompromising antagonism to cigarettes. They loved him none the less for that because he did not flinch. Neither was he narrow about selling them. He sold them because it was his duty, but he hated them.

Then for three days in the midst of the Chateau Thierry fighting the matches played out. Not a match was to be had for three days. The boys were frantic for their smokes, for the nervous strain was greater than anything they had suffered in their lives. The shelling was awful. The noise never ceased. Machine gun fire and bombing by planes at night kept up every hour. Boys saw lifelong friends fall by their sides every hour of the day and night. They needed the solace of their smokes.

Their secretary found two matches in his bag. He lit a cigaret for a boy and the match was gone. Then he used the other one. Then he did a magnificent piece of service for which his name shall go down forever in the memory of those lads. Forever shall he hold their affections in the hollow of his hands. He proved to those boys that his sense of service was greater than his prejudices. He kept three cigarettes going for two days and two nights on the canteen beside him; smoking them himself in order that that crowd of boys coming and going into the battle, in and out of the underground dugout, might have a light for their own cigarettes during the few moments of respite that they had from the fight.

"What a thrill went down the line," a captain said to me, "when that news got to the boys out there in the woods fighting." One boy told me that a fellow he told wept when he heard it. Another said, "Good old ——! I knew he had the guts!" [Continued on page 202]

"We were looking down upon the marching columns of khaki clad American troops, winding thru the valleys and into the villages"

# A NEW ERA IN EDUCATION

BY JOHN H. MACCRACKEN

PRESIDENT OF LAFAYETTE COLLEGE

A high official in Washington recently said that he was concerned at the report of a large number of desertions among the American troops in France until he learned that they were desertions from the rear to the front. Men in the noncombatant branches of the service, in their eagerness to be at the fighting line, dropt their important tasks of maintaining the continuous flow of men and munitions or of railroad construction and sought an opportunity to fight. We needed, said the official, therefore, two terms, so as to distinguish desertions forward from desertions backward. American education when the war broke experienced many desertions forward, but few backward.

Eighty per cent of the officers of the National Army are said to be college men. Hundreds of college professors are engaged in technical work for the Government in Washington. Red Cross, Y. M. C. A., Food Conservation, Liberty Loans, all have made large drafts on the energy and enthusiasm and leadership of college officials. Student attendance has been reduced 25 to 50 per cent.

All of this has created the impression that American education was either stunned by the war or lacking in initiative and leadership, whereas the fact was that educators had simply run out of the main tent when the aeroplane of war swept by, and were not concerning themselves primarily with education for the moment. Nor is it for the interest of mankind that every teacher should be an Archimedes.

Undoubtedly, too, education shared the inevitable bewilderment of a large part of the American people, when a generation taught to believe that Europe and America were two distinct worlds, and that, so far as America was concerned at least, war was almost obsolete, tried to adjust themselves to the fact that America was not only in a European war but destined to be the determining factor in the greatest war the world had ever seen. This bewilderment was increased by the sudden appearance of a terrorism which showed a disposition to trample upon the right of free speech and free press, and even of private opinion, revealing in a single flash how far the country had traveled along the road toward Bolsheviki lawlessness and mob tyranny and away from constitutional guarantees and those fundamental principles which alone make self-government possible. Don Quixotes appeared tilting at sound windmills of music and language, and snobbery tried to substitute for democratic freedom a sacrosanct democracy *sans peur et sans reproche*.

The first year of war had not passed, however, before Education found herself and came to a realization of the fact that her task in this war at least, whatever may have been

Press Illustrating  
DR. JOHN H. MACCRACKEN

true of other wars, was not to lock up the little red schoolhouse and shoulder a gun, nor even to leave the door unlocked and spend most of the time running the bank across the way, the hospital down the street, the grocery, or the local newspaper. She discovered that whatever unessential industries there may be for war, education is not one of them. Her scouts abroad came back with the message from France out of her three years' experience: "Above all things, do not let the efficiency of your schools be impaired." England, Scotland, Canada sent the word: "Profit by our mistakes. Be warned by our empty colleges, and our shortage of all trained man power."

As education saw the complicated mechanism of war gradually linking itself together and taking up the load, she recognized that not reserves of man power alone would win the war, but that it must also be reserves of brain power. In a scientific world, war, too, is science, and the old contrast between the research student Archimedes who solves his mathematical problem and the ignorant soldier who swings his sword disappears. Higher mathematics is the most practical thing in the world today, unless it be theoretical chemistry and physics, if we may judge by their immediate results. It is no mere chance, therefore, that for the first time in history education is in closer relation to the Department of War than to any other department of Government.

What, then, has education been about the last year? In the first place it has merged individual interests in a common cause. Last fall there were suggestions here and there that Edu-

cation ought to organize for joint action. This feeling found official expression in the resolution of the Association of American Colleges last January, before the coal holidays and government railroad operation had made federal administrators quite so unpopular, declaring in favor of a Federal Administrator for Education whose function should be to coördinate the demands of government upon education, and, secondly, an organization of the educational interests and institutions in a war council, which should be able to give effective expression to educational public opinion in the affairs of the nation. A two-day conference of a dozen educational leaders in Chicago was followed by adjournment to Washington, consultation with Government officials and with congressional leaders, more widely representative conferences, and, finally, the organization of the Emergency Council on Education, which was to be an organization not of individuals or of institutions, but an organization of organizations, each national in scope and each representative of institutions rather than of individuals. Each national association was to have one representative and one vote, and the membership fee was fixed at \$100 a year. Donald J. Cowling, president of the Association of American Colleges, was made president, and P. L. Campbell, vice-president and acting president of the Association of State Universities, was made secretary and treasurer, while the executive committee was made up of these two and the representatives of the Association of American Universities, the Catholic Educational Association, and the department of superintendence of the National Education Association. The organization thus inaugurated has added to itself until now it is composed of twenty national associations as members, and several organizations of an educational character, but not representative institutions, as associate members. Recently it has amended its name by a change from Emergency Council on Education to American Council on Education, partly because it had been in operation long enough to discover that such an organization would be needed not only for the present emergency but permanently, and partly because the original name threatened to prove an embarrassment in its international relations.

About the same time that the council was organized two other new educational activities got under way. The War Department, as well as the colleges, had come to realize that there must be some more definite agency for handling the relation of the war to education, and the same day on which the council was organized the War Department created the Special Committee of the War Department on Education and Special Training composed of three officers, one a representative of

the General Staff, one a representative of the Provost Marshal General, and one a representative of the Adjutant General, together with a civilian advisory committee of five members representing respectively colleges and universities, technical schools, corporation schools, the Bureau of Education, the Federal Board for Vocational Education, to which have since been added representatives of Land Grant Colleges, and of Labor. The advisory committee was fortunate in securing as chairman Dr. Charles R. Mann, to whose farsighted planning much of the progress of these last months has been due.

A week or two later, when the Department of Superintendence of the National Education Association met at Atlantic City, a committee on the national emergency in education was appointed, which was later merged with a committee already appointed by the National Education Association under the title Commission on the National Emergency in Education, with Professor George D. Strayer as chairman.

These three agencies have been operating with headquarters in Washington for six months, and the spirit in which they have approached their tasks, the ready response they have received from the institutions and educational leaders of the country, and the ideals which they have set before themselves mark the dawn of a new era in American education.

THE characteristics of the new movement may be briefly summed up as a recognition of the national and international significance of education in the present emergency and after the war; the determination to give education the place in our government and national life which American leaders from Washington down have prescribed for it, but never achieved; a consciousness of the strength resident in the educational forces of the country when properly organized; and a willingness, hitherto unknown, to subordinate institutional and personal advantage to national welfare.

There ought perhaps to be mentioned the organization of another educational agency at Washington which is full of promise and which we owe also to the necessities of the war, and that is the National Research Council, presided over so ably by Dr. Hale, an organization designed to unify scientific research in the national interest. It operates with the quasi-official status granted by Congress in the charter of the National Academy of Sciences at the time of the Civil War, and seeks to retain the advantages of private management combined with government recognition. So closely related has been the work of these four organizations the last six months, so harmonious and co-operative the spirit of their personnel, that it would be difficult to apportion to each its just measure of recognition for its share in the various educational measures of the last half year.

What now are some of the projects

on foot? First, the Students' Army Training Corps. The inauguration of this plan marks a great achievement in the American conduct of the war. It is something entirely new in warfare, and could only have come into existence in a Department of War which reflected the true spirit of democracy and was willing to work horizontally, coöperatively rather than vertically—autocratically, a department also which does not find thinking too fatiguing an occupation, and which is endowed with the clear headed patience which is willing to take infinite trouble if thereby all the forces of democracy can move forward harmoniously together. In a word the Students' Army Training Corps mobilizes all the forces of American education with true and sincere coöperation between the soldier and the teacher, because it is based on a recognition of the fact that generally speaking the type of mind produced by college training is the best officer material for the line, while the technically trained man is absolutely indispensable for the building and operating of ships and railroads, the manufacture of munitions and gases, and the invention of those new technical devices which make aeroplane and submarine effective, or which protect against their attacks. It gives due recognition to the desire of the spirited boy of eighteen to get into the army as a volunteer, to the fact that public opinion lags behind experience and still thinks in terms of the Civil War, when the boy who wanted to fight could take his gun and go and do effective service, and which therefore does not yet sustain as it should the boy who follows the course marked out for him by the commander-in-chief, rather than that of the vociferous recruiting officer, sticking to his books until his country can use him in a way that really counts. Under this plan we shall have universal military training on a volunteer basis so far as college men are concerned. Practically the entire 120,000 college men of the country will be enlisted this fall in the army or navy, and will wear the regular uniform while at college. They will constitute a distinct corps of the army on equal footing with infantry, artillery, quartermasters, aviation, and the rest. They will combine college study and military instruction in the ratio of about 3 to 1, and will undergo a sifting and sorting process which will produce an unfailing supply of the men needed as officers, physicians, shipbuilders, chemists, physicists, psychologists, and all the technical services.

Incidentally it will mold the education to the necessities of war. It will be the white hot electric wire running thru every college, technical school and university in the country, rendering education plastic, precipitating dross, liberating ozone. It will achieve this result not by militarizing the colleges, nor by educationalizing the military machine, but by a reasonable co-operation for which we have a guar-

antee in the appointment of President Maclaurin of the Massachusetts Institute of Technology as Director of College Training.

The task of persuading the boy to go to college and enlist in the Students' Army Training Corps, and of enlightening public opinion so that it will sustain and honor the boy for taking this step, has been undertaken by the American Council on Education thru its Committee on Students' War Service, of which President Vinson of the University of Texas is chairman. A campaign has been begun with the sanction of the National Council of Defense and under the immediate direction of Dr. Robert Kelly, Executive Secretary of the Association of American Colleges. A prominent college president in each state has accepted the position of state director. The campaign will explain itself to the public in the near future.

The second definite step of these six months is the crystallization of educational opinion in favor of a National Department of Education with a secretary occupying a seat in the President's Cabinet, and the drafting of definite bills for this purpose by both the N. E. A. Commission and a special committee of the American Council working in close coöperation. It is recognized that a far reaching constructive step of this kind may have to wait until the war is won for its fulfillment, but on the other hand England, with all her war problems, has found time for a remarkable Education Bill, and it is the belief of those who have watched the attempts to deal with educational problems which the war has created with the present machinery of government, that not only is the country ready for definite action now, but that the exigencies of the war will demand action before another year has passed. If the matter is not determined before 1920 on a nonpartizan basis, each of the great political parties will try to make political capital out of a big, broad education plank in its campaign platform.

The third step is in regard to international educational relations. The National Research Council has already secured the appointment of scientific attachés at some of the leading embassies. Part of the plan for the National Department of Education is that it shall have the same right as the Army and Navy Departments to maintain attachés at foreign embassies, to give us information regarding foreign education and national ideals and to give to foreign countries a correct interpretation of what we teach and believe as a nation.

American colleges have offered scholarships providing not only free tuition but free board and room for 200 French girls and the arrangement has been welcomed by the French Government. A special committee of the American Council, with Professor Schofield, of Harvard, as chairman, is at work on a comprehensive scheme which will develop closer [Continued on page 207]

# How I Learned to Read Character at Sight

## The Strange Adventure of Carlton Steele

"That man is a band leader," said the lady in white, turning casually in her steamer chair. "And his companion is the man who owns the band."

I had overheard the little group on the deck of the Mauretania discussing—as is the pleasant habit of ocean travelers the first day out—who their two rather distinguished-looking fellow travelers might be who had kept themselves so aloof since we sailed from Southampton.

From the looks of blank amazement on the faces of the lady's companions, and from their exclamations, it dawned on me that she was telling *what* these men were without having the faintest idea *who* they were.

"You know who she is, don't you?" said my traveling mate, Dr. Allen. "She is the most famous Character Analyst in the United States—Dr. Katherine M. H. Blackford. Let me introduce you," said he, moving over from the rail.

And at that moment began what I consider perhaps the most remarkable—and profitable—experience of my whole life.

"Mr. Steele, I don't know either of them from Adam," said Dr. Blackford with a gleaming smile and a twinkle of her keen, dark eyes, "but I am sure that my conclusion is correct."

Sure enough. We checked up Dr. Blackford that same evening and found that the two "mysterious strangers" were—who do you think?

Why, no other than the Leader of the Boston Symphony Orchestra and the President of the Corporation owning the orchestra (the "band leader" and the "owner of the band").

When I congratulated Dr. Blackford on her quite unbelievable feat she said, "Mr. Steele, you could do that just as easily as I do, if you would only take the pains. Really you could. There is no trick about it, or second sight, or any such rubbish."

"It is just knowing how to size up people by looking at them, and studying in one swift but careful survey their features and physique and gestures and habit of conversation.

"It all seems so simple that I often wonder why every normal man or woman cannot do the same thing.

"But I have taught thousands of people how to read and analyze character—all the way from office and factory employees to state governors, owners of large newspapers and corporation heads."

\* \* \* \* \*

Right there I made up my mind that whatever else I did when we landed in New York, I would invest five dollars in Dr. Blackford's popular course in "Reading Character at Sight," which I learned her publishers, the Independent Corporation, were now marketing nationally as a far-reaching educational service.

Five dollars! Why, I tell you that Course has been worth five *thousand* dollars to me already. In seven fascinating lessons I have discovered how to tell what a man is like from what he *looks* like. In fact I got the real secret of it in the first lesson, right in my own home.

As a result I am getting to be a judge of character to an extent I never dreamed was possible.

Honestly I never *knew* people before.

It is a positive revelation to be able to "look right through people," as the old saying goes, and be able by applying Dr. Blackford's simple method to tell what people really are—under the surface.

Knowing now the peculiar qualities of the men or women I meet in business—by observing them closely—I know how to deal with them more successfully; how to say the right thing; how to influence them effectively; how to interest them; how to meet them in a business transaction, or a discussion, and secure every proper advantage.

How many times have you said: "Oh, if I had only known him (or her) then as I do now! How different it all might have been."

Dr. Blackford's lessons will save you from any such painful experience as this. Her method is simple and accurate and amazingly easy to master—because it is not drudgery but just a fascinating game of "sizing people up."

It is not guesswork, but a sensible and scientific application of physical and psychological laws that govern human character and actions.

Photographing character! Sounds as strange as aviation and wireless did a few years ago, doesn't it? Yet that is precisely what Dr. Blackford's lessons teach you to do.

Men and women of all conditions have come to her for knowledge about themselves. Heads of large corporations, engineers, physicians, bankers,

educators have studied her course and profited thereby.

I see now why so many thousands have sought Dr. Blackford's guidance in solving the greatest problems of their business and their every-day lives.

I see why she has been sought as counsellor by such concerns as the Scott Paper Company, Baker-Vawter Company, Westinghouse Electric and Manufacturing Company and scores of other great concerns.

Dr. Blackford has a wonderful message and for the first time it has been put into a popular home-study course of seven lessons at a price within the reach of all.

Do not fail to send for it. It won't cost you a penny to look it over.

When you have spent a half hour with that wonderful first lesson, and see where *you* come in, I strongly anticipate that your verdict will be like that of Mr. L. E. Hawley, of Grand Rapids, who wrote:

"If I had known years ago what I have learned already from Dr. Blackford's Course, the knowledge would have been worth a thousand times the price of these lessons to me."

Dr. Blackford has shown me a hundred other letters like this from her grateful pupils. She has thousands more.

So why wait another minute?

CARLTON STEELE

### Send No Money

So confident is the Independent Corporation that once you have seen Dr. Blackford's Course in "Reading Character at Sight" you will want to keep it, that they are willing to send the entire Course to you on free examination.

Send the coupon for it now—or write a letter and it will be sent you charges prepaid.

If you are not entirely satisfied with the Course, send it back and you will owe nothing.

If, on the other hand, you like it as do thousands of others who have used Dr. Blackford's Course with immense profit to themselves, send \$5 in full payment.

You take no risk and you have everything to gain, so mail the coupon, before this remarkable offer is withdrawn.

#### FREE EXAMINATION COUPON

### Independent Corporation

Division of Business Education, 119 West 40th St., New York  
Publishers of *The Independent* (and *Harper's Weekly*)

Please send me Dr. Blackford's Course of seven lessons called *Reading Character at Sight*. I will either return the Course to you within five days after its receipt or send you \$5.

# THE NEW BOOKS

## Women Wanted

**I**N *Women Wanted*, by Mabel Potter Daggett, there is interest for every woman living in these times of war and changes, for it teems with facts about her woman in war, in industry, in the professions in business, and in the readjusted home. The book describes the altered position of women of all classes in America and Europe, with emphasis on England and France, where the effects of the war have been greatest.

In a chatty and amusing style Mrs. Daggett gives her experiences in the belligerent countries where she collected her data. Everywhere she is impressed with the marvelous work of the "woman behind the man behind the gun," and in five dramatic chapters she describes the war work of the women. These pages are alive with enthusiasm and illustrated with dramatic examples.

Who is it that is feeding and clothing and nursing the greatest armies of history? See that soldier in the trenches? A woman raised the grain for the bread, a woman is tending the flocks that provided the meat for his rations today. A woman made the boots and the uniform in which he stands. A woman made the shells with which his gun is loaded. A woman will nurse him when he's wounded. A woman's ambulance may even pick him up on the battlefield. A woman surgeon may perform the operation to save his life. And somewhere back home a woman holds the job he had to leave behind. There is no task to which women have not turned today to carry on civilization. For the shot that was fired in Serbia summoned men to their most ancient occupation—and women to every other.

With a background of woman's past struggles to gain a place of equality with man Mrs. Daggett contrasts the welcome woman now finds in all departments of civil life. With eager enthusiasm she describes the skill and proficiency exhibited by women in all their undertakings. Her hopes of the future are high for she sees reorganized economic and social conditions for women and children, and, crowning all, the new freedom for women which she terms woman's "paradise regained," and of which she says: "It may even, I think, have been worth this war to be there."

*Women Wanted*, by Mabel Potter Daggett. George H. Doran Company. \$1.50.

## Games That Train

**T**HERE are few things more pitiful in the world than a child who fails to develop as rapidly as other children of its own age. This can frequently be overcome and always alleviated by proper training, and in this training as well as in the training of normal children, there is nothing of more value than games. Hilda A. Wrightson has gathered together those games which she has found useful during her long experience in child work.

The games are played with material easily procurable by any one; bean bags, blocks, hoops, flags, blunt-pointed scissors and colored paper. They may begin when the child is three years old and are to be played in one hour sessions of alternating active and inactive games with no variation in the playing, as this tends to confuse the child's mind. Of such homely but often difficult processes as the putting on of wraps, Miss Wrightson makes a game, which consists in placing the clothing on chairs in front of the children who race to complete the task. They are taught to fasten their shoes in the same manner and

all this time concentration is being developed in the spirit of play. The clever combination of mental and manual training makes the games doubly valuable. The book should find a grateful reception from mothers and teachers, and especially from the volunteer workers in the city's playgrounds.

*Games for Children's Development*, by Hilda A. Wrightson. Prospect Press, Inc. \$1.50.

Sergeant Ruth Farnam, of the Royal Serbian Army, is one of the American women whose war work began long before their own country had entered the conflict

## Serbia at Bay

**M**ORE than a mere account of personal experience, *A Nation at Bay* cannot be classified as another of those endless war books. Even more than an appeal for a stricken country, it is the cry of civilization against barbarism, and those who read cannot lay down the book unstirred. The book breathes of the wonderful personality of this American woman, Sergeant Ruth Farnam, of the Royal Serbian Army, who has been decorated with three different orders for valor and service, and who has the unique honor of being the first woman of any nationality to enter reconquered Serbian territory.

The author says in her preface that she has tried to express the deep emotion, the admiration and the respect, which the sight of Serbia's great courage aroused in her, and that because her whole heart is in this book, she offers it with the hope that it may increase the awakening interest in our brave ally. Her book cannot fail in its mission. She paints so poignantly the picture of tortured but unconquerable Serbia, with her heroic men and brave women, that those among us who, in ignorance of, rather than in indifference to, the intense suffering of this country and its gallant fight for us, have not yet given their share, will respond generously.

Unless this war ends favorably for us, Serbia will be but a memory and her brave and splendid people will die out, butchered by the cruellest and most vindictive enemy the world has ever known. Serbia, who held the gates on the East, as Belgium did on the West, until the armies of England and France could take their stand; Serbia who, like Belgium, has been crucified and today is gasping out her life under the tortures of our enemies!

*A Nation at Bay*, by Sergeant Ruth S. Farnam. Bobbs-Merrill. \$1.50.

## Personal Efficiency

Efficiency is the ratio of useful work, or of effect produced, to the energy expended, or outlay made in producing it.

Personal efficiency can best be attained by training the individual mind, the individual will, and the individual body whose members carry out the directions of the mind and will. This means applying psychology to the problem of gaining efficiency.

These lessons on personal efficiency, published lectures by Mr. Grimshaw, do for the layman what the psychologist can do for himself. He emphasizes the practical aspects and applications of psychology and shows that efficiency is after all but a keen understanding of the possibilities and limitations of our mental and physical functions, and how best to realize the possibilities and overcome the limitations. This is, in the last analysis, self-knowledge to the highest degree.

*Personal Efficiency*, by Robert Grimshaw. Macmillan. \$1.50.

## Mental Measurements

**P**INTNER and Patterson's *A Scale of Performance Tests* presents a survey of many experiments directed to the standardization of mental tests and establishes a scale that can be used generally with various types of defective children as well as with normal children, or foreign children—that is, those lacking the language of the environment. The rapid extension of the use of laboratory tests in dealing with juvenile delinquents, with defective children, and with school groups in need of better adjustment makes this book timely and useful.

*A Scale of Performance Tests*, by Rudolf Pintner and Donald G. Patterson. D. Appleton & Co. \$2.

## Books in Brief

**SCIENTIFIC DISTRIBUTION**, by Charles F. Higham. (Alfred A. Knopf, \$1.50.) A study of advertising as something more than a trade ally—as a distributor of ideas, literature and social propaganda.

**EDUCATION FOR LIFE**, by Francis G. Peabody. (Doubleday, Page, \$2.50.) An historical survey of the fifty years' growth and achievement of Hampton Institute.

**PATENTING AND PROMOTING INVENTIONS**, by Mois H. Avram. (McBride, \$1.50.) A guidebook dealing with patent law and promotion, of interest to the inexperienced inventor and investor.

**SEWING AND TEXTILES**, by Annabell Turner. (D. Appleton & Co., \$1.75.) A well illustrated volume of practical information on sewing, darning, patching, with helpful chapters on the study of materials.

**HOW TO SPEAK**, by Edwin Gordon Lawrence. (A. C. McClurg & Co., Chicago, Ill., \$1.) A helpful textbook for the business man or woman who must converse daily with many persons, individually or collectively.

**CITY MANAGER PLAN**, compiled by Edward Charles Mabel. (H. W. Wilson Co., \$1.25.) This volume of the *Debaters' Handbook Series* discusses the theory of the plan, gives arguments pro and con, and extracts from city manager charters.

**CRIMINAL SOCIOLOGY**, by Professor Ferri. (Little, Brown & Co., Boston, \$5.) This translation, constituting the ninth volume of the *Modern Criminal Science Series*, brings to the front the scientific approach to problems of crime.

**MOTION PICTURE EDUCATION**, by Ernest A. Dench. (Standard, \$2.) A book of general information for motion picture writers by an accepted authority.

**COMMERCIAL LETTERS**, by Opdyke and Drew. (Henry Holt & Co., \$1.50.) Written for school use. It has copies of business letters from many well-known firms.

## THE BLACK SNAKES

(Continued from page 185)

edness cost Uncle Sam a cool million or so. As we talked our batteries were thundering all about us and it is needless to say that there was an air of suppressed excitement about that dinner table. The Germans on their part were shooting over shells that exploded high in the air. That meant that they were getting the range of our back lines—an almost sure sign of a coming advance. Fortunately no shells were falling in our vicinity, tho we were well within the range of their guns. Only a few nights before an outhouse connected with our chateau had been struck, killing a number of men and horses.

After dinner the general invited Captain Richardson and myself to accompany him to the front lines. It was a wonderful opportunity and of course we were thrilled with the idea of being permitted to go. We waited till after nine o'clock as it was unsafe to go by motor over any roads nearer the front line till dusk. Our gunners had started the first of the 400,000 shell fusillade and the great flashes of the guns from all points in the horizon made momentary daylight out of the darkness. The Germans on their part were sending up trench rockets which would light up No Man's Land for two or three minutes before they burned themselves out. I suppose they thought our vicious artillery bombardment might mean an imminent attack. As we spun along the white roads surrounded by this stupendous display of fireworks we could see the dusky shadows of men moving about in the neighboring fields and then, every few seconds, would come the lighting flash and colossal report of the gun almost deafening us with its concussion. In passing a clump of trees the general said, "Take a good look at that." I did, but could see nothing out of the ordinary. He ordered the corporal who was driving the car to stop and we walked up to the grove and there came upon the most elaborately concealed and camouflaged army headquarters I ever saw. The lower limbs of the woods were shaved away and there, under the tree tops, was a complete city with numerous tunnels leading down forty feet or so to the staff headquarters and sleeping apartments below. We called upon Brigadier General Hines, who invited us into his office, which was no bigger than a stateroom on a ship, and there we sat, the two generals on the edge of General Hines's bed and two or three aides and myself squeezed together on boxes and chairs. One of the colonels showed me some extraordinary aeroplane photographs of our boys in the act of taking the town of Cantigny. You could see plainly the little pin heads of men walking thru the shell craters while ahead of them, partly concealed by the smoke barrage, were little turtle like spots that on minute inspection we could recognize as tanks. By this time it was pitch dark outside and after visiting the subterranean radio stations, the mess hall, and the berths of the men, we came up out of the bowels of the earth and went over to where a group of twenty-five American messengers were waiting for orders to carry dispatches from one part of the line to another. These messengers are a very important factor in modern warfare because of course one of the best things that a successful advance does is to cut all the telephone wires and every means of communication with the rear line.

While talking to the messenger boys an officer came running up and said, "What is this civilian doing here?" When he was told who I was he apologized, but it was a good example of the watchfulness of our officers in war time. General Bullard in the meantime had finished his conversation with

## A Crusade

### For Puffed Grains Would Be Started If Children Had Their Way

There are still millions of children who don't get Puffed Grains, or who get them rarely.

They miss the finest grain foods in existence. And the best of grain foods, with every food cell steam-exploded so it easily digests.

If your children are among them, go order all three kinds of these grain bubbles now.

### No Foods Like These

No other form of wheat, rice or corn food is anywhere near so flavory.

None is so airy, so flaky, so thin, crisp and flimsy. The grains of wheat and rice are puffed to eight times normal size.

None is so fitted to digest. Puffed Grains are scientific foods, invented by Prof. Anderson. Every food cell is blasted, while most cooking methods leave half of them unbroken.

Puffed Grains are breakfast dainties.

They are for bowls of milk. They are tidbits for between meals. Crisp and lightly butter.

They supply three major foods in an ideal form where every atom feeds.

The better you know them the more you will serve them. Keep a full supply.

**Puffed  
Rice**

**Corn  
Puffs**

**Puffed  
Wheat**

**All Bubble Grains. Each 15c Except in Far West**

## Waterbury Radiolite

**T**HIS is the stylish small size watch, a jeweled movement encased in solid nickel.

It is staunchly constructed on the soundest principles of watch making.

Real Radium makes the substance on the hands and figures glow the time in the dark. The luminosity is guaranteed for the life of the watch.

The Waterbury Radiolite sells for \$5.00. In a high-grade English pigskin wrist strap it sells for \$6.00.

## Change of Address

**I**F you are going away for the summer, you will want *The Independent* to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

THE INDEPENDENT

General Hines and came up and joined us. It was pleasant to see how naturally he mingled with the men and how they all evidently admired and respected him. I was impressed by one remark he made to us showing the difference between individual and collective responsibility. "If I order any one of you boys here," said he, "to deliver a message to a particular spot, there is not one who would not die in the attempt to carry out instructions, but if I order you all as a group to go out and do some hazardous piece of service there are sure to be some who will funk." I asked the boys what effect the Cantigny victory had had on their morale and they were unanimous in the opinion that the division was 25 per cent more efficient now than before the attack. They felt that tho they had lost many comrades the fight had welded them together into a more vigorous army and that their one hope was that they could soon make another attack. In fact these boys, as well as all the other boys I talked with in the 1st Division, were literally wild with eagerness to advance. "Only let us get another crack at the Huns," they said, "and the next time we'll drive them into the Rhine."

After we said good-bye to the inhabitants of the camouflaged grove we went up and down the lines until long after midnight, the general expecting the news at any moment that the Germans had come over the top. But such was not to be the case, and when we finally got back to our chateau we went to bed and to sleep to the music of the residue of those 400,000 shells still going over our heads.

During the time I was in General Bullard's company he was most kind and frank in discussing the war situation with me. By the first of September, he thought, we ought to know whether the United States will have been in time to save Europe. So far the Allied armies have only maintained the defensive, but the time will come, he was sure, when we must strike, for no war can be won simply by defense. The point has about been reached when the Allies can retreat no farther, for if the Germans gain another twenty miles thru this Montdidier sector they can demoralize our intercommunications behind the lines. "The French general," he said, "who was talking to me yesterday when you arrived, came over to ask me what I was prepared to do in case we had to fall back. I did not answer him, for I didn't know what to say. My orders are to hold this line and I'll do so even if annihilated." What the general eventually told his French colleague I never heard, but I think I can imagine.

General Bullard extravagantly praised the courage of our boys. "There is nothing on earth that they will not fight. Our officers also are now having their experience and it will only be a short time when we can approach in efficiency the French and the English staffs. There is no way of testing an officer's real ability in time of peace, but now in a real war we can punish men who don't get results. Only last night a fine young officer under my command was ordered to bring his regiment up to a certain position. He gave the proper orders, but thru some mistake the troops did not get to the place assigned and he did not look personally to see that his orders were carried out. If the Germans had attacked us we would have been in trouble. We had to relieve him of his command this morning."

The next morning after breakfast General Bullard sent us up to the very front lines. A young officer who knew the roads perfectly took us first to Brigadier General Buck's headquarters, where we found the general living in a pretty chateau whose ground floor had been paved with brick

to protect his staff quartered in the cellar from air bombs. General Buck was born in Boston, but hails from Dallas, Texas. He agreed with General Bullard that the time would have to come, and perhaps soon, when we must take the initiative. "America must take the initiative, for France and England are war weary after their four long years of holding the line." The general, like every American officer I have met, spoke in glowing terms of the bravery of our men and told how some of his troops when they first saw the dejected and underfed appearance of the German prisoners, said, "And to think that those are the men we have been told to fear." The general suggested that I proceed to a ridge, where I could get the best view of Cantigny, but in order to do this he said I would have to walk 500 yards over an open field exposed to the German guns. The road was a dangerous one for automobiles and he explained how necessary it was for the car to go at top speed until I arrived at my destination. He told me to hide the automobile in a barn this side of the village, for it was not so likely to be shelled there as in the village. That remark seemed to suggest something to him and he took down the telephone and called up the woods where we were going and I heard him ask an officer on the other end of the wire whether they were then shelling the position. When the reply came that a bombardment was actually going on he kept me for twenty minutes longer and then he only let me proceed after he had telephoned again and found the coast clear. "It is safe now," he said. "They are not likely to fire again until this afternoon."

He ordered another lieutenant who knew the road to the woods to accompany us, for it would not be safe for us to slow up to inquire the way. As we sped along the road I told this lieutenant how our Connecticut and Massachusetts boys up at Seicheprey had not been in the trenches a week before they drove the Germans completely out of No Man's Land and I said I supposed the 1st Division had done likewise. "On the contrary," he replied, "the very first night we arrived in our sector we took over No Man's Land and we have held it ever since."

In a few minutes we had traversed the exposed road, had stopped as directed on the near side of the village, and hidden our car under a shed. We walked thru what was left of the town. Everywhere American boys were sitting like woodchucks in front of tumbled-down buildings ready to dive down forty feet below to the dugouts the moment any bombardment started. In one dilapidated court yard we saw that some of our humorously inclined soldiers had decorated the spot with signs. One of these at the door of the steps leading down into the cellar read, "Pistols will be checked at the door." Another one tacked on a shed in which were two broken beds and a one-wheeled baby carriage serving as a bureau read "Home was never like this." And another by the side of the horse trough where the men washed stated, "One joy towel will be furnished each night."

As we walked about the demolished village the German shells were going over our heads. In what was once the doorway of a home we met Colonel Smith. He took us down stairs some forty feet underground to the officers' mess and the various rooms for the soldiers. On returning to daylight we walked up the hill back of the village with Lieutenant Thomas, a Yale 1915 man, as escort. On coming to four corners, Lieutenant Thomas said we were at the most shelled spot in that sector. All about the earth was pocked with shell holes and the Lieutenant said it is shelled many times a day on the chance of hitting a supply train. We crept it one at a time and on the run, as it was in plain sight of the

# How a Change of Food Restored My Life

*and transformed me from a physical weakling to what my friends call a man of iron*

By EUGENE CHRISTIAN

**T**WENTY years ago I was at death's door. For years I had suffered the agonies of acute stomach and intestinal disorders. My physicians, including several of the most eminent specialists in the country, pronounced my case incurable and gave me up to die.

But although I could get no hope from anyone, I still clung to the idea that somehow, somewhere, I could find help.

I went out into the country—though scarcely able to walk—to think things over. I watched the animals on the farm. I noted the scientific feeding practised. I saw how with foods alone the farmer produced the results he wanted—how, to produce more milk, he fed his cows certain combinations of foods; how, to put fat on hogs, he fed other food combinations; how, to produce muscle in horses, he fed still other food combinations. I learned that *properly balanced rations* produced just the results desired and I saw how *improperly* balanced rations produced wrong results.

And then a great thought flashed through my mind. It was this: If scientific eating can produce such remarkable results for animals, why wouldn't the same treatment be effective with the human animal?

## A Boy's Vitality at 60

The results secured through animal feeding seemed to prove conclusively that there was an absolutely direct relation between the foods they eat and their physical condition, and of course this must be so with man.

Having been educated to be a physician myself, I determined to try some experiments. At first I made so many mistakes that I'd go a step forward and then two backward. But I persevered. I experimented and experimented and experimented. Soon I discovered a few basic laws. These I used as my foundation and gradually I began to improve until from a man who couldn't walk a city block without resting, unable to keep even the supposedly most simple meal down, so thin that the bones literally stuck out all over—from this I developed into a well man.

And I say "well" advisedly. Today I am nearly sixty years old and I haven't had a sick day in years. I work twelve to fifteen hours every day of my life and I never tire. It is a regular comment of my associates that I have more ginger, more vitality, and greater endurance than the average boy in his teens. And I owe it all to corrective eating.

## 23,000 Cases on Record

The above is Eugene Christian's own story of his remarkable recovery through correct eating. So amazing were the results in his own case that hundreds of people sought his advice about foods, usually after all other treatments had failed. Since then Christian has treated over 23,000 people for almost every non-organic ailment known with almost unvaried success.

One case of unusual interest was that of a young business man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation resulting in physical sluggishness which was naturally reflected in his ability to run his work. He was twenty pounds under weight when he first went to see Christian, and was so nervous he couldn't sleep. Stomach and intestinal pains were so severe that they caused irregular heart action and often loss of great mental depression. After ten days' treatment at his own not only did the stomach and physical condition, but in a few days, by following Christian's suggestions as to food, his constipation had completely gone, although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks

Eugene Christian, 57 Years Young

every abnormal symptom had disappeared—his weight having increased 6 pounds. In addition to this he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

Another one of Christian's most interesting cases was that of a multi-millionaire—a man 70 years old—who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago and rheumatism. For over twenty years he had suffered with stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition all caused by the wrong selection and combination of foods. After six months' treatment this man was as well and strong as he had ever been in his life.

## Help for Everyone

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a little course of lessons which tells you exactly what to eat for health, strength and efficiency.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons. Reasons are given for every recommendation based upon actual results secured in the author's many years of practice although technical terms have been avoided. Every point is explained so clearly that there can be no possible misunderstanding.

With these lessons at hand it is just as though you were in personal contact with the great food specialist because every possible point is so thoroughly covered that you can scarcely think of a question which

isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and will find that you secure results with the first meal.

## Little Lessons in Corrective Eating and Christian Herald for a Year—Great Value for \$3.00

Nearly two hundred thousand sets of Eugene Christian's Little Lessons have been sold during the past two years at a much higher price, but through a special arrangement with the publishers, the Christian Herald is able to offer this remarkable set of lessons, together with a year's subscription to Christian Herald for only \$3.00.

The Christian Herald has fully investigated Eugene Christian's food system and can confidently recommend it to its readers. Already over 7,000 of our subscribers have bought sets of these books and have fully tested their value. Their approval confirms our opinion as to their merits. Eugene Christian's system is not to be confused in any way with the medical systems; it is wholly scientific, hygiene reduced to the last point of simplicity. We believe that its universal adoption would result in overwhelming endorsement of it; hence, being fully convinced of its merits, we see no reason to withhold the Christian Herald's unqualified commendation of a system which is capable of doing so much good.

Only a limited number of the Little Lessons are available, however, so immediate action is necessary. Mail the coupon today.

## Training for Authorship

How to write, what to write,  
and where to sell.

Dr. F. Schwenk

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Fiction, Journalism, Play Writing, Photography, Writing for the Stage, etc. Each person can find his own way to success. Dr. F. Schwenk, Director of the Home Correspondence School, has a staff of literary experts. Constructive criticism. Personal instruction. Inspiring advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time. "play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*. We are constantly in receipt of complimentary copies of our courses. Besides our teaching system, we offer a manuscript criticism service.

Smethport, Pa.

German balloons. Then we went up to the second line trenches and took a look at Cantigny down in a little decline a few hundred yards ahead. All we saw was a mass of masonry and stone. A few bricks of the church were standing above the rest of the debris, but every house was in ruins and the forest back of the hill was completely shot away, leaving only a few scarred tree trunks here and there as tho the whole place had been swept by fire. It was a mute but vivid testimony of the accuracy of American shell fire. We saw our front trenches, which could only be safely entered at night, and then the faint yellow streak of the German trenches a couple of hundred yards beyond. We could see our shells landing in the forest back of the town, throwing up a spray of earth and dust forty feet straight into the air.

Verdun was the most imposing battlefield I had ever seen, but Verdun was an extinct volcano. Cantigny was in active eruption; it was alive. Then we motored back to take luncheon with General Buck. I subsequently learned that our car was the first one to make this trip in daylight. At General Buck's headquarters we had the pleasure of finding General Merie, the commander of the French division contiguous to ours, who had come over with his staff for luncheon. Captain Richardson being the only officer present who could speak French and English with equal fluency, acted as intermediary for most of the conversation.

After luncheon we went out to see another section of the line and to get a view of Cantigny from another angle. We had to go thru several ruined villages and finally reached the highest point of vantage in that sector. There we saw the whole German lines for miles in either direction. A veritable fusillade from our batteries was still pouring down upon their rear lines, and both near and far I could see the great splashes of earth flying into the air while above our heads shrilly whistled the shells. On our way back I stopped at a 75 mm. battery and I was again given permission to fire a shell. My target this time was a patch of German woods back of the lines where the German advance was supposed to be forming. There were three soldiers in charge of the battery, a young lieutenant fresh from college; a corporal, evidently in civil life from the mechanic class, and a foreign born American who spoke with an accent. I thought that those three men typified the diversity and homogeneity of America in this war—the cultured college graduate, the Yankee mechanic and the immigrant all fighting shoulder to shoulder and offering their lives that democracy may be extended on earth.

That night four hours after we left Cantigny for Paris, the great German drive began. It did not come at our boys of the 1st Division, as they had expected. But it plunged straight at our marines and regulars holding the direct line to Paris at Chateau Thierry. And all the world knows what those Americans did.

The Germans have one claim to renown: they're the only folk in history the Irish have declined to fight.—*Philadelphia North American*.

Member of R. O. T. C.—Captain, my foot hurts terribly.

Captain—That's a pretty lame excuse.—*Purple Cow*.

Job—Besides, it's so bloomin' unlucky sendin' a bloke back after bein' wounded half a dozen times.

The Comforter—Garn, what are you growlin' at? You're used to it—not like us poor beggars who haven't been broke in.—*Sydney Bulletin*.

## Phonograph Records Sound Clear and Harmonious

### ELLIS MELODIOUS REPRODUCER

"It makes all the difference in the world." It resurrects the "living voice" of the artist who made the record. All the tone values of instrumental music, solo or orchestral, are brought out perfectly and harmoniously with the overtones which musicians listen for.

Words cannot convey to you an adequate idea of how much this wonderful little device will do to improve the playing of records. You must see it—hear it—compare the effect with any and all other reproducers you know of; then you will understand why every music lover owner of a phonograph who hears the Ellis Reproducer wants to own one.

Plays all disc records.

# NEW KIND OF WAR MAP

**WAR MAP**  
OF THE WESTERN FRONT  
SPECIALLY INDICATING SCENES  
WHERE AMERICAN TROOPS ARE ENGAGED

**THE AMERICANS IN FRANCE**

Follow every move of our boys "over there." They are now in the "heat of it"—holding important sections on the Western Front.

## There Fight Our Boys!

There—right there! And in this spot too! Put your finger on their battle-ground. Isn't it great to have an "American" map of the Western Front! A map that shows just where "we" are "over there." A map that will take you in two seconds from the news headlines to the spot where "it happened." That's the kind of a guide you now have in this new War Map of the Western Front, specially indicating where American troops are engaged! A wonderful map in colors, showing the present fighting zones in detail and over 5,000 villages, towns and hamlets.

### Also a Military Map of the U. S. A.

This new kind of a War Map is really two maps in one. On the one side you have the map of the Western Front, on the other side you have a United States Military Map showing—

Posts and Stations of Army	Naval Training Stations
National Army Camps	Marine Barracks
National Guard Camps	Air Force Stations

**MAIL THE COUPON** A limited number of this new War Map will be offered at the special introductory price of only \$1. There is a great demand for this map and we do not know how long the \$1 price will hold. An increase in price may come any day—so please order promptly to secure the \$1 price. Fill out and mail the coupon or just pin a dollar bill to a letter. If you are not more than delighted with this splendid new map, just return it to us, and your \$1 will be promptly refunded. Order today—**NOW!** Clip the coupon before you forget.

## Independent Corporation

119 W. 40th St., New York City

Around the margin of the map is printed the various insignia showing the rank of commissioned and non-commissioned officers, and the different branches of the service. Be able to tell a Lieutenant-Colonel or a Major when you see one. Be able to tell the branch of service of every Soldier and Marine you see—a wagoner from a medical man, a coast artilleryman from a cavalryman, etc. You can learn it all from this new map.

**SPECIAL \$1 COUPON**  
**INDEPENDENT CORPORATION**  
119 W. 40th St., N. Y. City

Enclosed is \$1 for which you will send me the new U. S. A. War Map of the Western Front. 8-10-18

Name .....  
Address .....  
City ..... State .....

### Special Features

Map measures 27 1/2 x 38 inches when spread. Folds up into heavy mailing cover, 15 1/2 x 15 1/2 inches. Colors shown in actual colors. Map of Western Front printed in colors. All names printed to be easily read. Military Map of the U. S. A. printed in black. A wonderful two in one Map. The more you use it, the more you will prize it.

## SCHOOLS AND COLLEGES

## HARTFORD

W. Douglas Mackenzie  
President

## Theological Seminary

Scholarly and practical training in the seminary. Faculty of thirteen excellent professors. Special lectures. Notes by many of the best volumes. Liberal endowment to students of high rank and graduate fellowships. Open to college graduates of all Christian denominations. Address

Dr. M. W. JACOBUS.

## School of Religious Pedagogy

Degree Course for graduates of colleges and theological seminaries. Diploma Course prepares lay workers for salaried positions in all kinds of Christian service, church, Sunday-school, mission and settlement work. Correspondence Courses for teacher training. Demand for trained workers greater than supply. Address

Dean E. H. KNIGHT

## The Kennedy School of Missions

A Graduate School for Special Preparation. Interdenominational. For candidates, appointees and missionaries. Large faculty and library. Courses in phonetics, certain vernaculars, history and religions of mission fields, sociology, Bible, business methods, etc. Address The Secretary, E. W. CAPEN.

## DEAN ACADEMY

FRANKLIN, MASS. 52nd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$325-\$400 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

## NEW-CHURCH THEOLOGICAL SCHOOL

48 Quincy St., Cambridge, Mass.

Established 1866. Three years course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired.

For catalogue and information, address

WILLIAM L. WORCESTER, President

## MARTIN COLLEGE For GIRLS

PULASKI, TENN.

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue Grass Hills of Sunny Tennessee. Careful Supervision. Box 1. W. T. WYNN, President.

## Kiskiminetas

SCHOOL FOR BOYS

Located on a wooded highland overlooking the beautiful Kiskiminetas river. 200 acres. "Kiski" lets a boy grow up out of doors. Special preparation for college and technical schools. 13 expert teachers keep in close personal touch with boys. Small classes. High athletic spirit and strong competitive teams. Several athletic fields. Tennis, Golf, Swimming Pool, Bowling Alleys, New Gymnasium. School owns its own farm and coal mine. Rate \$700. For catalogue address

DR. A. W. WILSON, JR., President  
Kiskiminetas Springs School, Saltsburg, Pa.

## The Sanatorium School

A school and sanatorium combined for nervous, delicate or deaf children. Instruction and treatments—No feeble minded—References.

CLAUDIA M. REDD, Principal, Lansdowne, Pa.

The Carnegie Library School offers the following courses in librarianship for the year 1918-1919:

General Library Work  
Library Work with Children  
School Library Work

For information, address the Principal,

Carnegie Library School, Carnegie Institute, Pittsburgh, Pa.

## MAPLEWOOD

Wakes up boys to duties of life. Near Philadelphia. 50th year. Junior Department, where boys receive real care at moderate rates. Limited to 40. College or business. Small classes. Masters experienced men. Manual training. Boys accommodated entire year. Sports.

J. C. SHORTLIDGE - - - - - Concordville, Pa., Box 150

## DE MERITTE MILITARY SCHOOL

Jackson Springs, N. C.

An open air school for boys.

Prepares for Colleges and the Scientific Schools.

EDWIN DE MERITTE, Principal. Address until Sept. 5, Camp Algonquin, Ashland, N. H.

## THE WOMEN'S COLLEGE OF DELAWARE

Four-year courses leading to A. B. and B. S. degrees in Arts and Science, Education, Home Economics and Agriculture.

Special two-year courses in Education and Home Economics. Tuition free to students from the State of Delaware. For catalog and information address

WINIFRED J. ROBINSON, Ph.D., Dean, Newark, Del.

## Emerson College of Oratory

HENRY LAWRENCE SOUTHWICK, President

Largest school of oratory in the U. S. The demand for our graduates as teachers in colleges, normal and high schools is greater than we can fill. Courses in Eloquence, oratory, pedagogy, physical culture, voice, dramatic art, etc. 38th year opens September 23rd.

HARRY SEYMOUR ROSS, Dean  
Huntington Chambers Boston, Mass.

## WALNUT HILL SCHOOL

24 Highland Street, Natick, Mass.

A College Preparatory School for Girls. 17 miles from Boston. 40 Acres. Skating Pond. Athletic Fields. 5 Buildings. Gymnasium. Miss Conant, Miss Bigelow, Principals

## GLENDALE COLLEGE

Glendale, O., Suburban to Cincinnati. Founded 1853

Junior College and College Preparatory Courses.

Limited number of young women offered exceptional advantages under a large experienced faculty, in a healthful, pleasant environment. Music, Expression, Household Science.

## Florida (Hulvey) Military Academy

Barracks new and modern. Military work directed by War Dept. Prepares for universities, business and Government academies. Personal instruction and attention. Perfect health record. Cadets from 18 states. Tuition \$460. Col. GEO. W. HULVEY, Supt., Jacksonville, Fla.

## ROANOKE COLLEGE SALEM, VA.

FOR MEN. A standard college in the mountains of Virginia. Degrees granted. Military training adopted for discipline of the war. Liberal Arts, Commercial and Preparatory Departments. Address Dr. J. A. MOREHEAD, President.

## DOWN WHERE THE SHELLS ARE THICKEST

(Continued from page 192)

Another said, "I'll say he's a man!" Another came in one evening and said, "I'm going to quit cigarettes from now. If you're that much of a man you're worth listening to!" Another said, "If I get out of this, it's me for the church forever, if it has that kind of men in it!"

Is it any wonder that they brought their last letters to him before they went into the trenches? Is it any wonder that they asked him for a little prayer service one night before they went into the trenches? Is it any wonder that they love him and swear by him? Is it any wonder that when one of them was asked how they liked their secretary the boy said, "Great! He's a man"? Is it any wonder that when another boy was asked if their secretary was very religious responded in his own language, "Yes, he's as religious as hell, but he's a good guy anyhow"?

That kind of service will win anybody and that is exactly the kind of service that the boys of the American army—your boys—are getting all over France from big, heroic, unprejudiced, fatherly, brotherly men, who are willing to die for their boys as well as to live for them and with them down where the shells are thickest and the dangers are constant.

## Pebbles

It is remarkable how the British soldier will pick up languages. Only last week an American corporal stopped a British sergeant and said, "Say, Steve, can you put me wise where I can barge into a boiled shirt biscuit-juggler who could get me some eats?" And the sergeant at once directed him to a café.—Punch.

"Why is it, Sam, that one never hears of a ducky committing suicide?" inquired the Northerner.

"Well, you see, it's disaway, boss: When a white pusson has any trouble he sets down an' gits to studyin' 'bout it an' a-worryin'. Then firs' thing you know he's done killed hisse'f. But when a nigger sets down to think 'bout his troubles, why, he jes' nacherly goes to sleep!"—Life.

In Mississippi they tell of a young lawyer retained to defend a man charged with the theft of a pig. The young man seemed determined to convince the jury that he was born to shine, and accordingly he delivered the following exordium:

"May it please the court and gentlemen of the jury, while Europe is bathed in blood; while classic Greece is struggling for her rights and liberties and trampling the unhallowed altars of the beardless infidels to dust; while the United States, entering the war, shines forth the brightest orb in the political sky—I, with due diffidence, rise to defend the cause of this humble hog-thief."—Pittsburgh Chronicle-Telegraph.

The conversation turned to the subject of damage-suits, and this anecdote was recalled by Senator George Sutherland, of Utah.

A man in a Western town was hurt in a railroad accident, and after being confined to his home for several weeks he appeared on the street walking with the aid of crutches.

"Hello, old fellow," greeted an acquaintance, rushing up to shake his hand. "I am certainly glad to see you around again."

"Thanks," responded the injured one. "I am glad to be around again."

"I see you are hanging fast to your crutches," observed the acquaintance. "Can't you do without them?"

"My doctor says I can," answered the injured party, "but my lawyer says I can't."—Philadelphia Telegraph.

SCHOOLS

SKIDMORE SCHOOL OF ARTS

CHARLES HENRY KEYES, Ph. D., President  
SARAH GRIDLEY ROSS, A. M., Dean  
A college for the professional and vocational training of women. Offers four years courses leading to B. S. degree in  
Household Economics, Fine Arts, Music, Physical Education, Secretarial Studies  
A special diploma, securable upon the completion of two or three years, commands teacher's or supervisor's certificate.  
Residence accommodations for two hundred students. Quickest tests. Non-sectarian. Summer session. For catalogue address  
LOUISE HOLMES WATERBURY, B. A., Registrar  
SARATOGA SPRINGS, NEW YORK

Reopens Wednesday, October 2nd  
**The Veltin School**  
FOR GIRLS

160 and 162 West 74th St., New York  
A Fireproof Sanitary School Building.  
Classes limited to twelve pupils.  
PRIMARY DEPARTMENT.  
GENERAL COURSE.  
COLLEGE PREPARATORY.  
Unusual advantages in French are offered in every class.

**HARTWICK SEMINARY, N. Y.**

Founded 1797. Prepares for College. Steam heat. Electric light. Hot and cold water. Competent teachers. \$275. Catalog free. Address J. G. TRAVER, D.D., Principal.

**Pacific School of Religion**

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins September 30, 1918. Address President C. S. Nash, Berkeley, Cal.

**BRONZE MEMORIAL TABLETS** DESIGNS, ESTIMATES & ILLUSTRATED BOOKLET FREE

JNO. WILLIAMS, INC. BRONZE FOUNDRY (EST. 1875)  
Wm DONALD MITCHELL, DESIGNER. 550 W. 27TH ST. NEW YORK

**FREE!** An interesting book on automobile economy: repairing, tire upkeep, in raising mileage, etc.; invaluable to every owner, driver, garageman, etc.  
American Automobile Digest, 3338 Butler Bldg., Cincinnati

Spend the Winter at Lakeland **FLORIDA**  
Highlands

Solve the high cost of living, escape worry over coal shortage, enjoy delightful climate. Where you may secure a life income by investing in a 10 acre grapefruit or orange grove scientifically cared for by low-cost, cooperative methods.  
**A planted, 10 acre grove costs \$4950, payable 20% down, balance in quarterly installments.**  
Our illustrated booklet answers all questions. Write for a copy and read it. Then, if you are in a position to finance a grove, visit the property at our expense, and spend a week at the Country Club, as our guest. W. L. HANCOCK & CO., 225 5th Ave., N. Y.

**Don't Wear a Truss**

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that repairs rupture, will be sent on trial. No obnoxious springs or pads.

MR. C. E. BROOKS

**Brooks' Rupture Appliance**

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No valves. No loss. Durable, cheap. Send on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.  
C. E. BROOKS, 4501 State St., Marshall, Mich.

**A NEW ERA IN EDUCATION**

(Continued from page 194)

educational relations not only with Great Britain, France and Italy, but also with Scandinavian countries, Holland and Switzerland, Japan and China, and the South American republics. Looking forward to a new world which is to be ruled by reason and conscience, backed by the force of a League to Enforce Peace, Education realizes that a new task is laid upon her, and that she must restudy her problem so as not only to teach her own children in the light of new world relations, but also to do her share in making clear to the people of other lands that in a common science and a common search for truth, as well as in the community of the daily round of labor, and the worship of the one God, there are unifying forces which should strengthen the bonds of our common humanity.

Fourth, I may name the steps taken for the promulgation of sound propaganda regarding the war, its causes, and aims. This task which belongs peculiarly to education has been largely performed by others up to this time. The Junior Red Cross, the National Security League, the Committee on Public Information have drafted the educators into their service for this work. In North Carolina and in Washington the state universities have assumed their rightful places as teachers of the people.

Finally I may name the broader problems of educational reconstruction raised by the war. Many agencies are dealing with these questions. The foundations, government, bureaus and boards, commissions, special and departmental committees are at work. Educational elements are in flux. When the country is in such great need of men, it is going to find out why the St. Louis High School can prepare boys for college at seventeen, while the average age for the country is nineteen. It is going to recover those two wasted years. It is going to restore backbone to collegiate education either by electric shock, massage or by surgical operation. We may even see some of the old-fashioned virtues, preserved in such maxims as early to bed, early to rise, come back into favor. Turmoil over language teaching will at any rate result in the long run in better language teaching. Competition between military training and athletics will cause some heart searching as to the place of athletics in college training and may affect the popular view that the college owes it to its alumni and students to maintain by whatever means necessary a winning team for their vicarious exercise, and for communal pleasure and glorification. The great dearth of physicians has already led the medical schools to reexamine their curricula. We trust the results will be better pedagogic method and more hygienic life for medical students.

Such are some of the tasks undertaken at which I can only hint in the brief limits of this article. Even in war education, as defined by the English Education Bill, the acquainting the new generation "with the capacities and ideals of mankind as expressed in literature and art, with its achievements and ambitions as recorded in history, and with the nature and laws of the world as interpreted by science, philosophy and religion," must still go on.

The "main tent" which withstood the attempted swallowing of the "side shows," has weathered the cyclonic blow of war, and its demonstrated usefulness as a training camp has persuaded the people that when the man of war gives way to the man of peace and wisdom, the tabernacle must be replaced by a temple, built of the best of every land and worthy of its high function in a truth loving democracy

Are You Tired  
and Depressed  
—Lack "Pep" and  
Ambition?

**It's Your NERVES!**

When the flow of Nerve Force becomes feeble, you become feeble all over—every vital organ becomes lazy and weak. When your Nerve Force is restored, you will feel like a new being—full of energy, ambition and vital power.

## Ambassador James W. Gerard Said:

"Now we have to meet this German Propaganda. The war is not going to last forever—and you have seen what German Propaganda has done in Russia. These are grave dangers, and they only go to show what can happen in a country like Russia.

"Fortunately, they cannot propaganda this country as they can Russia, because we have great publications that go all over the country and have unified the whole country and the whole continent. That is why I am against the postal zone law passed in the last Congress putting an extra tax on papers sent from the cities where published.

"They forget that, whether these publications go from Philadelphia, from San Francisco, or from Chicago, it is the exchange of these papers from and to all parts of the country that makes one, universal, united America.

"They unify the sentiment, and that is worth far more in this war than the small amount of extra postage which the Government will obtain."

**Oppose this law. Write to your Senators and Congressmen against this disastrous postal "zone" law—and demand its repeal.**

# A BUSINESS MAN IN THE GARDEN

BY FRANK FARRINGTON

A little meditation now and then is a good thing for anybody, and the man who works in a garden, if he is a business man the rest of the time, will quite naturally think of his gardening in the terms of his business, or he will, while at work, think of his business in the terms of gardening.

Incidentally there will constantly be coming to mind contrasts and similarities between this gardening interest which is a side issue, and the main business interests of the man's life. Perhaps some other business man will find in this month of gardening thoughts an echo of some of his own experiences and sensations and observations.

Saturday, the 1st: I've just been looking over the blackberry patch and its conditions reminds me that last winter must have been too severe for the blackberry bushes, but I don't remember that the winter seemed long or tiresome to me, in spite of what I heard a good many say. Perhaps I made it short by keeping unusually busy. I think the best way to make a long season seem short is to work hard.

Sunday, the 2nd: If I were as careless of the rights of others as the snail that persists in eating my lettuce as fast as it comes out of the ground, and a little faster, where would I land? My life would be as short as the snail's and about as useful. Long commercial life seems to go with a respect for the rights of others.

Tuesday, the 4th: Brownie is letting the old cat die in the swing. I know a score of business men who were started with a big push by money or by friends and are letting the old cat die without knowing it, just because the difference between the length of the arc of this swing and the arc of the next one is not noticeable.

Wednesday, the 5th: I heard the old hen go "Cr-r-r!" as the shadow of a cloud glided over the yard. After all, she only did what a million merchants do mentally when a competitor walks past.

Friday, the 7th: I've driven the sparrows from the lettuce plants 9999 times and they have come back 9999 times. I heard a business man the other day complaining about one failure he had made. He said he was not going to try again.

Saturday, the 8th: Johnny Bowen is a hustler with the lawn mower, and no mistake. He barked three hydrangeas and two maple saplings today while mowing around them. When he gets into a business office, look out for ink spots and torn carbon copies.

Sunday, the 9th: The way the white grubs were spoiling my strawberry plants by invisible attacks at the roots, reminds me of the way Asa Beekman's business went down, ruined by the help-themselves methods of his easy going employees on whom he put no systematic check. I've dug out the grubs.

Tuesday, the 11th: Up our way they say you aren't safe from frost until after the tenth of June. That is just about like setting a definite time when it is safe to stop advertising.

Wednesday, the 12th: Brownie saw it first—the first rose of our season. I wonder if the youngsters are going to see all the opportunities first from now on? Not unless I break my glasses.

Thursday, the 13th: The thirteenth is an unlucky day for currant worms and so are all other days if a fellow keeps his hellebore sprinkler at hand. By the same token all days are unlucky days for dishonest employees if the boss believes in preparedness.

Friday, the 14th: "The leaves blow up like rain," says my pessimist neighbor on one side. "It's a fine clearing wind," says my optimist neighbor on the other side. "We need rain, but I like it clear," say I with friends over both fences.

Saturday, the 15th: There, I knew it. When we cut the asparagus too late and too close last year, I knew we'd be short this year, just as I knew Tom Dolan was fixing for a shortage of future business by adding to his net profits money that ought to be going for advertising.

Tuesday, the 18th: A boy's footprint in a flower bed has a different look to me today from what it had when I was twelve.

Wednesday, the 19th: I found a good deal of fault with a druggist in my block because he bought a going and a growing business and let it die on his hands. Then I planted three thrifty little grapevines, Moore's early, and now they are dead!

Friday, the 21st: What an unattractive name will do for a business never seemed as plain to me as it does now that I have discovered what a beautiful singer is the bird damned by the name "Cat-bird."

Saturday, the 22nd: Doubtless God could have made a more diligent weed, and a lustier, than the dandelion, but doubtless he never did, and I am glad of it. I have learned persistence from the lowly taraxacum dens leonis, and it has learned to respect me.

Sunday, the 23rd: If I cannot plant or cultivate on Sunday, I can at least watch things grow. I wonder if a man's business reputation stops growing over Sunday?

Tuesday, the 25th: I took a day's vacation recently and did not look at the garden at all. Isn't it wonderful how a little change of scene will help a fellow to see the good side of things at home? I found that my garden is a good deal better than I thought, and the weeds are not so bad.

Wednesday, the 26th: A big, rank weed always reminds me of the business man who swells around the Chamber of Commerce, drest right up to the nines, but never getting a friendly greeting from any other member because he will not help with the work of the organization.

Thursday, the 27th: The more pansies Brownie picks, the more blossoms there are, and I guess that is like a business and its customers.

Friday, the 28th: What is a man's moral obligation to the birds that spoil his strawberries as fast as they ripen? Also, what is his obligation to a competitor of delightful personality who persists in demoralizing local trade conditions by unwarranted price slashing?

Saturday, the 29th: The man who stops advertising because times are hard and business slow, would stop watering his garden when a drouth came.

Sunday, the 30th: I set out three apple trees in April. Two have died. First I blamed the nurseryman, just as once, when a merchant, I blamed the manufacturer because a line of goods did not sell. Now that I have thought it over and considered that all I did for the trees was to stick them into the ground—just as all I did for the goods was to put them on a shelf—I cannot see that any one is as much to blame as I.

Monday, the 31st: If I were to make red, white and blue flowers grow in my garden in the form of a flag, would I feel more patriotic? Or if I were to make an onion bed the shape of the dollar sign (\$), would I be a better business man? I wonder if we do not count too much on mere form.

# Oliver Economy in Your Office

## Save \$51 On Each Machine

You can now equip your office with new Oliver Nine typewriters at less than half the former \$100 price. Revised—economical selling methods make this saving for you—the machine is identical with our finest machine formerly priced at \$100. It is our latest model, brand new machine—not a substitute, not cheaper, different or rebuilt. Modern selling methods—pruned of all wastes and abuses—enable us to make this new price. So enthusiastic has been the approval accorded this one-price-to-all plan by business men and big typewriter users that our sales have increased enormously. You will find it the most satisfactory and economical method of typewriter buying. No salesman need influence you—the Oliver is sent for free trial without deposit or prepayment—without red tape—it must sell itself. You know you want it before you pay us one cent.

## Oliver Nine—New—Now \$49

In this machine you get the latest development of a \$2,000,000 typewriter corporation—guaranteed to be the same in material, workmanship and finish as the Oliver Nine formerly \$100. It is the best machine we have ever built. Oliver Nine has a keyboard which any typist can readily turn to—its operation makes it a favorite with typists who know it. There is no sound reason based on facts why you should not take advantage of the saving of our new selling policy—our offer to send to you a machine for complete test in your own office proves this claim. Your old machines accepted in exchange at a fair valuation. Every Oliver Nine carries our guarantee. Service is built into every part. Over 600,000 Olivers have been sold—discriminating buyers like those below are now using the Oliver:

**Large Users** U. S. Steel Corporation; National City Bank of New York; Montgomery Ward & Co.; Otis Elevator Co.; Curtis Publishing Co.; Pennsylvania Railroad; Hart, Schaffner & Marx; Morris & Co.; Baldwin Locomotive Works; Ward Baking Co.; Jones & Laughlin Steel Co.; Western Clock—"Big Ben"; Encyclopedia Britannica, and a host of others. Oliver service and Oliver dependability the reason.

Read the coupon below and see how easy it is to try the Oliver without expense. Simply fill in and mail the coupon—you need not decide to buy the Oliver until you have tried it. If you decide to buy, take over a year to pay—at \$3 per month. If you wish to return, we even refund transportation charges. Or you can secure fuller information and our de luxe catalog.

**The Oliver Typewriter Company**  
156-B Oliver Typewriter Building, Chicago, Ill.

### Oliver Features

The original visible writer. One-third lighter touch—permanent alignment due to arch-shaped type bars. Every machine is tested at 800 strokes per minute, 50 per cent faster than human hands. Built for hardest usage—famed for dependability. Printtype, if you wish—type like print. Capable of 20-copy manifold. In-built tabulator. Ruler horizontal and vertical. Bronze bearings. No hair springs nor flimsy wires. Simplified construction. Fewer parts. Built of fine tool steel.

### INFORMATION COUPON

**The Oliver Typewriter Company**  
156-B Oliver Typewriter Bldg., Chicago, Ill.

Ship me a new Oliver Nine for five days free inspection. If I keep it I will pay \$49 at the rate of \$3 per month. The title to remain in you until fully paid for.

My shipping point is .....

..... Do not send a machine until I order it. Mail me your book "The High Cost of Typewriters—The Reason and the Remedy," your de luxe catalog and further information.

## REMARKABLE REMARKS

**THE KAISER**—We shall remain armed to the teeth forever.

**BILLY SUNDAY**—Oh let us put it over for Jesus Christ.

**LEONARD MERRICK**—Men can be as constant as women.

**CROWN PRINCE WILHELM**—The war is a lot of damn nonsense.

**VICE-ADMIRAL SIMS**—The seven seas are free to light commerce.

**ED. HOWE**—Most grown daughters treat fathers as wives treat husbands.

**VICE-PRESIDENT MARSHALL**—I wish the coming elections could some way be avoided.

**WILLIAM ALLEN WHITE**—What has become of the old-fashioned black sateen shirt?

**DR. ARTHUR DAVIS**—The Kaiser entered the room attired in a red flannel undershirt.

**ARNOLD BENNETT**—What we say of the House of Commons often cannot even be printed.

**LINA CAVALIERI**—One of the most pronounced defects of the American girl is her poor forearms.

**EX-AMBASSADOR GERARD**—In conversation, the German Emperor reminds one very much of Roosevelt.

**MARY ROBERTS RINEHART**—The weak-mouthed pouting woman of the days-before-we-were-in is gone.

**CHARLES H. GRASTY**—General Foch has one clear advantage over Ludendorff, he has no Kaiser nosing about.

**WOODROW WILSON**—If you have to advertise about being reelected it is very difficult to be worth reelecting.

**SECRETARY BAKER**—America's output in rifles now is sufficient to equip approximately three army divisions every week.

**J. W. HAMILTON**—Sign every home and foreign letter "Yours for the Winning of the War" instead of "Yours Truly."

**FRANK MORGAN**—To be outspoken and candid is nine times out of ten only another name for being rude and unfeeling.

**PRIMA DONNA EUNICE ROBERTS**—In order to sing her best a singer must have both freedom and support in her clothes.

**MRS. VERNON CASTLE**—Positively I don't believe that half the people who descend upon the virtues of the cold bath ever took one.

**ALONZO CLARKE, M.D.**—All of our curative agents are poisons and as a consequence every dose diminishes a patient's vitality.

**WILLIAM ALLEN WHITE**—An Atchison, Kansas, man will sue for damages caused by the "humiliation" caused him by being run over.

**SIR ARTHUR CONAN DOYLE**—Our empire is already too large, and yet if we quitted it, it would throw a fifth of the world into barbarism.

**EDWARD A. FILENE**—The after-the-war period will, have its tragedies—but none

greater than that of the man who finds out too late that he has gone thru the most meaningful war of human history without taking a man's part in it.

**MARSHAL JOFFRE**—I am as happy and proud of the first success of the American army on our battlefields as if I myself were a citizen of the United States.

**UPTON SINCLAIR**—Since the last number of this magazine (Upton Sinclair's) appeared, the editor has had his appendix transferred into a bottle of alcohol.

**BUGS BAER**—It's going to be rather corrugated on old Billhelm when he has to step out and earn the daily biscuits by the sweat of his receding and bevel-edged brow.

**SAMUEL GOMPERS**—There is a group of faddists in this country who advocate ultra aims and who are intolerant of, and hostile to, the bona fide practical and constructive labor movement.

**ELINOR GLYN**—She did not walk about with a book of poems under her arm and wear floppy clothes and talk about her own and other people's souls. She was just human and true and attractive.

## J U S T A W O R D

Laurence La Tourette Driggs, whose article, "Beyond the Clouds Lies Victory," we publish in this issue, writes from his own experience in aviation. He was one of the few expert aviators before the war and he has studied thoroly the science of aerial warfare. During two visits to the battlefield in Europe, Mr. Driggs has gained valuable first hand information on the development of war flying. He is going over for the third time shortly and he will send back from France to readers of The Independent the story of his experiences and the information that he gains then.

In his article Mr. Driggs discusses from his knowledge as a manufacturer of aeroplane ordnance, as well as an aviator, the progress that the aeroplane has made in offensive warfare and explains just what the demands and limitations of this phase of fighting are.

The next article of Mr. Driggs's that we shall publish is "Fifty-three to One. The Career of Georges Guynemer, the Ace of Aces." It is a thrilling tale of individual skill and daring, the spectacular story of the greatest aviator the Allied armies have produced.

### PERSHING, BLISS AND JOAN OF ARC

This week, under the above caption, appears the fourth of a series of articles by the editor of The Independent, who has recently returned from a visit to the Allied battlefronts. The title of this article speaks for itself.

### WE HAND IT TO THE REGULARS

Chief Gunner's Mate Jenkins, who was on the destroyer "Fanning" when it sunk the first U-boat credited to an American ship, has written to us to correct a statement in The Independent of July 6, 1918, that the ship was manned by naval reservists. "The reserves on board," he explains, "numbered only fifteen and had nothing to do with the sinking of the 'U-58.' A regular sighted her, a regular dropt the depth bomb and regulars captured her crew. It takes a well drilled crew to do this kind of work efficiently and efficiency is produced in the United States Navy by years of hard work. The regular navy is efficient, as we all know."

Mr. Jenkins's opinion of the regular navy we heartily endorse. War exigencies in many fields of service have made it necessary for men with only short, intensive training to undertake heavy responsibilities. In our appreciation of their readiness to meet the emergency, however, we do not forget the honor due to the men who were already prepared.

### The lesson the Indian taught the Settler has had to be learned again

**W**HEN the Indian went out to destroy a settlement he had one sure master-stroke—fire. His weapon was a flaming arrow. His target an inflammable roof.

Substitute a modern, thriving city in place of the small settlement and instead of the Indian's arrow a wind-driven fire-brand. This is the flint and tinder for our modern town-wide conflagrations.

The world is just awakening to the danger of the inflammable roof. It is dawning on our national consciousness that roofs of wood, paper, tar and canvas are fuel for flames.

When you realize that your property's safety from communicated fire depends on its roof, when you realize that your building is at the mercy of every inflammable roof in your town, then Johns-

Manville Asbestos Roofing will dawn on you in a new light. Not as a roofing that you would like to have some day, but as a safeguard you should invest in now—before it is too late.

Johns-Manville Asbestos Roofings: Asbestos Built-Up Roofing; Asbestos Ready Roofing; Corrugated Asbestos Roofing; Col-orblende Shingles; Transite Asbestos Shingles.

## NO DIVIDED COUNSELS AT WASHINGTON

**T**HE hard-headed voter has a specific question to answer to himself as the fall elections come on. Should he on this particular occasion support the Democratic party, or should he lend his aid to the Republican opposition? We speak now of the decision to be made by the hard-headed voter instead of calling him according to precedent the "conscientious voter." For we assume that nearly all American citizens who are qualified to vote will be conscientious voters this time. America is loyal, patriotic and determined to win the war. A splendid moral enthusiasm has for the time being subordinated the less worthy considerations that commonly play their part in political campaigns. Unfortunately, however, wisdom is not always to be counted on in the behavior of the conscientious man. Quite honestly he may arrive at decisions which on practical grounds prove to be unfortunate.

The Republican party, as shrewd political observers acknowledge, is in a difficult position. Loyal it must be, and for practical purposes loyalty means backing up a Democratic Administration in its efforts to win the war. As a strategic procedure, not to speak of any higher reasons, the Republican party can attack the Democratic Administration on two grounds only. If the Administration is open to criticism as negligent or inefficient in the conduct of the war, the Republican party may and should expose the failure and demand an opportunity to demonstrate its own superiority. On matters of purely domestic concern, also, the Republican party may rightly press its own policies and ask the confidence of the people.

The facts, however, are that by the general judgment of the American people and of our allies in France and Great Britain, the Democratic Administration, by no means faultless and with not a few mistakes to own up to, has achieved unprecedented results since our declaration of war against the Imperial German Government. By comparison with positive attainment the errors and the failures sink into comparative insignificance. The Republican party will not find it easy to convince the people that it would have done better had it been in power, or that it would do better if it could be placed in power now.

Yet more difficult would be the task of convincing a sober judgment that anything would be gained by handing over to the Republican party that partial power which it is possible to transfer at the elections this fall, and which at the utmost would consist in Republican supremacy in Congress backed by Republican administrations in states electing governors and legislatures. American experience of divided political responsibility has never been happy. A Democratic President contending with a Republican Congress, or a Republican President contending with a Democratic Congress, has never been, even in times of peace, an effective disposition of political forces. Waste and inefficiency have usually resulted from it, and it is not possible to imagine that a

great war in its critical stages could be more effectively waged if energies and responsibilities should be so distributed.

We yield to no one in profound respect for the wisdom and the patriotism of men like Colonel Roosevelt, Mr. Taft and Mr. Root. But when they say that the voters of America ought this fall to return a Republican Congress, and argue that the time has come to impose upon Mr. Wilson's administration the fearless inquisition and the practical legislative check of an opposition political majority, we are unconvinced. Irresponsible power is indeed a serious matter and no human being is infallible. But a Congressional minority is quite competent to ask questions, to bring mistakes into the light of publicity and to register protests. It is not necessary for the preservation of our liberties to create the certainty that a Republican Congress would itself make lamentable and possibly well nigh fatal errors in its desire to play a decisive part in the conduct of the war at a time and under circumstances when it could not be, as the Democratic party is now, wholly responsible for success or failure. In our judgment hard-headedness demands that this responsibility should not be destroyed. It is, we think, the plain dictate of common sense that the people should return a Democratic majority to Congress and assure to President Wilson the support of a Democratic law-making power.

As for questions of domestic policy, they are important but not now imperative. This is not the time to open up the whole future policy of the United States on the ownership and operation of railroads, telegraphs, telephones and express service, on the tariff after the war, on labor legislation and on immigration. The war must be won first. This one thing we do, is the motto of common sense until the Hun is defeated.

What is the implication of this point of view as it concerns the action of the individual voter? How should the customarily Republican voter approach this fall his individual problem of deciding which of two or more candidates for Congress he should vote for? Each American voter, whether Republican or Democrat, Progressive, Socialist, or what not, ought to make certain in the first place that the congressional candidate for whom he will cast his vote is a good American. He should make sure that his candidate believes to the full in the vigorous and unflinching prosecution of America's purpose in the war until it is finally and completely achieved. He should be convinced that his candidate is one who will support the President and his Administration without regard to party, in everything that will make for the vigorous and unflinching prosecution of the war. If the voter finds anything to choose between the two or more candidates presented to him for congressional office in these respects, he should shut his eyes resolutely to party labels and distinctions and vote for that candidate who measures up most completely to these standards.

But if any voter should apply these tests and find that there is little to choose between two candidates when measured by them, it would be the part of hard-headedness and common sense for him to support with his ballot the Democratic candidate.

There has not been much partizanship shown in Congress since our declaration of war. There has been commendable unity of purpose and of action among all but a few "wilful men" of both parties in both houses. But the continuance of unity and harmony in our prosecution of the war is so vital that the individual citizen would be wise to do his part that this unity and harmony should be continued and made more complete.

These arguments do not apply, however, to state politics. There is no reason in the world why the Republican party should not elect governors and legislatures. On the contrary, there are very good reasons why in the field of state politics and policy the Republican party should reassert itself and demonstrate that it really has a positive and constructive policy to offer the people and superior men to put in office. We should be sincerely glad to see the Republican party come back to this extent, but in the name of elementary common sense, let us not have divided counsels at Washington.

## THE DIFFERENCE

**W**ILLIAM OF GERMANY has bestowed his five sons on the German army. All enjoy good health in the rear of the front lines.

Theodore Roosevelt has given his four sons to his country. One has been gloriously killed in action. Two lie wounded in the hospitals of France.

## THE LANSDOWNE FOLLY

**B**Y all accounts, Lord Lansdowne is an estimable gentleman, high-minded and thoroly honorable in his purposes. It would be a crude judgment of him which should assume that his intense desire for a negotiated peace with Germany proceeds from his fear that a prolonged war will destroy British landlordism with the privileges and perquisites thereunto appertaining. Without denying that his traditions and associations have unconsciously influenced his thinking, we prefer to believe that he is sincerely humanitarian and unselfishly eager to terminate the slaughter, destruction and desolation of the military struggle.

But whether Lord Lansdowne as an individual should be judged harshly or charitably, his proposition that even now it is neither too late nor too early to reopen peace negotiations with the enemy, taken objectively on its merits, is a piece of astounding folly. It is so crazy, indeed, that if men of much greater intellectual ability and general sobriety of mind than Lord Lansdowne did not every now and then offer a suggestion or make a remark betraying their own dalliance with the negotiation idea, we should suspect that war horror had affected sanity. Unhappily, the fact is that abler men than Lord Lansdowne do every now and then betray their interest in a negotiated peace, and thereby throw us back upon the conclusion, not unscientific, we believe, that first-rate minds may have blind spots in them.

Here, for instance, is Mr. Sidney Webb writing on the approaching parliamentary election and assuring the English and American public that the British Labor Party, concurring in the decision of the vast majority of the nation, will declare that we must all fight on for the aims laid down by President Wilson, yet qualifying it all by the preposterous remark, "and nevertheless neglect no honest overtures from the enemy."

Here is the assumption, unmistakable and shameless, made by a perfectly decent and severely thoughtful gentleman, that our Teuton enemy can, could or might make an "honest"

overture. As one of those mathematical possibilities comprized in an infinite collection of things, in which Mr. Bertrand Russell delights, we suppose that such a "can, could or might" must be included. But as a possibility within the realm of finite common sense it does not exist. The Imperial German Government is a liar. It has been a liar ever since William II became Kaiser, and it will continue to be a liar until he has been put out of business.

The question that the Entente Allies have to answer is as plain as a pikestaff. The man who can't see it has a blind spot in his mind. We are not now talking about insincere men or sophisticated men who see the truth but do not speak it. We are talking about honest men whose intellectual operations go wrong. The question is, Does the world want to have to do this job over again; or does it not? And the first rock-bottom fact in the data upon which we must base our decision is that the Imperial German Government is an unmitigated liar. Its word can be taken for nothing. Its pledges and promises are worthless. The war must be pushed until German militarism is so completely put out of business that German lying and oath breaking thenceforth will be a purely academic occupation.

This does not mean that every male German must be killed. It does mean that German power to make war must be destroyed. Judge Wadhams, returning from Europe the other day, said, "The first thing we do with a criminal when we catch him is to disarm him. The thing to do with this international criminal is to disarm it." That is plain common sense.

If Germany wants to talk peace she can obtain the opportunity any day. If the sane and liberal elements in the German population want to take the matter into their own hands the world will be only too glad to see them do it. Let them overthrow the House of Hohenzollern, proclaim and establish a free political organization, confiscate the estates of the Junkers and the war shops of the Krupps, and so give evidence that they mean business. A liberal, civilized, right-minded Germany would be welcomed in the family of nations with unbounded joy. But if Germany cannot regenerate herself the civilized nations must make her powerless. The world does not intend to have to do this job over again.

## DO BUSINESS MEN THINK?

**W**E suppose that they do, or at any rate, that some of them do. And yet:

And yet, on Friday, August 2, the downtown business men of New York City gave a public exhibition of their psychology which was amazing, disquieting and deplorable. For days, yes, for weeks beforehand, every newspaper, morning and evening, had reiterated in explicit detail instructions to the public what to do when the new scheme of subway travel should go into operation. Nevertheless, this is what happened:

A broker, doing business in the Wall Street district, arrived at his office shortly after eleven o'clock, sweating and cursing and behaving in general like an inmate escaped from Mattewan. A serene acquaintance greeted him with, "What's the matter?" "Matter! In the name of Hades or any other place, how did you get here with a dry thread on your back?" "By the Seventh Avenue subway, of course. How would you get here?" "Well, that ain't how I got here. I got off at Times Square as I was told to do, struggled for my life in the awfulest jam I ever see, was battering-rammed into a shuttle train, went thru another jam at the Grand Central and another at the Lexington Avenue train, and have been three mortal hours in getting from 103rd Street and Broadway to Broadway and Wall." "Exactly," said the serene one, "and then you walked two blocks to Wall and William and five doors beyond to your office, when all that you had to do was to stay in the Broadway train that you boarded at 103rd Street and without change come

to the station at Wall and William, two blocks nearer to your office than you ever were brought by subway train before." The perspiring one was incredulous; but finally convinced, he said, "But how was I to know that?" "Every newspaper for two weeks has been telling you." "Well, suppose it has. I don't spend my time reading such things."

This is what happened, for the case was typical: it was representative. Thousands of men in various parts of the downtown district had done substantially the same thing. And so we ask, do business men think? Or, perhaps we should ask, do they ever read? Or, what do they do with their minds anyhow?

We can't answer these questions, but they start interesting reflections.

If there is one class of men in our American population that is more sure than another that it knows it all and is competent to handle all circumstances of a practical nature, it is our business men. They can tell us off the bat what is the matter with Secretary Baker and how Mr. Wilson ought to run the war. They know all about railroads, finance and the labor question. They have a fine contempt for political economists and theorists of all sorts, and as for the working classes, they can tell you explicitly just why it would never do to permit such ignorant people to participate in the control of industry, thereby carrying democracy into the field of the economic relations.

In view of what happened at Times Square we imagine that a good many American voters, not of the business classes, will be tempted to ask, as we do, whether the business man's self-satisfied opinion of his practical competency to all occasions will wash. Would it do him any harm to cultivate the grace of humility for a while and ask himself quite seriously whether, as a matter of fact, he knows anything at all outside the field of his own business operations? Does he ever systematically inform his mind on any one of the great questions over which the world is torn and distracted today? Does he ever read a serious treatise on philosophy, history, economics, law or public policy? Does he ever actually read the more serious weekly and monthly reviews of current events and of world thought? Does he really read the newspaper, or does he merely skim headlines and pick up gossip in the street or at the club? We do not undertake to say; but we can't help wondering about it.

On one point we are sure of our facts and of our position. Whether he is well or ill informed, whether he thinks much or little, the American business man will pretty soon have to think a great deal harder and know a great deal more about matters beyond the range of his own business interests than he thinks and knows now, or he is going to be in worse trouble than he was in at Times Square on August 2. The hosts of industrial democracy are both thinking and reading. They are making up their minds not only that they would like to contest with the business man his mastery of the industrial and political world, but also that they are going to be able to do it. What will happen when they seriously start their offensive? Will they find the business class in a state of sublime unpreparedness? If they do, some very interesting things will happen.

## SHERMAN WAS RIGHT

"THE crossing of the Marne is worse than hell."—German message on a captured pigeon.

"We met the boche on his line of resistance. A sharp fight took place, after which boche turned tail and ran like hell up a hill pursued by our troops."—Official report of American Captain.

"The boys are giving Heinie hell up ahead—*beaucoup* hell."—American Chaplain to War Correspondents.

"We will win the war or all go to hell."—Inspired motto recently adopted by Prussians.

## SOLDIERS' LETTERS

*Almost every family has now a representative in France and is getting letters from the front. Many of these contain intimate description of the country or interesting incidents of camp life too good to be confined to a narrow circle. What war really is can only be told by those who are in it, not by the historians and romancers who live long after it.*

*We wish our readers would send us such extracts from their letters from soldiers and sailors as seem to them of general interest. We will publish what seems to us the best of them. Do not send us the originals, but copy out the most picturesque and readable pages. If you wish names suppressed state so plainly.*

## REMAKING THE PAST

HISTORY won't stay fixed. The drift of current events is not only making it necessary to add chapters to our histories but to rewrite the old chapters as well. Men who have long since done their work and have been decently buried by their biographers are being revalued in the light of the present world conflict. Germany, France, Russia, Marx, Nietzsche, Carlyle, Louis Napoleon, Disraeli, Salisbury, Heine, Kossuth, Kant, the Bagdad railway, Pan-slavism, the Boer War, the partition of Poland, the defeat of the Armada, the Thirty Years' War, the signing of Magna Charta—not one of these carries quite the same meaning in 1918 that it did four years ago. The past is always at the mercy of the future.

Opening at random an American atlas of the date of 1901 our editorial finger comes upon this assertion:

France. . . . The reader of events, the student of humanity, cannot fail now to foresee the approaching decadence of both nation and people; the signs are many and undeniable.

It is not hard to match this with innumerable bad guesses of the kind which can be picked out by any one who keeps old newspapers and periodicals on file or books which antedate the war. How frequently Russia was referred to as the most formidable military power in existence, at least in the event of a long war! How Disraeli was praised for his skill in upholding the "integrity of the Ottoman Empire," and Salisbury for his generosity in letting Germany have Helgoland. What pitying sneers were bestowed upon the Prussian radicals who fought Bismarck over such petty points as the control of the revenues by Parliament when the iron chancellor was building a united Germany. Today many of us begin to wonder if the "impractical" German radicals were not wiser than Bismarck in foreseeing that if a nation cannot be united under democratic auspices its union may be more of a curse than a blessing to the world. The Kaiser as a man of peace and a true democrat "at heart"; the Russian Czars as prudent and judicious statesmen; Belgium and the Balkan states as purely artificial creations of diplomacy without national consciousness—of such was the truth not many months ago. Is Zionism now a mere Utopia?

Surely we do not write to discourage either the statesman or the historian. Every deed and every word is an adventure, and where there is adventure there must be risk and may be loss. Had Bismarck's successors followed in the path of prudence which he marked out, or chosen a still better one, his life work might have been justified. It is not altogether his fault that it was not; but it was not. If Germany's present rulers had been wiser they could not only have secured for Bismarck a higher place as statesman, but also secured for Carlyle, Kingsley, Treitschke, von Sybel and other eulogists of German progress higher rank as prophets and historians. Our character is our own and in God's keeping. Our reputation is at the mercy of our grandchildren to make or mar; we can but lay its foundations and trust that our successors will build mercifully upon it.

# THE STORY OF THE WEEK

## Germans Withdraw in West

While the Germans under the Prussian Crown Prince were being pushed back from the Marne to the Aisne those under the Bavarian Crown Prince on the front between Ypres and Amiens have remained idle and intact except for a few divisions diverted to the Aisne front for the purpose of holding back the Allied advance. It has therefore been surmized that the Germans were only waiting to see how serious was their setback on the Aisne before renewing their attacks upon the British front in the effort to reach the Channel ports. But instead of this anticipated attack there is a withdrawal. At various points along the western front the Germans secretly evacuated positions which they have won and held at considerable cost. It will be remembered that the German drive in May resulted in a salient in the form of a triangle with its apex nearly reaching Amiens and with its sides bounded by the Ancre on the north and by the Avre on the south. These two rivers run into the Somme east of Amiens. The Germans crost both the Ancre and the Avre, thus securing foot-

## THE GREAT WAR

*August 1*—Chinese Government appropriates \$100,000 for regiment to join Siberian expedition. During July 123 ships of 632,000 total tonnage launched from American shipyards.

*August 2*—French take Soissons. Germans evacuate west side of Ancre, near Albert.

*August 3*—British ambulance transport "Warilda" torpedoed. Secretary Polk announces that America will participate in Siberian and Murman expeditions.

*August 4*—Americans take Fismes. Allies and Americans occupy Archangel.

*August 5*—Hog Island launches "Quistconck," 7500 ton freighter. German long-range gun again bombards Paris.

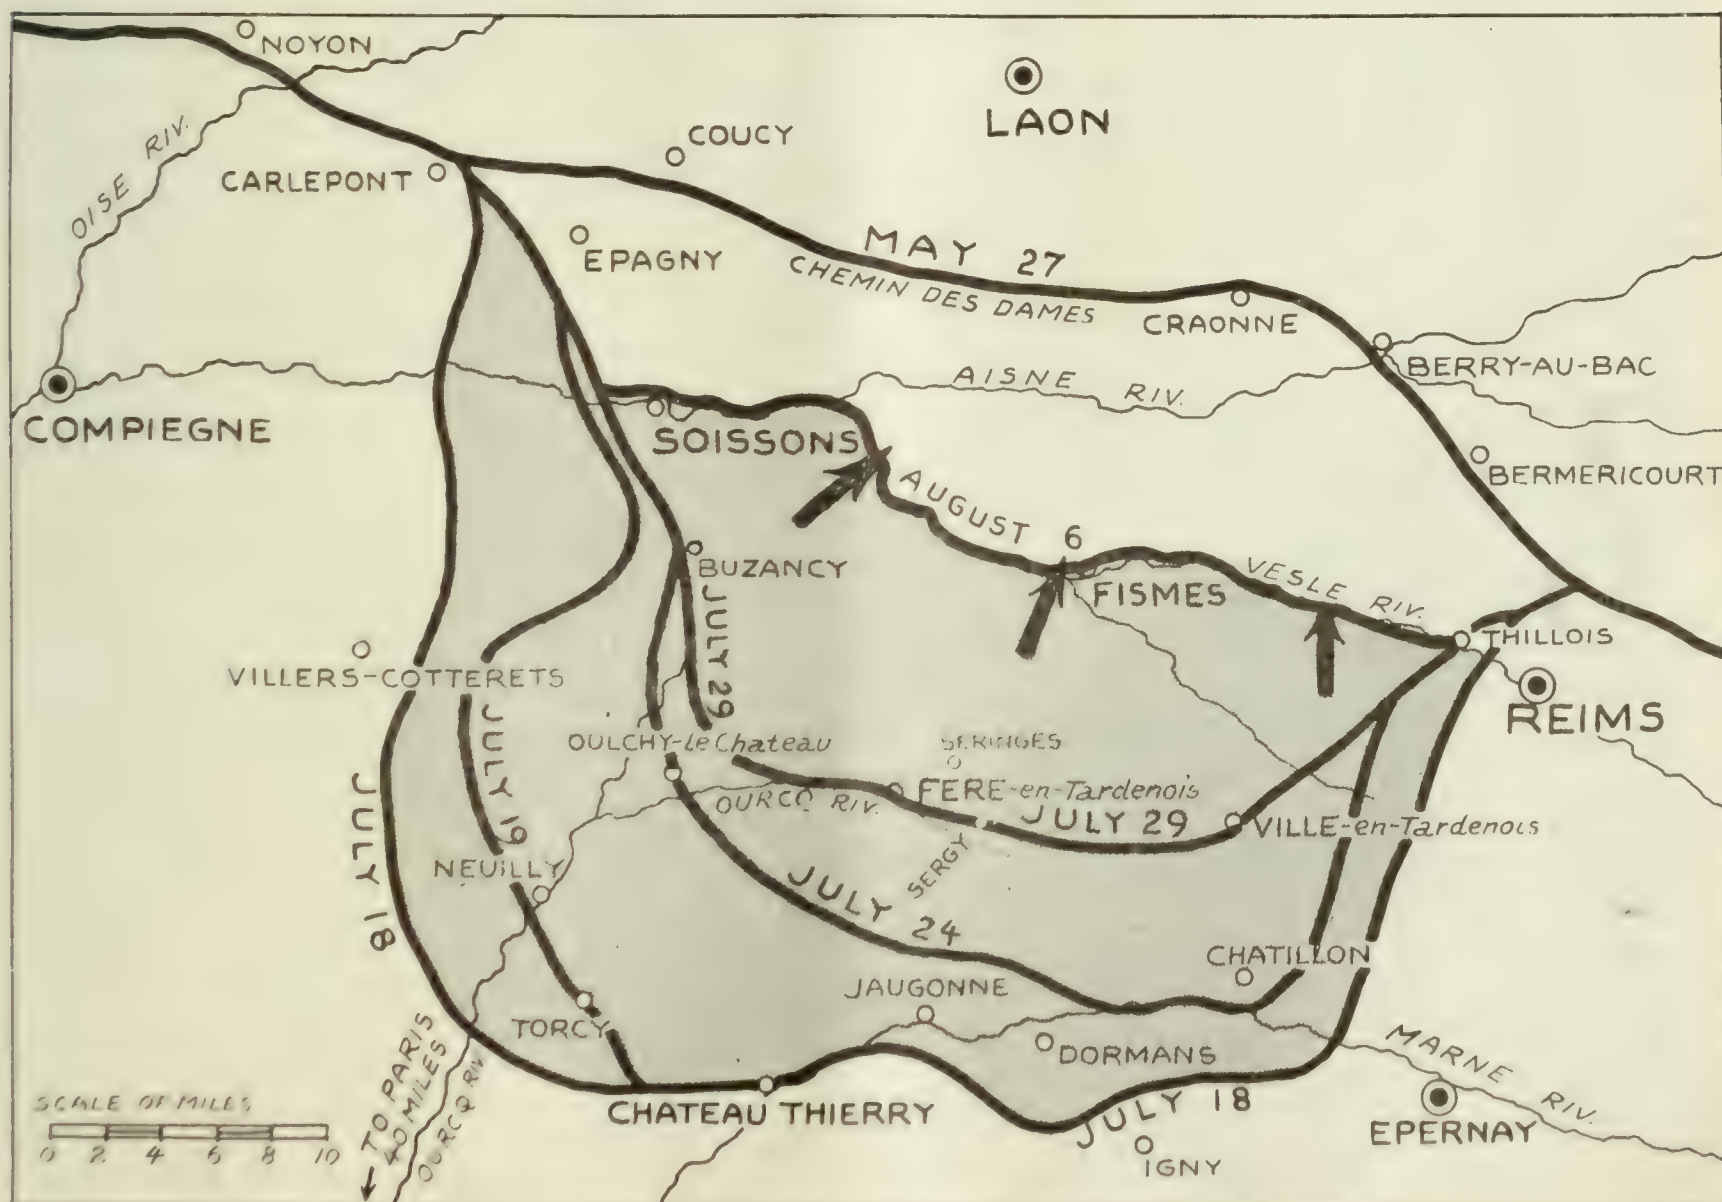

*August 6*—Diamond Shoals lightship off Cape Hatteras, North Carolina, shelled and sunk by U-boat. Foch made Marshal of France. Malvy, former French Minister of Interior, found guilty of sedition.

*August 7*—Americans bridging the Vesle. Rumored mutiny of U-boat crews at Kiel.

holds on the western banks that would be invaluable to them in case they renewed their advance in this direction. The British, French and American troops have been nibbling away at this front for the last few months with considerable success, but for the most part the Germans have stuck tenaciously to these points of vantage.

North of Amiens on the Ancre River the Germans held the town of Albert and the villages south of it. But on Thursday night, August 1, they recrosted the swollen river on pontoons and felled trees and retired about three miles to the higher ground on the east. The British patrols were surprised to find out from prisoners that the Ancre trenches in front of them were held only by a few pioneers left behind to blow up dumps and bridges. The villages of Dernancourt and Ville-sous-Corbie were deserted. The town of Albert is mostly if not entirely evacuated by the Germans. It has been quite ruined by its double bombardment and the statue of the Virgin that leaned from the church tower of Albert has now fallen.

South of Amiens in the sector be-

FROM THE MARNE TO THE VESLE

During the week, as shown by the dated lines, the Allied armies have made a great advance. The French have recovered the city of Soissons on the Aisne and the Americans have recaptured the town of Fismes on the Vesle. Since the Allies have now footholds behind both these rivers the Germans are now to withdraw to their original line on the Chemin des Dames, north of the Aisne. The shaded area is ground regained by Foch's offensive.

tween Montdidier and Moreuil, a distance of ten miles, the Germans have retired from all their positions west of the Avre River. The hills north and south of Cantigny which the Americans took have now been abandoned by the Germans and the French have advanced to within a mile of Montdidier.

This general retirement on the western front would indicate that the Germans have relinquished any intention of an offensive in this direction and are aiming to secure positions which can be held with fewer men and less effort.

**Americans Take Fismes** The keystone of the Ourcq line was Fère-en-Tardenois. The keystone of the Vesle line was Fismes. Both were railroad towns in the axis of the German advance and so served as storage and distributing points for the Marne salient. To the Americans who were placed in the middle of the Allied front fell the duty of taking these important centers and they took one, Fère, last week and Fismes this week. These must be regarded as rear-guard actions, for the Germans had given up hope of holding the Ourcq and Vesle lines. Nevertheless they were hard fought engagements that tried the mettle of the Americans as much as anything could. There is nothing nastier than to clean out one of these French towns with their narrow, crooked streets and their stone houses and walled gardens, every one a fortress. They seem to have been

French Official

#### "SOISSONS IS OURS"

At the end of this street in Soissons stands the ruined cathedral, testimony of German occupation. French troops, in their great offensive, have retaken the city

planned for defensive purposes, as indeed they originally were. And after the enemy has been exterminated or expelled there are mines and mantraps to look out for. But the Americans, with an individual ingenuity and initiative which the European critics accord to Indian tactics, have been very efficient in such fighting.

In order to give the retreating troops time to remove the big guns from their emplacements and to carry off the stores, the German commanders left behind machine gun detachments with orders to hold their positions till death and these instructions were in many cases carried out literally. The story often heard that the German gunners have to be chained to their guns appears on investigation to be without foundation. The idea originated in the German custom of supporting their machine guns by a chain passed over the back of the soldier.

Fismes is on the southern bank of the Vesle and most of the Germans had been withdrawn to the northern side when the American troops reached the town. A detachment of Americans entered the southern outskirts of the town and remained all night. But in the morning they were driven out by a flanking fire of gas shells and shrapnel from a neighboring height. After the French and American artillery had got the range of these positions and silenced their guns the infantry advanced and after seven hours' fighting secured possession of the town. But for several days after, houses and cellars were held

by German machine gun detachments.

Owing to the heavy rains the Vesle River was flooded, running some fifty feet wide and five to eight feet deep. But before Fismes fell the American engineers had thrown bridges across the river on the east and west of it. If the bridge under construction was demolished by shells they went on building another. One detachment of twenty engineers lost fifteen from the German fire, but when relief came the remaining five were found still working at the bridge. The French also effected crossings of the Vesle at various points. Many of the German rear guard were cut off by the rising of the river and the destruction of the bridges. Along the Vesle River were found newly dug trenches and gun emplacements indicating that the Germans had intended at one time to make a stand here but had given it up and abandoned the positions. According to the villagers the bulk of the German troops had departed from the Vesle a week before the French and Americans arrived, leaving only the troops designed to cover the retreat. Up to August 4, when Fismes was entered, the American had taken 8400 prisoners and 133 guns. Premier Clemenceau announces that the Allied forces altogether have taken 35,000 German prisoners and 700 guns and have recovered 200 towns and villages in the Marne salient. The American casualty lists from the offensive started July 18 are now beginning to come in; 1500 names are on the lists published in the past two days.

#### THE DICTATOR OF THE UKRAINE

The Germans have overthrown the Rada or National Council of the "Ukrainian People's Republic," with which they made peace at Brest-Litovsk and set up as dictator General Skoropadsky, the Cossack hetman or leader. Skoropadsky is a man of simple habits and stern discipline. He organized an army to support Kerensky in his offensive against the Germans and when Kerensky was overthrown, fought hard though unsuccessfully to defend Kiev against the Bolsheviks. But with the aid of the Germans he defeated the Bolsheviks on April 29 last. He is in imminent danger of assassination by revolutionists and of overthrow by a peasant revolt.

**French Take Soissons** The German salient to the Marne was driven between the two flanking cities of Reims on the east and Soissons on the west. Reims the Germans were never able to take, altho they encircled it on three sides at a distance of a few miles. But Soissons, on their right flank, they captured and this was a more serious loss to the French than Reims would have been, for it has not been so badly battered and it opened the way to Paris. But its capture did not prove to be of so much advantage to the Germans as had been anticipated on both sides, for their attempt to advance on Paris from this direction was soon checked by the vigilance of Foch.

When Foch's offensive began, however, the possession of Soissons proved of decided benefit to the Germans, for it protected their right flank and so saved their salient from being cut off at its base on the Aisne. After the salient had been flattened out by the withdrawal of the Germans to the Aisne and Vesle and there was no longer any danger of being cut off, Soissons ceased to be of such importance and the Germans abandoned it. They could not have held it very long, anyway, for the Franco-American troops by taking Oulchy-le-Château and Fère-en-Tardenois had come forward well to the southeast of it.

The villages lying between the Ourcq and Soissons were next captured, Saponay by the French, Buzancy by the Scotch and Grand Rozoy by the English. After this the Germans retired so rapidly from the region south of Soissons that the Allies lost touch with them and marched forward all day with no more obstacles than muddy roads and felled trees. On August 2 a detachment of General Villemont's chasseurs entered the Cathedral Square of Soissons.

Soissons has changed hands four times during the war but has not suffered severely at any time. The fighting has been mostly confined to the suburbs, but the cathedral and other public buildings have been damaged.

The capture of Soissons gives the French a position north of the Aisne River and doubtless will compel the Germans to retire behind that river probably to their old position north of the Chemin des Dames. But considering only what has already been accomplished the expulsion of the Germans from the Marne salient constitutes the most brilliant and successful piece of strategy yet achieved by the Allies. The French Government has made General Ferdinand Foch a Marshal of France and has conferred the military medal upon General Petain.

**American Action in Russia** The American Government has finally come to the conclusion that the changed condition of affairs in Russia due to the Czecho-Slovaks justify a certain measure of military action, but in order to preclude misconception of American motives the following statement was given out by Acting Secretary of State Polk:

In the judgment of the Government of the United States, a judgment arrived at

after repeated and very searching considerations of the whole situation, military intervention in Russia would be more likely to add to the present sad confusion there than to cure it, and would injure Russia rather than help her out of her distresses.

Such military intervention as has been most frequently proposed, even supposing it to be efficacious in its immediate object of delivering an attack upon Germany from the east, would, in its judgment, be more likely to turn out to be merely a method of making use of Russia than to be a method of serving her.

Her people, if they profited by it at all, could not profit by it in time to deliver them from their present desperate difficulties, and their substance would meantime be used to maintain foreign armies, not to reconstitute their own or to feed their own men, women and children.

We are bending all our energies now to the purpose, the resolute and confident purpose, of winning on the western front, and it would, in the judgment of the Government of the United States, be most unwise to divide or dissipate our forces.

As the Government of the United States sees the present circumstances, therefore, military action is admissible in Russia now only to render such protection and help as is possible to the Czecho-Slovaks against the armed Austrian and German prisoners, who are attacking them, and to steady efforts at self government or self defense in which the Russians themselves may be willing to accept assistance. Whether from Vladivostok or from Murmansk and Archangel, the only present object for which American troops will be employed will be to guard military stores which may subsequently be needed by Russian forces and to render such aid as may be acceptable to the Russians in the organization of their own self defense.

In taking this action the Government of the United States wishes to announce to the people of Russia in the most public and solemn manner that it contemplates no interference with the political sovereignty of Russia, no intervention in her internal affairs—not even in the local affairs of the limited areas which her military force may be obliged to occupy—and no impairment of her territorial integrity either now or hereafter, but that what we are about to do has as its single and only object the rendering of such aid as shall be acceptable to the Russian people themselves in their endeavors to regain control of their own affairs, their own territory and their own destiny. The Japanese Government, it is understood, will issue a similar assurance.

The plans and purposes of the United States have been submitted to Great Britain, France and Italy and approved in principle by them, but the United States does not intend to restrict the actions or interfere with the judgments of these governments. It is the intention of the American Government to send to Siberia at the earliest opportunity a commission of merchants, agricultural experts, labor advisers, Red Cross representatives and agents of the Y. M. C. A. accustomed to organization and educational work in order to relieve the economic necessities of the people.

The United States has proposed to Japan that each government send a force of a few thousand men to Vladivostok to occupy that port and safeguard the country in the rear of the westward-moving Czecho-Slovaks.

**Allies Occupy Archangel** When the diplomatic corps from Vologda reached Archangel they met with a hostile reception from the local Soviet and were forced to con-

#### CELEBRATING THE FOURTH IN PARIS

The whole city turned out to see the American soldiers parade on Independence Day. They are passing Washington's monument and marching out of the newly dedicated Avenue de President Wilson.

tinue across the White Sea to Kandalaska. But shortly after the Soviet was overthrown by an anti Bolshevik revolution. Before being expelled from the city the Bolsheviks looted the public treasury carrying away \$20,000,000 in money with other valuables. The Bolsheviks attempted to make a stand at the railroad station on the opposite side of the Dvina River, but were driven out by force. The Allies in response to an invitation by the leaders of the new movement sent a joint force including some American troops from the other side of the sea. They landed on Sunday, August 4, and were received with cheers by the people of Archangel. The expedition was headed by members of the Russian Officers' League.

A new Provisional Government has been set up at Archangel composed of nine prominent Russians, all members of the Constituent Assembly and one a former president of the Archangel Duma.

#### Finland's Dilemma

The appearance in an American Atlantic port of a sailing ship bearing the red and yellow flag of the new Republic of Finland raises again the question of the recognition of independent Finland by the United States. Altho in former years the American people have sympathized with the Finns in their struggle against Russian tyranny our Government has not thought proper to extend aid or recognition because the dominant party seems to be the tool of Germany. At the moment of liberation from Russia an unfortunate split occurred between the conservatives and radicals in Finland and this quickly developed into civil war of the most virulent sort. The Reds called in the Russian Bolsheviks and the Whites called in the German army. The Whites won and in their triumph showed themselves as intolerant and bloodthirsty as the

C. International Film

#### HEAD OF THE FRENCH MISSION

General Paul Gerald Pau, hero of the Franco-Prussian War, is now in the United States as the military member of the French Economic Mission. The message he brings from his countrymen concerning our troops is that "their courage and spirit are magnificent"

Reds had been. Hundreds of Red prisoners were shot and thousands more imprisoned. All socialists and radicals, even tho not implicated in the Bolshevik revolution, have been expelled from the Finnish Diet. In the old Diet the socialists and radicals constituted a majority.

But in spite of these strong measures there is still a minority in the Diet, composed chiefly of the Agrarians and Young Finns, which is stoutly opposed to a monarchy and the dominant party hesitate to impose a German prince upon Finland, when the Diet is obviously not representative and a majority of the people would probably prefer a republic. Duke Adolf Friedrich of Mecklenburg-Schwerin is said to have accepted an invitation of the monarchists to become King of Finland.

France and the three Scandinavian countries recognized the independence of Finland and Germany sent food and troops to her aid. Great Britain, like the United States, refused recognition. The Finnish delegates in the United States claim that 40,000 tons of American wheat, bought and paid for a year ago, has been seized by the United States Government for the use of the Allies and that they are not allowed to buy and ship food to their starving countrymen in Finland. The occupation of Kola and East Karelia by the Allied and American forces is declared by President Svinhufud to be an invasion of Finnish rights and a threat to Finnish independence, for these territories are claimed by the Finnish Government as giving a seaport on the Arctic and a railroad leading to it.

These circumstances unhappily combine to give the false impression that Germany is friendly and the Allies and America hostile to Finnish freedom.

This is of course fostered by German agents and the pro-German Finnish Government. A deputation of Finns has been sent to Berlin to confer upon the Kaiser the Finnish Liberty Cross for his assistance in establishing the independence of Finland. In his reply the Kaiser said:

By our deeds we succeeded, without much talking, in accomplishing what our enemies never tire of proclaiming as their aim, but which they never intend to realize, namely, the protection of small nations in their struggle for freedom.

The representatives of Finland and Russia are now in conference at Berlin over the details of a peace treaty. The session was opened by the German Under Secretary for Foreign Affairs, who announced that representatives of Germany would be present at the conference "in order to assist the delegates in reaching an agreement that would be mutually satisfactory." Doubtless the German delegation will support Finland's claims to Karelia and Kola, for this would be in Germany's interest and also would tend to embroil Finland in a quarrel with the Allies.

#### Hospital Ship Sunk

The British ambulance transport "Warilda," carrying six hundred sick and wounded men home from France, was torpedoed in the English Channel in the early morning of August 3. The torpedo struck the after-part of the engine room, smashing up the dynamo, which plunged the ship in darkness. The wardroom above was demolished by the explosion and the patients there, more than a hundred, were either killed outright or soon drowned, as the room was flooded. The ship remained afloat for more than two hours and most of the others on board were got off safely in spite of the heavy sea that smashed five of the boats. Among those lost were several women nurses. There were seven Americans on board, all saved except possibly one. The "Warilda" had been in the Channel service for two years and this was the first crossing from France in which she did not carry German wounded.

#### U-Boat in Canadian Waters

One of the German submarines which has been disturbing traffic off the American coast in recent months has extended the range of its operations to the north. On August 2, Captain Dagwell, of the British lumber schooner "Dornfontein," was held up by the submarine and he and his crew forced to leave the ship. The submarine did not torpedo the vessel, but plundered it of all stores found on board which could conveniently be stored for future use. After the British crew had taken to their boats the Germans set fire to the "Dornfontein" with torches. The ship was captured in the Bay of Fundy on its way from Canada to South Africa.

After the men from the doomed ship had reached shore they reported their encounter with the German raider and the American patrol fleet started on the pursuit. According to the statement of the German U-boat commander to the captain of the schooner the submarine had hovered off the

American coast for six months and expected to keep at it till October. The loss of some Maine fishing boats is traced to the activity of the same submarine.

**Caribbean Politics** The Cuban House of Representatives on August 2 approved the Senate amendment to the obligatory military service bill empowering the President to send to France such part of the army as he may deem expedient. The Cuban Congress has also approved a measure for postal and telegraphic censorship. Cuba was one of the first nations to follow the example of the United States in severing relations with and in declaring war upon the German Empire. Had transportation conditions permitted, the gallant little republic would long ago have placed an army in France, and it is hoped that before long this may be possible.

Another of our little sister commonwealths, also an ally of the United States in the war, has been entangled in political difficulties. The result of the Congressional elections of July 7 are still in dispute in Panama in spite of the fact that they were conducted under the supervision of the United States. Consul General Jorge Boyd has protested to this Government that the existing administration had succeeded in electing two-thirds of the new National Assembly, but that judges who were themselves opposition candidates had invalidated elections at which the administration ticket was victorious. Both parties are naturally eager to gain possession of the next Assembly since it will choose a President to fill the unexpired term of the late President Valdes.

In Mexico the National Liberal party, the supporters of President Carranza, have triumphed over their opponents in the congressional elections. Carranza appears to have both the political and the military situation in Mexico about as well in hand as any Mexican chief executive can reasonably expect, and the revolution may be said to be "over" in spite of the continued activity of bandits in remote parts of the nation.

### The High Cost of Fighting

The aggregate expenditures of our national Government have now reached the figure of \$1,500,000,000 a month. If the present rate of expenditure is maintained the United States must find no less than eighteen billion dollars before the end of the current fiscal year, or an increase of 50 per cent over the fiscal year which ended in June. It is assumed that about one-third of the total sum will be met from taxation, the rest to be raised by public borrowing. For the moment the Government finds itself with a large cash balance in the Treasury, due to the unexpectedly generous purchase of Treasury certificates and war savings stamps by the public. During July alone the receipts from the sale of war stamps of various denominations amounted to an average of more than two dollars for every person in the United States and the rate of purchase is rapidly increasing as this form of investment becomes more familiar. There will have to be a fourth Liberty Loan in the course of the next few weeks, however, and it is predicted that the quota of this loan will be placed at five billions with the hope that oversubscription will add at least a billion more.

Besides exacting its direct levy upon the great American purse the war has already made some inroad upon general foreign trade. Figures issued by the Department of Commerce show that the total export trade for the fiscal year 1917-1918 amounted to \$5,928,285,641, as compared with \$6,290,048,394. Shipments to England and France decreased slightly; shipments to Russia were enormously reduced. Of course these trade figures do not include the supplies sent abroad for the use of our own army. To Japan, China, Italy and the chief commercial nations of Latin America our exports increased during the year in a substantial degree.

### The Army Uses a Bigger Net

The new military service bill extending the age limits of registration for the draft was introduced into both houses of Congress on August 5. The new age limits are from

18 to 45 and men between the ages of 18 and 20 or 32 and 45 inclusive will be given opportunity to register at the earliest possible moment after Congress approves the new bill. It is estimated that the new system will add 2,398,000 men to the number available for military service. Of course the number registered will be many times that number, possibly as many as 15,000,000, but the proportion of the older men entitled to deferred classification because of those dependent on them or the essential character of their civil occupations will be large. The Government is resolved not to draft men in classes 2, 3 and 4 until the mobilization of class 1.

## HOG ISLAND'S FIRST PRODUCT

No formal ceremonies marked the launching of the "Quistconck," but thousands were present at the christening by Mrs. Wilson, and joined in the cheering led by the President

is practically complete. It is largely for this reason that the projected change in the ages for compulsory service was decided on by the Administration. Class 1 is almost exhausted and the new registrations of men who have this year reached the age of 21 added to the small and rapidly decreasing number of men still available in the first class will not keep the training camps full. The military authorities hope to call to the colors in September 200,000 men and at least 150,000 in each succeeding month of the year.

There seems to be little opposition to the new upper limit for military service, but a few congressmen may oppose the drafting of youths less than 21 years of age. The President is, however, empowered by the new measure to call registered men into service "in such sequence of ages and at such times" as he may prescribe. This will make it possible, if it is found desirable, to defer the mobilization of the youngest men, and will thus meet in great degree the objections made to any lowering of the draft age. It is hoped that the action of Congress will be complete by the first of September.

At the Hog Island ship "Quistconck" plant of the International Shipbuilding Company the "Quistconck," first of 110 standardized ships of similar type, took to water on August 5. The new vessel is a 7500 ton cargo steamer, 400 feet in length, with oil burning turbine engines and a speed of 11½ knots. In addition to the ships of this type the Hog Island plant is also at work on seventy transport vessels of 8000 tons each and 15

knots speed. Twenty-four ships of each kind will be completed by the end of the year if present plans are carried out. All are fabricated ships, the steel parts being constructed in numerous mills and shops and then sent to Hog Island for assembling.

The creation of the new shipping yards is possibly the most spectacular achievement of the United States in the Great War. Ten months ago Hog Island was a barren marsh. Today it is a city housing 30,000 shipbuilders. The cost of the enterprise is figured at \$55,000,000, but this immense cost will be repaid many times over in the increased rapidity with which ships can be launched by the mammoth yards.

As the new ships come from the yards half of them are turned over to the Navy Overseas Transport Service to man for direct use as auxiliaries to the army and navy. The other half are assigned to commercial use and are manned by civilian crews. A special committee on man power is now studying the operation of the seaman's law with a view to suggesting necessary alterations. It is charged that the present law, in its anxiety to protect sailors' rights, too greatly hampers American shipping by restrictions unknown to our competitors in foreign countries and thus places the shipping trade under a serious handicap.

The total production of American yards during July was 123 ships with an aggregate of 631,944 tons. Sixty-seven were steel, fifty-three wood and three of composite construction. This output doubles the June record.

Harvester Trust  
Dissolved

The Department of Justice has made public a decision whereby the International Harvester Company agrees to a dissolution as an unlawful combination in restraint of trade. The company's appeal, pending in the Supreme Court since 1915, is dismissed and it is agreed that the Springfield, Ohio, and Auburn, New York, plants and works must be disposed of by the company or else sold to the highest bidder at public auction after the lapse of a year. Duplicated sales agencies in the same towns are forbidden to the company. Finally, if it is found after the expiration of eighteen months from the end of the war that "the foregoing measures have not proved adequate to restore competitive conditions" the Government may take further steps to protect the independent producers.

The most interesting feature of the case is the fact that dissolution was sought solely on the ground of monopolistic control of the industry and that wrongful practices or unfair treatment of competitors were not alleged.

Shrinking the  
Newspaper

The pulp and paper section of the War Industries Board has issued a series of edicts which, while not legally binding, have in practice the effect of law since only those newspapers which comply will find it easy to obtain paper.

The new regulations require that unsold copies of newspapers be not accepted if already distributed for sale, that sample copies for purposes of advertising should not be given out and that free exchanges should be discontinued, that the reading matter in week-day editions be reduced according to a progressive schedule beginning at 5 per cent for reading matter up to fifty columns in an issue and increasing to a 50 per cent cut on additional space over ninety columns, and that similar reductions, varying from 10 per cent on 150 columns to 60 per cent on the excess over 350 columns, be imposed on the Sunday editions. The American housewife will no longer be able to cover all the floors and walls of her home with a single copy of the Sunday paper at housecleaning time! The strangest provision of the new paper code debars any newspaper hereafter established from access to the paper supply during the period of shortage, thus giving monopoly to the existing newspapers.

What the  
Enemy Owned

The report of Alien Property Custodian Palmer gives the audited sum placed under the care of the American Government as \$441,395,795. Since fewer than 14,000 accounts have been audited out of a total of more than 23,000 trusts taken over, the total sum will probably amount to well over half a billion. Of this more than half belongs to corporations owned or directed by alien enemies; the rest to individuals. Individual property is held by the custodian to be returned at the end of the war, but corporate property is invested in Liberty Bonds.

# PERSHING, BLISS AND JOAN OF ARC

BY HAMILTON HOLT

ONE of the most interesting of my experiences in the war zone was the visit I paid to General Pershing's headquarters, where the Commander of the American Expeditionary Force was good enough to invite me to luncheon with him, at the beautiful old chateau put at his disposal by the French Government and used as his official residence when at the front.

I had already presented letters of introduction to General Pershing in Paris and had called upon him twice in his magnificent residence across the Seine loaned him by a wealthy American whenever he comes to the capital. This mansion is one of the finest in Paris. It is furnished in the most luxurious style, and in the square court yard in front I noticed both times I called two American coffee colored limousines, each with U. S. A. painted on the side and red, white and blue stripes on the glass windshield. The general always takes two cars with him wherever he goes, so that in case of accident to one he can jump into the other and lose no time.

While waiting in the reception room for the general's appearance on my first visit I noticed thru the window a beautiful garden at the back of the house with a green lawn in the center surrounded by stately shade trees. Pretty walks wound about the statues and fountains and I could hear turtle doves cooing in the foliage.

I had hardly time to finish my look at the garden when the general entered. Judging only from his photographs one would imagine him a stern, forbidding man, but he is anything but that when you meet him. He is tall, lithe, handsome and alert, and he instantly puts one at ease by the simplicity and cordiality of his manner. It was fine to see how pleasantly his face lit up when he talked and I at once perceived he had one trait which is rare in men who have achieved eminence. He gives his undivided attention to whom ever he is speaking to. I got the impression that he is carrying with perfect poise the great weight of responsibility that has been put upon him. In all the conversations I had with him, while he was never at a loss for a word he seemed to weigh carefully what he was saying before speaking. I was especially pleased to find him willing to give me permission to visit all the American fronts, and I feel sure that it was owing to this per-

© International Film

General Tasker Howard Bliss

mission that I was able to enter many doors that might otherwise have been closed to me.

But there were other people waiting to see him and we had no time for anything but the briefest conversation. He suggested, therefore, that we postpone our talk until I visited the front, when he hoped to arrange to have me to luncheon or dinner. Accordingly when I arrived two weeks later at the nameless town amidst the sunny hills of France where he makes his headquarters, I immediately went to the great barracks which his staff occupy and where the general has his main office.

General Pershing had just left his desk for home and a young captain was detailed to take me over. After a ten minutes' walk down the residence street of the pretty town I found myself at the gate of the general's chateau. We walked up a short driveway and were met at the door by an orderly, who ushered us into a broad hall and thence into a beautiful reception room furnished in Louis something style, with paintings of shepherds and shepherdesses in various bucolic attitudes.

The general's staff were already assembled. There was a major-general, two or three colonels and several majors. Judge Ben Lindsey, of Denver, who happened to be in town, and I were the only civilian guests. Finally General Pershing entered and after shaking hands all around luncheon was announced.

As the caste system prevails even in the American Army, and as an officer does not usually speak to his superior unless spoken to, there was hardly a word said during the entire meal except by General Pershing, Judge Lindsey and myself. I wish I could quote in full what the general said, but that would not be proper as this was a visit and not an interview. But I may say we talked almost exclusively of the American Army and of the support that the American people were giving it at home. This was something of a contrast to what would have taken place had I been the guest of the English high command, for the English do not like to talk shop, especially with civilians. I had had a three-quarters of an hour interview with General Joffre a week or so previously in which the hero of the Marne had spoken very frankly about the strength and the weakness of the American Army, and altho General Joffre requested me not to publish his views, he said I might communicate them confidentially to high officials. General Pershing was much interested in all that Joffre had said and agreed with much of it. The general talked a long time concerning the splendid moral conditions prevailing in the American Army. He said that ours was the best army the world had ever seen, and from all I could learn on the subject I am sure the general is right. Even the French had officially praised our methods of dealing with drink and prostitution. The general especially deprecated the boastful spirit that was prevalent in some quarters at home.

"Americans talk too much about what they are going to do," he said. "If we hadn't bragged so much about our getting 20,000 aeroplanes at the front this spring we would have saved ourselves a great deal of trouble. Now our allies have a right to be distrustful of our promises, while Germany has simply redoubled her production of aeroplanes. Moreover, all this extreme talk about bringing millions of troops over and winning the war at once [Continued on page 235]

In this cottage at Domremy, Joan of Arc, heroine of France, was born

ASSUMING that the deadlock along No Man's Land must continue except by sacrifices too costly to contemplate—there remain the free and open avenues of the air! Free and open but for the aircraft of the enemy! Yet, undeniably, there lies the line of least resistance. Our first task then is to clear the skies of enemy craft.

The history of war aviation began on August 4, 1914. Only from participants since that date can helpful information be secured. And those active survivors now most familiar with its details find themselves for the moment so overwhelmed with the struggle for life or death that they are able to devote less time and brain power to its improvement than are we remote ones who are free from that exacting burden.

Let us examine then the existing status of air fighting, striving to so familiarize ourselves with its incidents—its limitations as well as its possibilities—that we may eventually help to devise the superior armament that shall render to our beloved America—aviation's birthplace—the true mastery of the air that is essential to victory.

Aircraft includes airships and aeroplanes. With airships we shall not be bothered beyond classifying them as comprizing all gas balloons or lighter-than-air conveyances, such as Zeppelins, dirigibles and observation balloons. They are all slower moving than aeroplanes and offer a larger target to the enemy, hence they have occupied an insignificant position in air fighting as compared to the heavier-than-air machine, the aeroplane.

The aeroplane is either a pusher or a tractor. They are thus distinguished by reason of the propeller either "pushing" the machine from behind or "attracting" it from in front. Experience has shown that the tractor is swifter and more easily handled than the pusher, so we will herewith abandon the pusher type and concentrate our scrutiny upon the machine of proved superiority.

With the tractor propeller buzzing rapidly before the face of the pilot, he

© Committee Public Information, from Bain Service

*This squad of aeroplanes, in bombing formation and ready for action, was photographed from another*

finds himself in an awkward position when it becomes necessary for him to hurl bullets or other missiles at his enemy pilot. He can move his craft ahead, but in no other direction. If his missile touches his own swiftly revolving propeller, the fragile slice of wood breaks. Even a handkerchief or a pilot's cap striking the whirling propeller breaks it upon occasions, compelling the aeroplane thus losing its motive power to glide down immediately to the nearest landing place.

Yet if the pilot veers alongside his opponent and fires a broadside across the intervening space at the enemy, he but wastes his ammunition. He must

steer his own machine while he is firing. The vibration of his throbbing engine as well as the rush of wind past him renders aiming sideways out of the question. He must shoot straight ahead and his gun must be a fixed part of the aeroplane and sheltered from the wind to enable him to aim with accuracy.

If he carries another man in his machine to act as gunner this extra weight so burdens his aeroplane that the enemy in a single-seater machine can fly circles around him. He must fly alone then, and must devise some method of firing ahead without breaking his propeller.

When war suddenly broke upon a peaceful world, aviators in general little dreamed of the coming importance of their art to warfare. For several months after hostilities began aeroplanes were used only as a means of spying on the movements of the enemy armies, with an occasional feeble and inconsequential bombardment of enemy positions by dropping hand grenades and light bombs. Enemy aeroplanes were carefully avoided for fear of collision. A sportsmanlike gallantry was punctiliously observed even between enemy airmen and courteous gestures of greeting invariably passed between them when meetings in the air occurred.

Little by little the impression dawned that aeroplanes alone could prevent enemy pilots from carrying on their daily reconnaissance. Then began that rivalry in armament of aeroplanes which today is recognized to be of crucial importance to the determination of victory to either side.

Crude devices gradually gave way to

© Underwood & Underwood

*Disabled by a French machine, this German had to surrender two miles up in the air*

# OS LIES VICTORY

URETTE DRIGGS

These machines are now doing splendid work in bringing down the Boche in France

more practical inventions. The earliest offensive armament consisted of:

August 4, 1914. (1) Short cavalry carbine.

This weapon was of no value to the pilot, as the vibration of his aeroplane made aiming difficult, the swiftness of the enemy plane presented a target elusive and momentary at best, while the force of the wind against the extended barrel rendered steadying the rifle practically impossible.

(2) Bags of bricks.

This primitive weapon was used in obedience to military orders in France at the beginning of the war in the hope that close proximity to a hostile aeroplane might enable a pilot to hurl a brickbat into the enemy's propeller, thus breaking it and dropping the hostile craft to the ground. Strange as it may seem, two German aeroplanes were actually brought down by this "weapon." Its limited range, however, quickly caused its retirement as an aeroplane arm.

(3) Automatic pistol.

To this day the pilot carries a light automatic for defense and offense at close quarters, tho its value during a flight is practically nil.

January 1, 1915. Machine gun mounted on upper plane.

The French Nieuport was the first aeroplane constructed to carry a rapid fire Lewis gun weighing twenty pounds on the upper wing, where it fired over the top of the propeller. It was aimed by pointing the aeroplane itself and it was fired from a string in the pilot's hand.

German airmen quickly followed suit

They mounted their Parabellum light gun in the same way.

But while this invention was a decided improvement over previous methods the difficulty of reloading the gun from the pilot's seat limited its usefulness. When he fired one magazine of forty-seven cartridges the pilot had to descend to the ground to reload his gun.

February 1, 1915. Machine gun firing thru the propeller.

Roland Garros, the famous before-the-war aviator, devised for France the first method of firing the gun from the fixed mount on the engine hood, straight ahead thru the revolving propeller. Midway along each blade of the pro-

PELLER a band of hard steel protected the wood from the bullets, deflecting the 7 per cent. which hit it, the balance passing thru without striking. The aeroplane itself was sighted at the enemy and the gun was exactly in line with the sights.

Garros was captured one day in June, 1915, and the Germans again quickly copied this French patent without asking leave. But this device, tho extremely interesting, proved not an unmixed advantage, for the steel bands on the blades lessened considerably the efficiency of the propeller and the speed of the aeroplane was correspondingly decreased.

July 1, 1915. The synchronized machine gun.

The German Fokker aeroplane first appeared with gun fixed atop the engine hood, the tripper synchronized with the propeller shaft so that bullets could issue from the gun only when the blades of the propeller were out of the way. As the two bladed propeller revolves 1400 times per minute, the muzzle of the gun finds a blade in front of it 2800 times each minute. But there are likewise 2800 empty spaces each minute. As the gun fires only 400 shots per minute the device is so timed that one shot issues thru each seventh space.

This ingenious contrivance remains in full vogue to the present time, affording as it does ample convenience of reloading and perfect ease of operation to the pilot. Often two guns are synchronized to shoot thru opposite sides of the revolving propeller. A push button on the steering bar fires both guns simultaneously while the pilot keeps his eyes on the enemy target thru the telescope sights lined up squarely in front of him.

With the capture of the first German aeroplane so armed the secret was out, and soon both sides were provided with this great improvement in arming, thus balancing the scales again until something still more deadly could be devised. It was two years in coming.

July 1, 1917. One-pounder gun.

The celebrated George Guynemer, then captain of the famous Cigognes, the elite fight- [Continued on page 233]

## The Strategic Importance of the Murman Coast

**E**IGHT ambassadors out of a job—for the Emperor to whom they were accredited is deposed and defunct—have found a place in the midnight sun on the granite cliffs of the Murman coast. Englishman, Frenchman, Chinaman, Japanese, Italian, Serbian, Brazilian and American had been residing during the period of their unemployment at Vologda, which seemed as safe a place as any in Russia and had the unique advantage of railroads leading to four emergency

BY EDWIN E. SLOSSON

exits, west to Petrograd, east to Vladivostok, south to Odessa and north to Archangel. But they were warned by the Administration that they would have to vacate Vologda, for the place was about to undergo alterations by a bombardment. Nikolai Lenine, *alias* Vladimir Utulyanov, who is the proletarian Autocrat of All the Russias—except such as have seceded—politely invited ambassadors to come and live with

him in Holy Moscow. But Lenine is *persona non grata* to the embassies. Besides, Moscow, as the late Count von Mirbach found out, is not a healthy climate for ambassadors, and as Talleyrand remarked under similar circumstances, an ambassador has to look after his health. The southern exit was impracticable since the Black Sea has become the German Sea. The western was no better, for the ambassadors—except our Mr. Francis—had tried a few months ago to get out via Petrograd and Finland but had been held up by both the Red and the White Guards. Vladivostok was five thousand miles away and the trains were not running regularly owing to some sort of a fight between the Czechoslovak union and the Bolsheviki union. So the representatives of the Allied Powers fell back on Hobson's choice, Archangel. Arriving at the end of their anabasis the eight diplomats shouted: "Thalatta!" or whatever stands for it in Chinese, Portuguese, Serbian, etc., for it seemed that their troubles were over when they caught sight of the sea. But the Bolshevik boss of Archangel, one Petrov, ordered them off the premises and they were obliged to pack their archives and attachés and other impedimenta into two boats and set sail across the White Sea to the village of Kandalaska, or Kandalax. Here most of the diplomatic corps remained, altho the Pomorian fishermen must have been hard put to provide suitable accommodations for such a distinguished body. But Ambassador Francis, with the Italian Ambassador, the British representative and the French *chargé d'affaires*, took the train for Kola over the railroad that our American engineers have constructed since the war began.

Here, it seems, the fugitive diplomats are among friends, for the Soviet of Kola, unlike the Soviet of Archangel, is pro-Ally. In fact it has been actively coöperating with the British, French and American marines in the defense of the Murman and Karelian coasts against the White Guards and Germans who are trying to gain possession of this territory.

The focus of [Continued on page 229]

THE NEW THEATER OF WAR

Allied and American troops have occupied Kola and Archangel. The foreign embassies which had been at Vologda have escaped by way of Archangel to Kandalaska and Kola. The Finns claim the Karelian and Murman coast and threaten an attack on Kem, cutting off the railroad to the Arctic

### LIEUTENANT B. O. WILLS

At Pelham Bay, tho not part of the training camp itself, is the Naval Auxiliary Service, of which he is head. Men here are trained for transport and merchant marine duties. A sailor's life is not exactly one of ease, for our boys are well supplied with mental exercise and physical labor. But according to those who have chosen it, and every one is enthusiastic, "there's nothing like it" and "Pelham is a great place"

### THE WAY TO FRANCE

When laying out a course across the ocean, a curved line is sometimes the shortest distance between two points. The student at the left is learning to obtain the most probable "fix" at sea by the Marcq St. Hilaire method of reckoning. Maybe the sailors find it simple, in spite of the many figures on the board, for it requires far less work than used to be necessary when the older methods were followed

# SATISFYING THE SEVEN FUNDAMENTAL HUMAN INSTINCTS

BY IRVING FISHER

PRESIDENT OF THE AMERICAN ASSOCIATION FOR LABOR LEGISLATION

**M**ANY people are imagining that when this war is won the great world questions will be settled. We know, however, from the experience of other wars that the coming of peace will be but the beginning of great questions.

Among these questions I believe that two of the most important will be the labor question and the health question.

These two problems really fit one into the other. Labor has been asked to support this war and has supported it. And at the end of the war labor will say: "We have done this for our country: what is our country going to do for us?" And we can answer labor's question very largely by giving health to labor. The greatest asset of the laboring man is his health.

That there is enormous room for improvement along this line, enormous room for the prolongation of human life, for adding to the working years of labor, for preventing laborers at forty-five being thrown on the scrap heap, and for keeping them able to earn a living, and contented or more nearly so with their lot in life by making that lot in life better.

We ought to establish a national department of health as one of the consequences of this war. The movement for a national department of health has received a great stimulus in England where after three years of experience with war people are becoming alarmed. They are making investigations. They are finding that their negligence has been extremely costly. They have examined the conditions of women in munition factories and have found the fatigue of long hours and dangerous conditions are really impairing the womanhood of Great Britain.

Health insurance would be, I believe, the greatest stimulus to health conservation which we have ever had.

**W**E are the one great industrial nation that does not have health insurance. Health insurance was started in 1883 by Germany. I am told that today "Germany" is not a good word to conjure with. I want to say, however, that at the end of this war, as at the end of all wars, there will be a great exchange of ideas between the two contending parties. We shall make more use of science in all Government activities. We shall try to discover the secret of German efficiency. And Germany will undoubtedly adopt in spite of herself certain principles of Anglo-Saxon justice and democracy. Possibly by this exchange we shall attain for the whole world that high goal, an efficient democracy.

One of the necessities, or at any rate one of the great engines, for an efficient democracy is, I believe, health insurance. I think there is no question that a large part of the patriotism in Germany is based on what the Government has done for the people. Undoubtedly it is true, and it is a burning shame, that the people are being exploited; and that the autocracy so intended when health insurance was established. They were trying to make the men contented to stay at home, in order that there might be more and better fighting units. But that fact is no argument against health insurance. On the contrary, in a democracy, it is an argument in favor of it.

There is another lesson which I hope the war may help teach, and that is that in order that labor shall be contented we must understand the psychology of the

workingman. We must satisfy his great fundamental human instincts. I believe there is a field for what might be called industrial psychiatry. Recently I have discovered that a number of other people have been working along this line. Among these is at least one practical employer of labor, Robert B. Wolf, who has shown, in the wood pulp industry, that it is possible to make the work itself interesting to the laboring man. I believe that herein lies the hope of solving the great industrial problem of labor discontent more than in any other direction. I think that if employers would join Wolf and the few other employers who have tried to adapt conditions of work to the needs and yearnings of labor, labor discontent will be diminished far more than by any other method I know of.

**P**EOPLE ask what is the secret of the I. W. W. It is not the machinations of a foreign foe. The machinations may be there, but there must be soil prepared in advance. We cannot blame Germany for the I. W. W. We must blame ourselves. There is something rotten, something wrong in our social system, that allows men to be so bitter against society.

As I see it, any human life in order to be a successful human life, must satisfy six or seven of the great fundamental human instincts. First, there is the instinct of self-preservation, or making a living. The trouble is, we harp too much on that one string. We think that is all the workman is interested in; that his interest is confined to his pay envelope. Undoubtedly that is the most fundamental thing. But there is also the instinct of self-expression, or the instinct of workmanship; there is the instinct of self-respect and respect for others; there are the instinct of self-sacrifice or heroism; the instinct of love, or the home-making instinct; the instinct of loyalty; and possibly, whether it is innate I do not know, the instinct of worship.

In order that the laboring man may live his life, he must satisfy something more than the instinct of self-preservation. His life cannot amount to much if it merely consists in keeping body and soul together. And yet, with strange blindness, the employer assumes that the only thing his employee is, or can be, interested in is his wages. Hence these ingenious schemes, like the Taylor system, or perhaps I should say like what the Taylor system has often degenerated into, for trying to get more work out of labor, consist entirely of thrumming on this one string—trying to hold out a bale of hay for the donkey, and as he approaches it, making him walk the faster to reach it. I believed thoroly in these systems, and in piece work, until I began to understand what at first had appeared to me strange, the objections on the part of the laboring men, tho they do not themselves understand the nature of their objections. Their souls are hungry and thirsty to satisfy these great instincts, but they do not know it.

**N**OW, what Robert B. Wolf did was to restore, in the first place, the instinct of workmanship, which has been subtly abstracted from industrial life thru specialization of work and division of labor. Originally a man was interested in his product, just as an artist is interested in his picture. But today, with the minute division of labor, a laboring man sees his work sweep by him, a peg in a shoe, a bolt in an auto-

mobile, and since he is not able to visualize his part in the product his work ceases to be interesting and becomes drudgery. He wants to shorten his hours; and the employer, whose work is interesting, whose work is his life, cannot understand why the employee is always trying to shirk, whereas he himself is willing to work twelve or sixteen hours a day. The reason is that in one case the instinct of workmanship is satisfied and in the other case it is not. I have sometimes thought how much wages I would have to be paid to give up my job to put pegs into shoes or to take up some other monotonous work. If you paid me \$1,000,000 a minute, I would not give up my work and go into an automobile factory or a shoe factory. I might for a few minutes! But if it meant sacrificing my life work, I would prefer suicide, after having had a taste of the satisfaction that comes from doing work which I love.

What Wolf did was to show each of these men, or some of them, what their own particular work was. At first he tried to introduce the Taylor system, but those associated with him practically forbade it. So he put into operation a part of the Taylor system, namely, a system of charts whereby men could record by a series of curves just what was happening at each stage of the process. They watched their records, and did more work than could have been gotten out of them by any pace-making system. All day these men trace with a lead pencil their work. Their own part in making that wood pulp is that little picture or graph. And they are just as much interested in making that picture every day as an artist is in painting a new picture. It is theirs.

There is more in the idea of which Mr. Wolf made such good use. He has tried to satisfy also the other great natural instincts, the instinct of self-respect and respect for others, the instinct of loyalty; making them feel as tho they were human beings—his brothers, instead of a lower order of human beings interested only in their pay envelopes.

Would you try to limit the instinct of a soldier merely to his pay envelope? Would you try to make a soldier go over the top by bribing him? Suppose President Wilson had said to General Pershing: "Now, Pershing, I want to be sure you are always on the job, and not skimping it. I have developed a system by which your wages will go up or down according to your victories."

What do you suppose Pershing would have said? He would have said: "Mr. President, what do you take me for? Of course I must live. But I am not primarily interested, or only interested, in my pay envelope. The motives which are sending me to France are loyalty to my country, heroism, the desire to sacrifice myself for an ideal, and may be to win some glory. Idealistic motives keep me at work."

After this war we must apply science to industry, in a way to make industry more wholesome and healthy; which means not only better sanitation and ventilation, not only how to make the workman keep his bodily functions going properly, but how he may obtain mental health so that he may live a complete all-around life. And if we are to say that the world owes every man a living we should mean not only that it owes him wages, but also that it owes him the full expression of the fundamental instincts of a human being.

"The show windows are so attractive that passersby always stop to look at them, many people crossing the street to do so"

## OVER THE COUNTER IN WARTIME

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

A man should be judged not by what he does but by how he does it. A good shoemaker is a better citizen than a poor doctor. A conscientious clerk is a finer asset to the community than the careless prodigal who throws his inherited wealth across the counter at the clerk. The real aristocracy is not of wealth, nor of intellect nor of birth nor of position, but of knowledge, labor, skill, service and character combined.

A man's place in the universe is fixed not by the position he holds nor the money he gets, but by the purpose he holds and the effort he makes. When a bootblack shines your shoes better than they were ever shined before, he deserves a higher place in your estimation than a senator who loafs on his job or a preacher who delivers a poor sermon. What is the standard of estimating a man's worth in a great modern business enterprise? Achievement. Nothing else. A total disregard of superficial class distinctions may be observed in the great manufacturing plants that have made America leader of the industrial world, and are helping us to win the war. Merit alone rules here—the man who can forge a bit of steel faster and better than the other fellow is most respected and admired. If we were all as good business men as the heads of the Emergency Fleet Corporation, and if we applied to our social and personal relationships the frank, honest, business-like standards that put a man where he belongs, we should have a new world based on sincerity, ideality and the common good.

I have been led to think along this line because of hearing a number of so-called ladies murmur in a haughty, patrician way the word "trades people." I hate that word. It is almost as bad as the term "gent." There is no more reason for applying this name to merchants than for applying it to musicians, artists, lawyers and ministers, all of whom have something to trade for money. Why should the men and women who labor to clothe, house and feed us have a lower place in our minds than the men and women who labor to inform, heal or entertain us? Really good food and clothing are easier to obtain than good amusement, theology or education. This is because "trades people" have tried harder to satisfy our needs. As long as we need material things we should honor those who provide them.

When the human race has fully evolved, nobody will take pride in calling himself a "professional" man, a "scientific" man, a "business" man, or any other single kind of man, every such name signifying that the man is not yet grown. A great man is always great on different sides—he is not limited by the scope or nature of his job. The age of specialization was merely the ante-room to the age of unification. Our national schoolroom is, or should be, the modern American store, which represents the combination and culmination of a hundred sciences, trades and professions.

The science of store-keeping is a world of study, research and experiment in itself. No professional or scientific man ever succeeded in mastering all the subjects that a great merchant must know either directly or indirectly. He must know buying, advertising and selling; banking, bookkeeping and accounting; raw material and manufacturing; distribution and transportation; commercial art and literature; hygiene and sanitation; industrial methods and machines; welfare work and social service; neighborhood conditions, advantages and limitations; community needs and problems; trade papers and business journals; scientific management and efficiency engineering; and many other branches of the new arts and sciences that we have not space to enumerate here. A department store is a department store of knowledge more than of merchandise.

We think of the phonograph, the automobile, the submarine, the airplane, the concrete ship, as the highest products of American labor and ingenuity. But the modern store in all its developments records more progress than do any of our most remarkable inventions. The airplane is no further ahead of the stage-coach than the store of today is ahead of the store of yesterday. The rapid growth of any public institution is a profitable thing to observe. Let us mark a few milestones of progress in the joint science, business and profession that we call merchandising.

The old-fashioned village store was generally inaccessible—you had to go a long distance to reach it. But when you got there you were disappointed likely as not, because there was no way of learning in advance whether a store had the articles

you desired, both newspaper advertisements and telephone service being lacking. You found stocks unassorted and clerks unable to give you accurate information about the goods. Light was poor, when you went to inspect an article thoroly you had to walk to the front door to get a look. Air was bad, scientific ventilation unheard of; aisles were narrow and crowded; germs and flies and dust were present to a dangerous degree. Sanitation with its modern rules and facilities for safeguarding health had not been thought of in connection with a store. The commodities you were expected to eat or wear had been mauled over by careless and unclean hands without regard to your hygienic or esthetic needs. In fact a shopping tour was likely to be a round-about way to the doctor's office.

All human relationships are helped by a knowledge of what the other fellow is doing to make living conditions better for us. The merchant, some kind of merchant or another, is the man with whom every family has dealings every day. We should all be able to recognize the fundamental points in good store-keeping, that we may discern more clearly what we owe to the merchant on whom we depend for the comforts and necessities of life, and also that we may have a composite standard of judgment by which to rate and compare the stores and shops in our vicinity. So let us give a brief description of a model store that I have in mind. This merchant is an unusual man. Some of his methods would not apply to all stores, but all of his methods are worthy of consideration by dealers, clerks and customers who approve mercantile progress.

This merchant, whom we will call Mr. Brown, chose the life work he is doing because he felt that a merchant has the best chance of anybody in the community to do public service, organize and equip the family on a sound basis, promote the welfare of the individual, provide and extend popular education, carry out new ideas in practical philanthropy. However, he concealed this purpose from his customers and employees until he had made a big financial success, because if people got a suspicion that a merchant followed a kind heart more than a cool head they would not buy his goods.

Merchant Brown guessed at nothing. Before he went into business for himself he studied trade reports and mercantile agencies to find how many stores in his line

failed and exactly why they failed, then he took precaution to guard the weak spots in the business. For example, he learned that two dangers to anticipate were poor location and high rent; he consulted the map and the real estate men, figured in what direction the population and rapid transit would develop, and resolved to open his first store not in the center of the shopping district where rents were high but on the extreme edge where they were low. Then he tied up his landlord with a long term optional contract specifying the same rent—a few years later all his competitors had to pay more but he did not. Before signing the lease, however, he analyzed the present conditions. He learned how many families lived near enough to patronize his store, what their leading occupations were, how many rival stores existed and how good they were, what these stores were doing and had failed to do to attract, serve, hold, present and possible customers. Then Brown started business with complete knowledge of the lay of the land—something that few dealers ever take the trouble to secure. People generally fail in business, and everywhere else, because they are willing to guess at something they should know.

**B**EFORE Brown stocked up he did a lot of things most merchants never think of doing. He consulted books on sanitation, the local board of health, and the national manufacturers of hygienic appliances, to make sure that health conditions would be satisfactory. Light, heat, ventilation and circulation, garbage and sewage disposal, toilet equipment and arrangement, other items of sanitary provisions, were carefully regulated in advance. Result: Brown's employees are healthier and more contented than those of his rivals, and the customers feel better while shopping, as the clerks feel better while serving them.

Brown selects employees by a modern system of queries and tests based on physiognomy, biology and experimental psychology. Therefore his labor turnover is reduced about a half, he saves the time and money so often wasted in hunting and educating new employees, and by harmonizing the job and the man he ensures better service and creates happier conditions all around. Believing in the merchant's profession, he trains his clerks as carefully as tho he were teaching students of law, medicine or mechanics.

He insists that every worker be a student. He provides a manual of store methods covering the policy, procedure and conduct of each department and individual; this book is the daily guide for employees and they are expected to know what it contains and how to apply this knowledge. Every clerk is taught to know and explain the goods he handles, from the raw material to the finished product; and if the customer asks any question he or she cannot answer, information is to be sought immediately from the head of the department or from a technical trade book furnished by the store. In order to make this knowledge of merchandise practical and vital, each clerk uses in his own home first the principal product that he sells across the counter, wholesale prices being given to the clerks by the store.

A falsehood means discharge; when a clerk is caught misrepresenting the goods he tries to sell, the only way to keep his job will be to prove that the lie was unintentional.

The friendship of the customer is gained and preserved at any cost to the firm. In rectifying a mistake, Brown has been known to spend five times as much as the whole transaction cost. He says the store is selling not merchandise but satisfaction.

One of these complaints mentioned that

telephone orders in the store had frequently been taken by shipping clerks who got the orders mixt and were frightfully slow even at that. Brown figured out a way to improve the situation; he had telephone blank sheets printed for each department with the name of the article typed and spaces left for price and amount; then he chose and trained a special group of telephone order clerks; then he arranged his deliveries so that customers who wished goods packed on the morning delivery would have to telephone before nine o'clock and for the afternoon delivery before two o'clock, thus telephone orders were practically all in and could be handled properly before the rush hours of the day, which began at nine in the morning and two in the afternoon.

A second complaint referred to the absence in the store of certain articles that customers thought should be kept in stock. Brown then did a remarkable thing; he had a professional shopper go over the list of articles and find where each could be obtained from a store nearby or a mail order house, and upon receipt of this information he told his clerks to inform customers where to obtain, even from a rival store, such articles as Brown did not and could not handle.

Commercial art, modern publicity and practical psychology form regular departments of the establishment. A color scheme was adopted with a forceful, beautiful and descriptive emblem and monogram; this bold publicity combination appears wherever Brown controls space that might be used—on letter heads, delivery wagons, walls and show windows, wrapping paper, advertisements, outdoor signs, and the uniforms of store attendants. All over town people are confronted by the emblem and the colors of the store; when they pass they are tempted to look in, moved unconsciously by the law of association. The street front is not dingy, soiled and disreputable-looking, the show windows are so attractive that a crowd is nearly always in front of them, and people walking on the other side of the street often come over to look at them.

Three-fourths of the charge accounts have been eliminated during the past two years, leaving the business practically on a cash basis. All merchants know the mutual advantage to customer and dealer of cutting out expensive deliveries and more expensive bad accounts, but few merchants have thought hard and long enough to reach the best way to get customers into the store. Brown specializes on this. Having computed the cost of deliveries and charge accounts, and having apportioned its amount to each dollar of merchandise bought, he made a big public announcement of the benefit to every customer from the cash method, offering to deduct from every cash purchase the saving on delivery and charge accounts.

When prices began to soar on account of the war, and other merchants were getting complaints and losing customers, Brown saw his chance. He engaged a business expert, they went over the main costs of running a store and together worked out a system for stopping the little wastes and leaks that lower profits and raise prices in any business that has not yet been redeemed from the slipshod methods of our grandfathers. Brown reasoned that a customer should pay only for maximum quality and quantity of the merchandise and minimum overhead; he found that his customers had been paying for a lot of foolishness on his part; when he cut this out, he was able to reduce prices anywhere from 5 to 20 per cent and by doing this he got the very trade that the other merchants were losing.

First he installed modern machines for computing, billing, bookkeeping and ac-

counting operations; mistakes and disputes were thus avoided; lower-priced clerks could operate the machines than those who formerly did the head figuring; and every customer was given an itemized printed receipt, which is the only businesslike way to record any transaction. Brown discovered that his method of correlating cost, price and profit had been largely wrong; some prices were too high and others too low; depreciation had not been accounted for and overhead properly distributed; a few departments were carrying the whole establishment, while others were losing money all the time. To correct these faults Brown made each section or department of the store a business in itself, he organized his clerks into a great class to study the science of store-keeping, and he gave each department head a modern technical book showing how to run his kind of business.

One of the main items of superfluous expense was the hiring and training of new employees, and the indemnifying of customers against their mistakes. The needless waste here involved had cost the store 10 or 15 per cent of the salary appropriation. There were two ways to reduce the labor turnover, first, to select employees who would not have to resign because of war demands or professional duties; second, to make employees so contented that they would not want to leave under any circumstances. Brown went over all his departments with a view to replacing men of draft age, when they left, not with other men of similar age but with girls or women or youths under the draft age or men over it. Already certain features of welfare work had been established by the store to promote the health and happiness of the employees; this department was extended to cover advantages like the following: gymnasium, athletic field, swimming pool, roof garden, military band, vacation camps, literary societies, thrift club, lectures and motion pictures, classes in personal efficiency, health, business, domestic science and other important subjects, a library both technical and popular, a building and loan society, a pension fund, a personal advice bureau. Brown privately confesses that he always wanted to treat his employees like human beings, but he never had the nerve to make the experiment until some of the big corporations led the way and proved in dollars and cents the financial soundness of the undertaking.

Perhaps the most modern feature of the store is the service department, which handles matters of general convenience to the customers and offers benefits that money cannot buy. Here questions of all kinds are answered; personal advice is given relating to the use of the products of the store; criticisms and complaints are entered, improvements are suggested, claims are filed and adjustments are made; articles lost and found are listed; maps, directories and time-tables are kept in view; reference lists and biographies of special interest may be consulted; shopping guides and household manuals may be had free or at cost; the store magazine with valuable hints for shoppers may be had free; and other important helps may be found to make shopping easier and more productive, life healthier and fuller, happiness deeper and surer. Brown holds that a service without a sale is better than a sale without a service. Brown has built up a service department that is known for miles around; a person does not have to be a customer before he is an inquirer at this department, but the chances are about nine out of ten that he will be a customer after he has been an inquirer. A successful business of any kind rests jointly on the desire to help others and the determination to advance one's self.

## CARRYING THE WAR INTO LAPLAND

(Continued from page 222)

the war dances about like a will o' the wisp and sets us to studying our neglected lessons in geography. We have no sooner got our eyes fixt upon Tabriz than we must turn them to Tomsk, next to the Adriatic and now to the White Sea. This new scene to which the war has shifted has a historic interest as great as its present strategic importance, for it was the first of Russia's doors to open, as it is now the last to be closed. This door was opened by Richard Chancellor in 1553 much as Commodore Perry broke thru the isolation of Japan. Now that the mighty empire of Russia has shrunk again almost to the dimensions of the domain of the Duke of Muscovy, it is interesting to turn to that most fascinating chapter of "Purchas His Pilgrimes" and read how the indomitable British navigator happened upon Russia while he was seeking to find a northeast passage to Cathay and the Indies:

They proceeded to sea and Master Chancellor held on his course toward that unknowne part of the world and sayled so farre that hee came at last to the place where hee found no night at all, but a continuall light and brightnesse of the sunne shining cleerly upon the huge and mightie sea. And having the benefite of this perpetuall light for certaine dayes at the length it pleased God to bring them into a certaine great Bay.

Sailing into this great bay, the White Sea, he landed at the mouth of the Dvina River, the site of the present city of Archangel. The natives, before they would trade with the strangers, secretly sent word to their sovereign and he returned an imperative invitation to visit his court at Moscow. So Chancellor went to Moscow by way of Vologda—the same route as our fugitive diplomats recently traversed—and there was ushered into

the Counsaile chamber where sate the Duke himselfe with his nobles, which were a faire company: they sate round about the chamber on high, yet so that hee himselfe sate much higher than any of his nobles in a chaire gilt, and in a long garment of beaten golde, with an emperial crowne upon his head, and a staffe of Cristall and golde in his right hand, and his other hand halfe leaning on his chaire.

He who sate upon the golden chaire was no less a personage than Ivan the Terrible and this was a momentous interview, for Master Chancellor came back with a

letter written in the Moscovian tongue, in letters much like to the Greeke letters, very faire written in paper, with a broad seale hanging at the same, sealed in paper upon waxe,

which gave to the English merchants free trade thruout the Russian dominions. To take advantage of this privilege the Muscovy Company was chartered, the first of those joint stock corporations to which England and other countries owe their expansion and present power. An English factory was built at Archangel and a brisk trade sprang up thru this port, which lasted until 1702, when St. Petersburg was opened, and revived in 1914 when St. Petersburg was closed. Peter the Great in his quest for outlets for his empire at first favored Archangel, and the small house in which he lived there is still shown to tourists. But when Peter, by beating Charles XII of Sweden had secured a foothold on the Baltic, he decided to "open a window upon Europe" from this vantage point. His affection was henceforth concentrated upon the city of his patron saint, Peter, and consequently he curtailed the commerce of Archangel, the city of the Archangel Michael.

But as soon as the Great War broke out the Germans blockaded the Baltic and all the munitions and supplies sent by England and France for the armies of Russia had to enter by Archangel or go around the world via Vladivostok. The Dvina River, which forms the [Continued on page 231]

## Equals 89 Eggs

Or 7 Pounds of Round Steak  
Yet Costs Only 30 to 32 Cents

The large package of Quaker Oats yields 6221 calories in units of nutrition. Official figures give eggs 70 calories each, and round steak 890 calories per pound.

That package of Quaker Oats—costing 30 to 32 cents—compares in food units as follows:

It Equals 89 Eggs  
Or 7 lbs. Round Steak  
Or 7 lbs. Leg of Lamb

Or 9 lbs. Veal Cutlets  
Or 11 lbs. Fresh Halibut  
Or 12 lbs. Broiled Chicken

These indispensable foods for the same nutrition, cost from 7 to 10 times as much as Quaker Oats, according to prices at the present writing.

That is why food authorities urge the wider use of oats. Not merely for breakfast, but in bread and muffins, in cookies, in soups.

The oat stands supreme among grain foods—as energy food and as food for growth. It is the richest of all grains in iron.

Yet Quaker Oats—the finest grade—supplies nutrition at 5 cents per 1000 calories.

If it cost \$2 per package it would still be cheaper than the average meat food.

## Quaker Oats

Just the Richest Flakes

Quaker Oats is a superior grade, flaked from queen oats only. None but the richest, plumpest oats are used in its production. We get but ten pounds from a bushel.

The result is exquisite flavor, which has made Quaker Oats the leading oat food of the world. Yet it costs you no extra price.

12 to 13c and 30 to 32c Per Package

Except in Far West and South

(1960)

# CARTING THE MAILS BY MOTOR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

THE United States Government is adopting motor transport on a scale hardly appreciated by the general public. For the use of its military forces our Government has ordered some seventy-five thousand motor vehicles, most of which come under the classification of motor trucks. Of this number nearly one half have already been delivered by the manufacturers and placed in service, either with our armies abroad or at cantonments and embarkation ports in this country.

From the standpoint of permanency, however, the adoption of motor transport by departments not directly concerned with waging war is of greater significance. Of these the Post Office Department must be accorded first place.

Recently on this page the "farm to table" plan of the Post Office Department was given in detail. This plan, already in operation in the vicinity of Baltimore, provides an extension of the parcel post service by motor truck to the farmer's front gate and will shortly employ some fifty-six hundred motor trucks. Since then attention has been drawn to the employment of motor transport in handling the regular mails, by the decision of the Post Office Department to abandon pneumatic tube services in several large cities and substitute additional motor equipment. Congress tried to reverse this decision, but its action met a Presidential veto.

According to statements made at that time by postal officials the department felt that the limit of efficiency in the dispatching of United States mails had been reached with the existing facilities in all of the large cities and that the sorely needed increase in mail-carrying facilities would have to be secured thru an increase in motor transport. In other words that the motor truck is regarded as the chief instrument of future improvement in the postal service.

To date the carrying of mail by motor trucks owned by the Government has been limited to the larger cities. The original policy was to have this service rendered by contractors who owned their own equipment, but in the last few years a change to Government owned and operated motor trucks has been gradually made. The same policy, it is said, will soon be extended to rural mail delivery routes where the use of motor vehicles is warranted. According to statements by postal officials the results secured with Government owned motor trucks in the larger cities have been so satisfactory that this service will soon be extended to every city where the volume of mail is sufficient to warrant a fleet of vehicles.

That motor trucks offer the fastest, safest and surest way of transporting mail between post offices, sub-stations, and railway terminals, is reported to be the unqualified assertion of post office men in all cities where Government owned vehicles have been used. The records of the Chicago post office,

for example, show a remarkable degree of reliability for the motor truck. During an entire year the fleet of Chicago mail trucks made only one failure to every 2900 trips—a performance said to be unequaled by any other form of mail transportation, not excluding railroads. This record is regarded as highly significant because for years it was contended that motor trucks could not operate efficiently in Chicago's Loop District on account of the severe congestion of traffic. Actual experience, however, proved that they were more economical and more reliable than the previous facilities employed to serve this district.

The heavy snowfalls of last January furnished a severe test for the postal motor trucks. In Chicago the official register was a total of forty inches of snow and yet deep snow did not result in a single failure to make deliveries. Similar reliability was reported from Philadelphia, where, thruout the period of abnormal snowfall, all deliveries and connections were made by motor trucks on regular schedule.

The Post Office Department is now operating Government owned motor truck services in New York, Chicago, Philadelphia, Pittsburgh, St. Louis, Detroit, Indianapolis, Buffalo, Nashville and Washington. Under the new plans the equipment and service in these cities will be increased and similar motor transport service provided in at least twenty more large cities.

One of the principal advantages advanced on behalf of motor transport by the postal authorities is its ability to cope with high "peak" loads. In emergencies the motor trucks can be worked almost continuously at high speed and thus readily handle the abnormal volume of mail which comes periodically, especially at Christmas time. This is not the case with either horse drawn systems or underground pneumatic tube services, both of which have definite limitations.

The Chicago post office records also furnish a fine example of the flexibility of motor transport. During the year ending June 30, 1917, the Chicago mail trucks, in

addition to performing their allotted work, handled 8160 pouches of letter mail which should have been otherwise dispatched. These motor trucks during this period of twelve months made 537,642 trips and only 154 pouches were delayed.

In the cities of New York, Chicago, Boston, Philadelphia and St. Louis the Government owned motor trucks now transport over 60 per cent of the first class mail, besides handling the immense volume of other mail. In Boston all important mail matter requiring close connection between post office and railway terminals is dispatched by motor trucks in order to assure train connections for the entire volume. In New York 94 per cent of the total mail in recent years has been handled by motor truck and horse drawn vehicle under contract. Now one hundred new Government owned motor trucks have been placed in service there, supplanting the contractor's equipment, and further additions are contemplated.

The post office records show that the value of motor trucks is greatest where the volume of mail to be transported is heaviest. This is similar to results secured in many other fields of transportation and is the old story of full loads both ways, adequate loading and unloading facilities and skilled handling—all promoted by a heavy volume of goods to be transported—producing maximum efficiency in motor transport. The foregoing is true with the postal truck services despite the fact that the heavy volume of mails in the cities must be carried over the streets having the greatest traffic congestion. However, the largest bulk of the mail in these cases is transported over the streets during the night or in the non-congested traffic periods.

This brings up a question which was introduced in the recent agitation over the abandonment of underground pneumatic tube services, namely, that by substituting motor trucks the Post Office Department would increase traffic on city streets already overburdened. The increase by comparison with the total traffic is so small as to be almost negligible and the mail traffic, as just pointed out, is heaviest during the periods of non-congestion on city streets.

Another point raised in this connection

was a possible increase in street accidents due not only to the use of larger fleets of postal motor trucks, but also to the higher rates of speed at which they are allowed to operate—that is, higher than vehicles of similar size in commercial service. In meeting this objection the postal authorities produced accident statistics from the cities where mails are largely transported by Government motor trucks, showing that the postal trucks figured in a very small percentage of accidents.

Thus one finds in the postal service a record and a promise of development in motor transport which portends well for the future.

## CARRYING THE WAR INTO LAPLAND

(Continued from page 229)

port of Archangel, begins to freeze in October, the by ice-breakers it may be kept open for a month or two longer. Then it is closed till May or later. Daylight in midsummer lasts twenty-two hours; in midwinter three hours.

A single-track narrow gage railroad ran from Vologda to Archangel, but failed quite to connect either with the town or the port. Vessels drawing over eighteen feet could not enter the river and those that could found no conveniences for unloading. There was no warehouse and only one crane. The population of Archangel before the war was 40,000, dependent for food supply upon the interior, for the surrounding country is barren tundra.

Imagine, then, the confusion when the export and import trade of Russia was suddenly shunted to this inadequate Arctic port. There were wheat, eggs and butter to send out and cotton and munitions to bring in. The confusion inevitably resulting from the disorderly and dilatory Slavic disposition was increased by corruption and downright treachery. Guns, motor cars and airplanes needed at the front were sidetracked and stacked up while private orders for imported goods that could sell at a high profit went thru on well-greased ways. At one time there were 120 steamers at the port waiting to unload; among them was an American that had been there five weeks without being able to reach a dock or secure a lighter.

The Allies, with the aid of American engineers, did what they could to bring Archangel up to its responsibilities. The narrow-gage line from Vologda was paralleled by a track in the Russian broad gage. Thirty new piers and a hundred warehouses were constructed. Still it was impossible to do much with a harbor closed for more than half the year, so attention was turned to the Murman coast, where it was possible to obtain an ice-free port. A branch of the Gulf Stream sweeping around the North Cape makes this coast warmer than Archangel, 350 miles farther south. The summer temperature averages 52° F. and the winter 17° F. The polar night lasts from November to January, but the aurora borealis may be relied upon to relieve the darkness. There is, of course, no agriculture to speak of, but fish are abundant and reindeer live on the moss of the tundras.

The name Murman or Murmansk is a Russian corruption of Norman, for the Norsemen at the time of their great expansion extended their power over the Lapps of this coast as they did over the people of France, England, Italy and Russia. But their possession was challenged by the Russ of Novgorod, who were of the same Viking race, and the poor Lapps had to pay tribute to both sides. It was not until 1826 that Norway and Russia came to an agreement as to the boundary, which was then drawn at Petchenga River. This gave to Russia all the Kola or Murman peninsula and to Norway all the coast line to the west, so Sweden and Finland were completely cut off from the sea tho at some points only a dozen or twenty miles from it. This is naturally exasperating and we cannot blame the Finns for asking access to the sea, tho we do not propose to permit it so long as Germany dominates Finland. That is why a force of six thousand British, French, American and Italian troops have been landed at Kola prepared to resist the joint army of Finns and Germans which is said to be moving northward. In the treaty which Germany forced upon Russia

## Holding Up the Nation's Defense

The telephone played a tremendous part in this Nation's mobilization for war. It continues vital to the Government's program.

At the same time it has remained at the service of the whole people whose demands upon it grow apace with that of the Government.

The public is entitled to the best service that it is possible to render. But the public has a partnership in the responsibility for good telephone service.

It takes three to make any telephone connection: the person calling, the company, and the person called. Without the co-operation of all three the service suffers.

The telephone company can make the connection, but no words

can be heard at one end of the line which are not properly spoken into the transmitter at the other. The relation between the speaker and the hearer is the same as the relation between the orator and his audience. It cannot be maintained if the orator turns his back to the listeners or if the audience is inattentive.

Telephone traffic must be kept moving. Speak distinctly—answer promptly—and release the line as quickly as possible. Don't continue reading when the bell rings.

These seem little things to ask the individual telephone subscriber, but when the individual is multiplied by millions all over this country, it is easy to see how important it is that *all* should co-operate.

## Phonograph Records Sound Clear and Harmonious

—no scratch—no twang—no harsh, rasping, metallic sound to impair the beauty of the music when you use the

### ELLIS MELODIOUS REPRODUCER

"It makes all the difference in the world." It resurrects the "living voice" of the artist who made the record. All the tone values of instrumental music, solo or orchestral, are brought out perfectly and harmoniously with the overtones which musicians listen for.

Words cannot convey to you an adequate idea of how much this wonderful little device will do to improve the playing of records. You must see it—hear it—compare the effect with any and all other reproducers you know of; then you will understand why every music lover owner of a phonograph who hears the Ellis Reproducer wants to own one.

Plays all disc records.

**3 FOR \$6.00 MADE TO MEASURE**

I will make to your measure shirts of perfect fit, smooth around the neck, no wrinkles and of correct sleeve length. These shirts will stand more trips to the laundry and give better service than any ready-made shirt you ever bought. Made plain front, with ocean pearl buttons and cuffs attached. Send for samples with colors that will not fade, and self-measuring blank. It is easy to fill in. At my risk I pay the postage and insure delivery. Money refunded if not satisfied. No agents.

**P. C. RUMMEL**

Successor to C. G. Clemmshaw 657 Second Ave., Troy, N. Y.

a strip of Russian territory east of Varanger Fjord and Petchenga was ceded to Finland. This would give the Finns a road about thirty miles wide leading to an ice-free port and, what is of immediate importance to us, would enable the Germans to launch their U-boats on the Arctic Ocean and so blockade Russia's only European outlet. The Germans are said to be now engaged in extending the Finnish railroad running north from the Gulf of Bothnia until it reaches the Arctic coast at Petchenga, a distance of 400 miles.

The Germans have long viewed with alarm the efforts of the Russians to establish a naval base on the Murman coast. In an article on *Der russische Norden und die Murman-Küste* in Petermann's "Mittheilungen" for 1899 it is pointed out that Russian warships from Kola could even in winter get into the North Sea within a week "unhindered by the German fleet" and could even blockade the German Baltic ports. It is interesting to note that while the German author is concerned over the naval possibilities of the proposed port the Russian Governor of Archangel, Engelhardt, in his book "A Russian Province of the North"—the best work on the subject that has been translated—considers only its commercial advantages.

Kola, which has suddenly become of such importance that both the Allies and Germany have drawn troops from the French front to fight for it, originated in the monastery founded there in 1475 to convert the Lapps from their heathenism and wizardry. It was fortified by Ivan the Terrible and Peter the Great, who visited it, strengthened the fortifications, built a church and subsidized a whale fishery. But Catherine II, rightly concluding that Kola being thirty-three miles inland and on a shallow fjord would never make a good port, started a new one nearer the sea and named after herself, Ekaterina Bay. But the British fleet demolished Ekaterina in 1809 and Kola in 1855.

Count Witte, the most perspicacious of modern Russian statesmen, made a visit to the Murman coast in 1894 and undertook its development. A few years later a commercial and naval base was started on a new site called Alexandrovsk, but on the same arm of the sea as Kola and Ekaterina. The difficulty is to find a place big enough for a town on the steep walls of the fjord without going too far inland.

So up to the outbreak of the war Kola remained a fishing village of a few hundred inhabitants and with no connection with the outside world save by telegraph and infrequent steamers. But the congestion of Archangel necessitated a new channel of communication, so a railroad was rushed thru to Kola in 1915-16. It would have been a difficult undertaking in the best of times, some seven hundred miles of track to be laid thru swamps, forests and barren rock, in spite of cold and darkness, fighting mosquitos and midges, in a country destitute of labor or provisions, and to do it in a hurry when skilled engineers and able-bodied men were needed at the front and materials could hardly be obtained seemed beyond the power of human effort. When the story is told it will prove one of the romances of railroading and it will be found that American machinery and men played prominent parts in it.

The new railroad branches off from the Petrograd-Vologda line at Ivanka and runs pretty straight north thru Kem and Kandalaska on the western shore of the White Sea to Kola. What sort of a railroad it is and whether it is altogether completed and in running order are things not generally known. Apparently the line from Kandalaska to Kola is open, for Ambassador Francis and a few of his colleagues made the trip, yet we are told from Washington

that the rest of the sixty composing the diplomatic party had to remain at Kandalaska because the transportation facilities were insufficient to enable them to travel to the Murman coast.

A few months ago the Finnish White Guard with—as is asserted and denied—a German contingent made a raid into Russian territory at the Karelian coast with intent to cut the railroad at Kem but were beaten back by the Red Guard and the French and British marines and engineers. The Finns claim the Karelian coast, that is, the western side of the White Sea, on three grounds; (1) racial affinity, (2) because it was unjustly annexed by Russia, and (3) because it was ceded to Finland by the recent treaty with the Soviet government. It is true that the Karelians are a Finnish tribe. To them we owe the Finnish national epic, the Kalevala, which Longfellow imitated in his "Hiawatha." But apparently the Karelians are now antagonistic to the Finns, or at least to the pro-German White Guard. This is certainly true of the Lapps of the Petchenga region, who have petitioned the Russian Government not to give them to Finland but rather restore them to Norway, from which they were separated in 1826. The Lapps are sometimes called a backward people, but they are evidently determined to keep up with the fashion of 1918, so we read of a Laponian declaration of independence and a Pan-Laponian movement. Lapland, like Poland, has suffered from repeated partitions. There are some 20,000 Lapps in Norway, 7000 in Sweden and 3000 in Russia and Finland, and these arbitrary national boundary lines interfere with the free pasturage of their reindeer.

The idea that Finland, tho barely a year old, should start out on a career of conquest is repugnant to many of the Finns even of the White Guard. General Mannerheim, who as commander of the White Guard overcame the Bolsheviki and secured the independence of Finland, has resigned rather than conduct the proposed expeditions to the Karelian and Murmansk coasts. From his exile in Stockholm he declares that: "If they go down on their knees I will not go back as long as the Germans are in Finland." He asserts that he would have had the Bolsheviki beaten in a few weeks more with the White Guard alone, but the Finnish Government insisted upon calling on the Germans for aid.

But Mannerheim is out and the Germans are in. General von der Goltz is in command of the White Guard as well as of the German forces in Finland. This gives him some 30,000 men with which to undertake the capture of the Kem to Kola railroad and the expulsion of the Allies from the Murman peninsula. The Allies as usual have the advantage in numbers but the Germans in distance. From the Finnish frontier to Kem is only forty miles, while the Allied troops after navigating the Atlantic and Arctic oceans and reaching the Murman coast have still 350 miles to go over the railroad from Kola to Kem.

But difficult as it is to fight at such a disadvantage we must do it, for it would never do to allow the Germans to get all of the military supplies still stored along this railroad as well as gain access to the Arctic. The British mine fields and fleets can close the entrances to the North Sea and the Baltic, but to blockade an open ocean is a different matter. But German ambitions extend beyond the Murman coast. In their treaty with Russia they imply a claim to Spitsbergen and what this means is explained in the editorial on "No Man's Land" in The Independent of April 20. To British and American interests the Arctic is as important as the Adriatic and it is not without reason that an American contingent is fighting on the Murman coast.

## BEYOND THE CLOUDS LIES VICTORY

(Continued from page 221)

ing escadrille of France, used the first 37 millimeter canon on a tractor single-seater aeroplane. Its appearance marks a new epoch in the annals of aeroplane fighting.

Convinced that the 37 mm. shell could not be safely fired between the blades of the propeller, Gynemer sought to evade this difficulty by shooting thru the hollow hub itself. Any V-shaped engine lends itself to this style of gun mounting. The gun is built into the very crank case of the engine, fitting snugly down in the lower crotch of the V, its breech and feeding mechanism within easy reach of the pilot's hand, while the muzzle of the gun extends ahead thru a hollow revolving shaft on the far end of which the propeller is attached. This hollow shaft is driven by the crank shaft of the engine to which it is connected by gears.

The barrel of the canon protrudes two inches beyond the edge of the hub, so that the sudden shock of explosion will not injure the delicately poised balance of the propeller shaft. Some three inches in diameter, this shaft barely permits room for the free slide backward of the gun barrel after each recoil. The recoil amounts to some eight or ten inches, depending upon the muzzle velocity with which the projectile is discharged and the amount of recoil force that is absorbed by the recoil chamber. Any tendency to "whip" upon discharge is checked by a sliding brace at the rear of the barrel.

This recoil force is utilized to operate the devices which eject the empty shell case and the next instant feed into the chamber of the gun a fresh shell. As the fresh shell is some seven inches in length, the recoil must carry back the breach of the gun at least far enough to the rear to permit the fresh shell to drop into its place.

With this powerful weapon Gynemer brought down his forty-ninth, fiftieth, fifty-first and fifty-second antagonists, and its superiority over the smaller .30 caliber machine gun was incontestably established. His type of canon was semi-automatic in operation, that is, the recoil of the gun ejected the empty case but the pilot himself must fit in the fresh shell. This operation required two or three seconds, and in two or three seconds the adjacent enemy aeroplane had opportunity to either get out of range or possibly to reverse positions and become the attacker.

Therefore the full automatic canon the recently weighing at least 150 pounds, as against the 100 pounds weight of Gynemer's type of canon, affords the already overburdened pilot such valuable advantages that it is essential to provide him with the superior type of operation, seeking at the same time to reduce by a like amount the weight of some other commodity that the machine must carry.

Increased effectiveness may naturally be expected as this powerful weapon is developed. Already automatic canon are being built into aeroplanes, relieving the much overworked pilot from any further effort in firing than merely pressing a button when his aeroplane is pointed on the target. The gun does the rest, fires, ejects the empty case and retracts the chamber with a new shell, fires again and repeats this performance if desired until the ammunition is exhausted.

These 120 shells weighing 15 pounds each are discharged each minute, making a total of 120 pounds delivered at the target each minute from the 37 mm. gun, as compared with 400 bullets per minute from the ordinary machine gun weighing approximately twelve pounds, a distinct advantage in

## LOCKWOOD, GREENE & CO. ENGINEERS

"IS my power plant doing all that it should?" Many a manufacturer asks himself this question, these days. At the Riverside and Dan River Cotton Mills, water was originally the only source of power. But the plant grew and water power proved inadequate. So, Lockwood, Greene & Co. service was applied to the proposition.

Today, these mills have a unified, smooth-working power system using both water and coal, and so arranged that both may be used to generate electricity. These several kinds of power can be operated interchangeably or all at the same time. This company is now able to meet very large power demands and is no longer subject to tie-ups on account of periodic flood conditions.

We have solved numerous problems of this nature. Of course, every case is different. Yours is. But the business of our organization is to make a study of *your* particular requirements, taking every local element and peculiar condition into consideration.

Possibly a substitute for coal would work out to your advantage. A rearrangement of your fuel handling system or increasing your fuel storage facilities might avoid a shut-down the coming winter.

Write to our nearest office for further information and ask for the book, "Building with Foresight."

**National Efficiency Society**  
119 West Fortieth Street New York

amount of missiles delivered aside from the vastly increased effectiveness of each projectile that strikes the target.

The increased weight of the automatic one-pounder gun limits by just so many pounds the supply of ammunition or of fuel that the aeroplane can carry and still keep up with the enemy craft. To overload the machine means that your enemy can overtake you while you cannot overtake him; your advantage in gun power is quite useless to you unless you do overtake him.

Not only in the weight and power of the gun does greater destructiveness lie, but in the character and effect of the projectile itself will be found the greatest opportunity for advance and improvement. To this end an understanding of the vulnerable spots on an enemy aeroplane is essential. What is the enemy target?

Briefly answered, it is the pilot's head!

Tho the fuel tank may be struck with bullets repeatedly, it is not always punctured nowadays, as several devices have been perfected to prevent the leakage or ignition of the gasoline.

The engine may be hit in a vital organ, or the indispensable propeller may be shattered by a lucky shot but the enemy pilot can still glide miles back into his own lines without any other power than the pull of gravity. An aeroplane thus wounded can glide back more than a mile for each thousand feet elevation. Once landed within his own territory the pilot jumps into another aeroplane and returns to the combat while his mechanics busy themselves with repairing the damage.

The pilot sits atop his fuel tank deep within the protective shelter of his cockpit, which is armored amply on the sides and bottom against the ordinary .30 caliber bullet, only the top of his head appearing above the rim. Over his head the top wing spreads its concealing shadow. Below him the pursuing airman cannot accurately select the exact point in the floor thru which to direct his stream of lead. Conscious of the position of his pursuer the enemy pilot maneuvers his adroit aeroplane so that no opportunity is offered for an open target. Under these circumstances a victory seems impossible.

The pursuing machine circles about him but is easily thwarted by a parallel move of the enemy. Too bold a venture results in a reversal of position and the attacker becomes the attacked.

In such a common dilemma the heavy projectile becomes of prime importance. One or two hits by a one-pounder shell can demolish the structure of the enemy craft and it collapses and falls to the ground. A one-pounder charge of buckshot scatters thru the fragile upper wing and finds the pilot's seat. A "fireworks" shell bursts in the enemy's tail and sets his craft aflame.

At what distance from the enemy does an experienced air fighter open fire?

This question becomes of great importance to the designer of the aeroplane gun, for upon the range, that is, the distance of fire, depend many vital points. If the projectile must carry on a level flight for a mile after it leaves the muzzle of the gun, then more powder must be packed behind the missile than for half that range.

If more powder is packed in, the force of the explosion is greater, and a stronger, heavier gun must be built to withstand this shock. Also the recoil is greater, and heavier contrivances to absorb this recoil must be provided. These additions of course add many pounds weight to the load of the aeroplane. It is essential, as we have seen, to cut down this load to the lowest possible point so that an abundant supply of fuel and ammunition may be carried and still enable our machine to keep pace with the light enemy aeroplanes.

The writer in a recent visit to the front secured the opinion of a score or more of the French and British air fighters on this important question of range.

While various diverging opinions were collected, varying from fifty yards to 300 yards, it was noticeable that the more experienced airmen saved their ammunition and waited for the most favorable opportunity of a bullseye, while novices at the game were not so daring as to await the precise instant for opening fire but preferred a comparatively long range.

Obviously it is more difficult to hit a target at two hundred yards range than at fifty yards. Pilots opening fire at this long range naturally waste much of their ammunition. But even accepting two hundred yards as a minimum range we have no demands made upon the muzzle velocity of the projectile that cannot be supplied within the weight of the automatic canon above designated—150 pounds.

This problem of muzzle velocity is bound up with the speed of the aeroplane as well as with the proper range for firing. An interesting table of speeds has been compiled by a British writer (O'Gorman) which we append here for comparison.

### COMPARATIVE SPEEDS

	Miles per hour
Man walking .....	4
Man racing .....	20
Horse racing .....	30
Bicycle racing .....	32
Steamship .....	42
Motorboat .....	62
Railroad train .....	90
Automobile .....	120
Aeroplane .....	150
	Feet per second
Pistol bullet .....	600
Machine gun bullet .....	1,000
Sound .....	1,100
37 m.m. gun .....	1,600
Largest gun .....	3,000
	Miles per second
Light .....	.186,000
Electricity .....	.186,000

The 37 mm. gun, credited in the above table with a muzzle velocity of 1600 feet per second, refers, of course, to the field gun where a range of a mile is requisite. For the aeroplane gun no such length range is desirable. If we cut down the muzzle velocity one half, to 800 feet per second, we will get a flat trajectory of approximately 500 yards, which as we have seen is more than will be required even for emergencies in a fighting aeroplane.

Now an extreme aeroplane speed of 150 miles an hour means that the machine is moving 220 feet thru the air each second! If fired upon when fifty yards away by a projectile having a velocity of 800 feet per second, it requires only three-sixteenths of a second for the projectile to reach its target. During that three-sixteenths of a second the target has moved onward forty-one feet. Now if we increase our muzzle velocity to 1000 feet per second, we necessarily incur an increased recoil force besides adding some thirty pounds' weight to the gun's equipment—two serious disadvantages. And the sole benefit received is a saving of three-eighths of a second time in the projectile's flight—far from a commensurate advantage when both results are analyzed.

And most important of all is the yet unwritten Manual of Aeroplane Tactics. Thru proficiency in this rare science, sixty-six of the star German airmen have been enabled to bring down 1131 aeroplanes of the Allies up to January 1, 1917, as against 1181 victories won by 125 aces of our allied air forces! Truly a melancholy indication of the efficiency of carefully studied tactics in this new fourth arm in warfare.

PERSHING, BLISS AND  
JOAN OF ARC

(Continued from page 219)

does infinite harm, for we cannot handle millions without long and great preparations in advance."

The general emphasized the good relations with the French and English armies. He had heard very little criticism from either the French or British high command of our troops. He was high in praise of the morale of the troops under his command and said that each man was doing the very best that he could and that any American's best was not bad. He was sure that if the American people wanted to win the war in the shortest possible time they must prepare as tho it would take four or five years and would require an army of four or five million men. The general was good enough to let me put the substance of his remarks in a brief cablegram for The Independent and this was printed in The Independent of May 25.

General Pershing seemed very anxious to have the American people know everything about the progress of our armies in France. He had on more than one occasion said that he is willing to have every bit of news sent home than any one wished to send provided it did not involve the safety of the army.

Everywhere I went I inquired about General Pershing's ability. I heard nothing but universal praise of his tact, discretion, judgment and force. He is evidently an organizer and statesman of first rate ability as well as a real military leader. One or two people told me that he was working too hard and too many details were put up to him by his subordinates for decision, but he hardly looked like a man who was allowing himself to be overburdened by the strain of petty details. I suspect he was rather to be compared with our Ambassador to England, Walter Page, who told me that he refused to have a desk during war times. "Any ambassador who keeps a desk now," he said, "is unfit for his job. Things that can be done at a desk can be done by a secretary."

There is one other American officer in France whose rank is equal to that of General Pershing and that is General Tasker Howard Bliss. These two men, together with General March, Chief of Staff in Washington, D. C., are the only officers in the United States Army who are privileged to wear four stars on their shoulder straps.

General Pershing is in supreme command of the American Expeditionary Force in Europe, while General Bliss is the ranking American officer at the Versailles Conference. Both are directly responsible to Woodrow Wilson, as Commander-in-Chief of the United States Army.

It is evident that the tasks of our two ranking generals in Europe require entirely different qualities of mind and character. General Pershing must have, above all else, force and capacity to command men. General Bliss must play the statesman.

It is fortunate that the United States has in these two officers unquestionably the right men in the right places. While both of them are evidently all round military men, probably neither could do the other's job as well as it is being done.

I was so fortunate as to be invited by General Bliss to take dinner with him at Versailles. On the evening of May 18 a United States Government car was sent to our hotel at six that evening and within an hour we were at Versailles and after a few inquiries we found General Bliss in a pretty and roomy old chateau on a broad side street where he is staying with his staff.

There were only four of us at the table

 Lake Placid, N. Y.

and it was a joy to get some real American cooking again after six weeks under the English and French food controller.

General Bliss was very frank in talking over the war situation with me, and I was greatly impressed with his grasp of the whole European situation as well as his familiarity with the most trivial details of the war's progress. His intellect is so keen and vigorous and his point of view so broad and statesmanlike that I am free to say he made more of an impression upon me than any man I met in Europe.

I can not, of course, outline our conversation, but I was particularly struck with his statement that unless the Allies won a decisive victory there would follow the greatest armament scramble the world has ever known and be no chance whatsoever of a League of Peace. While he was certain that Germany must be completely defeated yet he feared that if the imperialistic tendencies manifested in certain quarters were not checked there would be a real danger that Germany and Austria would be so unwarrantably carved up that the seeds of future wars would be actually sown at the peace conference. It was supremely important, therefore, for the United States to stand unswervingly for the highest moral principles both now and at the peace table, and all good Americans should sustain our President in every effort he is taking to raise this war to a higher ideal than questions of territorial aggrandizement or balance of power.

The general went at length into the problems that have arisen from brigading our troops in with the French and English. Like Pershing, General Joffre and Premier Clemenceau, he told me this was the best way to train our troops in the shortest possible time, but that after we had been serving with the Allies six weeks or so, our troops were sufficiently trench broken and over their gun shyness to be fighting under their own officers.

He thought that if we went too far in the policy of "brigading in," it might be very difficult for the French and English to reform their divisions after we left. And if we continued that policy too long after the present emergency was over we should need to complete our army corps with engineers, cavalry, etc., which we then would not have.

I suppose General Bliss has been closer to the heart of the various problems of this war than any other American barring even President Wilson and General Pershing. It is fortunate, therefore, that America has a man of his mental caliber at the Versailles Conference. His achievements can never be as spectacular as if he commanded a division of troops in the field, but when the true history of the war comes to be written it will be manifest I think that few men if any have had a more important part in its ultimate outcome.

During my week's stay at American headquarters I had occasion three or four times to pass thru the little village of Domremy where Joan of Arc was born and grew up to womanhood four centuries ago. One Saturday morning on our way to the front we stopped at the village and went thru the humble cottage and into the little stone paved room, pitch dark except for the tiny window thru the thick damp wall, where she was born in 1411.

The courtyard in front contains a statue of Joan leaving her village home lead by the Genius of France. Above the arched door of the tiny cottage are the royal arms of France and these subsequently assigned to Joan. Above this is a niche containing a kneeling figure of the heroine.

The country round about is truly pastoral and one imagines it looks just the same as it did when she shepherded her

flock in the wooded hills above the humble village and along the sweet meadows thru which the little river runs not many yards away from her dooryard.

There are two churches in Domremy which all the visitors see. One is the tiny village church where Joan was baptized and the other a great imposing modern affair which the French people have recently erected up on the hills a quarter of a mile back of the village where Joan saw her visions. The large church is beautifully decorated with noble paintings depicting the principal events of Joan's career from the time when she tended the flocks in the neighboring fields up to the burning at the stake. Down under the main floor is a little chapel decorated on either side of the altar with martial pictures of France placing wreaths on the brows of her military heroes. General Foch, when he was recently given supreme command of the Allied armies, came to this chapel where he knelt and dedicated himself to the spirit of Joan.

But I liked better the little stone church with vaulted roof just cross the road from Joan's home. It was very small and the walls were very low. On the old medieval pillars and on every available wall space were ancient paintings of Joan, some crude and most all cracked with age, while statues of Joan and the various saints were in every niche. It was a warm sunny day and thru the open doors the fragrance of the lilacs and the apple blossoms were wafted into the mellow lighted church, while two aged nuns were busy arranging the altar for the next day's special service which was Joan of Arc Day thruout all France.

The following morning I was so fortunate as to pass thru the village again just when the services were beginning. The church was packed with the simple folk of the village, old dames in black dresses and starched kerchiefs, mothers in deep mourning with babies in their arms, young girls in their white, bride-like, confirmation dresses, old limping and grizzled veterans of the war of 1870 in red trousers, and a few young French soldiers in the sky blue uniforms of France, but all with bandaged heads or sleeveless coats. It was good to see mingling in the congregation the brown khaki of fifty American soldiers who must have walked ten miles from the nearest encampment to attend that service, and the blue capes with the Red Crosses over their white banded brows of the American nurses from the neighboring hospitals. I could not understand what the village priest was saying but repeatedly he pronounced the name of Joan and France and sometimes he added America. I noticed that the eyes of most of the congregation were glistening and some were crying.

They say that nothing has pleased France more than the speech of General Pershing made at the tomb of Lafayette. When the general came to Paris over a year ago one of the first things he did was to ask permission to place a wreath on the tomb of our gallant ally.

When he arrived at the graveyard the French expected an oration or at least some sort of a formal eulogy. But all the general did was to place his modest tribute at the head of the grave and then say, "Lafayette, we are here."

Before long every little revolutionist can have a government of his own in Russia. — *Baltimore American.*

Doctor—Did that cure for deafness really help your brother?

Pat—Indeed it did, sir—he hadn't heard a sound for years, and the very next day he heard from a friend in America. — *American.*

## REMARKABLE REMARKS

**HERR BALLIN**—Give us light, air and liberty.

**CROWN PRINCE WILHELM**—I hate to have to go to a dentist.

**UPTON SINCLAIR**—I would describe Raemaekers as a phagocyte.

**GENERAL PETAIN**—Tenacity, audacity; you shall force victory.

**JULIAN JOHNSON**—I don't think Charlie Chaplin will ever marry.

**MARSHAL FOCH**—The great events of history are never accidents.

**PROFESSOR DELBRÜCK**—The German people are being led by the nose.

**LADY DUFF GORDON**—This may be termed the season of the sash.

**CHARLIE CHAPLIN**—I took long walks at midnight, thinking, thinking, thinking.

**ELINOR GLYN**—Passionate jealousy is not a good foster parent for prudence.

**MRS. VERNON CASTLE**—Avoid doctors, beauty specialists, corsetieres and cults.

**J. D. ROCKEFELLER, JR.**—As surely as there is a God in Heaven right will prevail.

**HOMER CROY**—The funniest thing in the world is for one person to hit another with a pie.

**NORMAN HAPGOOD**—We Americans fear political free thinking more than the British do.

**THE KAISER**—What has become of the King of England? Why doesn't he assert himself?

**ARTHUR RANSOME**—The only definitely anti-German force in Russia is that of the Soviets.

**SARA S. ADAMS**—I venture to say that a decade from now every woman will wear silk underwear.

**REICHSTAG DEPUTY COHN**—The entire war has become a family affair of the Hohenzollerns.

**GENERAL MARCH, CHIEF OF STAFF**—This is the time for the greatest effort. Keep the enemy running.

**DOROTHY DIX**—No man after being married for six months would ask a girl, "Oo's ducky is go?"

**R. L. GOLDBERG**—Altho it is not generally known, the Crown Prince is an accomplished pretzel bender.

**CHOLLY KVICERBOCKER**—Miss Gladys Vandebilt has proved to be the most popular debutante of many years.

**LORD WINBORNE**—We are fighting not only to overcome Germany in the ordinary sense but to convert her also.

**PRUSSIAN DEPUTY HOFER**—I am persuaded that Russia will spring at our throats when the time comes.

**A. J. BALFOUR**—Next to being enslaved by Germany there is no worse fate than being "liberated" by Germany.

**MAXIMILIAN HARDEN**—Since the beginning of the ruthless submarine war the key to the Temple of Janus lies in Washington.

**THE HORN**—The startling manner in which a woman sides as soon as she marries, and the equally startling manner in

**CHAMP CLARK**—No nation will long endure to deserve to endure which will not protect all of its citizens wherever they may be on land or sea.

## J U S T A W O R D

When a Canadian lieutenant two years in the trenches sings in a metropolitan theater the songs that he wrote to the tune of shellfire somewhere on the Flanders front; when a major who has seen forty years' service in the British wars plays behind American footlights the music of bagpipes that inspired to battle the "Ladies from Hell"—then it is time for even blasé New York theatergoers to sit up and take notice. *Getting Together*, a three-act play produced under the auspices of the British-Canadian Recruiting Mission, is more than an entertainment, more, too, than a recruiting challenge. It is the sincere—and successful—attempt of the men who are helping win the war to let the rest of us in on their experiences.

## T H E M O N K E Y C A P

A special cap, officially known as the "overseas cap," is now being worn by the soldiers of the American Expeditionary Forces. The cap not only is more practical than the regulation campaign hat worn by the soldiers in this country, but adds to the safety of the men while in the trenches.

The new cap matches the uniform in color, is round, and has no brim or peak. The crown is very low and made so that when not in use it can be folded and carried in the pocket.

When the Americans entered the trenches it was found that the brim of their campaign hats interfered with sighting thru the trench periscopes and that the high crown, in the case of tall men, could be seen above the parapets. The new cap is so low that it permits the men to move with the same freedom as when they are hatless. Another advantage claimed for the overseas cap is that the trench helmet can be placed on top of it with security.

The latest model of the cap which has just been received by the manufacturing branch of the Quartermaster's Department is slightly different from the cap worn by the troops which have returned from France. Slight changes have been made in the crown which permit its being folded flatter and thereby enabling it to be carried or shipped without injury to the cap. The new pattern will be substituted for the old as fast as practicable, but it is planned that a gradual substitution be made so that the production will in no way be slowed down.

Only soldiers who have been with the Expeditionary Forces wear this cap. It is not issued in this country, altho made here. Reports received from France say that new regulations provide that officers shall wear the insignia of their ranks on the cap. Enlisted men are to wear on the cap the button prescribed to be worn on the left-hand side of the collar of the service coat.—*Official Bulletin.*

## THE ANTI-GERMAN BOYCOTT

**T**HE power to restrict German commerce is the strongest weapon in the hands of the Allies. With it the Allies are literally invincible, for whatever victories Germany may gain on her borders she must remain an imprisoned nation so long as the Allies retain command of the sea and refuse her goods and people admission to their ports. The threat of continued commercial restrictions is worth more than a million men to our side. It has caused more consternation in Germany than any military menace. It is the only means we have to convert the German people, and to conquer without converting them would, as President Wilson has pointed out in his addresses to Congress of January 22 and December 4, 1917, leave the peace of the world still in danger of disturbance. The President has laid down, in his address of January 8, 1918, as one of the essentials of a permanent peace

The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all nations consenting to the peace and associating themselves for its maintenance.

But as the President says, "it might be impossible" so long as the German people live under and support their present ambitious and intriguing masters "to admit Germany to the free economic intercourse which must inevitably spring out of the other partnerships of a real peace." This is a clear and consistent policy and it is being recognized in Europe as the only policy that can accomplish the fundamental aims of the Allies.

Germany, as we all know, has been and still is divided into two factions: one the old military aristocratic junker caste that dominated the empire and precipitated the war, the other the new commercial class represented by such men as Herr Ballin, of the Hamburg-American line, who says this war is the worst, the wickedest and most foolish war that was ever waged. We cannot hold this latter class guiltless, for they have docilely and ardently followed their military masters and have been only too eager to share the spoil won by the sword. In fact we may consider them the more guilty in that they perceived more clearly the evil and folly of war and that the loss of the good will and confidence of other nations could not be compensated by any number of square miles conquered or of millions of marks of forced indemnity. But however guilty they may be of complicity in Germany's crime against humanity, it is only this commercial class that are likely to listen to reason and we know that the President's messages since they have been distributed broadcast over Germany are having a powerful effect. As soon as the captains of industry and the millions of organized workingmen whose interests are dependent upon theirs can be brought to realize that the Allies thru their control of the raw materials of the world, especially of the tropics, have Germany at their mercy they will cease to be deceived by the mirage of the map and will perceive that

they are losing every day the war continues, even when German armies are gaining ground.

The Allies were slow to recognize their advantage, but now that it is realized they are concerting plans for a future commercial war, if such should be necessary, with the same care as they are planning the present military war. The general plan of campaign was arranged at the Paris Conference of 1916, where the Allies agreed to show favor to one another and to discriminate against an unregenerate Germany. Following this the several countries are working out in detail schemes for controlling their key industries, securing sources of raw materials and fending off predatory nations. The report of the British committee on "Commercial and Industrial Policy After the War" we discussed in our issue of June 8. Similar measures have been considered in the United States and President Wilson seems in the passage cited to imply some such action. So long as the Allies and Americans possess the power to impose an international boycott of unlimited duration upon Germany they have an invincible advantage, and if they can hold this weapon as a threat over Germany they may well be able by means of it to shorten the war by a year or so, save several hundred thousand lives and billions of dollars and secure a just and durable peace.

We say "if" and "so long as," for unfortunately this weapon seems likely to be snatched from the Government by some of its over-zealous citizens who see the importance of the weapon but do not understand how to use it. They are trying to get everybody to pledge themselves never to buy any goods of German origin, and many people are signing either thoughtlessly or for fear of being accounted disloyal. But the charge of disloyalty rests rather upon those who are thus forwarding a movement which if successful would frustrate the efforts of the President to regenerate Germany and render it forever impossible to attain such a peace as he specifies in the passage quoted above. The liberals of Germany would have no inducement to rise against their masters, since the worst possible blow would have been already inflicted and the military party could claim with truth that the only hope of reversing it would be to continue the war to the bitter end. If we should all promise never to buy German goods, as we are asked to promise, we would sacrifice for nothing the chief advantage that we have over Germany. Sometimes a duelist will drop his sword when his adversary breaks his, but such futile generosity is out of place in this world-wide struggle for life. Germany has the military advantage of inside lines. We have the commercial advantage of outside lines. Let us hold on to our advantage and make the best use of it when the time comes, not waste it foolishly in advance.

The proposed boycott of Germany, if it is to be effective, must be governmental and international. For individuals or

unofficial organizations to interfere in such a matter is as improper and dangerous as to equip a private army and send it into the field. If the boycott is not to injure ourselves and our friends more than our enemies it must be carefully worked out in concert to see what the effects will be. For instance, the Allies have not adopted the Bolshevik principle of no indemnities. On the contrary they demand full compensation for the ships sunk and wrongs done to Belgium, Serbia and other countries. In this demand America concurs. But there is not enough gold in Germany or in the whole world to pay such vast indemnities and the only way Germany could pay them would be by the export of her goods. If all Americans as individuals refuse to buy them then they must be sold to the people of other countries or dumped in neutral markets in competition with our own goods, which would be worse.

However the war may end, whether as the President hopes in a freed and reformed Germany or as others expect in a crushed and sullen Germany, it is not to be presumed that our natural animosity toward all things German will die out in a single generation. There is no danger that German trade will be again welcomed and favored in America. The trade-mark "Made in Germany" will never regain its former popularity. But to renounce unconditionally our personal right to purchase German products of any kind would be to cripple ourselves without materially injuring the enemy. It is an absurdity when you come to think of it. For instance, are we not to buy even a single sample of a new Diesel engine or a febrifuge? Are we to boycott books? The more we hate and distrust the Germans the more important it is to know what they are thinking. What would we have known of Germany's plans if we had refused to purchase a copy of Bernhardt's "Germany and the Next War" or Naumann's "Mittel-Europa"? Shall German chemists have the advantage of access to all the discoveries reported in our journals while our chemists refuse to read theirs? Why should we voluntarily fight blindfolded?

The movement for a personal boycott is obviously unwise and unwarranted. It is an interference with our Government's freedom of action and it is unfair with our cobelligerents. The British Chancellor of the Exchequer, Andrew Bonar Law, assured the House of Commons on August 8 that Great Britain would take no action on the Paris resolution for a post-war boycott of Germany without consultation and coöperation with the United States. Shall we counter this courtesy by an unofficial nation-wide boycott without the approval of our own Government and without consideration to France and Great Britain?

## THE PRESIDENT AND THE CONGRESSMEN

**P**RESIDENT WILSON, thru sheer political ability, can be a party despot if he chooses to be. In virtue of the extraordinary powers that he now wields he can be an executive despot if he chooses to be. We are not among those who imagine or believe that he chooses to be, or that he will be.

It is profoundly to be hoped, therefore, that he will not give occasion for his political opponents to bring against him the charge that he is attempting to make the Congress of the United States a body of Presidential appointees. The Constitution of the United States established the principle of the fundamental separation of powers, and, in accordance with it, made the executive, the legislative and the judicial branches of the Government each independent in authority and functions. It provided further that congressmen should be nominated and elected by popular constituencies.

President Wilson will not attempt to override or to remake the Constitution in respect of these fundamental matters; but with great plainness of speech he has declared his antagonism to certain individual members of the national

legislative body, including Senator Vardaman and Senator Hardwick, whose reelection he opposes, on the ground that they have antagonized his administration. The country has too deep a faith in President Wilson to question his disinterestedness in taking this action; but President Wilson himself has too much at stake, and the civilized world which has accepted his leadership has too much at stake, for him to take any chance of going wrong in so vital a matter.

We concur in the view of the incident that has admirably been presented by the *Evening Post*. If any member of the Senate or of the House is known to have obstructed the nation's war efforts it is the duty of the President to lay the lash upon his back and to pursue him until he is expelled from public life, and the duty is equally clear whether the offender is a Democrat or a Republican; but if no such treason can be shown, and the offense which the President resents is antagonism to the Administration, the people of the United States, it is safe to predict, will resent an Executive attempt to deprive them of their Constitutional privilege of being their own judges in such cases.

## IF—WHY NOT

**I**F coal will win the war, why not save the 60,000,000 tons used by the saloons last year?

If food will win the war, why not save the 3,150,000 bushels of grain used for brewing last year?

If transportation will win the war, why not save the 157,915 cars used to transport beers, wines and liquors last year?

If ships will win the war, why not quit sending abroad the 1,647,777 gallons of whiskey we withdrew for export last March?

If labor will win the war, why not put to work at some essential industry the 100,000 bartenders and 54,000 brewery workers now in this country?

If money will win the war, why not spend on something useful the \$2,000,000,000 we spent on drink last year?

## HOME RULE FOR INDIA

**W**E must admire the courage of the English. Not merely their courage in battle, for that history has led us to take for granted, but—what has not been so characteristic of the race—their courage in tackling the most difficult questions of reconstruction in the midst of the strain and confusion of the Great War. If the English do not look out they will lose their reputation for "muddling thru" in which they formerly seemed to take a certain pride, and gain instead a reputation for "working out" their political problems. During the last four years they have undertaken enough reforms to make a creditable record for a century of ordinary progress. They have more than doubled the franchise. They have reduced the drink evil by four-fifths. They have overcome the most difficult labor difficulties. They have adopted a new system of national education. They have reversed the commercial and financial policy of Great Britain. They have made various bold—even tho unwise and unsuccessful—attempts to settle the Irish question. They have virtually admitted the dominions to full partnership. And finally they have undertaken a still more dangerous and delicate task, the determination of the future of India.

The joint report of the Viceroy and Secretary of State for India on "Indian Constitutional Reforms" just published is likely to prove one of the epoch-making documents of the world's history, for it lays down the lines by which, it is hoped, a fifth of the human race may ultimately attain self-government. It is proposed to begin by devolving upon Indian ministers, responsible to a legislative council in which there is an Indian elected majority, certain defined powers in provincial administration. These powers are to be gradually extended at intervals of not more than five years in such directions as they have proved most successful. The

control of the central British Government will be correspondingly relaxed until finally the people of India, for the first time in history, will have a system of responsible self-government as complete as any of the other British dominions.

The scheme seems to be an admirable one and if it is carried out continuously, consistently and tactfully, it should satisfy the Indian nationalists, for it gives them an opportunity to prove what they claim to have, political ability. When we compare this with the refusal of the Prussian Government to extend equal suffrage to the men of Prussia or to reform in the least the acknowledged injustice of the present electoral system we can see the difference in the two antagonists. Germany, judging by the attitude of her own dependent peoples, assumed that India would revolt at the outbreak of the war. Instead of that India has sent 1,250,000 men to fight in defense of the British Empire and she can supply 10,000,000 more. British rule in India has often been ill-considered and unsympathetic, but it has been on the whole well intentioned and justly administered, so even those Indian agitators who before the war were most bitter against Britain will now admit its benefits and are by no means inclined to prefer German rule.

## RACE AND THE WAR

ONE of the issues of the war is race prejudice. The Germans have this trait in so marked a degree that it ought to share the growing unpopularity which now accumulates around things distinctively German, whether good, bad or indifferent. Ever since the Germans took from Frenchmen like Gobineau, Englishmen like Houston Chamberlain, and Slavs like Treitschke, the legend that the world's civilization was the creation of a single race—the Teutonic—they have been unendurable. The bulk of German books on history, politics and sociology for the last few decades have been devoted to the elaboration of this great Teutonic myth. Slavs were barbarians, Latin nations were decadent, Celts were futile, the yellow races were "monkeys," black men were not human, Jews were enemies of the state; only the Teuton was tall, blond, handsome, virile, virtuous, reverent, honorable, practical, idealistic, scientific, thrifty, continent, just, brave, self-respecting, and capable of self-government. The fact that many Frenchmen, Russians and Irishmen had all these qualities and that some Germans had none of them (not even the blondness) did not prevent the Pan-Germans from identifying the imaginary "Teuton" with the German nation.

The moral of this pitiful collapse of German humor and common sense before the mirage of Teutonism should keep us from similar follies. Let our enemies have a monopoly of racial egotism. It is true, of course, that the Germans are not hereditarily superior to any of their neighbors, but it is nonsense to talk (as some of us do talk) of the Germans as natural barbarians whose atrocities but echo the deeds of Alaric and Attila, their forefathers. As a matter of actual history and ethnology the people of western Germany are brothers of the people across the North Sea in England and lowland Scotland. They are at least first cousins of the peasants of Normandy and Flanders. The eastern Germans (the "Prussians") are a mixture between the west German type and the Slavic and Baltic peoples of eastern Europe. The south German and Austrian is rather closely related to the north Italian and the man of central France, perhaps even to the Welshman.

But the war raises the question of race prejudice also in a broader form; not merely the claims of the Teutonic super-race but the claims of the "white race" itself to eternal and inevitable superiority. Germany has no doubt on the matter. Inferior as are the non-Teutonic peoples of Europe in German eyes, they take rank above the "na-

tive" races of Asia and Africa to such a degree that slavery or the sword is the just wage of the latter. Note the German fury at the Allies for seeking the aid of Japan and for employing African troops on European battlefields. Remember the day when the Kaiser preached against the "yellow peril" in the spirit of yellow journalism. Read any good book or article on Germany's system of rule in her overseas colonies. It is true that private plantation owners in Belgian and Portuguese Africa, and even in a few parts of French Africa, have been excessively cruel to the native laborers in their employ. But nowhere have the officials of a government been so systematically oppressive as in German Africa. The atrocities in the Belgian Congo were the work of a soulless capitalism. The atrocities in German Southwest Africa were the work of bureaucrats inspired by racial arrogance and measureless contempt of those whom they ruled. If the preacher of race hate from the Mississippi valley or the Pacific coast were to migrate to the banks of the Elbe he would not only relieve us of his presence but would find an appreciative audience and a true "spiritual home." Race prejudice is pro-Germanism.

If the hideous example of racial arrogance afforded by Germany does not suffice to cure us of our prejudices there is another fact which should make us reflect. Who are the Allies? At least five nations among them—China, Japan, Siam, Liberia and Haiti—have no white population worth mentioning. An absolute majority of the people of the British Empire live in India; "white" men certainly, but also "natives" and non-Europeans. France and its colonies, if taken as a whole, contain nearly as much black as white, and French Indo-China contributes numerous yellow men to swell the total. Italy, Belgium, Portugal, Brazil, Cuba and others of the Allies have many non-white subjects and citizens. The United States, with its ten million negroes and mixed-bloods, its Indian tribes, its Pacific colonies, cannot claim to be a racial unity. If we sum together all the peoples who are fighting against Germany it seems probable that at least three out of four of them are "natives"; that is, people not descended from the races of Europe. Of course, the white race is the most largely represented on the actual battle line, but, since an army is only the delegate of a people, we should learn to think of the war as a league of all the races of mankind against the common foe of all humanity.

## MILITARISM AGAIN

"MILITARISM" isn't just a word to throw at your enemy. It means something definite. It means something that Germany has and that England, France and the United States have not.

If you doubt this, think how frequently you have met such items as these in your paper:

"Kaiser Consults Hindenburg on New Peace Offer," or "Ludendorff and von Tirpitz Demand Chancellor's Resignation." Sometimes the rumors turned out to be true, sometimes they did not; the point is that you read such statements with no surprise, they seemed quite natural and appropriate—to Germany.

Suppose you turned to your daily expecting to find some such items as these:

"General Haig Demands that British King Dismiss Lloyd George."

"Foch Tells French President Not to Ask for Alsace-Lorraine," or

"Pershing Insists that Wilson Dissolve Congress and Declare War on Lapland."

Then, and only then, could you say that we and the Allies had succumbed to "Prussian militarism." Militarism does not mean having an army, or liking an army, or even being too fond of an army. It means being ruled by an army; that, and nothing else.

# THE STORY OF THE WEEK

## Foch's Offensive

Last week we noted a puzzling movement, the spontaneous withdrawal of the Germans from their positions west of the Ancre and Avre. This week we have the explanation of it. Evidently the Germans got wind of an impending attack on this front and wanted to get behind the rivers as a safer position of defense. But the precaution was not sufficient and the blow was struck, not on the Ancre or the Avre, but right between them, right on the apex of the salient pointing at Amiens.

On the morning of Thursday, August 8, the British and French delivered a joint attack along a front of some thirty miles and from the start gained an astonishing success. Within the first twenty-four hours their advance patrols had penetrated five and even seven miles behind the enemy lines and 7000 German prisoners had been taken as well as a hundred guns. This good start was rapidly followed up. The disconcerted and disordered enemy was allowed no rest. The Germans were forced to abandon more of their munitions and surrender more of their men. Within a week the number of prisoners had risen to more than 40,000 and the guns lost to 700. The Allied casualties were fewer

## THE GREAT WAR

*August 8*—British and French offensive makes rapid advance before Amiens. Russian "Government of the North" set up in Archangel.

*August 9*—Americans take Fismette, across Vesle from Fismes. D'Annunzio with eight airplanes drops manifestoes on Vienna.

*August 10*—French enter Montdidier. First American field army organized.

*August 11*—Nine fishing vessels sunk off Maine coast. British airmen bombard Frankfort.

*August 12*—Norwegian freighter "Sommerstad" torpedoed 25 miles off New Jersey coast. Eighty-seven German airplanes brought down during the day.

*August 13*—Germans attack Americans on Vesle. American tanker "F. R. Kellogg" torpedoed 10 miles off Barnegat Light.

*August 14*—French take Ribecourt and approach Lassigny. Austrian troops sent to Belgium.

than their captives. One Australian division, which had suffered 300 casualties, took 1600 prisoners.

The Allied offensive has converted a German salient into a reëntering angle with the apex directed at the important

railroad center of Chaumes. This town, twelve miles inside of the old line, was in fact reached by French patrols, but they were driven out and now both sides are battling hard for the possession of Chaumes. Other points of importance behind the new German line are Bray, Nesle, Roye and Lassigny, but even if these are not taken they may be rendered almost untenable by the Allied artillery fire. For instance, the Germans did not get nearer than eight miles to Amiens, yet the usefulness of that city as a railroad junction, supply center, military camp and connecting link between Calais and Paris was almost completely destroyed. The relief and recovery of Amiens is one of the greatest gains of the new offensive.

The left of the Allied front on the Ancre was commanded by General Rawlinson. The right on the Avre was assigned to the French under General Debeney. His advance brought him to the north of Montdidier and then General Humbert with another French army struck from the south on the Oise River and drove in the German line southeast of Montdidier. This compelled the Germans to make a quick withdrawal from the Montdidier pocket to avoid being cut off. When the French entered Montdidier they found this once thriving town had been reduced literally to ruins by the double bombardment it had sustained. Humbert's army has reached Ribecourt, only six miles from Noyon.

American troops cooperated with the British in the capture of Chipilly on the Somme near Bray and of Morlancourt between Bray and Albert.

The German press does not attempt to conceal its chagrin over what is admitted to be "the most serious reverse of the war." The Pan-German organs try to throw the blame for the demoralization on former Foreign Minister von Kühlmann for his admission that the war could never be brought to an end by the sword. The German public demands an explanation of how their troops could be driven out of their entrenched positions within a few hours by forces inferior in numbers. Three German generals have been cashiered for the loss of Montdidier.

This is really the first successful offensive of the Allies during the war. The first and second battles of the Marne, the important victories, consisted merely in stopping a German offensive and forcing a retreat.

**How the Battle Was Won** The Germans lay their defeat on the Somme to two things, fogs and tanks. The heavy mist that filled the river valleys on the morning of the 8th favored the surprise of the German lines. The preliminary bombardment lasted only an hour and before the Germans could reinforce the threatened sectors the lively little Brit-

WIPING OUT THE AMIENS SALIENT

The Anglo-French offensive started August 8 drove back the Germans from the angle between the Ancre and Avre to a distance of twelve or fifteen miles in the first week. On the left the British advanced as far as Bray and Chaumes. On the right the French regained Montdidier and took the heights north of the Oise overlooking Lassigny and Noyon.

ish tanks were running over the fields and thru the villages. These new tanks and the armored cars called "whippets" are the same as contributed so much to the recent victory on the Marne. They are much lighter and swifter than the tanks introduced by the British in the battle of Cambrai in November, 1917. They consist of a small turret or gun-house holding two men and mounted upon a truck run by caterpillar tractors. They carry one light gun.

These baby tanks and armored cars, like the German uhlans in the war of 1870, make their appearance in the most unexpected places. One of them entered a town still held by the Germans and running up to the house where the staff was lunching stuck its gun thru the window and opened fire. An armored car chased and ran down a German general trying to escape in his automobile. A group of cars far behind the German front held up a supply train and when four mounted German officers came up to see what the trouble was they were shot from the cars. Another group attacked a train loaded with enemy troops and set it on fire.

The British also were able to make use of the cavalry which they have kept in France for four years waiting till the lines were loosened up enough for their employment. Airplanes also were used on a larger scale than before as a fighting arm. Skimming low over the roads along which the Germans were retreating they poured machine gun fire into the columns. The bridges across the Somme were demolished by bombs. A fleet of 120 airplanes was kept busy over Lassigny, the supply center of the southern sector. In one day 46,000 pounds of high explosives were dropt on the stations, barracks and roads of Lassigny.

As in the Vesle valley the Germans on the Oise were caught harvesting the wheat so much needed by their folks at home. The advance was so rapid that at one place the German mail was captured as it was already sacked up ready to be sent back. From some of the letters it seems that the Germans were rejoiced whenever a horse was killed by a French shell, for it gave them their only chance of a meal of meat. Among the other booty was found a box containing 350 Iron Crosses that had been sent to the front for distribution among the troops.

#### The Siberian Expedition

To the Inter-Allied expedition into Siberia the United States will contribute less than 10,000 troops, Japan an equal number, Canada some 4000 and the rest of the force, which will not exceed 25,000 altogether, will be made up of French, Italian and Chinese troops. The supreme command of the combined expedition is placed in the hands of a Japanese general, Kikuzo Otani. He is now sixty-three years of age and has distinguished himself in two wars. In the Russo-Japanese war he campaigned in the same region which he will now enter and was decorated with the Second Order of the Rising Sun and the Second Class of the Golden

THE ARCTIC CAMPAIGN

The Allied and American forces landed at Kola now control the railroad as far south as Kem. The Soviet forces have been expelled from Archangel and driven seventy-five miles down the railroad toward Vologda. A body of 50,000 Finnish and German troops is said to be preparing to attack the Karelian coast and cut the railroad at Kem.

Kite. In the present war he took part in the capture of the German colony of Tsing-tao and has been in command of the Japanese garrison there ever since. The American contingent will be under the immediate command of Major General William S. Graves, who was "mentioned for gallantry" at Calocan in the Filipino insurrection. He served on the General Staff at Washington 1909-1918 and more recently has been in command at Camp Fremont, California. The troops for Siberia will be drawn from the Philippines and Camp Fremont.

It is hoped by the aid of this joint force that the Czecho-Slovaks in eastern Siberia may be able to force their way westward along the railroad and take Irkutsk and the stretch of road which at present separates them from the Czecho-Slovaks in European Russia. If the Allies can get command of the Siberian Railroad and the Volga River, and especially if the Siberian and White Sea expeditions can establish connection, the Lenine-Trotsky regime may be starved out of power "before the middle of next winter," according to Washington authorities.

But at present the Czecho-Slovaks are said by their leaders to be in desperate straits, "without artillery, cavalry, airplanes, cartridges, grenades or proper clothing," and sadly depleted by continuous fighting and sickness. If they are not relieved before winter, that is,

within six weeks, "they will certainly perish." In the opinion of the Japanese the expedition is too limited in numbers to rescue the Czecho-Slovaks. The total number of Czecho-Slovaks is estimated at about 100,000, of whom 15,000 are at Vladivostok under the command of the Russian General Duchonin and the rest, west of Irkutsk, under the Czech General Gaida. Two years ago the Czecho-Slovak prisoners in Russia numbered over 200,000.

The diplomatic efforts of the Allies at Vladivostok have been directed toward trying to reconcile the various factions of Russians in Siberia. In this they have so far been unsuccessful. General Horvath, who has proclaimed himself Dictator of Siberia, has control of the Manchurian section of the Siberian Railroad over which the Allied troops must travel. He consented to come to Vladivostok for consultation, but refuses to acknowledge the authority of the other bodies claiming authority over Siberia. The zemstvo or provincial council of Vladivostok has delivered an ultimatum to the Allied diplomatic corps demanding the expulsion of General Horvath.

The Bolsheviki on the Usuri River north of Vladivostok are said to have driven back the Czecho-Slovak troops and the Bolsheviki on the western frontier of Manchuria are said to have forced General Semenov to retreat into Chinese territory.

## Bolsheviki on the Defensive

Such scant communication as we have had with Moscow is cut off since the landing of the Allied troops at Archangel and the recent news consists chiefly of rumors from Berlin or Stockholm. Berlin seems to expect the speedy collapse of the Bolsheviki. The German Ambassador, Dr. Karl Helfferich, is back in Berlin and it is said that the German embassy is to be removed to Pskov, four hundred miles west of Moscow and near the German frontier. But on account of the breakdown of the railroads it will be necessary for the Germans in Moscow to go to Pskov by way of Petrograd and Finland.

Moscow is now almost as hard up for food as Petrograd has been. Bread cards permit one to purchase a quarter of a pound a day of a mixture of black flour, oat husks and straw, but even this is often unobtainable. Bread is sold on the sly for \$3 to \$6 a pound. Meat, eggs, butter, potatoes and white flour are not usually to be had at any price. The Soviet organs lay all the blame for the famine upon the Czecho-Slovaks, who by seizing a section of the Siberian Railroad and the Volga River have cut the connection between the grain fields and the cities. Leon Trotzky, the Minister of War, is trying with little apparent success to inspire his followers with martial enthusiasm and to organize forces for the overthrow of the Czecho-Slovaks and resistance against the Allied armies entering Russia. The great lack of the Red Army is trained officers, so Trotzky has authorized the employment of officers from the old armies of the Czar, but "every officer in command must be watched on both sides

by War Commissaries with revolvers in their hands. No officer will be allowed to take a single step without supervision and if he wavers he will be shot."

It is understood that the Soviet Government has delivered an ultimatum to Japan and has declared the republic in a state of defense against the Allies. America is apparently not specified. Robert Lockhart, the British Consular Agent, who remained at Moscow to keep in unofficial communication with the Soviet Government, has with several other British and French representatives been seized by the Government in reprisal for the alleged killing of Bolshevik leaders in Archangel by the Allies. In reprisal for this the Bolshevik representative in London, Mr. Litvinov, has been put under police supervision. American Consul Poole broke off relations with the Soviet Government at Moscow August 5.

A counter-revolutionary rising was planned to take place in July at Moscow, Jaroslav and other places in expectation of support from Archangel, but this wherever it developed was suppressed by the Bolsheviki with great severity. At Jaroslav, which lies between Vologda and Moscow, the rising was led by French, Serbian and former Russian officers and succeeded in gaining possession of the city and arsenal. Members of the Soviet were arrested early in the morning and many of them shot. But the Red Guard besieged and bombarded the city and cut off the supply of drinking water. After suffering for twelve days the White Guard or "Volunteers of the North," as they called themselves, surrendered to the commandant of the 1500 German prisoners in the city, who turned them over to the Red Guard.

It is assumed that the anti-Bolshevik factions in Russia will welcome foreign intervention, but the latest official statement we have from them is the resolution passed on May 18, 1918, by the Interparty Council of the All Russian Constituent Assembly. This assembly was forcibly dismissed by the Bolsheviki and the council is composed of the anti-Bolsheviki and pro-Ally parties of the defunct assembly. The resolution reads:

The Brest-Litovsk treaty is not recognized by our country. Russia was and continues to be in a state of war with Germany and the bonds uniting us with the Allies cannot be considered as invalidated by the action of a Government which is not recognized by Russia.

At the same time the Council declares that the Russian nation will never acquiesce in a violation of the sovereignty of Russia by the Allied Powers, in an occupation of Russian territory, or in an interference with the internal affairs of Russia. The appearance of Allied forces on Russian territory can only be admitted by Russia with her consent for strategic purposes of a struggle against Germany carried on together with Russian forces and on condition that the action should be taken in common by all the Allied Powers.

## The White Sea Expedition

The Allied and American expedition to the Arctic has secured control of the Murman coast and all shores of the White Sea. Under its protection a Government of the North has been set up at Archangel. In its first proclamation the new Government de-

nounces the Bolshevik rule as traitorous to the Allies and ruinous to Russia and announces its own aims as:

First—The regeneration of Russia, the resumption of relations between Russia and other governments and the organization of local power with the government of the north.

Second—The defense of the region of the north and the whole nation against all territorial violation by Germany, Finland and other enemies.

Third—It seeks a reunion with Russia of the peoples who have been taken from her.

Fourth—The reestablishment of the three organs of the people, namely, the Constituent Assembly, Municipal Dumas and Zemstvos.

Fifth—The reestablishment of legal order by the expression of the will of the citizens and the reestablishment of political and religious liberty.

Sixth—The security of the rights of agricultural workers.

Seventh—The defense of the interests of labor in accordance with the political and economic interests of the north and the rest of Russia.

Eighth—The suppression of famine.

The immediate difficulty with this program is carrying out the eighth clause. This region is altogether dependent upon the south for food and since a new frontier has been established south of Archangel, supplies for the Allied troops and the natives will have to be sent in by ship thru the Arctic Ocean. There is short time to do it in, for the port of Archangel is liable to be frozen up within three months. On the other hand, if the campaign should continue thru the dark winter the enemies of the Allies, be they Bolsheviki, Finns or Germans, will be in continuous and easy communication with their bases in the south.

The British Government has issued a declaration to the Russian people similar to that of the American Government stating that "we wish to solemnly assure you that while our troops are entering Russia to assist you in your struggle against Germany, we shall not

## OUR LEADER IN SIBERIA

Major General W. S. Graves will command the American contingent of the Siberian expedition

retain one foot of your territory," and that it is for the Russian people "and for them alone to decide their form of government and to find a solution for their social problems."

Archangel was held by a force of about 8000 men, consisting of 1500 armed Bolsheviks, 400 Lapps, 900 Germans and 5000 workmen. After they were expelled from the city on August 3 they tried to hold the station terminus of the railroad across the Dvina River, but they were driven out of this position on the following day by shell-fire. Their next stand was five miles south of Archangel, but here again they were defeated by the Allied troops and forced to retreat some seventy miles further down the railroad in the direction of Vologda. The diplomatic corps, which was recently expelled from Vologda and then Archangel, is already back in the latter and hopes soon to be in the former.

#### Torpedo and Poison Gas

The German submarines which have been attacking minor craft from Nova Scotia to North Carolina ever since May have intensified their activity. No less than fifty-six sinkings have been reported off the American coast from May to the middle of August. British, Canadian, Newfoundland, American, Japanese, Norwegian and Dutch ships are listed among the recent victims. Few, however, were of considerable tonnage and the majority were merely fishing schooners.

Recent phases of the U-boat campaign in American waters present some novel features. Thus on August 7 a German submarine shelled and sank the Diamond Shoals lightship, anchored off Cape Hatteras. Since a lightship is stationary it makes an excellent target, but as its purpose is not to transport munitions but merely to warn vessels from dangerous rocks and shoals, no one thought that it would be an object of submarine attack. To the logical German, however, it is just as advantageous to have ships wrecked on unlighted shoals as to destroy them directly with gunfire or torpedo.

Still more surprising is the report that Germans made a gas attack on the North Carolina coast on the 10th of August. Six men, coastguardsmen and lighthouse attendants, were overcome by the gas but no deaths resulted. The gas was floated ashore on large films of oil, supposed to have been set adrift by German submarines in the hope that the tide would bring the oil and the gas which it generated to land. In about forty minutes the gas was dissipated. Probably poison gas has never before been employed as an instrument of naval warfare and its usefulness for the purpose seems somewhat limited.

Most of the recent German attacks on shipping along the American coast have been without warning, but there seems to be a growing tendency to prefer shell fire to the torpedo. Perhaps this is because shells are cheaper than torpedoes, especially when the submarine is a whole Atlantic's breadth from its base of supply, or perhaps because

British Official, from Press Illustrating

#### A BRITISH BABY TANK

Lighter and more lively than the old tanks, the baby tanks have been the chief factor in the rapid advance of the Allies on the Marne and the Somme

the majority of vessels which have been attacked were small craft and wholly unarmed so that there was no risk involved to the submarine in appearing above the surface. On a number of occasions the Germans have boarded and pillaged ships before sinking them, thus "living off the enemy's country" and using their victims as supply bases. In such cases the crew were usually given time to escape in lifeboats and in one instance, the sinking of the "Marack," the German captain even told the escaping crew their distance from shore. The fishermen from the "Lena May" were photographed aboard the submarine which had attacked their ship, so that the Germans might have a trophy of their victory to take back to the Fatherland. Unquestionably the main purpose of the submarine "blockade" of the Atlantic coast is to intercept the transport of troops to Europe, but fishing boats and lightships are better than nothing, and it is possible that the Germans cherish the hope of producing a panic in shipping circles by their incessant "sniping."

#### Enemy Alien Allies

The War Department has issued orders for the immediate mobilization of the Slavic Legion at Camp Wadsworth, Spartanburg, South Carolina. The intention of the Legion is to make use of the services of the thousands of persons of Slavonic origin resident in this country who have not become naturalized and thus have not been brought into the general army organization of the nation. Many of the recruits in the Slavic Legion will be not only aliens but technically "enemy aliens" because they were born (thru no fault of their own) under the rule of the Austro-Hungarian monarchy. Strict inquiry will be made as to the loyalty of the alien volunteers, but if the authorities are satisfied on this point they will not discriminate against those who were formerly Austrian sub-

jects. So far as possible companies will be formed of men of the same nationality and speech and the company officers will be expected to know English and the languages spoken by the rank and file as well. The higher officers of the Legion will be chosen from the regular army. Special training for officers of the Legion has been provided at Camp Lee in Virginia. No effort will be made to attract volunteers from the mining districts of the country where Slavonic workmen are an indispensable factor in the industrial life of the nation, but in other Serbian, Croatian, Slovene, Czech, Slovak and Ruthenian settlements there will be a general recruiting campaign. It is not publicly known for which war front the new Legion is destined.

#### A Million Boy Power

In order to solve the problem of obtaining an ample supply of organized and partly trained labor without disorganizing home life or barring young men from their chance at a full education, the Federal Bureau of Education is at work on plans for reorganizing the United States Boys' Working Reserve. This organization has at present about 250,000 volunteer members between the ages of sixteen and twenty-one engaged for the most part in farm work. If the draft age is lowered to eighteen many youths now in the Working Reserve will be taken into the army and in that case the age of admission to the Reserve may be reduced to fourteen or fifteen.

The new organization to be developed out of the Reserve will, it is hoped, attract to government service a million boys and young men not yet within range of the draft but beyond the age of compulsory schooling. It has been feared that too many of this age would leave school altogether for industrial work either from motives of patriotism or to take advantage of the high wages of war time and the abundant opportunities for employment which are opened by the enlistment of so many

American workingmen. But by the new plan boys will give part of their time to industrial work and part to schooling, mainly technical, which will fit them for their life work. If the war should last long enough for these young men to reach the draft age and enter service their industrial training will enable them to qualify for technical branches of the army and navy. The youths in the new Reserve Corps will wear a special gray cloth uniform and serve under the direction of adult training officers. Those whose work is satisfactory will be given service records testifying to that effect. Enlistment in the Reserve Corps will probably be wholly voluntary. The Department of Labor has general supervision of the plan.

### The Meat Monopoly

The Federal Trade Commission has concluded its investigation of the packing industry and presented its recommendations. The report of the Trade Commission charges that the meat industry of the country is under the monopolistic control of five great companies: J. Ogden Armour, Swift & Co., Morris Brothers, Thomas E. Wilson (who is alleged to be acting in the interest of Kuhn, Loeb & Co., the Chase National Bank and the Guaranty Trust Company) and the Cudahy Company. The packers are said to own or control most of the stockyards in this country, to have heavy investments abroad in South America and other stock raising regions, to have entered into agreements with foreign corporations by which meat shipments from South America are apportioned among the "Big Five" according to fixed percentage basis, to control more than five hundred subsidiary companies, and to have formed "joint ownerships, agreements, understandings, communities of interest and family relationships" which prevent any real competition even between the largest corporations.

The Trade Commission recommends that all rolling stock used in meat transportation be a monopoly of the Government; that the Government acquire the "principal and necessary stockyards of

the country"; that the Government take over private refrigerator cars, cold storage plants and warehouses, and that the Government operate the acquired properties as public distribution points and markets. All of these recommendations are aimed at the power of the big packers over transportation, storage and marketing. On their part the packers point out that the Government already has and exercises at its pleasure many of the powers which are now demanded on its behalf.

Very heavy shipments of beef and pork have been sent to the Allies in recent months and an exceptionally large number of cattle are being shipped to market at present, partly because the dry summer has made it difficult to keep the cattle fattened and more advantageous to slaughter them at once. For this reason the Food Administration has relaxed its restrictions on the consumption of beef. Consumers are, however, requested to accept cuts from underweight cattle since it is mainly these which have been sold to the stockyards.

### Crop Prospects

The official Government estimate of the grain crops of the current year is a trifle more conservative than some earlier predictions. On August 8 the total year's wheat yield was placed at 878,000,000 bushels and the corn at 2,989,000,000 bushels. The wheat crop will without question be much greater than it was last year and yet it will not meet all expectations. Corn and potatoes have suffered from the excessively dry and hot weather which has prevailed for weeks over a large part of the agricultural area of the country. Practically every crop, in spite of the shortage of labor, is growing on a larger acreage this year than last and but for the failure of the weather wholly to cooperate with the patriotic efforts of the farmers this should be a year of bumper crops.

The annual report of the secretary of the New Orleans Cotton Exchange shows that the cotton crop for the year ending July 31, 1918, was the most valuable in the history of American agriculture. The yield was not exceptionally

large, amounting to less than twelve million bales, but the extremely high prices prevailing more than made up this loss to the farmer if not to the consumer. The average price of middling cotton was 28.86 cents a pound, whereas in 1916-17 it was only 18.41 cents and two years earlier, at the outbreak of the Great War, was less than eight cents. Prices have never been so high in the cotton market as today since the troubled times of Civil War and Reconstruction.

### The Telegraph Tangle

Vice-President Atkins of the Western Union Telegraph Company

announces that the danger of a telegraphers' strike has been ended by the recent agreement between the company and the men. The company made an agreement on August 9 with the Association of Western Union Employees to recommend to the Postmaster General a straight, permanent increase in salaries amounting to 10 per cent with back pay dated from the 1st of July. This increase does not apply to messengers and other commissioned employees or to those who already receive an income of more than three thousand dollars a year. The company recognizes only the Association of Western Union Employees and has refused to make any concession to rival unions such as the Commercial Telegraphers' Union of America. The Commercial Telegraphers' Union complains of unfair treatment, alleging that in several instances men had been discharged for no other reason than belonging to the union and wear-

### THE HUNGER STONE IN THE ELBE

"When you look upon me, then weep," reads the inscription on the stone near the bridge at Tetschen, Germany. The legend runs that when the waters of the Elbe fall away to a record low tide, suffering and hardship are sure to follow. In every instance since the date of the first inscription, 1417, the prediction has been found to be true. This year the waters have reached their lowest level

ing its button. The whole labor situation in the industry is under investigation by Postmaster General Burleson. The recent increase of pay schedules affects nearly 47,000 workers and involves a yearly outlay of about three million dollars.

#### A Heatless Winter

While much more coal is now being mined than last year, and while the transportation problem is not so baffling as it then was, yet the Fuel Administration is far from being confident that enough coal will be on hand this winter to meet every demand. The present rate of coal production is said to be about 9 per cent below what is necessary for the remaining weeks of the summer to make up the existing shortage. The output of coal for the rest of the summer should average 14,000,000 net tons a week. In order to instigate greater production it is planned to establish production committees in every coal mining district, each to consist of three representatives of the employers and three of the miners. The difficulties of production are not greater than those of distribution. Car space is now so much in demand for moving grain to market that the mines are unable to deliver as much coal as they can produce. Every effort is made to relieve the railways of excessive pressure by transporting as much grain as possible on the Great Lakes and other water routes.

In view of the urgency of the fuel situation President Wilson has issued an eloquent appeal to the coal miners to meet the emergency. He spoke of the existing scarcity of coal as "a grave danger—in fact, the most serious that confronts us." He urged every miner to devote every hour of the full working day to labor. He admitted that the man power in the mines had been decreased by enlistments in the army, but announced that all miners whose work was essential for the greatest possible output of coal would be granted "deferred classification" in the draft and "it is their patriotic duty to accept it."

#### Thumbs Down for Senators

President Wilson and Senator Vardaman. The President, in a letter recently made public, denounced the Senator in terms more severe than he has yet felt necessary to apply to any other Democrat who has sought reelection to either branch of Congress. He wrote:

Senator Vardaman has been conspicuous among the Democrats in the Senate for his opposition to the Administration. If the voters of Mississippi should again choose him to represent them I not only have no right to object, I would have no right in any way to criticize them.

But I should be obliged to accept their action as a condemnation of my Administration, and it is only right that they should know this before they act.

Previous to the war Senator Vardaman was best known for his extreme stand on the race question, an attitude which admittedly did something to secure his election but which offended not only the colored race but many of the white voters of the state. With the entrance of the United States into the Great War, a step which he opposed most stubbornly, he attained fresh distinction as a leader of the pacifist clique in his party similar to the position of Senator La Follette in the Republican ranks.

In Georgia the President has taken a similar step. "Senator Hardwick," he wrote, "has been a constant and active opponent of my Administration." He urged the Democratic party of the state to give their support to Senator Hardwick's rival, William J. Harris, former member of the Federal Trade Commission.

#### Wilson for the Women

President Wilson is actively working for national women suffrage. A few days after he had written to his fellow-Democrat, Senator Shields, of Tennessee, urging him to support the suffrage amendment, he wrote a similar letter to Senator Baird, who is a Republican, but from the President's own State of New Jersey:

Voters of Mississippi will have an opportunity to choose between

The whole subject of woman suffrage has been very much in my mind of late and has come to seem to be a part of the international situation, as well as of capital importance in the United States. I believe our present position as champions of democracy thruout the world would be greatly strengthened if the Senate would follow the example of the House of Representatives in passing the pending amendment.

The intervention of the President in the consideration of the suffrage amendment by the Senate is in striking contrast with his former neutrality on the subject. While for some time a convinced supporter of equal suffrage, President Wilson has until recently confined his work for the cause to advocating action by the states. Two considerations, no doubt, weigh strongly in explaining his changed attitude. In the first place, the fight on the amendment is so close that the shifting of a single vote may possibly give the women the necessary two-thirds of the Senate. In the second place, the hostile minority is mainly Democratic and the President as a suffragist is naturally reluctant to let the amendment be defeated by senators of his own party, some of whom might be won to his own view of the question or be induced to support the amendment from considerations of party loyalty.

On most questions involved in the elections of this year the President is "out of politics." He indicated this in a letter to ex-Senator Chilton, who is seeking nomination in the Democratic primaries of West Virginia. While expressing "my sense of gratitude for your friendship and support," the President added that

this question has presented itself to me, and always I have been checked by the consciousness that intervention of any sort on my part, even so much as the appearance of an effort to pick and prefer a candidate, would produce the most embarrassing impression and be met by a justifiable resentment on the part of the constituency concerned, which would do more harm to my friend than my preference would do good.

GRANDMOTHER'S HELP WITH THE WAR

The carefully camouflaged big gun, being moved to the front, has been nicknamed "Grandmother." The gun is so heavy that a steam caterpillar is necessary to move it.

Italy's aeroplanes are of the Caproni type, the best kind for bombing. This model is a biplane with machine guns mounted in the rear

## AMERICA'S ONLY FAILURE IN FRANCE

*In four previous issues, the editor of The Independent, who has recently returned from a visit to the Allied battlefronts, has described his experiences with our boys. This week he explains conditions as he saw them at first hand, in regard to our air fighting equipment now in France*

**I**N my previous articles I have written enthusiastically of America's marvelous achievements on the front. In the organization of transportation work back of the lines, which I shall discuss later, we have equal reason to be proud. But to present a fair picture I must here record our chief failure—the deficiency of aeroplanes.

During my inspection of the American front and supporting lines in May and June I visited three American aviation squadrons at the front, one assembling station, one repair station and one training station in the rear and one hydroplane station on the coast near America's largest port of disembarkation.

Everywhere I found the same tale of woe. Altho Congress had appropriated \$640,000,000 for aviation a full year before, there was nothing to show for it at that time as far as France was concerned except four active fighting squadrons on the line, eight Liberty motors (three unpacked), several partially completed back line support stations and hundreds and hundreds of American trained aviators sitting about in Paris and doing nothing but praying night and day for machines to fly. Every one realized that air power would win the war. No one knew why our loudly proclaimed promises to construct 20,000 planes for use in 1918 were not being kept. When I arrived in Paris the first thing a very intelligent officer said to me was: "If we can get the mastery of the air and the superiority of gas we can break thru the German lines in 1919 without much difficulty." His concrete suggestion was that Mr. Ryan, the head of our aviation service should call a conference at once of the Allied Aviation Ministers, who should then summon in consultation the flyers at the front, who naturally knew most about what was wanted, and then formulate an Allied plan to produce the necessary planes. He would also have a similar

BY HAMILTON HOLT

procedure taken in the gas branch of the service.

I was naturally anxious to visit our aviators at the front and see for myself whether the disquieting reports which I had heard were exaggerated or not. Accordingly I was very glad that Lieutenant Parks arranged that my first day at the American front be given over to visiting two of our aërdromes in the Toul sector. I found them situated the usual ten miles or so back of the line, out in the open country. Around their broad green fields scarred with the innumerable lines where the ascending and descending aeroplanes tore thru the grass were hangars, repair shops and barracks.

Out in front of the hangars were fighting planes facing the wind ready for instant flight. Everywhere was intense activity. Mechanics were busy testing motors or putting finishing touches on the wings. The mobile repair shop built on an automobile truck was ready to move at a moment's notice to befriend some aviator forced to descend before reaching home. Pilots were standing about ready at the first summons to jump aboard and within five minutes be at the front lines ready to do or die. Never in the history of warfare, I suppose, has there been such a desperate type of fighting as is witnessed every day over the battlefront with aeroplanes. Almost every time battle is given and accepted death is certain for one of the contestants. All honor to the lion-hearted boys who fly to the combat with a smile on their lips and who average but seventy-two hours in the air before death overtakes them!

The first aërdrome I visited contained a battle squadron. Each of the four squadrons America then had on the line were supposed to have eighteen planes and 150 men to fly and groom them. It was fine to see how shipshape everything was. The concrete floors of the hangars were as clean as a promenade deck, and every aeroplane was freshly painted and scoured till it glistened. Each aviator was allowed to have some device of his own choosing painted on the side of his plane and these varied from a Teddy Lear, an army mule or a flying stork to Uncle Sam's red, white

and blue hat within a ring. Some of the hangars were wooden and some were made of canvas, but all were camouflaged. The barracks of the men were as good as anything to be seen in our various training camps at home. The officers in some cases had small private huts, and the mess halls of unfinished pine clapboards and shingles with home-made tables and benches reminded me of a prosperous Adirondack hunting lodge.

The officers were most frank in answering my questions. They all agreed that we had potentially if not actually the finest aviators of any army on the front, but that the general situation was little short of scandalous. They assured me that we had completely and culpably fallen down in the production of aeroplanes. We were actually using French "seconds"—machines that the French and English would not use. Even so we only had observation and fighting planes. We did not possess a single bombing plane. We did not have an American made machine gun to man any plane. We did not even own an anti-aircraft gun.

One of the officers in command told me this astonishing story. "I do not see," said he, "how the situation could be worse." It seems that a year ago last May he paid money out of his own pocket to hire an office in Paris to get things started. He then worked out a complete plan that had the approval of all his colleagues in France to put America on the aviation map, but he could get no help from his superiors in Washington. Even his cablegrams were unanswered. His plan was to have the French Government furnish us with their best machines—those that were demonstrated to be the best in the world on the battlefield—and we were to supply them with certain raw materials for aeroplane manufacture, which we could easily do. In the meantime we could experiment at home with our Liberty motor till we got just what we wanted. But while doing this we would have been assured of an ample supply of aeroplanes from the French. The French Government tentatively agreed to this proposal, and if we had accepted it we would today have had enough aeroplanes on the line to give every one of our idle aviators a machine. But our

Government did nothing. They put all their eggs in the Liberty Motor basket, and then when it was found we could not get them in quantity to the front before the end of the summer we went back to France begging her to help us out of the hole in which our incompetency put us. Then it was too late. France had made other arrangements and all she could do was to let us have some of her "seconds" and these are the ones we have been using ever since. (It would be interesting to know whether Quentin Roosevelt, for instance, was using one of these seconds when he was killed.)

None of the officers with whom I talked expected to get planes in quantity before September if they depended on America. When I asked what should be done by those in authority at Washington a captain replied, "Let them ask the men on the line what they need in the way of ships, motors, guns, wireless and cameras, and then let them learn the quickest way to get them whether from our own or foreign manufacturers. Why, we cannot even get parts for our machines now. I actually had to send to Paris last week to get extra spark plugs." Several of our aviators had no hesitation in saying that the aviation high command in France should be superseded. "They should be sent back in the line, for they cannot organize. They have been in charge for five months and they have reorganized things four times and all they have accomplished is to demoralize the whole situation."

A major told me that "It takes from one to three days to obtain a new pilot when one is displaced. It should take three hours. If an extra enlisted man is needed it takes approximately a week." An officer in charge of an aviation unit said he had never received a single order or instruction from his superiors during the several months he had been in command, and he had had to build the whole unit from the ground up on his own best judgment. This same officer said that many first lieutenants who are doing captains' work at the front are not promoted to be captains, altho he has so recommended. The captaincies are filled from the aviation schools at home by those who have had no battle experience.

Nevertheless, with all these handicaps our boys are doing finely. Since they took over the Toul aviation sector they had done better in three weeks than the French in the neighboring aerodrome had done in the previous two months. They had destroyed a full German squadron and Germany had moved

up an extra squadron to help hold them. "Never," said the colonel, "has such a record been made before."

I was told the French had 2700 aeroplanes in the line, the English 1500 and Germany about 4000. The English have the best reconnoitering machine, the Haviland, Italy the best bombing machine, the Caproni, France the best chasing machine, the Spad, and Germany has as good as any of these.

When I visited later the great Aeroplane Assembly Depot and the large American Aviation Training School back of the lines I saw three of the eight Liberty motors then in France. What fat, ugly, snub nosed, tadpole looking machines they were. But I was told that they were the "real thing," that they could climb altitudes better than anything on wings. A fine looking young aviation instructor told me that when he was testing one the previous evening, two French Spads tried to catch it on a straightaway run and failed. So perhaps, after all, we have the trump aeroplane in the Liberty. Let us hope that it will be produced in jittney quantities from now on.

At the training school field we seemed to have all the training planes that we could possibly use. Indeed, I never saw so many in one place before. At sunrise and sunset, when the atmospheric conditions are most favorable, the sky was almost black with these giant dragon-flies. Altho I was invited at the

fishing villages and an occasional fashionable watering place. For the first time since we landed in France we saw a few women dressed in colored frocks. It was a refreshing sight to see white waists, skirts, stockings and shoes and colored parasols after the deep mourning which was universal everywhere else.

When we arrived at our destination and called at the officers' headquarters, the young American commandant of the station gave us a royal welcome. Altho mess was all over but the dessert, the commander and his officers would hear of nothing but that we should sit down with them while some more chops were grilled and potatoes warmed over. After luncheon we walked across the bridge to the little island on which the aviation station is situated. There we saw the giant aquatic planes with their outriggers waiting at the edge of the sea for the flight summons, and underneath swung the giant depth bombs, the terror of all submarines. The station was originally manned by the French, but our boys took it over in November, 1917. I asked the commander if they had got their first submarine, but he replied that since the Americans arrived the Germans have left that part of the coast severely alone. Indeed, so successful are these squadrons in keeping the submarines out to sea that the Allies are now planning to establish similar stations all the way from the Mediter-

anean to Holland and before many weeks they will have twenty-one of them in operation—ample to patrol the entire coast.

I asked the commander if they had the same difficulty in getting planes that our aviators did up at the front lines, but he said no. They obtained them from the French Government, but that there was some difficulty getting the parts. Indeed, sometimes they could not keep all their planes in commission on that account.

I was interested in seeing a cage of carrier pigeons near one of the hangars and was told the aviators always take one of them on every flight so in case they have to descend into the sea and the wireless is out of commission they can still send a message home quickly. I was also told—tho I suppose I should have known it beforehand if I had reflected—that if an aeroplane falls into the water from a height of over 100 yards the impact will kill a man just as tho he fell on land. The water from that height is as hard as solid rock.

We motored back to our port feeling that these hydroplane aviators are real factors in exterminating the submarine pest.

*The American machine, equip with the Liberty Motor, is perhaps the trump aeroplane*

English aerodromes to make a flight, here I was told that no civilian under any circumstances could go up. There had been too many accidents and the risk was too great.

I had an opportunity to visit one of our hydroplane stations, situated some twenty-five miles from one of the American ports of disembarkation, where American seaplanes perform the double function of patrolling the French coast in the hope of catching unwary German submarines and of acting as the aerial escort of our great armadas that come laden with troops to France. Our motor ride to this United States naval aeroplane station took us along the cliffs and dunes of the sea, thru numerous

# WHAT ARE WE FIGHTING FOR?

*This is the fourth of a series of forward-looking articles on America's aims and ideals in the war, written for The Independent by the leaders of thoughtful America. President Lowell of Harvard University began the series; the second article was written by Professor John Dewey of the Philosophy Department in Columbia University, and the third by Mrs. Corra Harris, the author of "The Recording Angel" and "A Circuit-Rider's Wife." As pastor of the Broadway Tabernacle, the largest Congregationalist church in New York City, Dr. Charles E. Jefferson presents in this article the viewpoint of modern Christianity concerning the war.*

BY CHARLES E. JEFFERSON

© Paul Thompson

Dr. Charles E. Jefferson

**I**N fighting against Germany, we are wrestling not simply against flesh and blood, but against principalities and powers, against ideas and ideals, against conceptions of the state and of the rights of ruler and people. We are grappling with a false philosophy, a philosophy which foundations government on force, measures national greatness in terms of explosives and guns, and presents to the world as the highest conceivable ideal, a nation in arms. This philosophy is known as militarism. It is not confined to Germany. Its roots run deep into the mind and heart of every nation. In every country there are powerful groups under the spell of the military tradition, who revel in the pomp and paraphernalia of military maneuvers, and who make it a fundamental article in their creed that war is not only inevitable, but to be classed among the things that are good. This militarist group is mightier in Prussia than in any other country of the civilized world. It there dominates not only legislation but the entire thought and social life of the people. It is militarism which has wrought the moral degradation of Germany, and has converted her into an Ishmaelite among the nations of the earth.

We are in the war to assist in the overthrow of this philosophy. If war is indeed inevitable and a blessing, a heavenly tonic which the Almighty delights to administer from time to time to a race which would otherwise become flabby and anemic, then preparation for war becomes the supreme business of the state, and rulers and statesmen are to be judged by their efficiency in keeping the sword of the nation sharp. The policy of armed peace is the logical deduction of the militarist philosophy, a policy which has long plagued and disgraced our modern world. Armed peace is not only a burden, it is also a menace. It is a blight on every nation which adopts it, and a constant peril to the peace of the world. It leads inevitably to war. It is itself a form of war. It not only squanders the strength of a nation, but it brings down its moral tone. The human pulse does not beat normally in a world converted into a powder magazine. The human conscience loses its divine sensitiveness when long prest close to rifled steel. The light of

shining armor blinds the eyes to the finer features in the fair face of Justice. Armed peace works havoc with a nation's soul. No nation can keep its mind high and its heart true which devotes itself, in season and out of season, to preparations for human slaughter. Every argument ever offered for universal conscription in time of peace is fallacious except one. When men advocate it as a means of physical culture, they are short-sighted, and forget the plain teaching of history. Look at Germany if you want to see what thoroughness in the way of military drill will do for a people. The German men may have fine chests, but how about their conscience? They may have athletic legs, but they also have hearts which sing Te Deums over the sinking of the "Lusitania." The most disheartening phenomenon in the whole war was the manifesto issued by ninety-three German Intellectuals in the autumn of 1914. No men of intelligence could have issued such a document who had not been brought up under the eaves of a gun factory. It proved the awful degradation which militarism can work even in gifted and highly cultivated minds. When men urge conscription as an instrument for educating the youth of a nation in obedience and respect for authority, they confess that home and school and church have proved a failure. These are the three institutions by which humanity is to be instructed and

disciplined in obedience and courage and sacrifice, and if all of these are recreant to their trust, their government, instead of falling back on the barbaric and antiquated machinery of Mars, should devise ways of assisting the home and school and church in the performance of their proper functions.

The only valid excuse for universal conscription in time of peace in any nation, is that a neighboring nation has it. This is why militarism is such an unmitigated nuisance—it imposes itself on nations which do not want it. Like leprosy it eats up the flesh of the victim in whom it starts, and communicates itself to all other nations which come in contact with it. Germany, for instance, cannot build strategic railroads, and develop Krupp gun factories, and manufacture asphyxiating gases, and drill all her youth in the manipulation of howitzers and submarines, without compelling all of her neighbors to follow her example. European nations cannot do these things without American nations doing them also. All nations today are neighbors, and what one does in the way of military equipment all must do, for otherwise an armed nation, afflicted with megalomania, could easily get the start of the majestic world and bear the palm alone. A gifted and energetic nation like Germany is able by her policy to convert the whole planet into an armed camp. That is what the world is going to be, unless Germany is converted or defeated. The war-lords of Potsdam must be taught once for all that war does not pay. Germany must be so mauled and mangled that she will be cured of the silly notion that war is either beautiful or beneficent. Germany has had her head turned by success in war. Frederick the Great was a successful robber, so also was Bismarck. Germany has developed a taste for looting. She looted Denmark in 1864, Austria in 1866, France in 1871, and now she is out for loot again. Should she succeed, her belief in the divine right of looting would be deepened and confirmed. In a few years she would start out to loot again. With Germany triumphant, every nation, including our own, would be driven forthwith to elaborate preparations for the next war. With Germany defeated, we can proceed to the task of getting civilization on a sounder basis. We can devote ourselves to the organization of the world. This, then, is what we hope to get out of the war, not territory, not military glory, not indemnities, not the sweetness of revenge, but emancipation from the deadening tyranny of military drill, relief from the grinding burden of huge military and naval establishments. We are fighting for liberty. The Liberty Bonds are well named. We are fighting to get our neck out of the galling yoke of armed peace. We are fighting to put an end to the whole colossal foolery of the cult of the mailed fist. We fight not only for ourselves, but for all mankind.

But let no one imagine that this freedom is going [Continued on page 255]

# THE DOMINIE "DOWN THE LINE"

*This is Mr. Stidger's second article to appear in The Independent. This week he tells the story of a Y. M. C. A. secretary who dragged his wounded colonel to safety while shells were bursting all around him. At least, that is what the interview was supposed to produce, but the secretary decided otherwise. Mr. Stidger is himself a Y. M. C. A. worker in France.*

THE news swept over Paris like wildfire thruout "Y" and army circles. The enemy was not far from the great city and every detail of the battle the day before at Chateau Thierry was eagerly devoured, for the fate of every man in the city depended upon the outcome. News had been pouring in of heroic stands made by the American troops, especially the Marines. Men had been mentioned by name. War honors were imminent for many. Then came the news of the newspaper reporter who had been caught in the sweep of an advance and who had gone "over the top" with the boys to win a strategic village. But of all the stories that came out of this week's dramatic fighting stands out in high relief that of how Dominie Clifford dragged his wounded colonel thru a stubble field for four hundred yards to safety, crawling with shells bursting all around him, with a gas mask on part of the time, and with rifle bullets coming so close that several went thru his clothes.

I was told to see him and have an interview; that he had suffered a severe enough strain and a wrenched back in dragging the colonel; that he had been brought back to Paris in an ambulance, and that he was now stopping at the Enlisted Men's Hotel.

"That's where I am staying. I'll just hunt him up and make him have dinner with me," I said to my chief.

I asked the hotel clerk for "Dr. Clifford" and just then he stepped into the lobby.

"Here I am," he said with a grin.

And there he was, a little, gray-haired man about fifty-five years old, with a Scotch twinkle in his blue eyes and a weary look about his face. You could see that the man had been thru a severe strain. The cane with which he walked was bandaged with tape in several places. I later learned that on the very day that he had rescued the colonel two bullets had gone thru the cane while he was walking along a camouflaged road attending to his duties. Yet he did not think that this little matter of two bullets coming so close was worth mentioning to me. I found that out later from a soldier.

He blushed when I told him what I wanted. "Interview me? What for, my boy?"

And the way he asked it made me feel that perhaps, after all, I had made a mistake in the man; that perhaps I had gotten the name wrong; for to be frank, he didn't look much like a hero to me. And evidently he himself didn't think that he had done anything worth talking about.

BY WILLIAM L. STIDGER

"Yes, I was sent here to interview you."

"They must have made a mistake. I haven't done anything," he said with perfect sincerity.

But just then a representative of the Associated Press came up to the desk and said to the clerk, "Is there a man registered here by the name of Clifford? I have been sent to get an interview from him."

"There, sir. That settles it. We've got you cornered and you can't get out of it," I said to him.

He still seemed confused about it all, but he finally consented to have dinner with us.

We were no sooner seated than he started in on his boys, the Marines. He had been with them on the front lines for six months. He used to know them back in the West Indies, where he was a missionary and in fact had found one of them, right down in his "outfit" near Verdun, that he had known in the West Indies. He wanted to talk about his boys, but it was a stevedore job to get him to talk about himself. He just naturally, and simply, yet with great subtlety, evaded that.

"Why, those Marines," he said; "they are naturally the finest fighting men in the world. That boy from the West Indies; I must tell you about him."

Then he went on to tell of about how ten years ago, one evening he was walking down the streets of a little town in the West Indies where he was a missionary. He had on white duck clothes. On the way to the post office he bumped into three drunken Marines and just as he came up an "M. P." sighted them and was about to arrest them. The good Scotch missionary knew that that would mean a severe punishment, so he said to the officer, "I will take care of these

boys." So with the boys hanging on to him, dirtying his white ducks, he took them to their boat and put them to bed. Then he kept in touch with them, especially with one of them. This one was one who needed him badly, for he was a hard drinker.

The boy braced up while he was under the missionary's care down in the islands and then he left and for ten years the good doctor had not heard of him. Then came Verdun in June of this year. The doctor, according to his own story, which he was more eager to tell than how he had dragged the colonel off, was standing behind the counter of his canteen one evening when up staggered a Marine.

Between hiccoughs, with bleary eyes staring up at the good doctor, he said: "Hello, ole fren. You don' know me, do you?"

The doctor admitted that he didn't remember him.

"So thash way yu' forget yer ole frens, ish it?" the drunken Marine said, half humorously but with real affection in his voice.

Then he continued, as the doctor looked mystified, "Shay, don' you remember that guy you got to shign the pledge back in ole Wes' Indies ten years ago?"

Then the doctor remembered and once again began his patient effort to save the soul of a common Marine in whom he saw something worth fighting for, even in those perilous days when a man might be in eternity any hour. In a month's time, under the dominie's care that Marine had the two stripes of a corporal and bid fair to win another.

And it was this type of experiences that the good Scotch missionary preacher-Y. M. C. A. secretary wanted to talk about rather than his own heroism, in spite of our efforts to drag out of him the story for which we had come.

By Pross Illustrating

"Why those Marines are naturally the finest fighting men in the world"

"Then there was Van," the doctor said. "Day before yesterday at Luzzy I met Van. I have been trying to help him quit cigarets for months, but the poor kid just couldn't do it. I come on him lying in the corner of a fence wounded seriously. He wanted a cigaret. I knew it wouldn't hurt him, so I lit the first cigaret that I've lit in forty years and put it in his mouth. I don't know as I ought to have done it, but I just naturally couldn't go by and leave that kid o' mine hungry for a cigaret while he was a-waitin' for the ambulance. Do you think I did right?"

"It would have been a crime if you hadn't done it," I said to him.

"Van looked up," said the doctor slowly and with tears in his eyes, "Van looked up at me and said, 'Doc, I know how you hate 'em and yet you are big enough to light a cigaret for me. God bless you, Doc, and if I ever get well and get my strength I'll quit 'em, so help me God!'"

"Do you think he will?" I asked.

"No," said the doctor.

"I buried him the next day."

Then we tried again tactfully to lead him back to his heroism, but he evaded that part and said, "I must tell you about the trick the boys played on me."

"One afternoon when I was out they stole my coat and my cap and took off all of my Y. M. C. A. buttons and put Marine buttons in their place. I knew it was against the rules to wear them, but when I came in I didn't notice it and went to the officers' mess with them on. The colonel calls me 'Padre,' the major calls me 'Chaplain,' and the boys call me 'Doc,' you know," he said, smiling.

"Well, the colonel looked at me funny like and he said, 'Well, Padre, I see you've joined the Marines for sure now, and have the buttons and all, right with you.'"

"I was embarrassed and said, 'I'll go home, sir, and take them off. I didn't know they were on.'"

"Who put them on, Padre?"

"The boys, sir."

"Well, if the boys put them on they want them on, so on they stay," the colonel said to me."

Then he told us about the last communion service. "The boys themselves asked for it. They knew the big fight was on the next day and they asked if we might not have a communion service. I went and got some of that 'Van Rubbish' as I call it; the French call it 'Vin Rouge,' and it being the best we could get, we had our communion with it. I told the boys what we were going to do and said that any who did not want to partake of the Lord's Supper could leave. Not a single soldier left."

"I took note of them and 9 Catholics partook, 13 Methodists, 3 Christian Sci-

entists, 9 Baptists, 3 Lutherans, 3 Congregationalists, 2 Episcopalians, 1 Hebrew and 23 who did not profess any religion. Five of these took a definite stand for the Christ in that meeting. The next day most of them were dead."

He was subdued for a few minutes and we couldn't get him to talk. He was

Marine Publicity

Some of the "first to fight" are here shown working with the poilus

thinking of those dead boys of his. Then he reached into his pocket and pulled out an envelope. Reaching into the envelope he pulled out a five-dollar gold piece.

I took it in my hand and waited for the story, for the moment forgetting even myself that the old fellow was still evading his own heroic deed.

"The boy that gave me that I saw just before the big fight. I passed him as he went down under the camouflage into a communication trench. He said, 'Doc, got any cigarets?'"

"I had tried to get him to stop smoking, but couldn't resist the desire to give him some. It might be my last chance to serve him. I pitched him a whole package."

"Thanks, Doc; you're a good scout." Then he came back, handed me that five-dollar gold piece and said, 'Doc, take that. If anything happens to me, send it to mother.'"

"Did he get out all right?" I queried anxiously, for I knew that only a few of the boys who had taken that strategic village had gotten out.

"I am sending the gold piece to his mother this afternoon, along with a letter telling her of his heroic death," he said quietly.

"How did he die?" we both shot at him.

"He died in a strange way. He had been in the thick of it all morning, right down in the front lines where the shell fire, gas and rifle bullets poured continuously and machine guns swept the parapets. Then there was an 'over the top' order. He happened to be near his major when they went over. Halfway across a field his major was shot down

and dropt in an open field, wounded. For an hour the boy lay there between his major and the machine gun fire protecting the officer with his young body, unscathed. The major, appreciating his service, but knowing that he was bleeding to death, sent the boy back for stretcher bearers."

"Why, the boy will surely get the medal for that," I said.

"He would have, but he was killed on the way back," came the answer. "It was this way."

"The lad made his way thru a barrage back across the field, thru the little village. Just as he was skirting the edge of the village he heard the whine of a shell. He jumped for a nearby dugout. He made it, but a fragment of the shell struck his cartridge belt and a dozen of his own bullets penetrated his body."

"Yes, he would have received a decoration undoubtedly; the major would have seen to that, for he was rescued later and almost the first thing he asked about was the welfare of the lad who had lain between him and the machine gun fire, and when we told him what

had happened to the lad he sat down and cried."

"But what about your own story?" the reporter asked a bit impatiently, I thought.

The old preacher paid no attention to him, but went on to tell us about an experience he had had in going down into the trenches the night before he had dragged the colonel off.

"It's no fun for an American boy to be on patrol duty down close to the lines," he said. "The last night I was there I went down to say hello to the boys. I was feeling my way along the sides of the communication trenches. It was pitch dark and misty. Every sound cracked like a gun. Suddenly I heard a 'Halt! Who goes there?'"

"I replied, 'A friend.'"

Then the old doctor chuckled. "That boy was so relieved to know that it was not a boche and to recognize my voice, that he whispered, 'Oh, come on, Doc. I'm glad it's you,' instead of making me advance and give the countersign."

He seemed determined not to talk about his own stunt and I could see that the reporter was fidgeting in his seat. We had long since finished the desert and he wanted the old man's story. These other things couldn't be put over the cable for a story. Dragging the wounded colonel off was the news story. That was worth a cable. That other stuff, in his eyes, wasn't big news. But I was beginning to think, as the doctor evidently believed, that after all he was giving us the real story; that of how he had gotten into the hearts of those Marines and had served them until they had taken him into their hearts.

But the non- [Continued on page 268]

*Press Illustration*

## TIME FOR CHOW

*Our boys in France have taken their American appetites along. Line forms here for bread and soup. Meat and potatoes further down*

## IT'S EASY TO GET WELL HERE

*American Red Cross Hospital No. 21, at Paignton, England, is one of the largest and most beautiful yet erected for wounded soldiers*

**KEEPING FIT**

*Plenty of outdoor work keeps our nurses in good health*

**HEALTH GARDENS**

*As soon as they are strong enough, the soldiers are taken outdoors*

**ST. GEORGE'S WARD**

*These two pictures of the ward give some idea of the size of this hospital. The rooms are made as attractive as possible, and everything is done to make the wounded happy, and to take away the hospital atmosphere. The alert expressions on the faces show that their minds are not on themselves. The photograph at the left is of Capt. H. Frost, chief surgeon*

## THE POILU AS HE SEES HIMSELF

SKETCHES  
DRAWN BY LIEUTENANT JEAN DROIT, OF THE FRENCH ARMY

### THE RIFLE GRENADEER

*He meets the need for a weapon between the stationary heavy trench mortars and the missiles of the hand grenadier*

### THE OBSERVER

*The quiet of the desolated plain thru which the enemy trenches run does not deceive the observer. He knows that at eleven o'clock soup trains pass by crossing No. 131, and that a stranger has observed our lines, for he showed himself to the waist, which no trench observer ever does*

### THE MACHINE GUNNER

*Concealed among the grasses on the level of the parapet and masked by the defense entanglements, the machine gun swings its slender neck of dull metal. In the murderous warp it stretches across the field the bravest of the enemies must meet death*

### THE STRETCHER-BEARER

*Between the first lines, covered by thick smoke clouds, and the first-aid posts there is constant coming and going. The path followed by the stretcher-bearer climbs over the hill to a field pitted with shell holes. There it is lost in a chaos of flying shots*

### THE VOLTIGEUR

*The last representative of old-time infantry; for him suffice the rifle and the spade. He flits from place to place, takes night-guard duty, and fights incessantly. The Voltigeur accompanies advanced grenadier parties and sometimes serves as their ammunition runner; whatever his duties may be he acquits himself with credit*

# JEAN AND PIERRE SEE SAMMY

*The following extracts from the compositions of French school children are absolutely authentic and were sent to us thru the courtesy of Captain David T. Mason, of the Tenth Engineers. While in south-western France he became acquainted with a village schoolmaster who asked his pupils to write without preparation, compositions on this subject: "American soldiers have been in our village for some time. You have observed them. Describe one of them. What interested you in their work, and in their habits? Write your personal impressions." Here are some of the results, letting us see the American soldier in France, as he is seen and appreciated over there.*

THEY are all fine men, tall, large shoulders. I know one, a big fellow. He has a scar on his right cheek, which was made by a horsekick. He has a rosy face, long hair, carefully arranged. His feet are small for his size. He has a sweet tooth. He is gay. He is good. He eats chocolate and sweets. There are some who going on an errand near their camp I met him sharing his chocolate with his comrades. Next Sunday I was playing at spinning-top with my comrades. He was looking at us. My small brother had no spinning-top. He gave him two cents to buy one.

The Americans are polite. When they shake hands, they bow down their head a little. Before entering a house they take off their hats, and wait till they are told "Sit down."

They have good discipline; no fault is left unpunished. They are more daring than we are; they do not fear expense.

JEAN LABERIOTE.

I know one more particularly. He is of ordinary size. He has a fine face, round cheeks, blue eyes. He likes to laugh at others. He is intelligent. He has got the bad habit of smoking and chewing tobacco. He is fond of sweets. He bathes very often.

The Americans have been very good to France, to come to help her to fight the Germans.

JEAN GAITS.

The Americans are generally very clean and very polite. They also like sweets. They are always eating chocolate and sweets. There are some who like raw eggs mixt with chocolate and milk, or with beer. They do not cut their bread as we do. They put it on the table and cut it as with a saw. Every morning they wash thoroly. They wash their teeth after all meals. They have leather gloves to work. They smoke and like alcohol.

The Americans came to France not for their own interest but in order to help us. And so we have affection for them. They have at the front one million men who will inflict great casualties on the Boches; meanwhile more yet come to join them by the sides of the English and French.

FRANCIS LOUPIEN.

The one that I know is tall, well built. He is very amiable and kind to children. Whenever he meets one on the road, he will stop his horses and take him along.

He is a horse driver. When it is raining he does not care, he will then whistle with all his might.

ERNESTINE CABANNES.

The Americans are very courteous. They came to save France, to save right and liberty. America rose against the despotism of Germany.

FERNAND LACOSTE.

The American soldiers are always laughing. They are playful and funny. They remember Lafayette and Rochambeau. They shed their blood for France.

GABRIEL NINOSQUE.

They are clean and polite. They often give us good examples and good lessons. They have every thing necessary, horse-wagons, automobiles, trucks, bicycles, motorcycles and some kind of motor with a sort of "bath-tub."

ANDRE PEDEMONOU.

They like sweets very much. They are clean; they wash all their body with cold water. They are very polite. They do not have the same religion as we have, but it does not matter, they are free to practise the one they choose, or none. I saw them put up their camp when they first came here; some were pitching the tents, some cutting the fern and others leveling the ground. They had soon put up a kitchen. Their tents have floors. They were quick to place a shop and a forge for their 300 horses.

CAMILLE DUBOS.

It is magnificent to see this country place herself by our side to help us to fight for liberty.

ROGER BES.

I have observed them well. Most of them are close shaved. They are almost all tall and large fellows. They have quick eyes. They are polite, but some of them are great drinkers. The Americans are very smart. They do almost everything with machines and horses. They are up to date in everything.

ANDRE PROUSTEY.

Their tents are waterproof, and well closed. They must be quite at home there inside, it must not be cold for them. They made barracks of boards. Over one of them waves the "Star Spangled Banner." They are polite, pleasant, desirous to serve. But some of them have the bad habit of blowing their noses with their fingers and of drinking too much. It seems to me that they were courageous to cross the seas, running the risk of being sent to the bottom by the submarines, to come to help us. They want to make safe our endangered freedom, and the liberty of the world.

BERTHE SUBERVILLE.

I have noticed one more particularly. He is lodged in the house of the school with some others. He is small, blond, has a moustache. His face is often cheerful, and has a broad smile frequently. He called my comrade Gaits: "Square-headed Boche," because my comrade, he says, has blond hair and wears spectacles like the "Boches." He

told us his father was a Spaniard, and his mother French. Having no liking for the Spaniards he became an American citizen. I saw the American soldiers at their meals. It is very funny. They stand in a long line and laugh aloud. When their meal is over they start singing. Some of them are very fond of Cognac and Champagne, of which they very likely have a great deal in their country.

PIERRE LOUPIEN.

The one I have noticed is close shaved and beardless. He has a fine body. He is tall and slender. He wears nice spectacles. He seems to be energetic. On his coat, very well made, he has a yellow belt which passes around his waist, and another over his shoulder with a case for the automatic pistol. He is an officer. He is called Captain —.

THERESIA LABATUT.

They all work. Some place the decauville (railway) rails; others drive the horses, which haul the big trees to the station; others drive the trucks which bring the supplies. There are some who bring the mail to the post office, and fetch it on motorcycles; and still others transmit the orders given by the officers. Some do the cooking, and others wash the clothes.

They are fighting at the front by the sides of our dear soldiers. They help to support the hardships of this war and take their share of them. Let us be very grateful to them.

ALICE DUPHIL.

The American soldier has a great love for his family. He always speaks of his mother, of his father, brothers and sisters. There is one who comes to my house often. They are jealous among themselves. When one of them goes in a house to learn French, if one day he finds another fellow in that house, an American soldier, he will not come back any more.

MATHILDE LECOMMERES.

The work of the Americans is certainly a curious one. I saw them raise huge logs with large pliers, as easily as they would have moved a straw. Their furnaces for their kitchens are half in the ground, in order not to waste any heat. What struck me especially about the American soldiers is their cleanliness. All of them are tall, healthy and strong owing to their hygiene. Their teeth are very white; and not to soil their hands they put on gloves even at work.

Another thing I admired also, is their politeness. France had the fame of being the most polite nation in the world. We have often heard and read about the French courtesy. Is France going to lose her rank among the well-bred nations?

I like the American soldiers who came to help France. I like the Americans who came here to defend justice and right. I admire the Americans who remembered France, and who came to her in spite of the many dangers.

Long live the United States of America!

RENEE BOURTHE.

# A VISION OF VENEZIA

(In War-Time)

BY ROBERT UNDERWOOD JOHNSON

From Asolo's unlifted land  
I watched with pensive pain  
The Evening's soft and shadowy hand  
Caress Venetia's plain,  
To where Piave's rushing sand  
Defined the Teuton stain.

Above the wide-horizoned heath  
Nine-towered Treviso loomed,  
And Padua's seven domes, whereneath  
Her gentle saint is tombed;  
While, like a lily from its sheath,  
San Marco's tower bloomed.

Sweet-syllabled, the vesper bells  
A maze of music wound,  
From towns whose very naming tells  
A rosary of sound,  
While grapes and lingering asphodels  
Still perfumed all the ground.

And, last, I heard Bassano's toll  
(That drowns the Brenta's roar)  
And there was something in its roll  
Was never there before:  
A tocsin to the patriot soul  
The Western breezes bore.

It was as tho the bell were sent  
To wake the sleeping land,  
And cry "O Italy, sore-spent!  
Now let thy legions stand;  
No farther inch of fair content  
Yield to the spoiler's hand.

"Look on thy beauty and be proud  
As partner of God's plan,—  
Half by His mighty thought endowed  
And half by Him thru Man;  
The Alps, whose incense is the clud,  
The temples Love began.

And as, at dawning of the night,  
The pageantry withdrew,  
From Po to farthest Dolomite  
Their anthem rose anew:  
"Fight ye for Freedom and for Right,  
But fight for Beauty, too."

"Long shall outlinger human shame  
The snow-clad eminence;  
But these that breathe His holy name—  
The spirit's monuments—  
Shall He who wrought with thee their fame  
Not share in their defense?"

Then there appeared with robe and crown  
A host in heavenly guise,  
As all the Angels had come down  
From Dante's Paradise;  
The thought of some Italian town  
Gave glory to their eyes.

The sunset pierced them thru with gold  
And many-colored fire,  
Till they as beautifully were stoled  
As Fra Beato's choir:  
A cloud of witnesses of old  
Called mortals to aspire.

And while I wondered at the sight  
I heard a soft ado  
That, as tho chanted by the light,  
To this clear anthem grew:  
"Fight ye for Freedom and for Right,  
But fight for Beauty, too."

And as they sang this high command  
In evening's growing shade,  
The Eastward pointing of each hand  
A myriad gesture made;  
I turned, to see the skyey land  
Was all in rose arrayed.

The Alps, the clouds, the near lagoon,  
Prolonged the heavenly scene,  
And the last breath of afternoon  
Lit up the brown lateen,  
Where lay, impatient for the moon,  
The Adriatic's Queen.

## A SOLDIER'S PRAYER

BY H. F. ANDERSON

FIRST LIEUTENANT, F. A. R. C., AMERICAN EXPEDITIONARY FORCE

Dear Lord, I dare not ask that Thou  
Be watchful over me;  
For Thou art Master of us all,  
Hun and Briton, Turk and Gaul,  
And over each Thy mantles fall  
Of love and charity.

Dear Lord, I dare not ask that Thou  
Be sparing of my life:  
'Twere vain to think that for my sake  
Thou wouldst a Great Exception make:  
An equal chance each one must take  
Who ventures in the strife.

But, Lord, dear Lord above me, grant  
This boon to me, I pray:  
Whatever fate may wait for me,  
Whatever death in store may be,  
By Thy own Son, I beg of Thee,  
Be kind to those who stay.

Bless Thou my mother, with a love  
Beyond our mortal ken:  
Shield Thou my wife from every ill;  
In her sweet heart, dear Lord, instil  
Thy trust that she may read Thy will  
And live in Thee. Amen.

# THE LONG ROAD TO THE NEAR EAST

Mr. Williams was for three years instructor in Syrian Protestant College and for the past two years special correspondent to the "Christian Herald" for China, Japan, Russia, Armenia and Turkestan. For three months, ending February, 1918, he was the only American relief worker in that part of Turkey captured by the Russians. Mr. Williams speaks with first hand knowledge of the conditions in the Near East, and the answer he makes to the Near Eastern Question is the result of close contact with its suffering people.

BY MAYNARD OWEN WILLIAMS

"The Kurds are not to blame," replied the Governor. "They are ignorant and know no better. You heard how Kamil Beg described the methods by which the Turks have kept his people poor and uneducated and then have used them as butchers. We cannot hate such dupes. Their condition is as bad as ours."

"When leaders attempt to carry out such cruel measures as were decided

while giving churches to the Holy Land. Armenia's enemy to-day is not the Kurd, but the Kaiser."

Germany's Pan-Turanian dream seems to be materializing. Defeat on the western front will once more drive the German war-lords to seek victory elsewhere. Aside from a small band of Armenian patriots in the Erivan district, there is no definitely pro-Ally force from the Bosphorus to the English armies in Jerusalem and Mesopotamia. And even those forces will be endangered if German propaganda among the Tartars, Persians and other Moslems is successful, as it gave promise of being when I left the Caucasus last April.

The spirit of revenge for what the Turk has done, the desire to save the remnant of the Armenian race, and the determination to crush forever a Pan-German movement which might reach India itself—all seem to cry out to us to declare war on Turkey. But big, rich and brave as America is, she is unable to wage such a war at present. We have no men ready to make a declaration of war effective and France and Italy will need all the men we can train for months to come.

The dash of American arms has never been felt in the Turkish theater of war. But the power and humanity of American missionary and relief work has made itself felt for decades. If we declare war on Turkey, we can send force there only by lessening our shipments to France and Italy. But American relief work in Turkey would stop at once. During months of "paper war," new suffering would ensue, for which our rash act would be immediately responsible, and we would lose all our influence among a wavering people.

American missionaries are credited with keeping us out of a war for which in years past they have eagerly exhorted. But it is not fear that their lives will be taken, their relief work stopped or their property confiscated that makes them urge patience and forbearance now. It is the menace of the German army. They hold to the principle of war that the "army of the enemy is the objective" and they recognize Prussianism rather than Kurdish brutality as the power which must be crushed.

We cannot yet declare an effective war on Turkey. But we may be sure that every Allied success on the western front will be reflected in the thoughts and plans of the Near East—home of opportunists. Persians, Tartars, Georgians, Afghans and Turkomen are judging the safety of their plans by the fortunes of war in France. But the west-

[Continued on page 23]

"WHY are you Armenians, who have suffered as no other people have ever suffered, so free from hate for the Turks and Kurds, who have tortured and massacred an unoffending but progressive race?"

Governor Hambartsoumiantz and I were returning from the mass of ruins that had once been Ardjesh. On both sides of the road, mounted guards covered every rise of land for a front of more than a mile. Trudging along the road, smiling and happy, were a hundred soldiers of the newly organized Armenian army, who had come out to rescue us from a party of ambushed Kurds beside a narrow ford.

The day before and that morning, he had had most friendly conferences with several powerful Kurd chiefs. These picturesque but bloodthirsty henchmen of the Hun had come in only after hostages had been sent to their camps. Yet their conference with the leader of the Van Armenians was marked with perfect confidence and good will.

It was dramatic, that strange meeting in Ardjesh. Over in the city, with its skeletons of former homes showing their eyeless sockets to the heavens, were four great pyramids of human bones—crumbling monuments to Turkish efficiency under German direction. The people laid down their arms in return for solemn promises of immunity from massacre.

"Save your bullets for foxes," said the commander, and only a handful of half-crazed women and children escaped the inhuman slaughter which wiped out ten thousand lives.

All around us, that February day, were thousands of Kurds, starving but well armed, who restrained their blood-lust because it was understood that the Armenians had powerful and interested friends. It was the last good opportunity for compromise or conference. Two days later, the Armenian army at Erzerum retreated in a panic before the Turks. Today, no one knows but what another massacre has been incidental to the passage of a Turkish army across the face of Armenia from Erzerum to Tabriz.

Governor Hambartsoumiantz, of Van (left), and Kamil Beg, Kurdish chief

upon, the men who do the dirty work have to be given a free hand. The officers took the young women, but the other loot fell into the hands of the common fighters. The man we are after is not the untaught savage, trained as a brute, but the man who sits behind a polished table strewn with maps, and finding a spot where resistance to his greed for world-might may develop, says, 'Wipe it out!' Abdul Hamid was our first enemy. The Young Turks, jealous of Armenian worth, were next. But the arch-fiend of them all is the man who planned this thing years ago,

Tabriz, Persia, taken by the Turks, who sacked the American mission

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

I do not mean to criticize the conduct of the war, but it sometimes seems to me that the methods of warfare are somewhat conservative and lacking in originality. Now if I were managing the business—tho I do not mean to force myself upon the Administration—I should see what could be done in the way of enlisting new allies, not merely of the human race, but of other branches of the animal kingdom. The primitive man before he had learned his a b c's had trained the wild horse to carry him against or away from his enemies and the wolf to follow the trail and fight for him. Has not the modern man brains enough to do as much? Why should we think only of machines to counteract the new machines of war? Since our foes have carried the war into the air and the sea why not meet them with the denizens of these elements?

We have hitherto treated the whale as an enemy. We have hunted him down and almost exterminated him. Would it not be better policy as well as more Christian—so rarely do these coincide—to make a friend and servant of the whale? A whale is bigger than a submarine, and a merchant vessel convoyed by a school or, better yet, a university of whales would be quite immune from attack. Sharks might be trained to bite off periscopes and sword fish to puncture U-boats or destroyers. We have all seen pictures of sword fishes piercing wooden boats but of course the boney weapon would have to be reinforced with a chrome steel point to penetrate armor plate. Sea lions might be trained in retrieving torpedoes. Don't tell me that they could not be taught this. I have seen them playing ball, balancing wands and setting off fireworks which I could never do if, like the sea lions, I had no hands. A few hundred crocodiles brought from the Nile and set to crawling up the Dardanelles would soon have cleared the strait of contact mines and as for the electric mines a trained gymnotus would set them off.

Best of all would be the octopus. If we could get one of the same species as Hugo used in his "Toilers of the Sea" we could do wonders with submarines, propellers, torpedoes and mines. How it would cheer the British up to see an octopus coming into the mouth of the Thames with eight U-boats, one under each arm.

For aerial warfare we could make use of the birds. The American eagle has hitherto done nothing for the country that has so honored him. Why should we not go hawking for Zeppelins with eagles? Their claws, armed sharp with steel spurs, like fighting cocks, would make short work of a silk gas-bag. Owls and bats might be employed as sentries for night work, as they would be better than watch dogs since they could pass silently thru the night air. The rose is unfortunately extinct but a condor ought to be able to drop bombs with a little practice more accurately than the German aviators have shown in British air. If the parrot could be croak with the carrier pigeon we could transmit oral messages. Possibly the parrot could be trained to perch in the enemy's camp and pick up conversation, a sort of feathered dictograph. But very likely this is chimerical. Parrots may not be discreet enough for espionage.

Insects, altho they are the most tractable

and best organized of living beings and have been held up to us as models of intelligence by Solomon and the socialists, have never yet been enlisted in the service of man. If this could be accomplished they would be of the greatest advantage. An army of Colorado grasshoppers sent into Germany next summer would clean off every green thing and bring the war to an end in the fall. They could also stop trains by greasing the tracks. I have seen them do this in Kansas. A swarm of hornets or wasps sent into the enemy's trenches might do as well as gas in clearing the way for an attack. Fireflies might be used for night signalling. I have often tried to read their dots and dashes on a summer night but not knowing their code I was never able to interpret their signals. If termites could be induced to eat out the insides of the woodwork of the barricades or of bridge timbers so they would collapse at a touch it would be a valuable aid.

Ever since men have been fighting one another they have made use of the animals. Horses for cavalry and chariots, sometimes elephants and camels, have figured in warfare from the earliest historic ages. Of the carnivora only the cheetah or hunting leopard has proved serviceable. The Spanish tried to defend the city of Panama by stampeding herds of cattle against the attacking British. But with modern educational methods, say the Montessori or the Gary system, it ought to be possible to do more in this line than the ancients were able to do. Moles and woodchucks would be very serviceable for tunneling. Beavers might be sent out at night to gnaw down the posts of the opposing entanglements. If all we read of caprine omnivorosity be true, goats could be set to chewing up the barbed wire. Giraffes might be utilized for a walking wireless or perambulating periscopes. Horses have not been of much use in this war so the Australians who are expert riders have not been employed to the best advantage. Why not, then, mount them upon the only large quadruped indigenous to the island? A squadron of Anzac kangaroo cavalry leaping trenches would strike terror to the Hunnish heart. The pouches of the kangaroos would be convenient for carrying cartridges.

I could suggest other equally promising plans for winning the war—but what's the use? Perhaps not one of those I have here specified will be adopted, for a hide-bound and red-taped bureaucracy pays little heed to the advice of outsiders. I do not ask compensation. I do not expect gratitude. But in giving freely to my country the results of my excogitations I have the secret satisfaction of feeling that I am doing my bit.

The American papers are using some rather vigorous English just now in regard to the Germans, but our lack of practise in vituperation puts us at a disadvantage. If we could only resurrect Heinrich Heine it would put some ginger into the press campaign. What leader, writer or paragraphist could beat this:

I could not trust this Prussia, this tall, pietistic hero in garter, the lieutenant with the capacious maw, carrying a corporal's staff which he first dips in holy water before bringing it down on your head. I had great misgivings about this philosophic, Christian, military despotism,

this medley of beer, deceit and sand. Repulsive, deeply repulsive to me was ever this Prussia, this pedantic, hypocritical, sanctimonious Prussia—this Tartuffe among the nations.

Somehow Heine has never been so popular in Prussia as elsewhere and many a naïve American tourist has been surprised to find that his well-meant eulogies of his favorite German poet have met with a cold reception from his German hosts.

The librarian had gone out in the afternoon to do some shopping or other important business but she had put the Carnegie in charge of her younger sister, a thoroly conscientious and obliging girl. So when a note came in from a lady saying: "Please send me some cheerful and amusing fiction; I am sick of reading about the horrors of war," the conscientious understudy looked over the index cards and picked out:

Hugo: "The Man Who Laughs."  
Stevenson: "The Merry Men."  
Andreyev: "Red Laughter."  
Wharton: "The House of Mirth."

At a recent examination in English at the University of Atlantis the candidates were asked to "Discuss the composite nature of the English language," and one of them began: "The English language is a vast lake into which countless tongues are continually pouring their contents."

As a teacher once said about a similar sentence: "It is grammatically correct but it sounds strange to the English-speaking ear."

In reply to another question: "What is the meaning of 'galley proof'?" one ingenious student wrote: "It means unusually strong, for only the most enduring men could survive the galleys."

When you listen to an impassioned appeal to turn the rascals out or an attack upon people in power just ask yourself whether you would rather live under the authority of the speaker than the present incumbent.

Ever since the Wright brothers used to get their school ma'am sister to figure out their early aeroplane designs mathematics has been the guide to the navigation of the air. A member of the British Flying Corps exprest this intimate relation of theory and practise in his song entitled "A Gallant Young Airman Lay Dying":

When the court of inquiry assembles,  
Please tell them the reason I died  
Was because I forgot twice iota  
Was the minimum angle of glide.

The author of these verses has since been killed at the front, tho whether it was because he forgot to multiply iota by two the news does not state.

Whenever I get time I am going to write a series of popular novels under the following titles, for which caveat for copyright is hereby filed:

Dolorosa the Sad Book,  
Furianna the Mad Book,  
Villanessa the Bad Book,  
Snoborina the Cud Book,  
Hermione the Fad Book.

Each to his own job. Leave kicking to the mule.

# CONFESSIONS OF A MOTION PICTURE PRESS AGENT

## PART I. NEW YORK AND LOS ANGELES

*Behind the motion picture series is a fascinating, curiosity-inducing reader. Here is a narrative of actual experience that will be found instructive as well as amusing. The author contributed "A Theatrical Press Agent's Confession" to The Independent some years ago. As stated on the previous occasion, we can vouch for his integrity and fairness.*

*The following article is the first of a series of three dealing with the inner side of the picture industry. The other two, which will appear in later issues of The Independent, will tell of the big film corporations, give a summary of past accomplishments and take a look into the future.*

MY entry into motion picture business was made thru a friend telephoning me: "Come to New York at once! I've the biggest proposition in the world's history, and there's a place for you in it." Three days later I presented myself in New York, my wife accompanying me. "It's a motion picture I want you to write about," said my New Boss, "with 11,946 actual scenes, 25,000 actors, 6,000 horses, cost \$750,000, and is unquestionably the greatest dramatic and historical spectacle ever conceived or realized by the mind of man. Mrs. Press Agent," he added, turning to my wife, "beg, borrow, steal, or dig in the old stocking for all the cash you can lay hands on, and buy a better investment than United States bonds, I mean the \$2 tickets for the opening night of our show. Mark my words, those seats will be selling on the sidewalk for \$5 apiece, and you'll become a rich woman."

Strange to relate, everything turned out pretty nearly as the manager predicted, even tho my wife and I were too conservative to gamble in the tickets. The photoplay ran an entire season in New York and earned more than a million dollars,

with all kinds of fancy prices paid for the seats. The manager and his executives moved down from Harlem to more expensive homes near Central Park. We ate in the best hotels, smoked perfect cigars, were interviewed instead of interviewing, and when we journeyed afield were received like nabobs. I devoted myself to the composition of prose symphonies, concertos and sonatas on the manager's lyric theme of "11,946 scenes, 25,000 actors, 6,000 horses, and \$750,000 production." These works were quickly gobbled up and duly printed. I cannot say we were exactly drunk with success, but we seemed to be living in a dream-world just the same.

With the full tide of prosperity ensued a struggle for power among the four proprietors. These were the president of the company, who owned 51 per cent of the capital stock and was nicknamed Brutus from his sulking in his tent when things didn't please him; the producer, a happy, irresponsible genius whom we called Cæsar; the author of the play, nicknamed the Old Gray Wolf, and the daring young showman, my managerial friend, who had carried the spectacle to commercial success.

The Old Gray Wolf carried dynamite about with him in the form of sensational publicity statements, which it was my duty to extract from him if possible and bury in our pigeonholes. The producer-genius, on the other hand, was a human skyrocket of fantastic invention and fancy; on his appearance, we had to shut up shop and win what of practical use we could from the scintillating verbal fireworks. The young manager kept a bunch of written "resignations" handy to fend off the demands and exactions of the other three. The Irish-American office boy called him "The Great Resigner," for it is recorded that in one day he threw up his job no less than

eighteen times! This method of asserting authority by offering frequently to relinquish it, proved exceedingly effective. The amateurish, untheatrical schemes of the other bosses were squelched as they realized that they could not do without the general manager. In the end, he won their entire confidence and built up for them a splendid property.

Six months after the inception of the photoplay, Brutus and some of his friends organized a large "film program" corporation, for which I was asked to do the press work. This was my long-coveted opportunity of gaining a more intimate view of picturedom than a New York run and hearsay information had afforded. As all our productions were to be made in California, I obtained the chief's consent to visiting the picture eldorado of Los Angeles and studying the studios at first hand.

ON my arrival I found Cæsar in the Chinese Quarter of the western city, staging a blood-curdling melodrama with the aid of a dozen Oriental laundrymen and his own matinee idols and heroines. The "Chinks" were having the time of their lives, for violence had long since departed from that peaceful district and it was as much fun for them to play highbinder as it is for an Apache to play "movie" Indian. The next day I sought out great Cæsar's studio for mementos of the extraordinary cinema production that was still playing in the East. The mise-en-scene had vanished, but how about the armies, both human and equine?

"Huh!" grunted a propertyman to whom I addressed my question. "Twenty-five thousand people and six thousand horses, did you say? Feller, take it from me, there might have been a matter of 600 actors on the lots, includin' supers, an' mebbe they was as many as sixty or seventy-five cow-punchers and ponies in one of the big rides. Say, how long you been in the movin' picture business?"

Without committing myself on this point I moved on to the next studio, the headquarters of an ex-blacksmith who had become famed for "stunt" comedies of the hair-raising order. "Honest John" greeted me with hearty Irish handshake and made me free of the works. They were a wonderland in which a child could have wandered happily for days. Every mechanical triumph—the dreadnaught, the howitzer, the submarine, the airplane, the complexus of railroad transport—was reproduced in toy-like miniature. "Close-up" photographer-worked the cameras as the little machines performed the most alarming, gravity-defying evolutions. In other branches of the laboratory, an acrobat jumped off the roof of a twenty-story skyscraper by means of a neat fall from a table to the floor. An aerialist hung desperately to a parachute in mid-air while actually dangling from a steel rod fixed on a platform, with an umbrella cover suspended over him. The beautiful heroine was "thrown to the lions," but without appeasement to their appetites or danger to her, because of an invisible wire barriers that separated 'em.

"Shades of Baron Munchausen!" I remarked to myself. "And then they tell us that pictures never lie!"

On a trip to a third studio I was still more astonished to find an old friend, the former traffic cop at the corner of Broadway and Forty-second street, New York transmogrified into a Wild Western hero.

*Courtesy Famous Players-Lasky Corporation*

Shouting to Indians "Stan dead, there. You're spoiling the show," is the easiest part of the director's job. Sometimes he has to show the heroine how to play her love scenes

He was booted, chapped and spurred, carried a "gun" in each hand, wore a big knife in his belt, a bandanna kerchief around his neck, and his \$50 Stetson sombrero was held in place by means of a leather band passing under his chin.

"How do you like it, Bill?" I asked.

"Pretty well," he replied. "The beer ain't as good as it is in New York, an' the cabarets are poor. Eats are all right, an' the sleepin's fine. This new leadin' woman of ours had me worried some, but the Boss tells the director to give me all the close-ups, an' I guess that'll tune her down a bit. Oh, I'll be in to see you in the Broadway office in a couple of months! They give us a reprieve from this here condemned City of the Angels twice a year, an' we go back East to see what living is like."

Inspection of "cutting" and "assembling" was the next step of my experience, for which I entered a darkened viewing chamber with the director, the editor, and the stenographer who took notes under the light of a tiny electric bulb. As the critical committee saw the inchoate picture flashed on the screen, and ordered excisions here, rearrangements there, and captions or titles inserted in still other places, the note-taker followed them closely. The typed directions were afterward turned over to the cutter and assembler, who scissored and repasted the film and saw to it that additional captions were drawn, photographed and inserted. The film editor—unlike the newspaper man—works in the dark, talks instead of writes, corrects a moving instead of a still object, and indicates the changes instead of personally performing them. Yet just as high a level of skill is necessary. The editor of your picture is equally important with the editor of your magazine or newspaper.

ONE morning toward the close of my stay, I was invited to go out upon "location," as it is called, and view a Mexican battle. The time of starting was officially bulletined as 7 a. m., but in the loose, unbusinesslike methods of direction it was several hours later before the entire caravan got under motion. I amused myself by observing the activities of the numerous open-air stages where no less than ten companies were rehearsing or acting before the camera. The scenario department had placed these ten companies in as many historic eras, each with its own peculiar fashions and settings. At times the work halted and the players and periods would mix, Miss 1915 chatting merrily with a bearded Babylonian monarch and Cleopatra exchanging confidences with Joan of Arc or Helen of Troy. Over in one corner John the Baptist was talking to the Spanish cigaret girl, Carmen, who was blowing smoke rings in his face. Sam Houston and Davy Crockett discussed militarism with the German Crown Prince, gentlemen of the cloth joked grass-skirted ladies from Hawaii, whilst the venerable Don Quixote, forgetful of his Dulcinea, was illustrating the fox-trot with a belle of drawing room comedy. About half past ten a noted New York actor, his face made up in the dreadful whiteness of a clown's, burst forth from his dressing room and called out to all and sundry: "Am I good? Am I good?" He was to be the Yankee star of the Mexican battle aforementioned. His leading lady looked like a pygmy, albeit a very trim and chic one, and I wondered how in the world the pair would "register" in the film as representatives of New York's 400.

The vividly costumed "armie," having departed in the lumbering automobiles about 10 a. m., the rest of us started an hour later by motor cars for the grounds. The lions of the cinema placed me next to an "efficiency expert." He talked all the way out of "overhead," costs and economies—a

Courtesy Famous Players-Lasky Corporation

*The director, manuscript in hand, looks very much out of place in the splendor of this Persian garden (in Los Angeles, U. S. A.). But this time he's part of the picture*

sing-song drivel that bore as much relation to the terrific wastage of film-making as voodoo incantations would bear to the fortunes of war. Happily relieved from him by our arrival at the desert-and-cactus location twenty-five miles out, I turned to watch the Yaquis and Mexicans deploying over the landscape. The director bossed them with a leather-lunged voice reinforced by the megaphone. The head Yaqui was an American actor, much bedaubed with chrome and magenta, but the others were Hopis and Apaches who love to "play savage." On the other side the motley battalion of Los Angeles "Mex" were led by a one-armed Irish-American soldier of fortune who had stolen cattle and robbed haciendas with Villa.

Both sides got away to a flying start, the Yaquis first, carrying everything before them as they shrieked the favorite war cries and discharged the blank charges of musketry against the foe. For running ability I have never seen the "Mex" equaled; every mother's son of 'em could have won a prize in the Olympic races. Later the Mexicans came back and "cleaned up" the Yaquis, the latter performing many thrilling death-agonies in the course of their supposed extermination. The more lively of them, however, would not stay in the picture, they bobbed up repeatedly to watch what was going on; to which the director angrily shouted at them: "Stay dead there! You're spoiling the show."

Between the two big battles the celebrated New York thespian I have alluded to, performed prodigies of single-handed valor, rescuing his inamorata, defending an adobe house against the attacks of the cut-throats, and firing off much ammunition. He seemed to take it all joyously like a kind of picnic, and to this amazing zest in action I attribute largely his popularity with the public. At the end of a perfect day we returned to Los Angeles, the players dispersed, and the film record of the strenuous proceedings was developed and printed. When I looked at it twenty-four hours later, the pygmy leading lady had somehow become a most personable young heroine, and the clown-whitened face of the star was unduly whitened no longer, but just the right complexion of a New York City youth plucked bodily from Fifth Avenue and thrust into the Mexican wilds.

Ten days in Los Angeles! I regretted the

fate that compelled me to leave the mimic world and return to the New York grind. Somehow the tang of the unreal, happy-go-lucky life had gotten into my blood; unlike the ex-policeman actor, I didn't long for Broadway cafes and could have stayed in Madcap Land a year. Yet business sense told me that most of the folk I had met were wilful, spendthrift children. Caesar's studio was run in a helter-skelter, hugger-mugger style that (in spite of his having made the big spectacle for \$110,000 instead of \$750,000, as claimed) boded ill for the success of our new weekly film program. No business hours; no collocation of resources at fixed times and places; "artistic jealousy" of stars that sometimes stopped a production for days together: I had never seen anything like it in my fifteen years' experience of theaterdom. The cinema had sent the actors out of doors and, for the nonce, had given them unlimited resources to play with. They were enjoying the bonanza era as only grown-up children could enjoy it. Perhaps all of us were touched with the same frenzy. Daydreaming of some great future Morgan or Rockefeller that should organize the films, I handed my suitcases, loaded with photographs, up the Pullman car steps and journeyed back to New York.

I had had some inkling of the studio extravagance during my trip to Los Angeles. The directors wanted to make the best pictures, lacked business judgment, and set no limits to the salaries paid. Stage actors who had been getting \$500 or \$600 a week in New York, found that they could go to the coast and reap thousands. An instance was the celebrated lady who received the lump sum of \$15,000, the use of a house and yacht, and all expenses of her stay for five weeks' posing. Not all the stars made good. But they all had to be paid, and this was only the preliminary expense.

The directors-general earned king's ransoms, and were surrounded by a little world of courtiers whose pay bore no relation to hard facts. Costumes, furniture, settings, were shipped in wholesale from New York when they could not be obtained in Los Angeles. The leaders, of course, were the actors, and the merry game went unchecked, as under the terms of the contract the directors got \$40,000 a feature and could spend it as they liked.

*(The second installment will be published in a later issue)*

# INSURANCE AND THE NATIONAL GOVERNMENT

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**A**N interesting situation is possible, tho not probable, of development as the result of the exercise of two powers by the Federal Government.

By those interested in such matters, it is well known that none of the property of the United States is insured against loss or damage due to any cause. As far as my knowledge extends in this direction, that liability has always been carried by the Government. If there has been any exception, I have never seen it noted anywhere. The custom, then, long continued, of itself assuming this liability constitutes one of the powers mentioned.

Since the war began the Government, as is its privilege under the circumstances, has commandeered various private property, the most conspicuous example of which is the railroads. All such property, covered against loss and damage by fire in corporations transacting that business has passed into the custody and control of the Government, and is by it being operated under an agreement with the respective owners.

Some time subsequent to the passing of the railroads into the custody of the Government, the Secretary of the Treasury announced that none of the insurance outstanding on them would be renewed.

This joins the exercise of the two powers to which I have referred. I have described the situation thus created as interesting. To the insurance interests it may verge upon the dangerous. That some prominent underwriters regard the possibilities with apprehension, is clearly apparent.

**I**T is well known in insurance circles that there are in both the House and Senate and among the subordinates in one or two Departments at Washington, men who are striving permanently to commit the Government to a system of state insurance. A number of bills introduced in Congress reveal some such intention. None of these measures go directly at the object, but all of them in one or another way make the United States an insurer. One of them, presumably in an effort at what we may call camouflage, proposes to indemnify farmers against loss through the elements of all "non-perishable" products. The honest meaning of that description is plainly incomprehensible by any straight-thinking person, and it is difficult to evade the conclusion that its employment covers what is sometimes called a "joker."

After carefully considering the matter, I have arrived at the opinion that all these attempts, even if the bills became law, would be futile in the absence of an amendment to the Constitution authorizing the Government to participate in lines of business now the especial prerogative of private persons; nor do I think that the insurance interests feel any apprehension on this score.

The present danger, if there is any, lies in another direction. For war purposes the executive powers of the Government have grown to be nearly absolute, and properly so. The principal business of this nation at present is the waging of war, successful war, against the Central Powers of Europe. All other enterprizes are subordinate and contributory to that business. In the prosecution of that design it is desired by all

patriotic citizens that all the national resources be employed and it is expected that none so employed will be unnecessarily injured.

But we are not to forget that we are dealing with human beings and not with angels. We see coteries of men using the war for the purpose of advancing the particular principles they advocate. We find the prohibitionists using every available artifice, we discover them taking advantage of any war measure, to fasten that sumptuary doctrine in our laws. What they and the leaders of other schools cannot speedily accomplish by direct methods, they will attempt in other ways. Their plain purpose seems to be to use the exigencies of the war to so change conditions during the war as to make their doctrines permanent after the war.

Now, if we carry this idea into the business of insurance we will readily see how easy it might be for the advocates of Government insurance to make progress by using the war to advance their own interests.

**T**HE second large and important piece of private property taken over by the Government was that of the telegraphs and telephones.

If, following the precedent set in the case of the railroads, the insurance on this property is allowed to lapse, the insurance companies will be again deprived of millions of dollars of premiums annually. There is a present demand that the meat-packing industry pass into the control of the Government. Here are additional millions of premiums deducted from the companies' incomes.

Continue that process of first commandeering large lines of private business and then dropping the outstanding insurance and a breach of large proportions will be made in the annual incomes of the insurance companies.

It is an insidious process of emasculation which persisted in long enough is bound to undermine the fire insurance fabric as now constituted.

Excluding the telegraphs and telephones, the insurance on which has not yet been affected, it is estimated that the insurance companies have already lost about \$26,000,000 in annual premiums on property taken over by the Government. This, I should say, is about 5 per cent of the whole amount.

Continue this process with any reasonable degree of industry during the remainder of the war period and not only will the insurance companies suffer the dispersal of a very large part of their business and the disorganization of their working forces, but scores of thousands of citizens who have labored for years as agents on commissions

will be deprived of their occupations and means of livelihood.

Discussing this question in a letter to the agent of another insurance company who had requested an explanation of a statement previously made, Mr. Henry Evans, president of the Continental Insurance Company, the Fidelity-Phenix Insurance Company and the American Eagle Insurance Company, representing combined assets of nearly \$60,000,000, after stating that if the taking of the railroad insurance were all, there would be little to consider, says:

But the facts are that the Government is likely to assume the fire risk in connection with the properties of the telephone and telegraph companies and also all insurance connected with other properties that have come under its jurisdiction. This will apply to many mills, etc., formerly owned by alien enemies now in the hands of the Alien Property Custodian. There are hundreds of these plants. Again, when the Government buys merchandise for the maintenance of the war all insurance is dropped and in this way the insurance of property costing hundreds of millions is dropped out of the market. This property is located in warehouses awaiting shipment.

These subtractions, constantly increasing, are in addition to the insurance carried under marine covers by the Government on hulls and cargoes and employers' liability insurance on workmen in the service of the Government in multifarious capacities.

Continuing his statement, Mr. Evans says:

I am sure that you will see that the outlook is not bright for the insurance business and that if the program now under consideration is carried out it means the death-knell of the American agency system. Aside from this it means that unless the Government builds up rather than pulls down the American marine insurance companies, the merchants in this country will never succeed in securing our share of the world trade.

I am looking at this matter from what might be called a disinterested position, because, while I want to see the companies of which I am president grow stronger and bigger each and every year, still from a money standpoint I know that I can liquidate them today and get more dollars for my stockholders than they can get by selling the stock in the market.

I am doing everything that I can do to protect the American agency system, but I am very sure that I will not have success unless I have the hearty coöperation and help of the sixty-six thousand local agents that are referred to in the interview that you quote from.

**I**F, indeed, there is any disposition at Washington to alter the status of the privately owned insuring structure of the country, the movement will doubtless be vigorously opposed by the states as an aggression on their prerogatives.

I think that in any movement having Government insurance for its object, the established insurance interests will have in the front line of their supporters the insurance commissioners of all the states. Those who have thus far expressed any opinion are against it.

Superintendent of Insurance Jesse S. Phillips recently made this statement after lengthily discussing the subject:

In my opinion it is unnecessary for the Government to engage in the business of insurance. The present, corporate agencies and mutual companies and associations, together with the new capital which will naturally be employed to form additional companies, will be sufficient to provide the property owners of this country with ample insurance protection, and I cannot believe that our people are willing to drift on the undemocratic rock of governmental insurance.

*The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service*

## Pebbles

Pig-breeding as an occupation is becoming quite sty-lish.—*London Opinion*.

Dot—How fast can you knit?  
Madeline—Oh, about fifty knots an hour.  
—*Exchange*.

Sailor—Gang-way!  
Scot—Hoot mon! I ha ma ticket and I will na gang way.

Don't kill cats—they answer very useful purposes, say the humanitarians. *Sauve qui purr!*—*London Opinion*.

She—I heard you made the Glee Club.  
He—Yes, I sing shortstop; between first and second base.—*Cornell Widow*.

No matches have been on sale in Berlin for some time. Yet there has been no shortage of strikes.—*London Opinion*.

Mrs. Spratt—Is she musically inclined?  
Mrs. Gatt—Well, she seems to have a leaning toward the pianist!—*Judge*.

"Right will eventually prevail," says the Kaiser. So he's getting despondent, is he?  
—*Nashville Southern Lumberman*.

"I spent a very boring afternoon."  
"How's that?"  
"I was drilling on the Campus."—*Yale Record*.

"Does a woman always have the last word?"  
"No, sometimes she is talking to a woman."—*Widow*.

Tommy (who has been wounded for the fourth time)—I know what it means, mate, them Huns don't want me at this war!—*London Opinion*.

Angry Prof.—Do you think this class is a joke, young man?  
Stude—No sir, I'm not laughing at the class.—*Jack-o'-Lantern*.

Bella—I wonder who was the first woman to get her gowns from Paris?  
Stella—Helen of Troy, no doubt!—*Punch Bowl*.

"Father, what kind of boats were the rams they used so much in the Civil War?"  
"They were probably the ancestors of the ewe-boats of today, my boy."—*Puck*.

It's a puzzling question.  
Besides the wind or weather:  
That when two hearts are warmest,  
They always freeze together.  
—*Widow*.

"Luxuries a tax must pay."  
What are luxuries, I pray?  
"Luxuries, my friend, are what  
You possess—and I do not."  
—*R. K. H. in the Westminster Gazette*.

Shopkeeper—Well, ma'am, anything you would like today?  
Customer—Why, yes; I would like to select a birthday present for my husband, but he neither drinks, smokes, plays cards nor stays out late at night.  
Shopkeeper—Is he fond of fancy work?  
—*Judge*.

Mary made an angel cake  
For her darling Charley's sake  
For his dear sake  
Charley ate it every crumb  
Then he heard an angel's drum  
Calling softly, "Charles come"  
And Charley went.  
—*Widow*.

DEAR LITTLE—When the house is on fire it's no time for family quarrels. It's no time to gulk and tolerate plots with the enemy at your doors.

Forget your oft-timed House Rule agitation! Do your bit toward causing the Kaiser. If the Huns can you'll have no home to rule!  
Sincerely yours,  
VERITAS  
—*Life*.

# Tooth Brushing Is Not Folly

*All Statements Approved by High Dental Authorities*

## The Fault Is This:

It is true that the tooth brush has proved disappointing. Millions of people find that brushed teeth still discolor and decay.

Tartar forms, despite the brushing. Pyorrhea is alarmingly common. Statistics show that tooth troubles are constantly increasing.

Every dentist knows the reason. It lies in a slimy, clinging film. The ordinary dentifrice does not dissolve it. It gets into crevices, hardens and stays, and resists the tooth brush; and it causes nearly all tooth troubles.

That film is what discolors—not your teeth. It hardens into tartar. It holds food which ferments and forms

acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film which the tooth brush leaves is the thing that wrecks the teeth.

Science has for years sought ways to end it. That way has now been found. Four years of clinical tests have proved it to many able authorities.

That way is now embodied in a dentifrice called Pepsodent. You can prove it for yourself, and quickly. And for that purpose we offer you a One-Week tube to try.

## Watch the Film Go

Try Pepsodent for one week at our cost. You will gain a new idea of teeth-cleaning. You will know that the tooth brush need not fail.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

The great difficulty lay in the fact that pepsin must be activated. The usual method is an acid, harmful to the teeth. But science now has found a harmless activating method. Five governments have already granted patents. That method, employed in Pepsodent, makes possible today an effective pepsin dentifrice.

Dental authorities have made thousands of tests, and have proved it in every way. Now we are asking everyone to prove it in the home.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch results. Note how clean the teeth feel after using. Note the absence of the film. See how teeth whiten as the fixed film disappears.

Do this to learn what really clean teeth mean. Prove for yourself that this great tooth-destroyer can be easily defeated. You will then, we believe, forever adopt this new teeth-cleaning method. Cut out the coupon now.

### One-Week Tube Free

# War Training for Women

A Call to Service—Trained Woman Secretaries  
are needed to speed Government Work

One of the Government's great needs is for *trained secretaries and statistical workers*. To help supply them, Drexel Institute, in co-operation with the U. S. Civil Service Commission, has prepared special training courses.

Graduates of these courses will be eligible for certificates to positions under Civil Service. The certification of graduation will be the basis for rating; no further scholastic test will be required.

1. A four months' intensive course for High School graduates who are qualified in Stenography and Type-writing and have had one year's experience in business.
2. A one year's intensive course for College graduates. Specific technical and statistical secretarial training of high grade.

*Drexel Institute's special war training courses for women have been approved by the United States Civil Service Commission.*

Students who enter these courses will be at once in training for their country's service.

Uniform will be worn. Military regulations.

Enrollment will be limited and applicants carefully selected. As courses begin October 7, we urge you to write at once for complete Bulletin No. 10 and enrollment blanks.

The Nation needs you.

## DREXEL INSTITUTE

Hollis Godfrey, Sc. D., Eng. D., LL. D., D. C. L., President  
Philadelphia, Penna.

In addition to the above courses, Drexel Institute offers the regular Courses in Domestic Science and Arts, Engineering and Secretarial Work.

## Did You Order Your Copy?

It has taken three years to prepare this picture history of the Great War. Not only is this a book of fascinating reading and vivid and inspiring pictures, but a volume of permanent historic value for the library of every American home.

224 pages. Highest grade coated paper. 437 pictures. 8 $\frac{3}{4}$  x 12 $\frac{1}{4}$  inches. Richly bound—full cloth.

INDEPENDENT CORPORATION

## The New Books

### The White Flame of France

PLENTIFUL as are the books about war-torn France, there is always room for one more of the type produced by Maude Radford Warren. The author has been thru France with open eyes, heart and mind, and she gives in this book a conversational account of her vivid impressions. Wherever possible, she allows people to tell their stories in their own words, introducing us thus directly to men, women and children of many types and experiences—in England, in Paris, in Switzerland, at the front, and on the "Black Trail" of the German advance in ruined or half-ruined villages. Whatever the person may be—soldier or child, Catholic or Quaker, sturdy mother of a family, or girl who made the great fall under pressure of hunger, she gives the kindly introduction that sets them talking freely and from their hearts.

The impressions of a disinterested observer may do something more than inform those who cannot go to see for themselves. Will not criticisms such as the following loosen the rigidity of military red-tape?

It was a hospital in Eprenay that we visited first. . . . As we entered, the men rose, stood to attention and saluted. And my blood boiled, because all the time we were in the ward they stood. That they must always do when a doctor enters. And why? Surely they have earned the right, have bought it with their blood, to sit in convalescence or lounge in the presence of a doctor who, whatever his devotion, has not had to give his own blood for France.

The personal note is often tragic, but the writer always ends on a note of hope.

They have given everything to France, these soldiers: their standards of living; their bodies, their souls, their minds; men who were once capable of splendid thoughts are now vacant-minded in the trenches; their minds are as if suspended till the war ends. There is nothing that France asks from them that she may not have, but they give because they love France and not because they like the grim job she has set them to.

Happy little Solange, who plays in the old garden of the priests . . . unaware that he is a refugee. . . . May Solange be the forerunner of the new nation of French children who will have no memory of the horrors of war.

*The White Flame of France*, by Maude Radford Warren. Small, Maynard & Co. \$1.50.

### By the Grocer's Boy

THE average woman would doubtless be surprised at the dark character the boy in the corner grocery store would paint for her. Like the milkman who always judged a woman by her habit of having her pans out in the morning, every tradesman sees her by standards of his own.

Johnny Pryde, who plays the title role in another refreshing book by the author of "Wee Macgregor," is a sixteen-year-old Scottish boy who works for P. Clark, the grocer of Kirkside.

"Mind ye," he says, "it's no aye the rich that buys the best nor the poor that buys the rottenest goods. It would astonish ye to hear what some folk in big hooses eats; but of course that's a trade secret. But there canna be any harm in remarkin' a few remarks on oor chief queernesses, the lady customers."

There is the woman who "bites yer nose off if ye ask her to repeat her words," but who is nevertheless very angry that she receives a pound of flunau haddies when she

wanted fine cut ham, and a gross of fly-papers when she asked for Cross's Finest Capers.

Then there is the woman who drives up in her motor just at closing time, gives her order "wi' her nose up and her eyes down" and instead of carrying it with her, drives off and leaves Johnny Pryde to take a three-mile walk in the rain with her four ounces of cocoa.

There are many other types not at all indigenous to Scotland. They would doubtless all be recognized by every grocery boy from Bangor, Maine, to Missoula, Montana.

They're no a' alike. Some is snotty, some hotty, some, I doobt, is dotty; and here and there ye strike a nice, dacent body among them. But takin' them a' round, it beats me to ken hoo P. Clark can put up wi' them. I suppose it's the man's livin', but I'd sooner be a Turk nor kow-tow to some of them, especially the sort that looks at ye as if ye was damaged fruit and speaks as if they was feart a loose tooth would fall out. We've got several of that brand. They walks in as if they was ower fine to breath the same air as a grocer, perfumed like a pomade factory, and ye can hardly make oot what they're sayin'—whether they're askin' for butter or margerine or washin' soda.

Johnny Pryde, by J. J. Bell. Revell Company. \$1.

### Dual Personality

JACQUES was an upright young man. He loved wife and work, child and country. He lacked only a little earthiness. Marcel, his best friend, was a gay young wastrel. He had a little too much earthiness. Both went to the front for France. Both were hit in the head by the same shell. Both were trepanned. Marcel died. Jacques lived. But Marcel's brain, carried into his on the bullet, lived with him. His own memories were wrapt in the nervous organism of Marcel. His own high purpose began to struggle against the self-indulgence of Marcel. Even his wife who had given him as Jacques a calm, pure devotion, now responded to his more vivid magnetism as Marcel with a tempestuous ardor that made him jealous for himself when he was Jacques. Dragged down by Marcel's love of wine and women, Jacques ended the torments of his dual personality in a last great sacrifice to his country.

*The Man Who Survived*, by Camille Marbo. Harper & Brothers. \$1.35.

### Books in Brief

FOR THE RIGHT (Putnam, \$1.25.) Essays and addresses by members of the "Fight for Right" movement.

FROM THE HEART OF A FOLK, by Waverley Carmichael. (The Cornhill Company, Boston, \$1.) Verses that express the spontaneous melody and simple rhythm characteristic of the negro race.

RURAL PROBLEMS OF TODAY, by Ernest R. Gross. (Macmillan Press, \$1.) A presentation of the differences between country and city life in family, school, and church, as they confront the rural worker.

AT HIS COUNTRY'S CALL, by Albert Lee. (George H. Brown Company, \$1.25.) Continuing and rapid action of a career in a young lieutenant's adventures during the present war. For love and red blood.

ABRAHAM'S BOOM, by Basil King. (Harper's, 50 cents.) A short and not altogether convincing attempt to explain the life beyond and to connect it up with life on earth. Tinged strongly with idealistic philosophy.

THE MYSTERY OF A GERMAN PRISON, by Captain John Meade. (George H. Brown Company, \$1.50.) A gripping story of action, of pain, of courage, of friendship and of love, set during the recent months of the war.

THE LYRICAL POETS OF HUNGARY, by Hermann Thiel. (Translated by George Whipple. New York, (Yale Univ. Press, \$1.50.) Mr. Thiel has put into English some of the delicate and mystic quality of the lyrics by one of Germany's finest modern poets.

THE WHITE BOON OF MYSTERY, The Story of an Ancient Adventure, by Philip Dru. (George H. Brown Company, \$1.50.) A vivid and powerful story of an ancient and mysterious quest, set in the heart of the "Old World." The "Adventure" book.

### For Hay Fever and Summer Colds

Luden's give real comfort to nose and throat. Many uses. Popular with soldiers on dusty hikes and drills. Luden's allay thirst and refresh the mouth. You use Luden's in winter—try them in summer, too.

### Phonograph Records Sound Clear and Harmonious

—no scratch—no twang—no harsh, rasping, metallic sound to impair the beauty of the music when you use the

#### ELLIS MELODIOUS REPRODUCER

"It makes all the difference in the world." It resurrects the "living voice" of the artist who made the record. All the tone values of instrumental music, solo or orchestral, are brought out perfectly and harmoniously with the overtones which musicians listen for.

Words cannot convey to you an adequate idea of how much this wonderful little device will do to improve the playing of records. You must see it—hear it—compare the effect with any and all other reproducers you know of; then you will understand why every music lover owner of a phonograph who hears the Ellis Reproducer wants to own one.

Plays all disc records.

### Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, a monthly magazine devoted to the art of writing, and a monthly magazine of literary criticism.

# WHAT ARE WE FIGHTING FOR?

(Continued from page 250)

to come automatically as the result of a military decision on the battlefield. Enduring freedom never comes except thru law, and thru institutions established to interpret and enforce it. Simply driving the Germans back across the Rhine will accomplish little. Compelling Germany to hand back to France Alsace-Lorraine and the billion dollars which she stole in 1871, and to rebuild every town and city which her armies have destroyed, and to court-martial every one of her officers responsible for the hideous atrocities inflicted on helpless populations, would give relief to the universal human heart, but would not greatly advance the cause of liberty and peace. We have passed thru many critical times, but the most critical time of all is yet to come. The most momentous hour for our generation will strike when the war is ended. What is done then, will determine whether or not we have fought in vain. There is much talk of crushing Germany, but the world is not gotten forward so much by crushing things as by building things up. We are in the war not primarily to crush but to build. We must coöperate in the building of a new international order. The sweeping away of the Potsdam oligarchy is essential, but only incidental. The military drives and counter-drives are indispensable, but only preliminary. The great work is to be done after the guns have fallen silent. The rectification of various national frontiers is indeed important, and yet only of subordinate significance. There must of course be a treaty of peace, but too much must not be expected of it. Treaties generally have a fashion of disappointing the men who sign them. An American historian has reminded us that it was not our treaty with Great Britain signed at the close of the Revolutionary War which secured our national life. The most critical period of our country's history, he says, was not in any one of the years during which armies were contending in the field, but embraced the time between 1783 and the adoption of the Constitution in 1788. It looked more than once in those five solemn years as tho the war had been fought in vain. The colonies clashed with one another, and seemed to be drifting hopelessly toward anarchy. Their mutual antipathies were so intense and bitter, and their differences in manners and interests were so great, that to bring them together under one head seemed a visionary and hopeless undertaking. Most of the wise men of Europe were sure that the problem was insoluble, and that no sort of union could be constructed which would stand the storms of a dozen years.

But there were resolute men alive in America in those far-off days, and they faced the situation without flinching. Fifty-five of them met together in Philadelphia in the summer of 1787, and in about four months devised a constitution which Mr. Gladstone declared to be "the most wonderful work ever struck off at a given time by the brain and purpose of man." It was this constitution which saved the nation. By its scheme of Federal union, the distresses of the past were ended, and the glorious triumphs of the future were rendered possible. It was by organization that the miracle was wrought. Not by altering the dispositions of men, or by changing the ideals and manners of any of the colonies, but by the creation of a scheme of political union, order was brought out of chaos and the American Republic was started on its conquering way.

It is by organization, then, that we are

to escape the distresses by which we have been tormented thru weary generations. Without adequate political machinery, we shall inevitably sink back into the international anarchy out of which the present war emerged. If there is no general provision for the protection of the security and welfare of all the nations, then each nation will look out for itself, and the devil may take the hindmost. Forces have been released by our modern civilization and contacts have been established, which render international clashings and disasters inevitable unless adequate safeguards are provided. There is no escape from immeasurable calamity except thru organization. The nations are closer together now than were the thirteen American colonies one hundred and fifty years ago. These nations must be leagued together. Some sort of federal union must be devised. A political scheme must be created by which each nation shall enjoy its own rights and liberties, and at the same time be able to contribute to the strength and prosperity of all. In short, there must be a parliament of man, a federation of the world. There must be a world Legislature, and a world Supreme Court, and an international Police Force. This is what we are fighting for—the United States of the World, a federal union in which all nations, great and small, shall be guaranteed their right to life and liberty and the pursuit of happiness.

The experiences of our fathers are repeating themselves on a larger stage in the lives of us their children. Our fathers fought against England and at the same time they fought for England. There were two Englands in the eighteenth century, the England of King George III and Lord North, and the England of Charles Fox and Edmund Burke and the Duke of Richmond. There were Englishmen who declared openly that the American colonists were in the right, and who spoke of the American cause as the cause of liberty. There are two Germanys today, the Germany of Bernhardi and Ludendorff, and the Germany of Lichnowsky and Mühlton and Förster. We are fighting the first Germany for the sake of the second. By defeating Cornwallis we enlarged the liberties of Englishmen in their island home. By defeating Hindenburg we shall hasten the political emancipation of the German people.

On the recent Fourth of July the Prime Minister of Great Britain sent the following message to the General of the American army in France: "We join with our whole heart in your Fourth of July celebrations. Once a bitter memory, we now know that the events to which you dedicate these rejoicings forced the British Empire back to the path of freedom from which, in a moment of evil counsel, it had departed." Is it too much to prophesy that the Chancellor of the German Empire will some day send a message to the President of the United States, gladly acknowledging that the real Germany was gloriously served by American arms in the greatest of all the wars?

We are also fighting the war of the rebellion over again. The old heresy of state rights is once more to the front. It is known now as nationalism. Germany claims the right to do as she pleases. She is wedded to a belated ideal. She asserts the right to secede from the sisterhood of nations, and to repudiate her promises of obedience to established laws. She converts state documents into scraps of paper, and tramples on customs and traditions held sacred by the whole family of mankind. We are not willing that she should thus depart. She

must come back. She must respect the laws of humanity. She must submit to the regulations of international law. The South was demoralized by a barbaric institution—slavery, just as Germany has been degraded by a barbaric institution—the Army. As soon as slavery was destroyed, the South regained its normal mind, and today rejoices that Lee was compelled to surrender his sword to Grant. So will it be with Germany. When she is once delivered from the curse of Prussian militarism, the German mind will again become sanely human, and the time will come when Germans will rejoice with all men everywhere that mankind is no longer doomed to live under the shadow of a suspended sword.

If any nation would be great it must become the servant of all. That is what our Republic is just now trying to be—the servant of all. Its work of destruction is only preparing the way for building up a world federation by which a recurrence of the present heart-breaking catastrophe may be forever avoided, and all the nations may live in peace and mutual helpfulness forevermore.

## Capital Copy

Orders for 8000 more motor trucks for the use of the United States Army have been placed.

Last month 87,000,000 pounds of beef products and 308,000,000 pounds of pork products were exported.

Fifteen women doctors have been accepted by the Army Medical Department as anesthetists in base hospitals.

All exports of flour to Cuba will hereafter be made by the Government and individual licenses will be revoked.

The Signal Corps has organized 100 girls, who speak both English and French, as army telephone operators in France.

Thousands of women are employed by the United States Gas Plant, many as inspectors and others for the manufacture of parts of gas masks.

During the first two weeks of June there were completed and delivered to the Shipping Board sixteen steel vessels of a total dead-weight tonnage of 89,162.

Announcement has been made by the Post Office Department that mail service is suspended for Rumania, Bessarabia and the Ukraine, because the territory is occupied by the enemy.

The Treasury Department has extended to Great Britain an additional credit of \$75,000,000, making a total of American loans to that country \$2,795,000,000, and the total to all cobelligerents \$5,363,850,000.

More music is to be provided in the American Army. The General Staff has ordered, at the suggestion of General Pershing, that each regiment's band shall be increased from twenty-eight to fifty musicians.

The Young Women's Christian Association maintains in France, besides the Hotel Petrograd in Paris for American women, and its restaurants and recreation centers for French working women, as well as our own women of the Signal Corps, a series of club rooms for the use of American nurses serving in American base hospitals.

Some weeks ago the war council of the American Red Cross contributed \$500,000 to the Canadian Red Cross. The gift was without restriction of any sort, but the hope was expressed that it would be used to nurse and comfort wounded and sick Canadian soldiers. Canadian hospitals in France are helping care for wounded United States soldiers.

## THE LONG ROAD TO THE NEAR EAST

(Continued from page 258)

ern front alone is not enough. We must not remain idle when Germany is exerting every influence among ignorant people against us. We cannot remain idle when humanity is dying thru starvation. Christian relief work on the broadest lines is our only way out. Beginning at the Persian Gulf, we must fight German greed with American charity, German intrigue with American friendship, and German bribery with American food for the starving.

In four great colleges on Turkish soil, consecrated and trusted Americans are fighting German propaganda in the most effective way—a Christ-like humanity in the midst of moral and physical chaos. The Syrian Protestant College in Beirut has more than seven hundred students. Robert College, on the Bosphorus, and International College at Smyrna have a thousand more. The American College for Girls is still open. The Turkish Government is supplying these colleges with food and fuel at nominal prices. In a score of other centers, American relief work is being carried on where thousands are dying from starvation.

Is this kindly treatment of American institutions by a cruel government a bribe to America to prevent a declaration of war? The answer is found in the character of the men and women who are carrying on this work. Ambassador Morgenthau never tires of praising them. They are heroes, who would rather be killed than have their presence in Turkey operate against a righteous declaration of war. If Turkish kindness to them were preventing an outbreak of hostilities, they would be the first to protest. But they are on the ground. They know of Turkish irritation under the Prussian yoke. They know that many Turks look to America with friendliness and trust. They see the widespread German propaganda which can be fought only by limitless force or limitless love, and in the absence of force they are exerting the love.

Turkey is not the only problem. Persia must be won away from suicidal allegiance to the deep-laid German plans. American relief is planning the only possible method for winning the Persian to the Allied cause thru a proper and friendly approach in the midst of distrust and despair.

Dr. Harry Pratt Judson, heading a worthy commission to Persia under the auspices of the American Committee for Armenian and Syrian Relief, has recently sailed.

The Allied advance on the west front will impress Turkey and the entire Near East more profoundly than a declaration of war. Christian relief work will impress the shrewd Levantines more than the most cleverly camouflaged scheme of world-domination hatched in Berlin.

The Potsdam crew still seem ignorant of righteousness and our boys in France are showing the might of American arms. But in the Near East the responsibility falls upon the missionary. If the missionary must be supplanted by the soldier, let the change be sure and swift. But the Near Eastern Question will never be settled until the German war lords are humbled. And the road to that polished table in Potsdam leads thru France.

In the Near East, America can exert two influences, both righteous. Charity and force offer ample field for American effort. But until force can become effective, it would be criminal to forgo the opportunity of Christian charity, even if it did not, as it surely does, offer the most probable solution to the problems that confront the Allies in the Near East.

## SCHOOLS AND COLLEGES

### Kiskiminetas

#### SCHOOL FOR BOYS

Located on a wooded highland overlooking the beautiful Kiskiminetas river. 200 acres. "K-i-k-i" lets a boy grow up out of doors. Special preparation for college and technical schools. 13 expert teachers keep in close personal touch with boys. Small classes. High athletic spirit and strong competitive teams. Several athletic fields. Tennis, Golf, Swimming Pool, Bowling Alleys, New Gymnasium. School owns its own farm and coal mine. Rate \$700. For catalogue address

DR. A. W. WILSON, JR., President  
Kiskiminetas Springs School, Saltsburg, Pa.

### The Sanatorium School

A school and sanatorium combined for nervous, delicate or deaf children. Instruction and treatments—No feeble minded—References.

CLAUDIA M. REDD, Principal, Lansdowne, Pa.

**MAPLEWOOD** Wakes up boys to duties of life. Near Philadelphia. 56th year. Junior Department, where boys receive real care at moderate rates. Limited to 40. College or business. Small classes. Masters experienced men. Manual training. Boys accommodated entire year. Sports.

J. C. SHORTLIDGE - - - Concordville, Pa., Box 150

### SCHOOL DECISION!

The success of your son may depend upon your DECISION regarding the school to which he is sent this fall.

#### THE PENNINGTON SCHOOL

offers preparation for Colleges and Technical Schools, and Business Life. Strong Faculty. Military Drill. Rifle Range. Gymnasium, with Pool. Infirmary. Athletics. MODERATE RATES. Half way between N. Y. and Phila. Write for information to

DR. FRANK MACDANIEL, Box K, Pennington, N. J.

### Florida (Hulvey) Military Academy

Barracks new and modern. Military work directed by War Dept. Prepares for universities, business and Government academies. Personal instruction and attention. Perfect health record. Cadets from 18 states. Tuition \$460. Col. GEO. W. HULVEY, Supt., Jacksonville, Fla.

### Pacific School of Religion

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins September 30, 1918. Address President C. S. Nash, Berkeley, Cal.

### ROANOKE COLLEGE SALEM, VA.

FOR MEN. A standard college in the mountains of Virginia. Degrees granted. Military training. Liberal Arts, Commercial, Preparatory Departments. Address Dr. J. A. MOREHEAD, President.

### The University of Chicago

#### HOME STUDY

in addition to resident work, offers also instruction by correspondence.

For detailed information address

25th Year U. of C. (Div. 6) Chicago, Ill.

### ATTEND Chicago "Tech"

The nation is calling for technical men. Engineers and draftsmen are needed. Inquire for our graduates in number that we can supply. Now. Faculty of consulting experts. No ground or expense requirement. Low tuition fees. Our instruction methods bring quick results.

#### ARCHITECTURE DRAFTING ENGINEERING CIVIL-MECHANICAL-STRUCTURAL-ELECTRICAL

No time wasted on unnecessary studies. Complete course in two years. Short courses for special study only. Courses for non-support while studying. Work up for catalog and full particulars. Chicago Technical College 2721-E Michigan Ave. Chicago

DAY AND EVENING CLASSES Convenient Study and Practice Hours

### SKIDMORE SCHOOL OF ARTS

CHARLES HENRY KEYES, Ph. D., President  
SARAH GRIDLEY ROSS, A. M., Dean

A college for the professional and vocational training of women. Offers four years courses leading to B. S. degree in

Household Economics, Fine Arts, Music, Physical Education, Secretarial Studies

A special diploma, securable upon the completion of two or three years, commands teacher's or supervisor's certificate.

Residence accommodations for two hundred students. Outdoor sports. Non-sectarian. Summer session. For catalogue address

LOUISE HOLMES WATERBURY, B. A., Registrar  
SARATOGA SPRINGS, NEW YORK

### HARTWICK SEMINARY, N. Y.

Founded 1797. Prepares for College. Steam heat. Electric light. Hot and cold water. Competent teachers. \$27. Catalog free. Address J. G. TRAVER, D.D., Principal.

Reopens Wednesday, October 2nd

### The Veltin School FOR GIRLS

160 and 162 West 74th St., New York

A Fireproof Sanitary School Building.

Classes limited to twelve pupils.

PRIMARY DEPARTMENT.

GENERAL COURSE.

COLLEGE PREPARATORY.

Unusual advantages in French are offered in every class.

### DEAN ACADEMY

FRANKLIN, MASS. 52nd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$325-\$400 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt. D., Principal

### WALNUT HILL SCHOOL

24 Highland Street, Natick, Mass.

A College Preparatory School for Girls. 17 miles from Boston. 40 Acres. Skating Pond. Athletic Fields. 5 Buildings. Gymnasium. Miss Conant, Miss Bigelow, Principals

### DE MERITTE MILITARY SCHOOL

Jackson Springs, N. C.

An open air school for boys.

Prepares for Colleges and the Scientific Schools.

EDWIN DE MERITTE, Principal. Address until Sept. 5, Camp Algonquin, Ashland, N. H.

### MARTIN COLLEGE For GIRLS PULASKI, TENN.

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue-Grass Hills of Sunny Tennessee. Careful Supervision. Box 1. W. T. WYNN, President.

### OBERLIN COLLEGE

Henry Churchill King, President

A non-sectarian, co-educational college offering unusual advantages for study in either of Three Departments:

College of Arts and Sciences  
Graduate School of Theology  
Conservatory of Music

Military Training is provided by a unit of new Students' Army Training Corps. Special courses in Physical Education are offered for both men and women.

Applications for admission in September, 1918, are now being received. Students in College of Arts and Sciences, limited to 1,000. Conservatory students, limited to 100. For catalogue and Book of Views, address THE COLLEGE SECRETARY, OBERLIN, OHIO.

### Efficiency Society Journals

FOR 1916 AND 1917

are filled with timely and valuable articles for Business Executives.

\$2.50 a Vol 12 Nos.

## THE DOMINIE "DOWN THE LINE"

(Continued from page 252)

chastant doctor was not ready for his own story yet. Instead he jumped back half an hour to a story we thought he had finished.

"After that communion one boy came up and told me that he was a Catholic and that he wanted me to go with him to Father Ryan to hear him make his confession. I didn't want to go, but he insisted upon my going. I went and a more horrible confession of sins I never expect to hear. But he was in dead earnest and it was a good thing that he got it all off his soul, for he was dead the next day."

"But, Doctor, won't you please tell us about your own stunt, for I have to go in ten minutes," the reporter implored.

"Well, we still have more than enough time to tell about what little I have done, but I won't tell it if you don't promise me that you won't spread on the taffy." That was his word; not mine.

It was an expression I had heard my own Scotch mother use and I knew all that he meant by it.

"All right; you go on with the story."

Then followed as simple a statement as a Scotch dominie (economical with anything, especially words) could tell: of how he and Mr. Gibbons, the newspaper reporter whom the press later eulogized for having gone over the top with the Marines, were waiting in the major's tent. They were to go down front. The major went off with the reporter and told the dominie to follow with his orderly, a young lieutenant. The major and the reporter were barely out of sight when a runner came in with the news that the colonel was wounded seriously and was lying in an abandoned trench on the other side of the town, about four miles away at the far end of a wheat field.

The young lieutenant and the old "Y" secretary (whose colonel was the apple of his Scotch dominie's eye) started off for him. There were no stretcher bearers in sight but there was a stretcher. They carried that with them. Amid a constant hail of machine gun bullets they went thru the town. Nobody knew which house was occupied by Germans and which by Americans. Machine gun bullets were flying in every direction. They had to get thru this village somehow to get to the wheat field. Finally they reached the field. Then they had to crawl for four hundred yards on their stomachs along a low hedge across this field, in full view of the Germans, the field swept by rifle and machine gun bullets with now and then a shell falling perilously near. One fragment from a shell tore a hole in the old secretary's coat as he crawled and ripped the hedge at his left into bits.

The young lieutenant kept yelling back, "Keep your head down, Doc."

The old Scotch missionary chuckled as he told us this, pointing down to his rather prominent waist: "I was keeping down as close as I could get to the ground. I never did realize what a bother a stomach was before. I got to wishin' I had dieted all my life as we crawled along that hedge. As it was I was so close to the earth that I scratched my nose and flattened my stomach into a pancake."

After crawling four hundred yards in this manner they finally dropt into the abandoned trench and there the colonel was lying. His first question was: "I wonder how Bare is?" referring to his major. Then he handed over his maps to the young lieutenant and fainted.

For two hours the three of them lay in that shallow abandoned trench waiting for the fire to die down enough to let them crawl back again. As they lay there two

gas shells fell close and they had to don gas masks.

At this point the old preacher interrupted his own story, much to the disgust of the newspaper reporter to tell about how one evening he had been preaching to the Marines when a gas alert sounded. The boys quickly donned their masks and then one boy yelled out, "Put on a French mask, Doc, and go right on talking." Then he added: "You know, you can still keep on talking with the French mask but you have to breath thru your mouth with an English mask and can't talk." We both knew this for we had had some uncomfortable experiences breathing thru English masks ourselves, but it was interesting to hear the old man chuckle as he told about that evening when the boys wanted him to "put on a French mask and go right on talking."

Finally we got him back to his story.

"The colonel had a hard time getting his mask on so I tried to help him, but he wouldn't let me move. The trench was so small that when I moved my body was exposed. I felt so sorry seeing him try to put that mask on with his left shoulder shot thru, that I rolled over and helped him. That's where I twisted my back so that they had to send me to the hospital." He added these last words in disgust that he had been invalidated for such a slight pretext. It was not according to his wishes; we could see that in his whole attitude.

"After a while we decided to make a try for it. The machine guns were still sweeping the field and shells were falling now and then. But we got the colonel on the stretcher. The lieutenant went in front and I behind. We lifted the stretcher with the colonel in it, to the top of the parapet. Then we shoved it out as far as we could in front of us. Then we pulled and pushed and lifted and crawled and rolled over and over; keeping our bodies close to the ground; and scraped and edged and squirmed and grunted; and finally we got the colonel across that stubbled field. It took us another hour and a half to get across that field. Then we had the village to go thru, but about dark we got him to the woods, where it was comparatively safe. That's all there was to it. Not much of a story; hardly worth telling. Others would have done the same and are doing it every day up there. I don't want you to make a lot of what I did. Please don't! I feel so humble in the face of what the boys are doing. Bless them every one!"

The new Hun helmet is specially designed to protect the neck. How wise! That is just where Germany is going to get it.—*London Opinion.*

The munition worker who used matches for hairpins, and was fined, is an exception. The perfect munition girl is matchless.—*London Opinion.*

Now that the negro republic, Haiti, has declared war on Germany, Fritz finds himself up against not only Uncle Sam, but also Uncle Sambo.—*London Opinion.*

Whatever von Hintze may say about the iron fields of Alsace, the French haven't the least intention of surrendering their iron to a foe unworthy of their steel.—*The Passing Show.*

"We do not want a fresh war with Russia," says Hertling. And, for the first time in modern history, we can take a German Chancellor's word without hesitation.—*The Passing Show.*

## JUST A WORD

If you own an automobile or a garden or a dog or a house or a fruit tree or a hen you will be interested to read the September Countryside Section of The Independent and make the most of all its common sense advice and practical suggestions. In short, timely articles packed full of information experts on each of these subjects will give you the benefit of their experience.

From Professor Hugh Findlay, professor of horticulture in Syracuse University College of Agriculture, there is a page of essential instructions to gardeners—"What to Do in September" in the greenhouse, the flower garden, the vegetable garden, the orchard and the berry patch.

"Now that you've got your harvest what are you going to do with it?" asks E. I. Farrington, himself a successful market gardener and poultry keeper, in an article called "Harvest Home." Mr. Farrington goes on to explain the various methods of storing winter vegetables in cellars or outdoor pits. If you follow his instructions you can be sure of having potatoes and beets and onions and turnips and squashes and all the rest till spring comes round again.

In his monthly article for poultry keepers Mr. Farrington points out the needs of the poultry yard in September, with a special view to the wartime scarcity of the usual grains for feeding.

"Let Sonny Take Care of the Car" is advice from C. H. Claudy that will please both the youngsters and their fathers. Mr. Claudy is explicit in his explanation of what must be done to keep the car in A1 running shape. Photographs especially posed show Sonny just how to do it.

In the realm of interior decoration there is an article by Maxwell Armfield, an English artist who has recently established a studio in New York. Mr. Armfield stresses the esthetic and utilitarian value of stencils and gives detailed explanations of how to make and use them. There are numerous illustrations of good stencil designs.

### THE EDINBURGH LINCOLN

George E. Bisell, of Mount Vernon, New York, is the sculptor who created the statue of Abraham Lincoln in Edinburgh, Scotland, a photograph of which was published in The Independent, November 3, 1917, and commonly ascribed to J. Patrick. The statue was set up as a memorial to the Scottish American soldiers in the Civil War.

### MEMNONITES EXEMPT

To correct an apparent injustice done the Memnonites in The Independent for June 22 in which the newspaper report of a sentence imposed by a court martial at San Antonio was reviewed it may be stated that the Memnonites have long held the doctrine of non-resistance. Representatives of

this text point to the President's proclamation for conscientious objectors in which it is declared that the recorded and drafted objector "shall not, against his will, be required to wear a uniform or to bear arms: nor, if pending the final decision as to his status, he shall decline to perform, under military direction, duties which he states to be contrary to the dictates of his conscience, shall he receive punitive treatment for such conduct."

## REMARKABLE REMARKS

**THE KAISER**—Wilson is a real scoundrel.

**BOOTH TARKINGTON**—Men cannot be goaded into loyalty.

**KING GEORGE**—We shall with God's help secure a victorious peace.

**LORD ROBERT CECIL**—I prefer Prussian brutality to Austrian hypocrisy.

**SAMUEL GOMPERTS**—The New Republic has failed to think its problems thru.

**THEODORE ROOSEVELT**—My only regret is that I am unable to fight beside my sons.

**ED. HOWE**—One of the things every woman knows is that her feet are hideously ugly.

**JOHN BURNS, M.P.**—The yellow press is owned by blackguards, edited by ruffians and read by fools.

**CHARLIE CHAPLIN**—I can't wait until the middle of a reel for a laugh. I must start in "on high."

**HOMER CROY**—The second funniest thing in the world is for a waiter to fall downstairs with a tray of dishes.

**GENERAL SMUTS**—After the war South Africa will probably have the lowest taxation of any country in the world.

**DR. E. J. DILLON**—For lust of blood, for revolting atrocities and Satanical contempt of human nature this war is unique in history.

**DAVID JAYNE HILL**—Without question Kaiser William II is the most dramatic sovereign of his time and perhaps of any time.

**NORMAN HAPGOOD**—If we stand by liberty we shall win this war. Our only chance of losing it lies in our fear of liberty.

**HERR PAUL ROHRBACH**—For the present there is for us no greater interest in the East than the interest of maintaining Bolshevism.

**COLONEL HOUSE**—Mr. Wilson is in the class of men limited in numbers who combine driving power, magnetism, and vigor with vision.

**R. L. GOLDBERG**—The Kaiser's eldest son has long enjoyed the distinction of being the most pronounced lounge lizzard in the whole German Empire.

**NIKOLAI LENINE**—Of a hundred Bolsheviks, there is one honest believer in Bolshevism, there are thirty-nine adventurers and hangers-on who profit by it, and there are sixty fools.

**WILLIAM ALLEN WHITE**—The Kaiser has turned down three thousand two hundred suggestions for a new German hymn. Why doesn't the All Highest write it himself?

**MARSHAL FOCH**—Great results in war are due to the commander and it is justice that history couples with the names of famous generals victories that glorify them or defeats which dishonor their memory.

**J. D. ROCKEFELLER, JR.**—When peace has been established on an enduring basis, then and not until then can the spirit of brotherhood be extended among nations, and then it must be extended to include all the nations of the earth.

## RACIAL PSYCHOLOGY

WE Americans ought to excel all other nations in our knowledge of foreign languages and, what is more important, of foreign psychology, for we have had the unique advantage of personal contact with millions of immigrants from all parts of the globe. What other people had to travel for we had brought to our doors. In any of our industrial centers we could find a native tutor in forty living languages. We have no excuse for being puzzled or surprized by the attitude of various minor nationalities now springing into life in Europe and Asia, for in most cases their patriotic propaganda has been directed and financed from America. Yet we have left it to Germany to take advantage of these nationalistic movements and pervert them to her purposes. Diplomacy nowadays consists largely of applied ethnology. The victories won by the German generals have been less than those won by the German professors. For while the German generals have made enemies the German professors have made friends. The Finns, Letts, Lithuanians, Poles, Ukrainians and Bessarabians now look to Germany as their liberator from Russian tyranny and as their protector against resubjugation. But it is America and not Germany which should stand sponsor for these new-born nations, for it was America that declaimed loudest against the Czar and America that contributed the men and the money that gave them a start in life. A big scrap-book could be compiled of the editorials appearing in American journals during the last ten years in favor of the freedom of the Finns. Yet when the time came and the Finns appealed to us for recognition and food we turned a cold shoulder on her. Finland then turned to Germany, which jumped at the chance we let slip, and with the loan of 20,000 men and a few ships of grain added a new country to her conquests and gained access to the Arctic. We had more men and grain to spare than Germany and the Finns would have given us a heartier welcome, for many of them have lived with us and would know that we had no intent of thrusting a king upon them. The only excuse for America's inaction that has been brought forward is that we did not understand the situation sufficiently to justify intervention. But this is no excuse at all, for who should know the Finns better than we? They have been going back and forth by the thousand for a generation and they have constituted a large part of the population of some of our towns. Besides as it turned out it would have been best if we could not choose between the White Guard and the Red Guard to have tossed up a dime to decide which we should back. Even if by such chance we had chosen the wrong side we would have made it the right side by our choosing it. We might have made friends of one faction. As it is we have made enemies of both. We viewed the Reds with disfavor because they committed atrocities and wanted to set up a socialistic state. But the Whites have committed worse atrocities and have set up a monarchical state. If we had aided Finland to

establish a decent sort of a republic a few months ago it would have saved that country a civil war and saved us from having to fight the Finns from a precarious position on a barren Arctic coast.

What is true of the Finns is true in general of the belt of minor nationalities stretching from the Arctic to the Adriatic. We have in recent years received a large and increasing part of our immigration from this region, yet these peoples remained strangers to us. We have learned little of their language, religion, racial characteristics or national aspirations. We have been content with a simple classification of our immigrant populations into wops, dagoes, kikes, micks, hunks, squareheads, chinks, spigotties, greasers and the like without bothering with finer and more polite discriminations. As a consequence of our neglect to study the ethnological museum within our gates we are likely to have to spend some billions of dollars and sacrifice some thousands of young men.

Some say: "What is the use of bothering our heads with these uncouth names and outlandish peoples? The Government has its ethnological experts." So it has, but it is not enough that Mr. Wilson or Colonel House or Mr. Lansing or somebody at Washington knows of somebody who knows all about them. This is a democracy and the people must understand the questions of the war. These nationalities, struggling for birth, are the most vital of the questions. Even in Germany where the people have little real control over foreign affairs it has been found advisable to educate them on this question. The Lithuanian department of the German Government was not content with keeping files of the Lithuanian papers from all parts of the world and intimate information as to the leaders in the nationalist movement, but it has sent out lecturers—expert ethnologists, geographers and historians—to explain to the country the history, resources and national aspirations of Lithuania and why it ought to be separated from Russia and affiliated to Germany. Consequently, after three years of such educational work Lithuania drops like a ripe fruit into the lap of Germany. It is incorrect to say that the Lithuanian movement was "made in Germany." It would be more correct to say that it was "made in America," for the 700,000 Lithuanians here have contributed most of its money and vitality. The stamp "made in Germany" gets attached to many a movement, as well as many a manufacture, that originated elsewhere but of which Germany takes advantage.

The Ukrainian movement was manipulated by Germany in the same way. The French, awaking late to the situation, gave a subsidy to the Ukrainian Rada, just before it called in the Germans to protect it against the Bolsheviki. This trifling mistake in ethnical psychology cost the Allies the richest part of Russia, the part that contains the grain, the coal, the iron and the oil.

On the other hand we recently waked up to the fact that

we had 10,000,000 friends in the heart of Austria and 100,000 in the heart of Russia, the Czechoslovaks. By a few words of sympathy and a little cash they have been converted into active allies and by their aid it seems likely that Russia may be recovered and Austria-Hungary exploded. This also was largely a "made in America" movement, yet at first we treated the Czechoslovaks as "alien enemies" and even confiscated the property of those who were eager to fight against the Austrians, with whom we classed them. Since then most of the American people have learned better, but the knowledge has not yet penetrated all classes, for only the other day a congressman was heard to inquire: "Who are these folks with the unpronounceable name beginning with C and what have we to do with them?" Such ignorance would be excusable in a Frenchman, Englishman or Italian, but from a man living in a country that contains two million Czechoslovaks it sounds strange. The United States with its composite population is preëminently fitted to solve the problem of nationalities, which is one of the most difficult of the issues of the war.

### THE NATION SHOULD OWN THESE THINGS

**U**NDER the stress of war the first great steps have been taken toward a comprehensive national ownership and management of those basic resources and fundamental business operations upon which the national life depends. Shipping, railroads, telegraphs and telephones have passed under Government control. It is now proposed that the Government shall, in like manner, take over the power plants and the water power sites.

Before the war began a majority of American voters held with the business men and political conservatives in general that individual ownership and management of economic plant and operations were inseparable from individual initiative and enterprise and that the individualistic organization of economic society was infinitely more efficient, flexible and progressive than governmental business could possibly be. It was held that governments are incapable of successful business functioning because of endless red tape, on the one hand, and of the vicissitudes, not to speak of the corruption of politics, on the other hand. Even the municipal ownership of street railways and lighting systems was looked upon askance as dangerously socialistic.

These individualistic voters have acquiesced in the transfer of the means of transportation and communication to the national Government because they have been told and have believed that it had to be done as an imperative war measure. Already, however, they are beginning to see that the affair is broader and deeper and likely to be more enduring than a war policy. They are discovering that one of the reasons why Government control was necessary goes deeply down into the relative efficiencies of individualistic and public management, and they are beginning to observe that public management promises to satisfy the needs and the convenience of the people in a degree that will greatly strengthen the case for continuing governmental management after the war ends.

Among many surprising things neither political nor military that the war has revealed, one of the most startling has been the exposure of the all-around weakness, inadequacy and ineffectiveness of the old individualistic organization of big business. Just why was it necessary for the governments of Great Britain and the United States to take over the means of transportation and communication? To say that it was because these governments had to give precedence to military operations and had to make sure that all elements of disloyalty were eliminated from them is not to give an adequate answer to the question. The undisputed fact is that the old individualistic managements either could not or would not deliver the goods that these governments

demand. Their organizations were found to be full of waste, friction, official and personal extravagance. Operations were not properly correlated and social needs were remorselessly subordinated to dividends. Factitious business was multiplied while substantial interests too often were sacrificed. To an extent which probably will not, and possibly should not be disclosed until the war is won, but which certainly will be remorselessly disclosed when the strife ends and the world turns to the problems of reconstruction, individual enterprise in big industry was as wasteful and incompetent as any bawling socialist ever proclaimed, as selfishly devoted to profiteering.

Every consideration of right and expediency which justified the taking over of transportation and communication by the nation applies to the power plants, to water power, to forests, to oil and natural gas, and the oil industry, to coal and the coal industry, to iron and the iron and steel industries and, in short, to any natural resource and any basic industry connected with it which is socially vital. In war or in peace the interest of the entire people in these things is paramount. The only possible justification for individualistic ownership and management must be sought in clear proof that individualism better serves the general interest than collective ownership and governmental management could serve it. When it has become plain not only that individualism does not and cannot meet this requirement, but that also it has failed in efficiency and given itself over to profiteering, it is the duty of the national Government as trustee for the people to discharge the obligations of ownership and management on a basis of efficiency and justice.

The time has come to face the issue. The nation must own these things.

### CHAUTAUQUA AND CHAUTAUQUAS

**W**HEN a proper noun becomes common and a singular noun becomes plural it gradually undergoes certain imperceptible alterations in its connotation. Neither the Indians who gave the name to the New York lake nor Bishop Vincent who adopted it in 1874 for his Sunday School Assembly took the trouble to copyright the word, so it has in the course of time drifted far from its moorings. In the Indian language it meant "Place of the Mists," which does not apply to the Chautauqua Institution as we know it, for the speakers are not as a rule misty in their meaning and they have uncommon facility in getting their meaning over to the commonalty. So, too, some of these tents labeled "Chautauqua" that appear in the remotest parts of the country in the days when the sunflower is in bloom bear little resemblance to the assembly from which they claim name and relationship. In them the old lyceum distinction between "men with a message" and "entertainers" is sometimes almost obliterated, for it seems that the message gets weaker and the entertainment gets stronger the farther they get from the parent institution by the lake.

But the genuine Chautauquans are not selfish. They never claim a monopoly of the name and they do not seem to mind even when it is misapplied to some nomadic troupe which, professing to give instruction in the guise of amusement, really gives amusement in the guise of instruction. Meantime the real and original Chautauqua Institution does business at the old stand, tho now under new management. Regardless of its emulators, imitators and parodists, it keeps up its high ideals and standards. But it changes with the times, especially with these times. The program of the assembly now in session differs from any of the preceding forty. One gets the impression from it that the Chautauquans eat and work and play and talk and sing and pray with the war in mind. Even when listening they are not idle, at least the better half of them are not, for the click of the needle plays an accompaniment to the speaker

and they sometimes drop the thread of the discourse while picking up a dropt stitch. Certain susceptible lecturers, finding themselves so surrounded by *tricoteuses* have thought themselves back in the French Revolution and felt nervously for their necks.

Like other peaceable institutions in America Chautauqua was in fact part of our national preparedness. Such a medium of adult education is all the more needed now that our institutions for adolescent education are depleted and crippled. This country is a democracy and the people as a whole must be educated to the new duties that devolve upon them. Out-of-school education, home education, club education, self education, are what Chautauqua has educated itself to do. It believes in adapting the education to the individual, whoever and wherever he may be, instead of bringing individuals together and molding them all to the institution. It believes in adapting education to the times instead of following a pattern set perhaps centuries before to suit some other times. So the nation in this emergency has ready to its hand this instrument for national training in national patriotism. Just as Y. M. C. A. leaders have been picked up by the Government as experts in organization and the art of ministering to the needs of men, so Arthur E. Bestor, President of the Chautauqua Institution, was commandeered by the Government as an expert in popular education.

The Chautauqua method involves the employment of press, platform and pulpit. It carries its message by means of the spoken and the printed word—and recently by pictures, stationary and moving. In this work we are proud to have a humble part, for The Independent has been chosen as its text-book in current history. This is more than an honor; it is an incentive to good conduct. For the Chautauquans are a critical crowd. They have minds of their own and they are not afraid to give a piece of them to a speaker—or even an editor—who in their opinion fails to keep the three requirements of a witness in a lawsuit. He who stands upon a Chautauqua platform has to tread carefully lest he fall into a mistake. So do we.

## THE QUESTION—

THE United States has at the present crisis in the world's history two priceless assets.

One is the valor of the American army in France.

The other is the statesmanship of Woodrow Wilson at home.

The American army is the military leaven in France that will win the war if supported by the American people. The President of the United States is the statesman who can transform this war from a righteous war into a holy war if supported by the American people.

The question before the American people is not whether the American army and the American President are worthy of them, but whether they are worthy of the American army and the American President.

## CREATIVE IMPULSE IN DEMOCRACY

MISS HELEN MAROT'S admirable little book on "The Creative Impulse in Industry" is a good deal more than a contribution to educational theory, and it does a good deal more than open up the larger problem of the democratization of industry. It abounds in fruitful suggestions relative to the problem posed by Governor McCall of Massachusetts, of making democracy safe for the world.

The British Labor Party definitely demands for wage-earners a larger industrial responsibility and a share in industrial control as well as a larger share in the economic product and more satisfactory living conditions. Sooner or later industrial democracy in America and elsewhere will follow the British lead. Miss Marot's proposition is that something still more fundamental must be provided and

obtained in order that these demands may be met and in order that when they are met the masses of mankind may actually profit by them and live a richer individual life.

That more fundamental thing is the exercise and satisfaction of the creative impulse. The normal man not only wants to get something—food, clothing, shelter, property; he just as naturally and insistently wants to do something worth while. He wants to exercise his ingenuity, his inventiveness, his skill, his intellectual grasp of situations, his trustworthiness and responsibility. Miss Marot is right in insisting that no man can live a complete life if his intellectual and practical creative impulses are denied expression.

The tendency of industrial evolution in the age of machinery has undoubtedly been to deny and balk them in the wage-earning half of the population; to stimulate them enormously in the economically independent and initiative half of the population. The mill-hand, the factory operative, gives his days to a specialized process which is but a very small part of the total creative task of producing a finished product. He knows nothing of the productive scheme as a whole and nothing of its relation to the entire economic achievement of society. There is almost no chance for him to do or to suggest anything outside of the grooves of routine in which he automatically works. He has no share in the industrial control and no responsibilities for its success beyond the duty of obediently following orders.

It would seem to be quite certain that industrial democracy can never be the comprehensive success which its prophets look for unless in some way it can restore to the machine workers the opportunity to indulge and develop the creative impulse. How far this can be accomplished by the educational method that Miss Marot suggests we shall not now inquire. We are concerned for the moment in the question whether the creative impulse, denied expression in the day's work, is not finding expression in other opportunities which have an important relation to the development of democracy in a broader sense of the word, and which may probably have a great deal of significance as bearing upon the possibilities of the competency or efficiency of democracy as a form of political society.

Is it not probably a fact that the intense and growing interest of the wage-earning groups in social reorganization, or as some of them would prefer to put it, in a social revolution, has been created in part by the thwarting of creative impulse in industry itself? The impulse has not died, it has found outlet in new channels. It has created the trade union, the socialistic organizations, and the labor movement in politics. In these spheres of action it has given broadening opportunity to thought, invention and organizing ability, to control and to responsibility. If so much be admitted, a further and highly important question arises. Would the social and political expressions of the creative impulse of the masses expend itself more wisely and constructively if it could penetrate freely also into the industrial life now denied to it; if it could make industry as well as politics democratic? Or, to put the problem in a slightly different way, would political democracy become a more stable, safe, conservative, responsible and efficient collective experiment if it could strike its roots deeply into the industrial life?

Already it is striking its roots into the educational life, and perhaps thru that way of approach it will, in time, penetrate down into the daily vocation and its organization in workshop and factory with wholesome result in the body politic and in the individual life.

Even the Yakuts have declared their independence of the Bolshevik Republic.

Germany has not yet been defeated but she has been found out. A plot disclosed is already half frustrated.

# THE STORY OF THE WEEK

## The Siberian Situation

The international expedition into Siberia is now fairly launched upon its career into unknown seas. The American troops from the Philippines began to land at Vladivostok on August 15, and three troopships have arrived. Some Japanese troops have been acting as guard for the city and its stores since last March, and more have now been sent. French and British contingents have arrived. The Italians are on the way. The Chinese regiment of 2000 is delayed because of difficulty with the Japanese over transportation. General Otani, the Japanese commander-in-chief of the international army, has arrived at Vladivostok.

The Japanese are also sending troops from Dairen (Port Arthur) into northern Manchuria to protect

the frontier against threatened attacks by German and Austrian prisoners fighting for the Soviets. The Japanese cite their recent treaty with China as authority for such action and state that the Chinese Government agrees to it. But the local Chinese officials deny that the danger is great enough to require Japanese aid, and the Chinese generally are suspicious of Japan's growing power in Manchuria and Mongolia.

For the invasion of Siberia there are two routes open, for at Nikolsk, above Vladivostok, the railroad divides. One branch, the All-Russian line, runs north down the Usuri River to Khabarovka and thence west up the Amur River. The other, the Chinese Eastern line, cuts straight across Manchuria northwest to Tchita. The Chinese Eastern railroad is probably clear and in running order as far as the Manchurian frontier, but between there and Tchita there is a Soviet force of sufficient size to drive back General Semenov whenever he has attempted to make connection with the Trans-Siberian railroad at this point. A thousand Czech troops have now been dispatched from Vladivostok by way of Harbin to reinforce Semenov's Cossacks.

That the Chinese Eastern railroad is now available in this emergency is due largely to the Stevens Railway Commission. This commission was sent from America in May, 1917, but owing to the revolution found no opportunity to be of service, so most of the men have been staying at Nagasaki, Japan, ever since. Last March, General Horvath, the Russian dictator of Siberia, and General Semenov asked permission for the Stevens commission to put American operatives on the Chinese Eastern road, but our Government refused. Now, however, there are Stevens men at Harbin and Lake Baikal. Since an attempt is being made to open the other branch of the Siberian railroad, eighty-four members of the American Commission have gone up the line toward Khabarovka.

The line here on the Usuri is blocked by a strong force of Bolsheviks with plenty of artillery. The Czecho-Slovaks who tried to break thru were driven back after heavy fighting. Now 12,000 of the 15,000 Czechs who were at Vladivostok have been sent to the Usuri front and have been reinforced by some of the British newly landed. Since the British were unprovided with artillery to match the enemy's they took guns from a cruiser and mounted them on two flatcars.

The Czech-Slovak commander, General Diedrichs, has appealed to the Allies to have more troops sent without delay. He says unless the Allied forces from the Pacific make connec-

## ON THE SIBERIAN FRONT

The international army has arrived at Vladivostok and is advancing into Siberia. The Bolsheviks block the railroads before Tchita and Khabarovka. Czechs and British are fighting them on the Usuri River. Americans guard the railroad from Vladivostok to Nikolsk. Japanese are coming up from Port Arthur to Harbin. Russian Cossacks are fighting Bolsheviks on the Manchurian frontier toward Tchita.

tions with the Czecho-Slovaks at Irkutsk by the end of September, when the Siberian winter sets in, all western Siberia will be lost and Russia lie at the mercy of the Germans.

Irkutsk has hitherto been held by the Bolsheviks, but on July 7 it was captured by the Czecho-Slovaks aided by native Siberian volunteers. The Czechs lost 250 men killed and 1200 wounded in this battle.

The political situation is perplexing. The recently elected municipal council of Vladivostok is composed exclusively of socialists, but is anti-Bolshevik and pro-Ally. It supports the Autonomous Government of Siberia which was elected by the Siberian Duma in February, 1918, at Tomsk. This party is friendly to the Czecho-Slovaks at Vladivostok, but is opposed to General Semenov and General Horvath, who are monarchists and suspected of working for the restoration of the empire. But the Czecho-Slovaks in Manchuria are aiding Semenov and those in western Siberia are fighting in favor of the new Government that has been set up at Omsk. At the head of this new Siberian Government is Premier Vologodski, and it is better off than its short-lived predecessors in that it has armed troops and plenty of provisions.

In Vladivostok the Czechs have had trouble with the workingmen, who demand the release of the Bolshevik leaders held as hostages by the Czechs and the deportation of Horvath. The workingmen threaten to strike and attack the Allied troops unless their demands are complied with. It is expected that the Allies will have to resort to martial law to put a stop to the disturbances.

**Russian Rumors** Since the diplomatic representatives of the Allies have been expelled or imprisoned by the Bolsheviks and all intercourse with the interior broken off, we are more in the dark than ever as to what is going on in Russia. Such rumors as we get thru Stockholm and other roundabout channels indicate violent political convulsions. The Soviet Government is said to have collapsed. Lenin and Trotzky are rumored to have fled from Moscow and taken refuge in the Baltic fortress of Kronstadt or to have embarked upon the warship "Aurora" in the roadstead of Kronstadt, ready to escape to Germany. The gold in the Moscow Kremlin is reported to have been removed and sequestered by the Soviet leaders before their departure. According to another Swedish rumor Kronstadt has been seized by the German troops who are marching upon Petrograd.

It is not yet certain whether Germany intends to support the Soviet Government or to abandon it. The German Embassy, with its staff, servants, and guards, seven hundred in all, and with its baggage, archives, and automobiles, went by special train from Moscow back to the old capital Petrograd on August 9. Here the Yusanov Palace was being prepared for their occupancy, but later it was said that

## THE GREAT WAR

**August 15**—First American airplanes with Liberty motor fly over German lines. American schooner "Madrugada" sunk by U-boat off Virginia Coast.

**August 16**—British tank steamer sinks U-boat 300 miles northeast of Nantucket. Japanese General Otani arrives at Vladivostok to take command of international forces.

**August 17**—French attack between the Aisne and Oise. One hundred I. W. W. members found guilty at Chicago of conspiracy to oppose war.

**August 18**—Rice riots in Japan. American troops from Philippines reach Vladivostok.

**August 19**—British take Merville on Lys. British reinforce Czechs on Usuri River, Siberia.

**August 20**—General Mangin takes 8000 German prisoners. United States has sent 1,500,000 overseas.

**August 21**—General Byng drives Germans back between Arras and Albert. Spain threatens seizure of German vessels to compensate for shipping sunk. Lassigny taken.

they had left Petrograd for parts unknown.

Undoubtedly the simultaneous entrance of the Allied troops into Russia by three gates, Archangel, Vladivostok, and Baku, was a great shock to the Soviets and has strengthened the various factions opposed to them. The frantic efforts of Trotzky to organize a Red army seem to have failed. More than seventeen hundred Russian officers have been shot for refusing to take command under the Soviet Government. In their desperation the Bolsheviks have resorted to a reign of terror. Thirty thousand members of the official and middle classes were arrested in the first half of August. Lenin said at the last session of the Executive Committee:

We may be compelled to go away, but before we withdraw we shall close the door behind us with such force that they will remember us for a very long time.

Efforts are being made thru the Swedish Consulate at Moscow to get American and Allied citizens out of the country. Several hundred of these, chiefly British and French, were arrested by the Soviet Government to be held as hostages for the Bolsheviks, whom the Allies captured when they entered Archangel. Some have been released, but about ninety still remain in custody. The American Consul General, Mr. Poole, has resigned his office but remains in Moscow to give unofficial aid to Americans and other foreigners.

**Mangin's Wedge** Foch's plan of keeping the enemy busy by striking first at one point and then at another along the line is working well. Hitherto his offensives have been directed at the points of the German salients, which have been driven back. But this week he has struck at an interior of an angle, a more difficult operation, but one promising greater results, if it can be pushed. The angle now attacked is the most im-

portant on the French front, for it is that formed by the German drives westward toward the Somme and southward toward the Marne. After gaining this ground Ludendorff tried to connect the two salients by a drive toward Paris, but he was checked before he got to Compiègne. Now the situation is reversed and the French are advancing northeast from Compiègne.

The theater of operations is defined by two rivers, the Oise, which flows south from Noyon to Compiègne, and the Aisne, which flows from Soissons to Compiègne. The two rivers join a few miles from this city. The French forces that occupy the angle between the rivers have now been thrown against the German line between Noyon and Soissons, on a front of fifteen miles. The country is a high rolling plateau, cut by sharp ravines. These ravines the Germans fill with mustard gas to hinder the French advance.

The new offensive is entrusted to General Mangin, the French commander who led the brilliant advance on the Aisne last month. His first attack was made at 5 o'clock on the morning of Saturday, August 17, on a three mile front. The resistance proved weak. The German soldiers in the front trenches surrendered readily and there was no counter attack. Next morning the attack was renewed on a longer front and was likewise successful. Then an intense artillery fire was

### ACROSS THE ENEMY LINES

Brigadier General Foulis last week led the first squadron of eighteen American-built De Havilland planes, equipped with Liberty motors, on a reconnaissance flight behind the enemy line. They returned without loss.

Baptist Union

## A KING FOR POLAND

Germany and Austria have agreed upon the Austrian Archduke Karl Stephen as the new monarch of Poland. The Archduke is a cousin of the late Emperor Francis Joseph

brought to bear upon the enemy lines for a distance of over fifteen miles and continued all day and night. At 7:10 on the morning of August 20 French troops charged and by 10 o'clock had broken thru the German lines and taken a thousand prisoners. By nightfall they had advanced from two to three miles along the entire front, and the number of prisoners had increased to 8000.

While General Mangin is advancing upon Noyon from the south General Humbert keeps gaining ground at Lassigny, west of Noyon. Further French victories will more than half encircle Noyon at a distance of less than five miles and compel the German commander, General von Hutier, to evacuate this important point by the one narrow gage road yet remaining clear. If the French get Noyon as they have Soissons the danger of a thrust at Paris will be averted and a position gained from which a wedge may be driven into the German line forcing a withdrawal from both the Marne on the right and the Somme on the left. The enemy, realizing this danger, has thrown a large part of his reserves into the section between the Aisne and the Oise. A secret circular from Ludendorff, found on one of the German officers captured, finds fault with the waste of men in holding on too long to unimportant advance positions which might better be sacrificed. Since the French offensive started a month ago the Germans have lost, according to Paris estimates, over 360,000 men.

## British Gains on the Lys and Ancre

On the British front just south of the Belgian boundary the Germans are withdrawing before the steady pounding of Haig's men. It will be remembered that their offensive on the Lys River last April carried them forward within five miles of Hazebrouck, a railroad junction on the road to Calais. Here, however, they were stopped and left holding a salient twelve miles deep with the point directed toward Hazebrouck. It is this point that the British are now driving back. Merville and other villages two miles inside the salient have been evacuated by the Germans. Their heavy artillery has been withdrawn to a considerable distance, and it is quite possible that they may fall back to the original Hindenburg line.

Farther south on the Ancre River the British under General Byng made an attack between Arras and Albert that carried them forward about three miles in the direction of Bapaume. The charge was made at 4.45 a. m., August 21, under cover of a heavy mist. By 9 o'clock the British had taken half a dozen villages on a ten mile front. Tanks and cavalry as well as infantry were used in the attack.

General Byng was the first commander to use tanks on a large scale. He gained great renown last March because he held Arras with the Third Army when the Fifth Army under General Gough gave way before the German drive.

## Rice Riots in Japan

Serious disorders are reported from various parts of Japan. The immediate cause is the scarcity, or, rather, the high price, of rice, but the outbreak has taken a socialistic and political aspect and appears as a demonstration against profiteering and luxury. The war has brought unprecedented prosperity to Japan, for she has taken little part in the fighting since November, 1914, when she took the German colony of Kiao Chau. Her manufactures and munitions have brought high prices and, instead of being overwhelmingly in debt, she is lending money to the Allies. Her trade has been extended thruout the world and she has virtually acquired a monopoly of Pacific commerce. But while this has made some immensely wealthy the wages of the poorer classes have not kept pace with the high cost of living.

The first reported disorders took place at Kyoto on August 11, when a mob of 6000 destroyed stores and had to be dispersed by the troops. At Nagoya, one of the leading manufacturing centers, the palace of the governor was besieged by a crowd of 30,000 demanding food. Here also the soldiers fired upon the people. At Tokyo on Tuesday night 5000 people raided the business section and destroyed 200 stores and restaurants. Ninety arrests were made and twenty policemen injured. As the disorders continued it became necessary to close the stores, theaters and principal streets. At Kobe

many rice stores and warehouses were burned. At Sakia 500 persons were arrested.

The mobs attacked the police and soldiery with such arms as they could find, stones, axes, swords and sharpened bamboos. The residences and resorts of the wealthy were the objects of especial animosity. It is impossible to get full information as to the disturbances and their cause, for the Government has prohibited all reports or discussion of them in the newspapers. Besides attempting to suppress the riots and the news of them the Government is endeavoring to remove their origin by the distribution of rice. An appropriation of \$5,000,000 was voted for the purchase of rice to be resold at a moderate price, and the Emperor has added \$1,500,000 to the fund from his private purse. Several millionaires have contributed \$100,000 each to purchase rice for the poor. The Mitsu and Iwaski families have each donated \$500,000.

**Internal State of Germany** The German reverses on two fronts in France just when the people were expecting a final victory will undoubtedly increase the discouragement and demoralization already prevailing in that country. Even in the full tide of the German successes, last June, Dr. von Kühlmann, the German Foreign Secretary, intimated to the Reichstag that peace might not be won by a military victory and that the war might extend into the fifth winter. He is supposed to have had "the highest authority" for what he said, yet the speech aroused such a storm of protest among the junkers that he lost his place.

The military authorities are said to have secured the support of the recalcitrant Reichstag by the definite assurance that the 1918 campaign would

FIGHTING FOR THE SENATORSHIP

Left to right: Chase Osborn, Lieutenant Commander Newberry, and Henry Ford are the three candidates for Senator in Michigan's most hotly contested political race

bring victory within a specified time and with a limited loss of life. Whether there was any such agreement or not it is obvious that the soldiers and civilians were led to expect that this was a final effort and bound to succeed. In order to overcome the reluctance of the Reichstag to acquiesce in the adoption of the policy of ruthless U-boat warfare on February 1, 1917, Secretary of the Interior Helfferich declared that it would prevent America from taking an active part in the war, and Secretary of the Navy von Capelle stated that the effect of America's entrance into the war would be equivalent to zero. The Germans generally believed that few American troops could be sent over until they read Secretary Baker's announcement that 700,000 had been safely transported, and they believed that the American troops would be poor fighters until they met them on the Marne. Now in the revulsion of feeling there is a disposition in Germany to exaggerate both the numbers and the prowess of the Americans.

On the eastern front the German people have received another disappointment. When their flour ration was cut down in May from 200 to 160 grams (5.6 ounces) a day they were assured that the acquisition of the Ukraine would soon bring a large supply of Russian grain. The Government promised 60,000,000 pounds by the last of July. But the reliance on the Ukraine proved illusory. The food available was found to be less than was anticipated and this had to be shared with Austria, which was even worse off. The ruthless efforts of the German military to gather in the grain of the Ukrainian peasants incited them to rebellion and aroused indignation even in Germany. The peasants hid or burned their corn rather than let the Germans have it. Finally the German military commander, General von Elchhorn, was assassinated in Kiev, the capital of Ukraine, and the German Ambassador, Count von Mir-

bach, was assassinated in Moscow, the capital of Russia.

Meat and eggs are often impossible to obtain. The number of pigs in Germany has been reduced from the 13,000,000 of last year to less than 6,000,000 this year. The sugar ration has been reduced to six or seven ounces a week, about the same as in the United States. The potato allowance was cut in June from more than seven pounds a week to less than three. Even the bread ration of the soldiers at the front was cut from 750 to 700 grams (21.5 ounces). When the American soldiers overran the wheat fields of the Ourcq valley they found that the harvesting had been done by German soldiers, who had done up the wheat in four pound packages to be sent to their families.

Overstrain and undernourishment have left the populace a prey to disease. An epidemic of a new disease or a more virulent type of an old one, the Spanish grippe or influenza, is running thru the country and causing a large number of fatalities. In one of the reserve divisions of troops at Berlin the deaths from this were from six to twelve in each company during a single week. Curiously enough the infant mortality rate has fallen during the war. In the 26 German cities of over 200,000 inhabitants the death rate for infants fell from 153 per 1000 in 1914 to 140 in 1915 and 130 in 1916.

Germany has lost during the war more than five million of her men in the army. Up to January 31, 1917, the number killed in action or taken prisoner amounted to 4,156,961 men, or by years

1914 (five months) .....	669,800
1915 .....	713,461
1916 .....	901,250
1917 8 (thirteen months) .....	687,900

This does not include the deaths from wounds and disease. The figures up to July, 1917, are official; the later estimated. The number of births, which in Germany in 1913 was 1,839,000, had fallen in 1916 to 1,103,000.

Remembering that Congress was "out at recess," as schoolchildren say, the President and other officials off duty, and Washington gaspingly recovering from extraordinary heat, it seemed likely that the only report of the week there would be: "All quiet along the Potomac." Then came General March's startling announcement on the 15th to the Senate Committee on Military Affairs that the United States must have four millions of fighters in Europe before next June in order to do its part in the strategic plan of the Versailles war council. He did not say may, or might, or should, but *must*. This would have seemed astounding in its effrontery of conditions a few weeks ago, but it has been accepted by the country in the same matter-of-fact way in which it was uttered. Conigsby Dawson remarks, in his recent book on what America has done in France, that with the English war is a sport, with the French a martyrdom, but with the Americans it is a job. The Government's view of the way the job should be done is that we should accumulate on the western battlefield, from the North Sea to the Adriatic, next spring, so many soldiers and engines of war that, combined with the strength of the Allies, the force would be irresistible by the foe. It tells us that Great Britain is preparing for a supreme effort, that France will muster a more powerful army than ever before, that Italy's effort will be doubled, and that if we put eighty divisions beside them the war can be ended by "one smashing blow."

On the 19th Secretary Baker and General March repeated even more forcibly before the House Committee on Military Affairs their confidence in the power of this plan. They asserted that ships and equipment would be forthcoming as fast as men were ready for them.

## The New Draft Bill

The most immediate and vital requirement, in order to carry the tremendous military program of the Government, which only now has revealed the grand scale of its intentions, is men. In order to get what it needs the age limits for selective drafting must be enlarged, and Secretary Baker has asked Congress to make them from eighteen to forty-five years. This proposition was in the hands of the two military committees when Congress adjourned for its holiday, which was to last until August 24. The urgency of the War Department was so great, however, that Mr. Chamberlain, chairman of the Senate Committee on Military Affairs, asked the Senate to reassemble on the 15th, in order to rescind the adjournment limit, and begin at once to consider the Man-Power bill, as it is called, which the committee was ready to offer. A quorum failed to present itself on the 15th, altho it is said that senators enough were in the Capitol on that day, and so the matter had to go over until the 19th.

Chairman Dent, of the House committee, declined to take any similar hastening action, and has been rewarded by much condemnation. "It is difficult," the *Chicago Tribune* exclaimed, for example, "to consider the case of Dent and his followers without passionate resentment," which it expresses at length in a hot editorial. On the 19th Dent's committee came together and listened to an exposition of the War Department's needs.

On Monday of this week the Senate met, and voted to yield the remainder of the recess, and the Man-Power bill was at once introduced. Its principal features are as follows:

The present draft ages of twenty-one to thirty-one, inclusive, are extended to eighteen and forty-five inclusive.

The estimated number of effectives thus to be secured in class 1 for military service is 2,398,845.

The President is empowered to draft such persons "in such sequence of ages and at such time or times as he may prescribe."

Exemption is given to those engaged in industries, occupations or employments necessary to maintain the military establishment or the national interests during

the war; and they must continue in such work or be subject to draft.

The Senate laid aside the Prohibition bill, which had right of way, and agreed to put the Man-Power bill ahead of all other business. It is hoped that it may be passed by the end of the present week, the bill having first place on the calendar having been postponed.

Chairman Dent expects to report the same bill to the House by Thursday, the 22d, probably, he said, with amendments relating to the summoning of men less than twenty-one years old, in compliance with a widespread sentiment that these youths should not be called until the supply of older men is exhausted. In respect to this matter, Secretary Baker and General March are reported to have explained to the House committee that calls are planned for first men between nineteen and thirty-six years of age, next those between thirty-six and forty-five, and last of all eighteen-years-old youths; but General March added emphatically that all three groups would be summoned to the colors before the end of next spring.

## The I. W. W. Convicted

The one hundred leaders of the Industrial Workers of the World, who have long been on trial in the Federal Court in Chicago, were convicted on August 17 by a jury that found its verdict in less than an hour. The charges thus substantiated were of specific violations of the Espionage Act; of that section of the Federal Criminal Code prohibiting interfering with civil rights of citizens; of the Selective Service Act, and of the conspiracy statute.

In his brief closing address, Frank K. Nebeker, chief of counsel for the Government, explained the Government's point of view thus:

The wisdom of the laws of this country is not at issue. We obey the decisions of the highest court and that is the only way that a republic can live. Anything that strikes at that is a dangerous thing.

The wisdom of the decisions of the courts of this country is not at issue. The industrial system is not on trial. This case is not against any interests of honest working-

## SAVE THE SHIPS

Millions of dollars worth of ships and freight in American waters are being saved by salvagers. This diver is putting on his collar, to which the helmet is fastened

men nor against any patriotic labor organization. No effort is being made by the Government to justify mob violence, the Bisbee deportation or other lawless acts.

The documents issued by the defendants themselves are enough to convict them. When you consider the definitions made by the witnesses on the stand and compare them with what they have written and the books they authorized the case of the Government is complete.

The I. W. W. attorney said he was astounded when he heard a verdict against all the defendants equally, the principal of whom is "Big Bill" Haywood, the highest officer in the organization, and conspicuous by reason of his part in murderous Western miners' strikes. The maximum penalty faced by him and each of the other ninety and nine is twenty-seven years in prison and a fine of \$10,000. All were remanded to jail, where next morning they declared themselves wholly impenitent.

## Lynching Unprofitable

Texas and Georgia are trying to put a stop to lynching. The Texas plan is to pay rewards for convictions. A San Antonio newspaper announces that it has "set aside a fund of \$100,000 to be used in combating the crime of lynching in this country, thereby to aid in stamping out the lawlessness and violence of the mob." The method is to offer large rewards for evidence, followed by conviction and punishment, against any person instrumental in causing a lynching; and twice as much will be paid in the case of the murder of a negro by mob-violence as when the victim is white. The difficulty in earning one of these rewards will be in getting a jury to convict. The Georgia plan, now before the Legislature at Atlanta, is to remove from office automatically any sheriff who allows a lynching in his county.

## BATTER UP

Gas masks are not allowed to interfere with their comfort or enjoyment when American soldiers want to play baseball

### Influenza Not Feared

Two or more ships have come into eastern ports lately bringing patients suffering from what is called Spanish influenza, a disease that has been epidemic in Europe, especially among the German soldiers and people. When these arrivals became known considerable apprehension was felt lest this disease, which does not appear to be essentially different from the ordinary type, would spread widely in the United States, as it is known to be communicable. The port authorities at New York found that nearly all those on the afflicted ships who had been ill for the customary four days exacted by the malady had fully recovered, and the few remaining sufferers were placed in isolation in hospitals. Those who had died on shipboard or after landing died of pneumonia, it was explained; and most of them were East Indians who seem to have little resistance to that disease.

Both the Federal and local health boards have declined to quarantine these or other vessels that may bring such patients, and assure us that there is no danger of an epidemic. It appears certain, indeed, that this kind of influenza, which is regarded by medical authorities as of a mild form so far as it has manifested itself in the United States, altho uncomfortable, is not dangerous to a person in fair health. The reason why it has been virulent in Spain and Germany, and has produced a good many fatal cases in England, is said to be that the persons it attacked were not well fed and were in general in a bad state to resist a disease that was often followed by pneumonia.

Nevertheless, all possible precautions, short of a rigid quarantine, are being taken by port health authorities,

especially in New York, to keep influenza, Spanish or otherwise, away from our shores.

### South American Strikes

The widespread and riotous strikes of laborers in Uruguay for greater wages, based on the increased cost of living, shows how worldwide has been the economic effect of the Great War. At Montevideo a strong force of soldiers was required to subdue the destructive mobs, and among those arrested were several anarchistic agitators. It appears that order is being restored, but nothing is known of how far the demands of the hungry workers have been satisfied.

Argentina is also suffering from the steadily mounting prices of necessary articles, especially foodstuffs, owing in part at least, to the vast quantities of grain that have been shipped to Great Britain for the benefit of the Entente Allies. The Argentine cabinet has just held a special meeting to consider measures to relieve the situation. It has also leaked out that the Argentine Congress has been asked to increase the navy.

### Mexican Oil Threats

One point of contact of Mexico with the rest of the world is so sensitive that a harsh touch arouses instant attention. This is the matter of the oil supply from the Tampico region. The Allies need this year, it has been estimated, 430,000,000 barrels of crude oil for fuel for their ships, of which the Mexican fields are expected to supply 130,000,000 barrels.

All the oil lands in Mexico are controlled by British and American companies under leases. Last February the Mexican Government decreed new regulations that would have destroyed the productive value of every lease-

hold, and by the resulting practical confiscation would have thrown the wells back into Mexican hands, and thus would have made the oil an article of contraband deniable to the belligerents—in effect, to Great Britain's navy. It is not illogical to conclude that this subtle move was guided by the German hand heretofore so busy in the City of Mexico, especially as Herr Ballin, manager of what is left of the Hamburg-American Steamship line, recently declared that "after the war we are assured of extensive oil possessions overseas."

Great Britain at once protested against the decree, and all the oil companies united in a refusal to comply with the new terms. So Mexico modified her regulations somewhat, in July, but failed to quiet British apprehensions or satisfy her sense of justice. To these protests Mexico sent a tart reply a few days ago, the burden of which was that the proposed arrangement is one of purely internal affairs regarded as beneficial for the home country. Therefore Mexico "is surprised" at any outside concern with it, and all persons feeling aggrieved may seek redress in Mexican courts. To this the natural reply was made that, while the title to the lands involved remained with the Mexican Government, the leases were the property of the lessees, and it was intimated that their Governments would maintain their rights.

At any rate the February decree, modified by a new decree dated July 31, was again softened by a decree on August 12, and danger of disturbance of the flow of fuel oil to the European navies seems averted. Negotiations continue, but so do the production and shipment of oil.

Paul Thompson

### ENLISTING WITH THE MARINES

Eight women last week joined the Marines as privates and will work in Washington as stenographers, releasing men for active service.

# WHAT IS BACK OF THE FRONT

BY HAMILTON HOLT

**A**SSUMING that the United States has 1,000,000 men in France, the correct proportion would be 600,000 on the line and 400,000 back of the line supporting them. The visitor who simply goes to the front trenches, therefore, misses two-fifths of America's effort. As I was determined to see all that America had to show before I returned home, and as every one who had ever made the trip advised me that no one could possibly appreciate how much America has done without an inspection of the rear lines, I started from Paris on June 3d, accompanied by my cousin, Captain Gardner Richardson, who had been detailed as my escort by "G. H. Q." (the universal designation of General Head Quarters).

America has several ports of disembarkation in France, which are of course well known to the German General Staff, thru her most efficient spy system. But I suspect the censor would not permit me to divulge them to the American people. Our destination was the most central and important one of these ports.

It is a city of considerable size, but as we rode to the American headquarters in the government auto that met us at the station, I was surprised to see more Americans than French on the streets. Everywhere were the soldiers in brown khaki walking up and down. Everywhere were American cars, from the ubiquitous Ford to the giant Pierce-Arrow truck. At every street crossing our military police were posted to direct the traffic. In almost every store window were "Souvenirs de France" for sale—pretty embroideries made by the French orphans, and all decorated with intertwined American and French flags to catch the eye and allure the pocketbooks of "Les Americains."

After our call at headquarters, we set out to inspect the city. Everywhere were evidences of American enterprise and effort. We saw the docks built by the American engineers—marvelous products of engineering skill; for the tide

here rises and falls some twenty feet. The docks have large berths inside the basins provided with locks. I counted twenty-five American liners unloading at one time. Railroad tracks come down to the docks, so that the cargoes can be loaded directly from the boats to the trains. It seemed like home to see great American freight cars and colossal four driving wheeled American engines everywhere. How pigmy the French engines and cars looked in comparison! We visited a great locomotive assembly station where fifty skilled American mechanics were putting together railroad engines. The lofty cranes would lift the huge boilers up as tho they were feathers and then drop them exactly in the right positions on the trucks. Indeed, American railroading is one of our greatest achievements abroad. Already we have laid over 600 miles of track in France. We have double tracked a trunk line nearly to the front. We have transhipped 250 large engines and 800 freight cars across the Atlantic. We have taken over and equipt an enormous railroad repair shop. We have even erected American telegraph poles along the roadbed. It gave one a distinct pleasure to see stamped on the side of a tall telegraph pole "U. S. A. 30,716."

Not the least American thing in this Franco-American city was a completely equipt American fire engine house with a crew imported from as far distant a city as Portland, Oregon. And you should have seen the boys slide down the polished brass pole just as they do at home when the Captain sounded the gong.

I forget how many hundreds of miles of telephone wire we had installed in our especial American telephone circuit. But best of all, you could say "Hello," just as you do at home—and back would come the response from a real American exported hello girl: "Number, please?"

Large receiving camps have been con-

structed at various points about the city. We found them packed to overflowing with our boys just disembarked from the ships. In addition to the receiving camps there was a permanent camp for cavalry and another for the engineers.

It was a motley group of workmen that we saw scattered about the town and its environs. Besides American and French enlisted men, we noticed gangs of Russians, Portuguese, Italians, and Spanish. There were also American negroes and black Algerians with red fezes. I noticed also one group of 500 Chinese in sky blue overalls, and all under a Chinese officer dressed in an American Y. M. C. A. uniform.

But I was especially interested in the squads of German prisoners, whom it was curious to note were under English guards, working for America on French soil. We had not at that time captured many, and so had to borrow them from the British. They looked remarkably well fed, and I was told the last thing on earth they wanted was to be sent home. I was very anxious to talk with them, but that was strictly forbidden. I finally, however, obtained permission to question three common soldiers, and I asked them, thru Captain Richardson as interpreter, who speaks French and German fluently, why they thought America entered the war. Without a moment's hesitation they replied that it was because America had all her investments to lose if England and France were defeated. And then they volunteered this most significant opinion: "You are never going to get out of France, else why are you spending so much money on these colossal warehouses and wharves. You intend to conquer France." Evidently the typical German mind cannot conceive of one nation investing money in another's territory without there being some interested selfish political motive behind it.

In addition to the great docks and military camps, we have built some of the largest warehouses in the world in the immediate neighborhood of this city. Yet so great is the freight and troop congestion that our officers are often at their wits' end to know what to do with the men and supplies dumped upon them. Tho the railroads are working wonders, all the automobiles now have to leave town under their own gasoline and loaded to the tops with freight. I saw literally a mountain of baled hay out in an open field. There was no room to store it under cover.

After a trip to the American hydroplane station which I described in my last week's article on aviation, we returned to town in time to visit the docks again, and walked along the whole three miles of the great basin filled with ships still being unloaded. Originally America employed French labor on the docks, and it took about three weeks to unload a vessel. But now we have substituted enlisted men, it takes about one week, tho a single boat has been unloaded in as few as two or three days.

"The sheds were so full that boxes and bales were piled high outside"

On our way to spend the night at an American hospital ten miles out of town we stopped beyond a little village and saw a gang of several hundred Chinese coolies out in the open fields eating their supper. They were paid, I was told, five francs a day, less two francs taken back for medical assistance and food. They were in their native costumes, and a sturdy lot of workers they were. The American officer in charge directed them thru a Chinese interpreter, and he told me that he had no difficulty in keeping order among them.

As we motored over the perfect macadam road thru a beautiful rolling open French country, we came after a short run to the great American supply sheds, which are already completely erected, and which will store forty-five days of supplies for a million men. These sheds, built on the unit plan, will soon be enlarged to supply material for two million men. They were so full they could not hold all the material that had come from the last convoy, and many boxes and bales were piled high out in the open.

That evening we arrived at the first large hospital erected along the American lines of communication. It was manned by the New York Post-Graduate Hospital unit. It is a substantial and permanent affair of red brick and concrete, and is now capable of accommodating 5000 wounded. It is soon to be expanded, however, by the building of enough extra sheds to accommodate 15,000 patients. Dr. W. E. Cooper, the Major in command, who hails from Nashville, Tennessee, was as fine a type of American as one would want to meet. He received us with the utmost hospitality and took us about in person to visit the hospital and outbuildings. He now has under him thirty-six doctors, 100 nurses and thirty enlisted men, but more will be needed as the hospital expands.

The town in which the hospital is situated is almost a city in size. But all the French doctors have been drafted with the French Army, so the American doctors are taking care of the town sick. In the general clinic I saw many of the townspeople waiting their turn at free treatment, while in one of the wards I met a little French boy who had just been operated on for appendicitis in a bed next to an American soldier whose leg had been shot thru at Cantigny.

As the bugle sounded for mess it was pleasant to see the convalescent patients assemble in the old Spanish-looking courtyard in the center of the low buildings and march in true military formation to their evening meal; and it was even pleasanter to sit down to a real American supper of oatmeal, omelet, boiled potatoes, chicken, pure white bread, strawberry jam, apple sauce and chocolate cake.

After this report Major Cooper took us in his car about a mile out to the little graveyard which America has just purchased as a permanent resting place for those of her sons who die in that part of France. Already ten fresh graves were dug in one corner of the green acre. They had been covered with

*At a simple ceremony officers and nurses decorated the graves of American soldiers*

wreaths, and on Decoration Day, a few days before, the French General from the nearest army post, had come over with his aides to take part in the simple ceremony of decorating the soldiers' graves just as our people were doing at the same time in the church yards at home. A military band headed the procession which marched from the hospital to the cemetery. The officers and nurses and soldiers marched behind, and when they arrived at the pretty, peaceful spot, the French General placed a wreath on the graves of our soldiers with this inscription on it, "Les Généreaux, Officiers, Sous Officiers, Soldats, et Marins de la —me Région, a leurs Camarades Américains." Major Cooper gave me a photograph of this simple ceremony, which I herewith reproduce.

The sun was setting, and the birds were singing as we left the little plot. We then went over to the French cemetery on the other side of the road. There I counted twenty-nine more American graves where our boys had been buried before we bought our own graveyard. Each grave had a small wooden cross at the head with the name of the soldier on it, and beneath it a small American flag was erected. To show the cosmopolitan character of the boys who now fight under the Stars and Stripes, I noticed that the names on the graves of these twenty-nine boys were of English, Irish, Scotch, German, Italian, Scandinavian, Polish, French, and Dutch extraction.

We then drove half a mile further up the road to a neat French farm of 100 acres, which the American hospital has bought as a sort of outdoor cure for American soldiers every day. Those able to work are sent out there to do a little farming, tho always under a doctor's prescription. It has been found among other things that men with stiff arms and fingers are greatly aided by pulling weeds. Of course, it was a young Cornell graduate who was in charge. He had enlisted in the army, but had been transferred to take care of this farm. He was evidently putting into practice all that he had learned in our great New York State agricultural college. The Red Cross pays the rent of the farm,

but the hospital stocks and runs it. Besides the garden there was a farmer's home and a barn for eighteen cows. Already the refuse from the hospital was keeping a good sized piggery in swiffling bliss.

Over the hill back of the farm the American engineers had built a great dam, which looked to me like the famous Roosevelt Dam in Arizona, only of course on a smaller scale. There is no engineering feat like this in all France, and the French have never ceased marvelling at the quickness and skill with which it has been done. The dam is built across two hills, and already it contains 120,000,000 gallons of water, which is enough to supply the town and the neighboring villages during the severest drought. The breastwork of this dam is twenty-five feet thick at the bottom and five feet at the top, and its foundations go down twenty feet under ground. It is 500 feet across and is 60 feet high. It was built in three months, and when I was there, there was enough water in the reservoir to supply a 10,000 bed hospital for five months. The famous 17th Engineers directed the making of this dam, and the labor employed was all Spanish. The Y. M. C. A. secretary, who was accompanying Major Cooper, Captain Richardson and myself on our little tour, told me that no one was more delighted than he when this dam was built, for now the hospital had plenty of water and he did not have to take his morning bath any longer with an atomizer.

When we returned to the hospital, I went over to the Y. M. C. A., and there addressed probably 500 convalescent soldiers who packed themselves on the wooden benches in the darkened hut. After I had finished a French film was thrown on the screen while the Y. M. C. A. secretary translated the French text to the audience into true American vernacular.

Major Cooper put us up for the night in one of the vacant wards, and after a good eight hours' rest and a hearty breakfast, we said goodbye to our hospitable hosts and proceeded on our way up the American lines.

# FROM BALUCHISTAN TO BAKU

## The Significance of the Struggle for Central Asia

**T**HE arrival of a small British force from India at the Caucasian port of Baku may prove to be one of the most important moves of the war, for it means that the tri-continental Pan-Islamic belt has been cut thru in the middle. If the British can hold this line of communications the gigantic scheme for a Turanian Central Asia to rival and complement the Teutonic Central Europe will be blasted in the bud. The fate of Eurasia is dependent, as it has been many times before in the world's history, upon the possession of the mountain barrier that stretches between the Black Sea and the Caspian. This ancient stronghold is now garrisoned by the remnants of two Christian races, Georgians and Armenians, beleaguered on all sides by the anti-Christian forces of Tatars, Turks and Teutons. If this, the traditional homeland of our Caucasian race, is lost it means that the hereditary enemies of that race, oftentimes the destroyer of its civilization, will as in the days of Genghis Khan have a clean sweep from the Black Sea to the Yellow Sea, from the Danube to the Amur. France is now the cynosure of all eyes, but whether from the point of view of race, religion, language, territorial control or natural resources there is more at stake in the Caucasus. A few hundred men there just now can do more to win the war than as many thousand in France.

For it is in the Caucasus that the two most portentous movements of our time, Pan-Germanism and Pan-Turanism, meet and merge. It is thru this region that the Berlin-Bombay railroad is planned to run and it is thru this region that the Mohammedans of the south hope to join hands with their brethren of the north. This little isolated group of Christian peoples is a block to both ambitions and that is why Turks under German officers have been engaged in exterminating them. Nothing that Nero did can compare with the doings of the Committee of Union and Progress of Constantinople with connivance of His Most Christian Majesty of Berlin. A million Armenians, men and women and children, have been slaughtered within the last four years to clear the Caucasus for Islam and Kultur.

Besides its unique strategic importance the Caucasus is one of the richest regions of the globe. The land to which Jason and the Argonauts came in search of the Golden Fleece has proved a modern El Dorado. The Fountains of Eternal Fire that the Zoroastrians used to worship have been the making of the Moslem millionaire. A single tract ten miles square at Baku produced for some years half the world's supply of petroleum and even yet keeps Russia next to the United States in output. The Caucasus is rich in copper and manganese, the metals that Germany most needs for her munitions. The Trans-Caucasian and Trans-Caspian plains may grow

BY EDWIN E. SLOSSON

the cotton that she wants for her mills and munitions.

The Caucasus is the key to a territory larger than the United States and having now a population a third as great. The isthmus itself is somewhat larger than California and has about 12,000,000 inhabitants. Divided into a dozen religions and fifty races they lived side by side from time immemorial, rarely mixing and often quarreling.

We need here, however, to consider only the leading racial groups, which I will venture to characterize briefly below. But in a case of such complexity to simplify means to falsify and I have no doubt exception could rightly be taken to every statement in the following summary:

1. Russians. Chiefly Cossacks. 2,400,000. Russian language. Orthodox religion, Monarchists and pro-German.
2. Mountaineers. 1,300,000. Circassians, Lesgians, etc. Primitive tribesmen. Various dialects. Fanatical Mohammedans of Sunnite sect.
3. Georgians. 3,000,000. Georgian language. Same religion as Russians but distinct church. Mostly peasants. Over 85 per cent literate.
4. Armenians. 1,600,000 and 250,000 refugees from Turkey. Partly peasants, partly tradesmen. Armenian language. Gregorian Christians.
5. Tartars. 2,000,000. Primitive nomads but recently caught in the oil boom and made wealthy or workmen. Language Turkish. Religion Sunnite Mohammedan.
6. Persians, Greeks, Kurds, Jews, Germans, Lithuanians and other races too numerous to mention.

The Russian empire in its glacier movement toward the southern seas began to absorb this region in 1723, when Peter the Great captured Baku, and after many ebbs and flows reached its farthest limits at Trebizond, Erzerum and Tiflis in 1917. Then came the great collapse and none of the subjugated nationalities rejoiced more at the overthrow of the Czar than those of the Caucasus, for none had suffered more from his tyranny. They were so glad that they actually shook hands. Armenians and Tatars, who in 1905 were engaged in mutual massacres, called each other brothers. Priests of the rival Mohammedan sects, Sunnite and Shiite, who hate one another as much as Catholic and Protestant in their worst days, embraced upon the public platform. Oil magnates and Bolsheviks joined in the work of liberation and reconstruction. Georgians, Armenians and Tatars united to form a Caucasian federal republic with a capital at Tiflis.

But this era of good feeling did not last long. The old enmities revived and new rivalries emerged. Perhaps Caucasasia as well as Russia proper might have worked out its own salvation if it had been let alone, but outside pressure is added to internal strain.

The Caucasus is divided geograph-

ically into two parts by the lofty range that runs slantingly across the isthmus, dividing the waters and also forming a political line of cleavage. On the northern slope are most of the Russian Cossacks and Mohammedan mountaineers. On the southern are most of the Georgians, Armenians, Tatars and Persians.

The Mohammedan mountaineers at the outbreak of the revolution united with the Kuban Cossacks to the north in the formation of a joint republic, but the two parties soon quarreled over the land question and have been fighting ever since. The Mohammedans in December, 1917, set up a separate republic called the "Union of the Independent States of the Mountaineers of the Caucasus" with Vladikavkas as its capital and Colonel Tchermoev, a liberal minded Lesgian, as its president. The Lesgians are the people who in the nineteenth century under Samuel the High Priest fought the Russians twenty years to maintain their independence and doubtless their only wish now is to regain it. The Kuban Cossacks, who also claim the territory north of the Caucasian range, have set up a republic with General Krasnov as its head and Ekaterinodar as its capital. Still farther north are the Don Cossacks with a capital at Rostov. Both the Don and Kuban Cossacks have called in German aid to maintain their "independence" against Great Russia and the Ukraine.

So much for the country north of the Caucasian range. Let us now consider the southern side. Here a Trans-Caucasian Federation was formed at Tiflis and declared its independence April 27. It was at first composed of Georgians, Armenians and Tatars. Three members of each race constituted the cabinet. But when it came to a conflict with the Turks, the Tatars went over to the enemy. Later it appears the Georgians and Armenians separated on account of a dispute over boundaries. An independent Georgian republic was formed May 26. The Diet meets at Tiflis and the Prime Minister is Ramishvili, a member of the first Russian Duma.

The Georgians, who outnumber the Danes or Norwegians, claim independence on racial and historic grounds. The Georgian kingdom lasted over two thousand years from 323 B. C., when it was conquered by Alexander of Macedonia to 1801 A. D., when it was confiscated by Alexander of Russia. The Georgians thus have been in subjection to Russia only a little over a century and we ought to count out of that the period 1836-1864, when they were in revolt. By the treaty of 1783 Georgia came under the "protection" of Russia and it was stipulated that the Georgians should retain their king, that they should have self-government, that their church should be independent, that no more than 6000 Russian troops should be quartered there, that Georgians should not be conscripted for the Rus-

The conflict for the Trans-Caucasus and Trans-Caspian: British troops from India and Bagdad have, as shown by the arrows, arrived on both shores of the Caspian. Armenians and Bolsheviki are defending Baku. The Turks are at Tabriz. The Germans are at Tiflis

sian army and that the Georgian language should be used in schools and administration. Needless to say the Russian Government kept none of these promises. Georgia lost its king. It was ruled by the Russian bureaucracy. The Georgian church was brought under the Holy Synod of St. Petersburg and its property, amounting to \$350,000,000, was confiscated. There were 180,000 Russian troops quartered on the people before the war. The Georgians were forced to serve in the Russian army. The Georgian schools were suppressed and the language denied official recognition. Under Nicholas II, the late unlamented Czar, the Russian troops pillaged their country, destroyed their crops, burnt their villages and distributed their women and girls among the Cossacks.

Naturally, then, the Georgians have no love for Russia. They took part in the abortive revolution of 1905 and the successful revolution of 1917. Two Georgians, Tcheidze and Tseretelli, were members of the provisional government. The Georgian leaders are largely socialists, but opposed to the Bolsheviki. Crushed between the Turks on the south and the Germans on the north they are now helpless. A deputation of Georgians visiting Constantinople on June 19 is said to have agreed to the cession of Batum to the Turks and the acceptance of a German prince for a king. But if the Georgians can get arms and aid from the Allies they may renew their resistance. In order to secure their coöperation, however, it would be necessary for the Allies to make it perfectly clear that they do not intend to favor or permit the restoration of the Czar or any interference with the independence of Georgia. By the secret agreement made between Russia, Great Britain and France in the spring of 1916 and published by the Bolsheviki Russia is granted Turkish territory as far as Er-

zerum and Trebizond which is claimed by the Georgians. The British Government has recently declared that all these agreements still hold regardless of changed conditions and so long as this attitude is maintained it will be difficult to get the hearty coöperation of peoples liberated from the Russian yoke.

As soon as the revolution of 1917 set them free the Georgians set about the task of developing the national life which the Romanovs had suppressed. The first step was to regain their spiritual freedom. The Georgians demanded ecclesiastical autocephaly of the Provisional Government and when that was not conceded they proceeded to declare their independence of the Russian Holy Synod and in September, 1917, elected Bishop Kyrion as Catholicos of the Georgian Church. In January a national university was organized at Tiflis with a faculty of twenty-seven professors to teach all subjects in the Georgian tongue. The Georgian nobility not only renounced all their ranks and titles but with unparalleled generosity surrendered all their lands to endow a national system of education. A national army of 250,000 was enrolled and such part of it as could be armed and organized was sent against the Turks in coöperation with the Armenians.

For the Bolsheviki in this case as in others showed themselves fair in promises but treacherous in performance. On January 16, 1918, Nicholas Lenin signed a decree declaring that the Soviet Government would support the right of the Armenians to complete independence both in Russia and Turkey. But a month later he assented to the treaty of Brest-Litovsk which consigned to the tender mercies of the Turk that part of the Armenian race that had hitherto escaped massacre. The Brest-Litovsk treaty gave back to Turkey not only the territory taken by

Russia in the present war extending as far as Erzerum and Trebizond but also that taken by Russia in the war of 1878, namely, the districts of Batum, Ardahan and Kars on the southwestern side of Trans-Caucasia. Now Batum and Ardahan are chiefly inhabited by Georgians and Kars by Armenians. The Georgians also claim the country as far as Trebizond and Erzerum on the grounds that it was included in the realm of the Georgian queen, Tamara, in the twelfth century, and that it is largely peopled by Georgians who, though mostly Mohammedanized will, it is believed, be glad to unite with the Christian branch of their race in founding a new Georgian state.

So the Georgians and Armenians joined in an effort to prevent the Turks from getting the territory conceded to them by the Bolsheviki. They fought valiantly but for lack of ammunition were forced to fall back. In March we heard that the Turks had regained Erzerum and murdered the remaining Armenians. In April the Turks had taken Kars and Ardahan. In May they had captured Alexandropol and Erivan with heavy slaughter. In June the Georgians were forced to send deputations to Constantinople and Berlin to sue for peace. In July the Turks had captured Tabriz and pillaged the American consulate and hospital. The appetite of the Turks had grown with what it fed upon. Not content with the generous concessions made to them at Brest-Litovsk they had pushed beyond these limits. They had carried their conquests to the foot of the Caucasus mountains. They had swept over northwestern Persia and seemed likely to capture the Caspian ports of Enzeli and Baku.

But now it appears that the advance of the Turks was halted by a curious combination of forces. The British got to Enzeli before they did. The Armenians and [Continued on page 294]

**F**RANCE, the shrine of Roland and Jeanne d'Arc, whose sorrowful son has for four years borne the devastating imprints of an invader's heel, has taken time to pause in her heroic struggle to worship and adore the superhuman prowess of one of her sons, a fragile boy of twenty-two, whose daily combats against the enemy became as familiar to the very children of France of the twentieth century as were those of Roland to the people of an earlier day.

Eight times shot down from on high! And eight times miraculously saved from a certain death!

On the very morning of his decoration as an officer of the Legion of Honor by General d'Esperey, he went aloft on a cruise for enemy aeroplanes and had two encounters; upon his return, and after the conclusion of the ceremony, the general desired Guynemer to show him his fighting aeroplane. Straight across the floor of the fusilage upon which the pilot's feet must rest while they touch the rudder bar, a line of bullet holes was traced—received in one of the combats of the morning.

"How was it that your feet were not struck?" inquired General d'Esperey, pointing to the row of bullet holes.

"I had just moved them, my general," replied Guynemer, simply.

Returning almost daily from his chases with his aeroplane, and often his clothing, riddled with bullets; hurling himself with absolute abandon against three, ten, fifteen or twenty enemy machines in formation, among which he usually succeeded in bringing down one or more; exulting in the number of wounds which his faithful planes brought home as if to bear witness to his charmed life, and encircling them with red paint to make them more conspicuous; on three oc-

casions shooting down an enemy machine with one single bullet; on May 25, 1917, bringing down four enemy aeroplanes in one single day—at that time the record—all these extraordinary exploits, coupled with the very extraordinary energy of this slim boy, soon placed him upon a pedestal which raised him high above his comrades. It placed him in truth above the greatest men of his time, and by reason of his many miraculous escapes from certain death, eventually surrounded him with a halo of immortality and superhuman prowess unknown to the French populace since the day of Jeanne d'Arc.

Possessed of every decoration that a grateful nation could officially bestow upon him, conscious of a position in the public esteem that, tintured as it was with the legendary, illumined him with more glory and religious fervor than was accorded even to a Joffre or a Foch, Georges Guynemer fulfilled the expectations of his fellow countrymen when, on September 11, 1917, he disappeared from the eyes of the world while in the full exercise of his duty. The heavens swallowed him up and no clue to his disappearance has been discovered. Small wonder, then, that the people of France in contemplation of this last legendary exploit of their adored hero place his memory with one acclaim alongside the niche so long occupied by that last youthful miracle of France, Jeanne d'Arc!

Georges Guynemer was born in Paris on December 24, 1894. After falling between the trenches, where his aeroplane was smashed into bits, on the occasion of one of his chutes, from which perilous position he was rescued by a group of devoted poilus from an adjacent dugout, Guynemer remarked to them as they were hastily dragging him out of the hailstorm of German bullets: "They can't hurt me. I was born on Christmas eve!"

His parents were well to do. His boyhood was spent at the family home in Compiègne and later at Stanislas College. Before war had threatened France this young schoolboy,

enamored of the thought of flying, had cultivated the friendship of aviators and had actually made several flights with them. His desire to enter aviation knew no bounds. He haunted the flying fields. He studied motors and their parts. First attempting to enter the infantry and being twice rejected because of his slight figure and extreme youth, Georges one November day met an army aeroplane pilot and learned of the new importance of aeroplanes in war. He set off again for the recruiting office and pleaded once more for admission into service, this time in aviation. Again he was refused.

Arming himself with recommendations he returned a few days later and applied for a position as mechanic, as laborer, as office boy—any work would be suitable so long as he might be near his beloved aeroplanes. His passion and perseverance conquered all objections and he was accepted as a laborer and put to work in the aerodrome at Pau.

Once admitted to the sacred presence, the rest was easy. The boy did his required work and found time to learn all that the mechanics knew. Then he pestered the pilots until they took him up for flights. Quickly he mastered the machines himself, and in February, 1915, he earned his pilot's certificate.

The escadrille in which Guynemer made his début was the M. S. 3, called the "Cigognes" because of the flying stork which each pilot in this escadrille painted along the sides of his machine. It already contained Captain Brocard, Vedrines, Deullin, Dorme, Heurteaux, Auger, Raymond, de la Tour, a galaxy of stars that with Guynemer's aid made the Cigognes the greatest fighting squadron in France. And among these carefully selected champions this boy, Guynemer, was to become the chief!

Before every flight Guynemer spent an hour over his aeroplane and gun, examining every wire, screw and turnbuckle, oiling his gun, greasing each separate cartridge, leaving no detail to the exclusive care of his faithful

mechanics. His motor, his propeller, his controls, he knew so intimately that he could demand from them the last ounce of their strength without overstraining them; thus, secure in the perfection of his implements, he went aloft to use the same painstaking thought in the details of the combat that ensued. Thus we reduce the miraculous element in Guynemer's career to those frequent occasions when his impetuosity in combat carried him full into the enemy's fire regardless of consequences, and to those several escapes from an expected death when his machine was shot down completely out of control. Seven times this miracle happened and he landed without a scratch. The eighth—no one can say how the miracle operated on that occasion, the 11th day of September, 1917, for no one has been found who witnessed it.

One morning in July Guynemer attacked an L. V. G. of the enemy, as was his custom, full in the face. As he approached, a bullet from his enemy struck between the thumb and forefinger of his right hand as it lay encircling the trigger of his gun. The bullet had traversed his engine, the oil reservoir, the gasoline tank, the cartridge box and his glove, and came to rest between his fingers!

The pain of the impact made him lose his aim, and he came home to find another bullet in the edge of his seat; one had penetrated the revolution counter in a direct line for his heart, but stopped after bulging out the brass toward him; another had flattened itself against the projection of his Vickers gun directly opposite his chest, and others had riddled the rudder, the propeller and his garments.

Forced to land a scant hundred yards behind the trenches, he "got for dessert," as he put it, some hundred shells from 3 inch, 4 inch and 5-inch guns, which demolished his machine into splinters.

In September, on the Somme, after shooting down two enemy machines during the forenoon of Saturday, the 23d, he was in pursuit of a third when

a shell from his own batteries caught him in full flight when he was at 10,000 feet altitude, breaking his left wing and tearing away part of his radiator. With half his air support missing, his mangled aeroplane started down like an onion peel. Guynemer calmly steadied the uncontrollable machine as best he could with his controls and the weight of his body, finally bringing her into a glide, but unable to lessen her speed.

The troops below watched the catastrophe, knowing full well whose crash they were witnessing. Utterly unable to reduce his speed or to prolong his course for a single foot, Guynemer landed less than a hundred yards

from the battery which had unwittingly fired the shell which had struck him. His Spad hit the ground head first and buried its nose so deep that it could not be budged. The soldiers ran to get his body. Upon arriving they found Guynemer standing by the side of his wrecked machine, regarding it with so deep an interest that he did not observe their coming.

On January 25, 1917, was enacted one of the crowning dramas of war aviation, with Guynemer playing the leading rôle. Again the miraculous power of this youthful warrior was hailed thruout France, for he had brought down and captured, without arms of his own, a two-seater machine of the enemy's.

He had up to this time scored twenty-nine official successes. Guynemer had been unusually active, but the bad winter weather had somewhat lessened the sport of which he was so fond and he had taken this opportunity to send his Spad to Paris to have certain improvements added at the factory.

The previous day he had lain idle at camp. The morning of the 26th he borrowed a machine and went aloft after game. His distaste for the mediocre fittings of the borrowed aeroplane in comparison with the perfection of his own was so vexing that he could not suppress an allusion to it in an entry in his diary the next day—the same entry which describes his capture of an enemy aeroplane by sheer will power:

The 25th I watched the others fly and itched. The 26th Bucquet lends me his taxi. Gun sights a deplorable emptiness. What a layout! Line of aim worse than pitiful.

Twelve o'clock saw a boche at 12,000 feet. Up went the lift. Arrived in the sun. In tacking about was caught in nasty tail spin. Descending I see the boche 400 yards behind firing at me. Recovering I let go ten shots. Gun jams. Completely jammed. Finished. But the boche seemed to feel some emotion and dived away full south with his motor wide open. Let's follow him!

I do not get too close to him for fear he will see that my gun is played out. Altitude drops to 5000 feet above Estries-Saint Denis. I maneuver my boche as nicely as I can and suddenly he redresses and

sets off toward Reissons and lays it off stiff. I try a bluff. I mount to 2000 feet over him and drop onto him like a stone. Made an impression on him, but was beginning to believe it did not take when he suddenly began to descend. I put myself ten yards behind him; but every time I showed my nose around the edge of his tail the gunner took aim at it.

We take the road toward Compiègne—2000 feet—2000 feet—again I show my nose and this time the gunner takes his hands from his machine gun and motions to me that he surrenders. *All right!*

I see underneath his machine the four bombs in their resting place. 1500 feet. The boche slows down his windmill. 600 feet. 300 feet. 60 feet. I swerve over him while he lands. I make a round or two at 300 feet while the men come up to get him from the aerodrome. But not having any gun or cartridges I cannot prevent the boches from setting fire to their taxi, a 200 H. P. Albatros, magnificent.

When I see they are surrounded I come down and show the two boches my disabled machine gun. Some headpiece!

Guynemer's frequently expressed ambition was to get his fiftieth Boche aeroplane. On May 25 his record breaking bag of four aeroplanes in one day brought him the following citation together with the Legion of Honor Rosette:

Office of the elite. Fighting pilot as skilful as he is audacious. Has rendered striking services to his country not only by the number of his victories but by the daily example of his sustained ardor. In his never failing mastery of his conflicts, he, unmindful of danger, has become for the enemy thru his sureness of methods and maneuvering the adversary feared above all others. He accomplished on May 25, 1917, the most brilliant exploit in bringing down in a single minute two enemy aeroplanes and in adding to them on the same day two other victories. By these exploits he has contributed to exalt the courage and enthusiasm of the troops in the trenches who witness his triumphs. Forty-five aeroplanes shot down; twenty citations; twice wounded.

On July 5 he received his Rosette and on that day he also received something else for which [Continued on page 298]

# PLEASURE AS USUAL?

The author of the following article has been an occasional contributor to *The Independent* for the past twenty years as many of our readers know. For the past few summers in particular he has spent his vacations on far journeys out of which experiences he has published two volumes of travel, "Going Ahead Over Land" and "Vacation Journeys East and West." He has just returned this summer from a two thousand mile circular tour among the leading summer resorts of the East.

**F**OR years, the turning point of the summer season has been Labor Day. It marks the time for the return to town of summer vacationists. A multitude of people will come back to their accustomed places next week, better for their having gone away. That is, such of them will as needed rest. There is a group apart, however. In it are a million people. I have studied them at close range for years past. I am moved to speak my mind about them at this juncture—for a reason.

Created things all need to be remade recurrently. Among living things, this fact spells recreation. Those of this returning host whose mental gear was slipping when they went away have tightened up the clutch. Those who were, whether intellectually, emotionally or energetically out of breath, know marvels in their way akin to the mystery of second wind. All this is normal; it is natural, and it is good. But there are others.

Among those who need rest most, there have been fewer taking it by far this summer than was usual; but among those who need it least there has been the same hectic and industrious idleness. There are conditions nowadays and circumstances hereabouts wherein one can sit by reflectively and see this portion of humanity cavort about him in ways that stir more to wrath than risibility. I am thinking of those who toil not, neither do they spin—winter or summer. In the former season, they are familiar club loungers and week-enders; in the latter, they are the idle habitues of the Fashionable Summer Resorts.

I am not censorious of their morals; these people are not bad. Nor am I concerned with their manners; those are to their own satisfaction. I am even sympathetic with them in that they are not trained for more useful occupation. But my point is, they are in the way. They ought not to cumber the national wagon. Even if they cannot help materially to pull or to push, they ought at least to get off and walk.

I have made a study of these people in the mass for more than a decade. I have seen them, in both seasons, from Quebec to San Diego. I have traveled with them all the way from

BY DAVID M. STEELE, D.D.

Florida to Puget Sound. I have wrought among them, personally and professionally. I have spent this past month in particular upon a special mission in their midst. Out of such experience—as varied as extensive—I aver their inutility. They are a burden in war time, grievous to be borne.

This study needs, however, two preliminary words; the one of definition and the other of delimitation. Many erred at the Great War's outset in their advocacy of the slogan, Business as Usual. All soon found there could be no such thing. Others erred alike in advocating the theory, Pleasure as Usual. They forgot there should be no such thing. Pleasures are time consuming. Time is money. We need both, to win this war. What we do not need is a class living in idleness even tho a minor class and altho only temporarily.

I spoke also of delimitation. I do not mean to put into this coterie those who need surcease from labor. I indict those only who need no rest, since they never labor. I do not refer to Saturday outings, even to Sunday amusements. I am not thinking of fortnight excursionists; I would point the contrast rather between those who "take a vacation" and those who "spend the summer."

There are a million people in the United States who are spending this summer in the manner I have set out to portray. In doing so, they have spent, this season alone, fully a billion dollars. And worse, they have caused a million other people to labor to contribute to their pleasure while they played.

But report is current that, in ultra fashionable resorts this summer, a change has been evident. That is true. There have been fewer people. But this change is less real than apparent. Those who fit into this picture are all here, and the business of pleasure still prospers. The preponderance is that of chil-

dren, to be sure, up thru young boys and girls to boarding school and college ages, and of men, all the way downward from decrepitude to those who are yet going "thru the rolling forties." But of matrons there are many, of young women most, and of men-servants and maid-servants as many as of others put together. There is money spent, as much as ever. There are results gained by this expenditure, as vacuous and empty. It is the resorts that would be empty if the lives of these folk were more full.

With the normal delectations of the Good Old Summer Time, not even war with all its rigors can or ought to interfere. The health in out-door exercise; the uplift at far sight of mountain scenery; the inspiration from communion with the roaring surf and whispering wood; the upreach of the soul in contemplation of the sun-lit vastness and the starry deep; all these have place and, in their place, are profitable. I am thinking only of that million who are not thus using time but who are simply killing time. I am speaking of those many for whom going to the shore or mountains is a phrase rhetorical, not geographical. I lament the paucity of resource among those for whom opera dress is essential at roadhouses in the wilderness. I recall the high-priced hostelrys where bridge tables are thronged and the cafes are crowded.

Of these places that are most populous, there are some features that are permanent. No desecration can destroy them. They are carved as on earth's countenance by the engraving hand of her Creator. They mark rare regions that will have quite as abiding an intense devotion. The peculiar charm of the White Mountains; the health-giving climate of the Adirondacks; the historic, legendary and romantic settings of Lake Champlain and Lake George and Saratoga; the smiling vistas and the balmy air of Newport; the sights and the sounds of the many-named harbors of Maine—these are by-paths of a nation's Eden. But the people in their palaces and huge hotels! The latter should be empty; for the former ought all to be busy. Not one should be idle. All ought to be saving; not one should be spendthrift.

A critique of this social insomnia which drives these people to foregather thus, six months on end, for nothing to their profit, would have to begin years back. It had a beginning, however. And the appetite for such amusements only as could be laid on from the outside is one that has grown by what it fed on. At first, minor joys at modest prices were sufficient; now the

## ALLIES SALUTE!

Beginning at the top from left to right the salutes here represented are the English, American, Belgian, Greek, Italian, Polish, Portuguese, Serbian, Czechoslovak. Each is different, with the exception of the Belgian and Czechoslovak, which are almost alike.

## CHAUTAUQUA IN FULL SWING

The people who gather at Chautauqua to work and play are making the most of their vacations as a means to wartime efficiency

### ALL CHAUTAUQUA'S WORK NOW IS FOR THE WAR

Captain Gabriel Parès, "chef de musique de la Garde Republicaine," led the French Military Band that kept the martial note dominant in Chautauqua's musical program. Captain Parès himself wears the decorations that testify to bravery in active service. He and all his band have already borne a heavy part in actual fighting. Many of the men have been wounded; nearly all of them decorated for bravery in battle. In their tour of this country they are bringing to America the spirit of France

### A MILITARY BAND FROM FRANCE

Music Week at Chautauqua was led by the "Musique Militaire Française" which is making a tour of America under the auspices of the French High Commission and the Y. M. C. A.

### WIRELESS OPERATORS AT THE WOMEN'S NATIONAL SERVICE SCHOOL

Women are trained here for war work of practical value. Besides wireless and telegraphy there are courses in dietetics, gardening and farming, bandage making, nursing and canteen

### A DRILL AT COLORS

Patriotism has always been the keynote of education at Chautauqua, but in these days its ceremonies have more than usual significance. This photograph shows the older people and youngsters gathered to watch a squad of women at drill

### COMPANY STREET IN THE WOMEN'S WAR CAMP

Mrs. George E. Vincent, wife of the president of the Rockefeller Foundation, is commandant of the Women's National Service School at Chautauqua. Mrs. Elizabeth W. Backus, governor for Minnesota of the Women's Naval Service, Inc., is quartermaster

Photographs by Courtesy of Chautauqua Institution

## FOLLOWING THE WAR WITH THEIR FINGERS

Blind persons are printing newspapers in Braille type telling the story of the war from day to day, for the blind to read

### THE NEW ALLIED LINE

Every boundary line on this war map stands out distinctly. Because it is raised and marked with raised letters, the blind can learn for themselves the daily war situation by feeling the letters with their finger tips. The map, as well as the plain reading matter, is being prepared by a man who himself has lost his sight. Besides war maps, charts on a great variety of subjects are made in this way. Among the most interesting are the diagrams that accompany the latest baseball scores and show how the game was played and won

### "FOE DRIVEN BACK ON WIDE FRONT"

The story of the great Allied offensive on the west front is perhaps more eagerly awaited and read by the soldiers who have come back from the battle line, sightless, than by those who know of the conflict only thru print. At the left is a sample of the Braille raised letter type which they quickly learn to read after a little practise has made their fingers sensitive to the small dots. With this system persons formerly dependent upon the good nature of the more fortunate can now do for themselves

Photographs by Knud & Herbert

### PUTTING IT ON THE PRESS

Not only newspapers, but books also, and among them the English classics, are printed in Braille. The room in the New York Public Library where these books are kept is always crowded with persons who enjoy thru their fingers what others enjoy thru their eyes

### FOLDING THE FINALS

Blind and partly blind women are employed in the final process of getting the news to the reader. They sort and fold the newspapers as they come off the press and superintend the work of sending them on the journey to their final destination

# MOBILIZING THE MIND OF AMERICA

BY ARTHUR E. BESTOR

PRESIDENT CHAUTAUQUA INSTITUTION

ALL of us hope that the work in which we are engaged may contribute to the winning of the war. There is nothing more important for those of us who are not privileged to serve in the military forces of the United States than the creation of that effective and intelligent public opinion which it is absolutely necessary to have back of the Government in the prosecution of the war. Wars have been won and lost by armies, by a small percentage of the population. But this is not a battle of armies, it is a contest of completely mobilized nations. Armies have oftentimes lived off the country thru which they were passing but this is impossible today. These million men, whom we have today in France six months ahead of our original schedule, must be provisioned, munitioned, clothed and maintained from America. And these supplies and the food for our Allies will go by that submarine infested ferry across the north Atlantic only because an overwhelming majority of the American people support our war program.

For this war is not merely a conflict of armies; a contest of guns and aeroplanes and war vessels; a problem of food or transportation or money; a mobilization of men and materials. It is a gigantic struggle of morale. The war will be won, says Clemenceau, by the side which can fight the last fifteen minutes. The complete mobilization of the man and woman power of the country, as complete as that in Britain and France and Italy, an entire utilization of the moral and spiritual forces of the nation, is increasingly necessary. And in all this we are merely following that old dictum of Napoleon, "In war morale is everything. The morale and the force of opinion are to the material as three to one."

This war is different from all the wars which have gone before. It is a war of nations, not of armies; it involves all the material resources, all the mechanical and scientific mobilization of entire populations. In a democracy like ours, steeped in a *laissez faire* individualism, it necessitates a complete reorganization of our life and putting aside of some ideals and many controversies which have always seemed to us supremely important. Three thousand miles away from the fighting line we are not yet ready to accept governmental direction and supervision which the immediate menace of Prussianism forces on our allies. Most of our problems must be worked out by volunteer action—food conservation, reorganization of industry, raising of vast sums of money for voluntary war activities, keeping our educational, religious and philanthropic institutions in full force and efficiency.

We are passing thru a period in which there is a tendency to reduce everything to a single basis, as if the war were to last forever, as if everything must be discontinued which does not bear directly and immediately upon the war. We see people leaving posi-

*Mr. Bestor, who is the Director of the Speaking Division, Committee on Public Information, delivered the accompanying address at Chautauqua Institution on Independence Day. Mr. Bestor has been president of Chautauqua Institution since 1915*

tions of great responsibility and usefulness to engage directly in war work, no matter how trivial. We are tempted to characterize those who do not agree with us or those who do not sacrifice as we do, as slackers and traitors. Do not misunderstand me! This is our war and it is the primary concern of every individual and every organization to relate themselves as helpfully as may be to the winning of the war. But I am pleading for an intelligent appreciation of how necessary is the work of the 100,000,000 Americans who are not honored by being called into the military service of the United States, many of whom can never engage in direct war activity, but who, because of the nature of this war, are as necessary to its success as soldiers or sailors or ship builders or munition workers.

All these problems and conditions lay upon the intelligencia of America—in so far as we have such a class—a heavy responsibility. I am one of those who believe that Germany made war upon America long before America acknowledged it and that when Congress made a resolution declaring a state of war, it was simply confirming a fact. A small group of people had seen this war coming and it was upon that group of people that the President and Congress relied for the public opinion that would justify that declaration of war. The people who were urging preparedness,

not merely because they believed that only in that way could America maintain independence, but because it was a war for civilization—that group of people was largely made up of educators and publicists and editors and lawyers and ministers and leaders of women's clubs and philanthropic agencies—people who have been accustomed to attempt to see whither the world was going. They were the ones who began to accept the contention of England and France that this was a battle for all the fundamentals of civilization and to believe that if America refused to do her part in it she would endanger her continued independence. Many people then began to believe, as every thoughtful person must now believe, that that German officer knew what he was about, at the time of the Spanish War, when he said, "Fifteen years from now Germany will be at war in Europe; after having brought England and France to their knees, Germany will bombard your sea-coast towns, will take New York and hold Washington, and will collect from America the cost of this war." Is there anything in the principles of the German Government today, is there anything in her conduct of the war since the violation of the neutrality of Belgium that would make any person believe that Germany would hesitate to do that if only power were given her to do it? Some of the Americans saw that sooner than the others; and that group of people who carried America into war, under the direction of the President, have a responsibility equal, if not greater, than any borne by any set of people since we won our independence from Great Britain. And if this war is to be won only thru America putting her last atom of physical and moral strength into it—there rests upon our leadership a burden not exceeded in the world today. Unless the United States is kept steadfast to her task, unless America follows the leadership of the President in his democratic ideas as to how this war ought to end it will not end in the only safe way for the democracies of the world.

In the mobilization of public opinion our problem is one, therefore, of methods and means. We must keep our educational institutions going, for it is thru them that we reach the largest element in our population, and it is thru them that the ideals have been created which carried America into the war. We shall lead our foreign-born and foreign-speaking population with us by education rather than by coercion or the strong arm of the law. If we follow the lines of our own thinking with respect to the war, we shall be able to deal more sympathetically with those who have gained their views of this struggle from other sources than our own. The whole machinery of our widespread educational life is at our disposal. It must be our task to extend this message and this spirit to the last unit. Community centers and school houses and conferences and labor unions and church gatherings all furnish the [Continued on page 300]

# THE WAR AND SUPREME VALUES

BY ELMER BURRITT BRYAN

PRESIDENT OF COLGATE UNIVERSITY.

**I**N recent years the world has been in grave danger of falling victim to a philosophy of education. This is true not because a philosophy of education is an undesirable thing or because the world as a whole, or many parts of it, has had such a philosophy, but because one nation with a logical and effective philosophy of education, as false at the heart as it is logical and effective, has undertaken to dominate the world. The right-minded nations of the world are in arms today in support of their mental protest against the domination of the spirit of Prussianism which is supported by vast armies of men who have themselves fallen victim to this false philosophy. If we are to be saved from such domination, and are to make sure that there shall never again be a recurrence of such a danger, we must realize that it can only be done thru the agency of a philosophy of education just as logical and as effective, and just as true at the core as this one has been false. The Prussian philosophy of education is false at the very core because in the first instance supreme emphasis is not placed upon things of supreme value. The theory has been the German State over all—over every one and everything within and without the state. If we grant this premise, we must follow it to its legitimate conclusion, and when we do so, we need not be surprized to find such results as those we are witnessing at the present time.

In working out this philosophy, the Prussians have committed the blunder of confusing means and end. They have forgotten that all organized agencies of men, including the state, are but means to higher ends, and that the only reason even for people bearing arms in defense of the state is their loyalty to it because of their gratitude and their faith in it (despite certain delinquencies) as the agency or avenue thru which their lives may be most fully expressed and realized. Human beings are of supreme value, and a philosophy of education which is to prevent the recurrence of such cataclysms must lay this down as its first principle and place supreme emphasis here. Jesus came that men might have life and that they might have it more abundantly, and the only excuse or reason for an institution in a Christian civilization is that it is at least actuated by the motive to contribute to the enlargement of human life. This is perhaps the first and most important lesson that the war as a schoolmaster is teaching.

The fat years have failed to teach it. Will the lean years succeed? If they do not, we may well question whether we shall be able to survive the methods that will need to be employed to teach it.

We have never before had brought home to us so forcefully the fact that adding values are spiritual rather than mental, and that battles are won by ideas rather than by force. Germany made the mistake of believing that Bel-

gium could be measured and weighed by merely scientific methods and appliances. She had lost the power to see the greatest asset which the Belgians possess—their indomitable spirit and their lofty ideas and ideals. Had Belgium not possessed these spiritual and ideal assets, Germany would have made good on her boast that she would breakfast in Paris within a fortnight. The war thru the spirit of Belgium is teaching the world, while it is inconvenient and a real hardship to live without bread, that "man cannot live by bread alone but by every word that proceedeth out of the mouth of God"; that there is nothing so powerful to resist the onslaught of evil as the impelling force of things spiritual.

Closely related to this lesson is the one of moral equivalents. On every hand we hear even yet the statement that war is essential to the highest development of men. How else, they say, are the courage and bravery and stamina of men to be developed? How are the virile virtues to be brought to their best? It will be very strange indeed if at the close of this war when, as we confidently believe, the nations wholly unprepared to battle with arms have been victorious, men do not then realize that the strength and manly virtues which have carried us to victory have been the result of activities in peaceful years which were the equivalent of military preparation. And if during these years and those that follow, we are not able to devise better ways to untie world knots and better methods to solve world problems than by depleting the ranks of our young men in industrial pursuits and in educational institutions and sending

them forth to kill and be killed, we shall be under the necessity of admitting that we are terribly delinquent both in mental power and moral stamina.

This schoolmaster, forbidding in many aspects, is bringing home to right-minded people with tremendous emphasis the fact that there are many things heretofore regarded as necessities without which we can live in perfect comfort and not suffer the slightest diminution in our happiness and efficiency. How freely the money has flowed! How willingly we have denied ourselves! With what an eagerness and relish we have accepted opportunities for sacrifice and service! It will be a fearful commentary on human nature if these experiences born of the vicissitudes of war do not teach us once and for all that if we can invest months and years of our time, and billions of our money, and thousands or even millions of our men in destructive activities, we surely should be willing and happy after the dark days have passed to contribute freely of our time and our means to constructive ends.

Along with all this the lean years are teaching in a way the fat years were unable to teach, the lesson of democracy or even universal brotherhood. Every day some man born in affluence and reared in the lap of luxury, college bred perhaps, whose every need from the day of his birth has been promptly supplied, has gone into the trenches beside a stable boy or a man who speaks another language, or beside a man who lives in a skin of a different color, and there without flinching they have faced the foe together. When it is all over, these men will have an attitude toward one another never known to them in the days of peace. Unfortunate, indeed, it will be if while these men who are fighting the enemy at the front are learning such lessons of democracy and brotherhood, those of us at home under the pretense of maintaining standards have not moved up to the same high levels. I have in mind here nothing sentimental. I realize that there are individual and racial preferences, but we must also learn that men who do not speak our language and whose life occupations are of the most menial sort, who stand side by side with us in fighting the foes which do beset us are worthy our respect and admiration and shall also have an opportunity to realize fully on themselves.

This war should bring home to the minds and hearts of the people the fact that while God moves in mysterious ways His wonders to perform, He nevertheless does a large amount of His finest humane work thru the agency of human beings. Not infrequently men apparently in sore distress ask why God is not on His job. Why does He allow all of this unspeakable suffering? It apparently does not occur to them that it would be more to the point if they were to ask themselves: "What is God's job?" and then [Continued on page 300]

*Dr. Bryan delivered the accompanying article as one of the opening addresses at the Chautauque Institution Summer Schools, of which he is director*

# THE NEW BOOKS

## Conditions of Allied Success

WE have especially in this country, new to the war, been concentrating so vehemently on the military conditions of Allied success that the very title of this book is arresting, and raises question in our minds. Are there, after all, political conditions of the success of our arms that we have been neglecting? Is modern war something more than a series of battles, on the outcome of which alone will victory be judged?

Mr. Angell, in a closely reasoned but vividly interesting manner, presents an illuminating and well-supported point of view which is bound to arouse much discussion and may even have more tangible result.

How are the principles enunciated by the President to be put into practice? Victory of itself, however complete and overwhelming, will not answer that question. Even though not a single German soldier remained alive it would still be a vast and thorny problem to secure safety and equal rights for each nation, to maintain economic freedom and rights of way, to reconcile national right with international obligation. If we are to find a solution at all, many old conceptions must be vastly changed, and that change can only come as the result of widespread and thorough discussion.

It was evident that in the case of a war fought by a large alliance, success would depend, not merely upon the military force of each constituent state, but also upon the capacity to combine those forces for a common end; upon, that is, the political solidarity of the group. . . . The factors of disintegration in the Grand Alliance are of two kinds: conflicting territorial claims by the component states . . . and conflict of economic interest and social aspiration within the nations. . . .

The general truth we are here dealing with is of far greater importance to us than to the enemy. He can in some measure ignore it. We cannot. His unity, in so far as it rests upon moral factors, can be based upon the old nationalist conceptions; our unity depends upon a revision of them, an enlargement into an internationalism. . . . The term "democratic internationalism" as the condition of Allied success is not a mere playing with words. Any understanding between nations, even for the purpose of a temporary alliance or war cooperation, is of course "internationalism" of a kind. But the term used here means more than that. . . . The internationalism that will give a place to the minority—that is to say to youth, to change, to innovation, and furnish some counterweight to established government and institutions.

Mr. Angell argues for an Inter-Allied Congress to formulate the plan of the Society of Nations, composed of a smaller body of the delegates of the executive branches of the governments concerned and a larger body drawn from the majority and minority parties of the respective legislatures. This method, he urges, is

indispensable to our own unification and indispensable to the democratization of Germany in foreign affairs—the only practical method of carrying into effect our policy of not dealing with the German autocracy.

*The Political Conditions of Allied Success*, by Norman Angell. Putnam. \$1.50.

## Tales of Japan

PAULOWNIA is the title of a little book of short stories by three contemporary Japanese writers, collected and translated by Mr. Torao Taketomo. Besides typifying certain literary movements and portraying the spirit of the Japanese people, these tales appeal to us all because they are something different, genuinely different. They are not exactly short stories and they are more than incidents.

"Takase Bune," the first tale by Mr. Mori Ogawa, is the name of a small junk that goes up and down the river Takase in Kyoto. On this junk is a criminal facing

Bert had been playing "Puss in Boots" when the attack came, and hadn't time to change. This is one of Captain Bairnsfather's laughs from the firing line

exile, but even happy. "Hanako," by the same author, concerns the great sculptor Rodin and a Japanese dancing girl. "Ukiyoe" gives us Mr. Nagai Kafu's emotional reactions to some famous prints. "A Domestic Animal" is the pathetic tale of a homeless dog.

Prof. John Erskine, of Columbia University, sums up the value of these tales in a foreword:

I think there is something here which will not wear threadbare on closer acquaintance—as imaginative power, such as all artists long for, to feel and see vividly the whole drama of our daily life. This comes from a way of living rather than from a way of writing. If Japan can teach us this, we may well spare an hour to learn from her.

*Paulownia*, by Torao Taketomo. Duffield & Co. \$1.25.

## The Pretty Lady

MR. ARNOLD BENNETT'S newest novel, *The Pretty Lady*, is utterly unworthy both of his ability and of the times in which we live. Mr. Bennett apparently does not know—or does not care—what is going on in the world.

*The Pretty Lady*, by Arnold Bennett. George H. Doran Company. \$1.50.

## The Pawns Count

THE PAWNS COUNT is a secret service story with an international setting, written in the usual effective style of E. Phillips Oppenheim.

Probably the author has more in mind than the simple relating of a gripping story. Most of his later books seem to hint at the widespread influence of the German Secret Service with an attempt to convince us that the threat is far from removed.

A fine character is John Luthester, a presumably phlegmatic English type who "comes thru big." Playing opposite him is the American type of woman with all the virtues fiction can create, but who is perhaps not overdrawn.

It is probable that every one who likes

Oppenheim will enjoy this book—except Germans.

*The Pawns Count*, by E. Phillips Oppenheim. Little, Brown & Co. \$1.50.

## Laughs from the Firing Line

GIVEN his choice of interpreters of the Great War, Tommy in the trenches would probably turn first to Bruce Bairnsfather, whose cartoons of life at the front are as humorous as they are genuinely human. Captain Bairnsfather is a Scotchman and has been in service in the British army since the beginning of the war. His sketches were drawn first for the amusement of his men—soldiers knee deep in mud got many a good laugh from Bairnsfather's cartoons of their predicaments and pleasures before the fame of them spread to the folks at home. Now they are syndicated in most of the Allied countries and republished in book form.

*Fragments from France*, by Bruce Bairnsfather. G. P. Putnam's Sons. \$1.75. *Part Five* (a supplement to *Fragments from France*), 50 cents.

## Out There

FULLY appreciating the art and charm of Miss Laurette Taylor, who interpreted the character of 'Auntie Annie, the heroine of J. Hartley Manners's play, *Out There*, one can nevertheless say emphatically that the play loses none of its appeal in book form. Those who have seen Miss Taylor will doubly enjoy reading the play; others, less fortunate, will find it one of the worth while war stories.

*Out There*, by J. Hartley Manners. Dodd, Mead & Co. \$1.25.

## Poems of Belgium

FROM the delicacy of lyric love and beauty out-of-doors Emile Cammaerts, one of Belgium's greatest poets, has turned to write of war and sacrifice. In *Messines and Other Poems*, all written between Easter, 1916, and August, 1917, there is much of the grace and clarity of his earlier verse, enhanced by the deeper note of Belgium's bravery. "A War Lullaby," written in August, 1916, is particularly expressive of this complex appeal:

Sleep, sleep, baby, sleep.  
Baby will soon be asleep.  
The fire dwindles and the wind moans.  
The rain lashes the window-panes. . . .  
Is it blowing and raining there?  
Hailing or thundering, perhaps?

Sleep, sleep, baby, sleep. . . .  
Is he well?  
Is he warm?  
Is he lacking naught?  
Has he all he wants?  
His coat, his matches, and his gloves.  
And, in his pocket, next his heart.  
My last letter  
And all its love?

Baby soon will be asleep. . . .  
The lamp burns low, the fire dwindles.  
We shall have to go to bed.  
The child is clasping its wee fists. . . .  
Is my big child sleeping, too?  
Sleeping peacefully before the battle?  
Is he running madly  
Thru the shells?  
Or is he lying in some hole.  
With open mouth and with closed eyes?

Sleep, sleep, baby, sleep. . . .  
The child moans and the wind swells the curtains.  
The wick splutters.  
The child turns in its cot.  
The rain ceases, the night shivers.  
The sadness of it is fearful. . . .  
Baby soon will be asleep. . . .

# HOW WE STOPPED THE LEAKS THAT KEPT US POOR

The Discovery Which Enabled Howard Lindsay and His Wife to Save One-Third of Their Income and Later Made Mr. Lindsay President of a Large Corporation. A Secret That Applies to Any Income

By Harrison Otis

WHO should walk into the room but Howard Lindsay! Of all men perhaps the last I had expected to find as the president of this great new company. They had told me that Mr. Lindsay, of the Consolidated, was looking for a fine country home and was interested in buying the Dollard Place in Englewood; so as executor of the Dollard estate, I had come to discuss the terms with him.

But Lindsay! Surely some miracle had happened. For it was the very man who had come to me "dead broke" about four years back and had asked me to help him get a new job. But how he had changed! The man I remembered was down at the heel, and timid and ill-kept. The man now facing me was keen-eyed, alert, confident and well groomed.

"You are surprised, Mr. Otis, I can see that without your telling me. I was a pretty sorry object the last time we met—and you may be sure I have not forgotten the good turn you did me when I needed it so badly.

"Let that real estate matter rest for a moment while I tell you how the miracle happened. It won't take five minutes. It all seems simple as A B C as I look back on it now. And come to think of it, it was simple and perfectly natural.

## How It All Began

"Our new life began when we discovered how to save money. That happened soon after I started in the new job you helped me secure. And it all came about right in my own home. Our family cash account was in terrible shape at that time. Both my wife and I had been used to luxuries at home and 'charge it to Dad' had been our easy way out of any money problem.

"But it was different now and our sole source of supply was my salary of \$4,000. We never went to the theatre that we didn't have the uncomfortable feeling that we were using money that ought to go for coal or clothes or food. We seldom bought anything without feeling as though we were cheating ourselves out of something else.

"That year we didn't save one cent. Besides that, we woke up on New Year's day to find a big bunch of unpaid bills to be taken care of somehow or other out of future salary checks.

"When I asked myself the reason for all this I found that I did not know the reason, and no more did my wife, because we hadn't the faintest idea what our money had been spent for.

"Then we looked around among our friends and learned a great lesson.

"The Weeds, I knew, were getting more than \$5,000 a year. They lived in a modest apartment, did not wear fine clothes, seldom went to the theatre, did little entertaining, yet we knew they had enough money to pay current bills. They found it out of the question to pay my salary and found themselves, as Wood told me, in the same predicament that we had found on New Year's Day.

"In the case of the Wells, I found a very different story and one that set me thinking hard. Their income was \$2,000 a year, yet, to my amazement, they concluded to us that they had saved \$100 a year ever since they were married. They didn't have any grand opera in their program, except on their little Saturday matinee, and they didn't go to the theatre regularly. They gave good clothes, entertained their friends at home, and were almost the happiest and most contented couple of all our married friends.

## Our Great Discovery

"When I discovered the magic secret, The Weeds never knew whether they could afford to make a zero expenditure or not. Their life was a happy, happy-go-lucky existence with the happiness cut out because they were

always worried about money matters. They kept no accounts and just trusted to luck—and so had bad luck all the time.

"The Wells, on the other hand, were getting more real enjoyment out of life than people with double their income—simply because they knew what they could afford to spend.

"The difference between these two families was that in one case the expenditures were made without any plan—while in the other the income was regulated on a weekly budget system.

"Right there we got our Big Idea and our key to success and happiness.

"We sat down that evening and made up a budget of all our expenses for the next fifty-two weeks. We discovered leaks galore. We found a hundred ways where little amounts could be saved.

"And in no time we were engaged in the most fascinating game either of us had ever played—the game of 'Money Saving.'

"In one short month we had a 'strangle hold' on our expenses and knew just where we were going. In one year my wife proudly produced a bank book showing a tidy savings account of \$800.

## My New Grip on Business

"In the meantime an extraordinary change had come over me in business because of my not having to worry about my personal affairs. I was able to give my employer's affairs my full, undivided attention during business hours instead of being harassed and worried as I had always been before.

"I didn't fully realize this until the president called me in one day and said, 'Lindsay, you have been doing exceptionally well. I have been studying your work for the last year and you have saved the company a lot of money. We have decided to give you an interest in the business.' And besides that he doubled my salary. I never told him what had worked the change, but my wife and I know well.

"When you consider what my income is now, all that I have told you seems funny, doesn't it? I can write my check in six figures today, and my new salary here is \$25,000 a year. But I am still working on the same plan that I used to keep track of that original \$3,000. Result, I know just what I can subscribe to Liberty Bonds and the Red Cross and all the other war funds, and I never have to wonder whether I can afford to have a new motor car, because my budget tells me—to a penny.

"It all began when we got a grip on our family expenses.

"So there you are. It is wonderful, isn't it? I often wish I might tell my story to the thousands of young married couples who are having the hardest time of their lives just when they ought to be having the best time.

"If you ever get a chance, do pass this message on, for there are thousands who don't know what the trouble is, who would give everything to know 'the secret of the fat bank balance.'

So now I have the opportunity and you are lucky, if only you will act on the wonderful message this story contains.

HARRISON OTIS

## The Magic Budget Plan

The Ferrin Money Saving Account Book is built on the experience of Howard Lindsay. It is simplicity in itself. It contains 112 pages, size 4 1/2 x 10 1/2 inches, and is bound in dark blue seal grain imitation leather, semi-flexible, stamped in gold. This book has been prepared by an expert and fits any salary from the smallest to the largest.

This wonderful aid to money-making—this watching of your income and expenditures—properly kept will tell you to a penny where your money goes. It will keep absolute track of your expenditures. It will keep you out of debt. It will help put money in the bank. It will provide, as nothing else can, a feeling of security, self-confidence and independence that comes only from the knowledge that you have a tidy and growing bank account.

The Ferrin Money Saving Account Book is lucky, if only you will act on the wonderful only account book based on the budget idea. It

is the only one that provides for the income as well as the classified items of expense. It contains compact information on

Keeping Expense Accounts.  
Making An Inventory of Household Goods.  
Making Safe Investments.  
Making a Budget.

## Two Minutes a Day

The Ferrin System takes only two minutes a day. No knowledge of bookkeeping is required. Any grammar school boy or girl can keep the accounts in the Ferrin Book. This method is not a hard task. It is just fun.

Now you need not worry about the money you spend for clothes, food, rent or the theatre. You will spend it freely because you will know how much you can afford to spend.

July 2, 1918.

Independent Corporation, Division of Business Education, 119 W. 40th St., New York City:

GENTLEMEN: I today received the Ferrin Money Saving Account Book, and on showing it to some of my friends they were very much impressed with the idea and requested me to order one for them. I would therefore appreciate it if you would send me five more of these Ferrin Saving Account Books. I am sending you herewith my check for \$12.00 to cover the cost of these five in addition to the one which I have just received.

Trusting that you will get the books to me at once, I beg to remain,

Yours very truly,

CARLETON F. BROWN.

July 28, 1918.

Independent Corporation, 119 W. 40th St., New York City:

ATTENTION: MR. JOS. J. KOELBEL.

GENTLEMEN: I wish to thank you greatly for your letter of July 22d, in which you advise that I sent you \$1.00 in excess of the regular price of Ferrin's Account Book. I would appreciate your returning this money in enclosed stamped and addressed envelope.

My wife and I have been making entries in the book only a little over one week and already have discovered many household "leaks" to an approximate sum of \$5.00. We have the Ferrin method to thank for these discoveries.

Again thanking you for calling my attention to above mentioned error and wishing the Independent Corporation continued success, I am, very truly yours,

D. G. SHEPARD,

Publicity Manager Fairmont Gas Engine and Ry. Motor Car Co.

## Send No Money

See how magically the Ferrin Book works, no matter how much or how little your income. We know what you will think of it when you see it. So we are willing to send you the book without your sending us any money in advance. Just mail the coupon, and back will come the book by return mail. When you have seen what big returns the Ferrin System will pay you, send us only \$2. If you feel that you can afford not to have it, return the book and owe us nothing. Act now, for the sake of your bank account and your future.

## FREE EXAMINATION COUPON

## The Best Child Ever Born

is a problem. The brighter your child the greater your problem. Upon your wisdom depend his physical, his mental, and his moral development. The greatest of these is his moral development—the building of his character—for this determines the value of the others. It is the power that pilots him through life. And there is no way that you can better solve this problem than by the proper selection of his reading.

Much that children read is positively injurious to their eager, receptive minds. Some books merely entertain in a wasteful way. But, some not only entertain but at the same time have those fine, constructive qualities which inspire high ideals and build strong, clean character.

## THE YOUNG FOLKS' LIBRARY

is enthusiastically endorsed by the leading educators of the nation and by the fathers and mothers in over 75,000 homes, especially because of its distinctive plan of building character. An illustrious gathering of men and women, under the leadership of Thomas Bailey Aldrich, Hamilton Wright Mabie, and Henry Van Dyke, who never forgot the child's point of view, nor overlooked his interests, have made this plan and library a rich treasure-house of childish delights and a boon to parents.

## FROM BALUCHISTAN TO BAKU

(Continued from page 283)

Bolsheviki are defending Baku. The Georgians put up a stiff fight. The Pope is using his influence to prevent the extension of Moslem territory. And the Germans have blocked the northward movement of the Turks. For the new Ottoman ambitions are causing a great deal of trouble to their allies. When the Dobrudja at the mouth of the Danube was taken from Rumania it could not be given to Bulgaria because Turkey objected and demanded in compensation a large slice of Bulgarian Thrace. Both the Dobrudja and Thrace, they contend not without reason, contain more Turks than Bulgars and why not settle it by ethnic principles? They lay claim also to Caucasia and Crimea on historic and racial grounds. Evidently the Asiatics are picking up European catchwords with disconcerting rapidity. They, too, are arguing for the self-determination of nationalities and the recognition of racial rights. They, too, are talking of a Terra Irredenta, an Unredeemed Land, and they are listening for the cry of oppressed brethren beyond the mountains and the seas.

But it would never suit Germany to let the mines and oil fields of the Caucasus pass altogether into the hands of so uncertain an ally as Turkey. So 3000 German troops were landed last June at Poti just north of Batum and are now said to occupy Tiflis. This puts the Germans in control of the Black Sea end of the trans-isthmian railroad and pipe line. The other end, at Baku, where the oil wells are, is held by the Americans and Bolsheviki, and it is to be hoped that the Allies from their more abundant forces have spared more than 3000 men to reinforce the defenders of the Caspian coast.

It illustrates our American ignorance of the Caucasian situation that last April when the news was received that the Armenians and Bolsheviki had killed a thousand Tatars at Baku, it was regarded at Washington as a mistake in cable transmission. The word "Bolsheviki," it was surmized, should read "Georgians." As we now know the Bolsheviki joined with the Armenians in the defense of Baku against the Tatars, and together held that port until now the British from Bagdad have come to their rescue. On the other hand the Georgians were at that time fighting against the Bolsheviki on the other side of the isthmus, for when the Georgians seized the Russian vessels in the Black Sea ports, the Bolsheviki warships bombarded Sukhum, a port north of Batum that the Georgians were trying to hold and the Turks to get.

If the reader has ever been in an oil city or mining camp in the height of its boom he will have some idea of the aspect of modern Baku. The millions of barrels of oil that have poured out of it and the millions of money that have poured into the sleepy old Tatar city have metamorphosed it unrecognizably. It has now all the modern improvements—nouveaux riches, bourgeoisie, intelligentsia, proletariat; a literary movement, an art movement, a civic movement, a socialist movement, a nationalist movement, a feminist movement, a religious movement, and all the rest of them. In 1906 the first Tatar newspaper was issued at Baku. Now the Tatars publish twenty-eight dailies and weeklies as well as many books. Baku rivals Constantinople and Kazan as a center of the Islamic revival and Pan-Turanian propaganda.

The Armenians live intermingled with the Tatars in the Caspian Caucasus, and

the new influx of wealth into this region has tended to increase the racial and religious rivalry. As in Mexico the managers of the oil wells and refineries have to pay tribute to the predatory bands of both sides, and sometimes this does not suffice to protect their property. In the race riots of 1904-5 two-thirds of the works were destroyed and hundreds of lives were lost.

The news of the advent of the British at Baku is a great relief, for the last we had heard from that region was discouraging. It was that the Turks by their advance into Persia had cut off the British from the Caucasus and forced them to retire over a hundred miles upon Bagdad. But somehow a body of British made their way from Mesopotamia across Persia thru Kermanshah and Hamadan to Resht, a distance of over four hundred miles in an airline from Bagdad. The Turks from Tabriz were also marching on Resht, less than two hundred miles east, but the British beat them to it. In Enzeli, the port of Resht on the Caspian, the British found vessels to convey them to the Caucasus. Last year a British force entered Enzeli but were expelled by the Bolsheviki and had to retire to Hamadan.

Simultaneous with this comes news of another move of equal strategic importance, the arrival of a British force in Turkestan. This means that the British have control of both coasts of the Caspian and have established at least two lines of communication from India to Russia crossing Persia from south to north. It means also that Germany's new route to India, north of the Caspian and down thru Turkestan, has been blocked by the British as they blocked the Bagdad route before. On the other side of the Caspian from Baku is the port of Krasnovodsk, from which the Russian railroad leads thru Turkestan to Meru, Bokhara and Samarkand to the Afghan frontier. This route, which caused such alarm to England in the nineties when it was opened up by the Russians, is now in the hands of the British.

We have heard even less about Turkestan than about Caucasia. At the beginning of this year Turkestan, following the fashion of the times, declared itself an independent republic. In March the papers incidentally mentioned 20,000 casualties as having occurred in the "fierce battles" between the Bolsheviki and "the natives," tho what they were fighting about was not explained. Then we heard of pogroms; of 350 Jews murdered and thousands plundered in Khokand, tho who were the murderers we were not told. Now we hear that the British are welcomed by the Turcomans, the Bokharans and the Social Revolutionists who are fighting the Bolsheviki. So it seems that on the east side of the Caspian the British and Bolsheviki are foes and on the west side they are friends.

Since the British expedition to Turkestan entered Persia from India by way of Baluchistan it shows that the native risings reported in Baluchistan last March must have been quelled and the broken lines of railroad and telegraph restored. The railroad running from the Indus River thru Baluchistan, which formerly reached only to Chaman on the Afghan frontier opposite Kandahar, has probably been extended considerably westward, possibly well into Persia. The next step would be to connect it with the Russian Trans-Caspian line and then the British would have Afghanistan almost encircled by rail. This would obviate the danger that the Emir

of Afghanistan might be seduced from his British allegiance by German agents or Pan-Islamic propaganda and make a raid on India.

What the Turco-Teutonic schemes in this direction are appeared in the course of the Brest-Litovsk negotiations. The first draft of the treaty imposed upon Russia specified the independence of Persia; the second draft, which was signed, added the independence of Afghanistan. It will be remembered that the agreement of 1907 between Russia and Great Britain recognized the exclusive rights of Great Britain over Afghanistan and divided Persia into Russian (northern) and British (southern) "spheres of influence" with a "neutral zone" between. But during the war the British made considerable inroads into the neutral zone in order to secure the oil fields lying north of the Persian Gulf. But it seems that Russia sought compensation, for in one of the secret papers published from the Russian archives published by Trotzky, it appeared that on March 22, 1915, the Czar's Government asked for the transfer from the neutral to the Russian zone of a small area on the Afghan frontier. To this note the British Government returned no reply. But the Emir of Afghanistan was assured by the British Government "that no proposal affecting the interests of his country would be made or agreed to at the Peace Conference." Evidently, however, it is the intention of Germany and Turkey to raise the question of the status of Persia and Afghanistan at the Peace Conference. The Emir was wrathful when he learned that Russia and England had disposed of his country without his knowledge or consent. He has never recognized the agreement of 1907 and doubtless hopes to have the case reopened.

The Anglo-Russian bargain of 1907 was obliterated by the revolution ten years later, for the Soviet republic repudiated all imperialistic aims. By the recent movements the British have gained control of the neutral zone and most of the Russian zone of Persia as well as Cis-Caspian and Trans-Caspian territory formerly held by Russia. It is to be hoped that they can hold on to it not only for strategic advantage in the present war, but for the benefit of the peoples concerned. They are not likely to get any government better than British administration for a long time to come nor one more willing to give them opportunity for development. Certainly it would be preferable to the possible alternatives—the rule of Russia, Germany, or Turkey. The partition of Persia in 1907, tho intended as an amiable compromise, was irksome to both parties and injurious to the country. British Liberals were shocked that their government should become the accomplice of Russia in what Mr. Shuster called "The Strangling of Persia," and was obliged to condone whatever Russia did in Tabriz and Teheran.

The advance of the British from the Arabian Sea to the Caspian has a double importance. It frustrates two schemes for the expansion of Turkey. The first was the Pan-Islam plan, which aimed to join those of a common faith in an interoceanic chain whose links would be Morocco, Tunis, Algeria, Tripoli, Egypt, Arabia, Turkey, Persia and India. The second was the Pan-Turanian plan, which aimed to join all those of common blood—Turks, Tatars, Turcomans, Mongols, Manchus, Finns, Lapps, Esths, Bulgars, and mayhap Magyars. Such are the dreams which ambition inspires in brains inflamed with ethnological and linguistic speculation. It is a question which is the more dangerous to the peace of the world—Imperialism or Irredentism. Turkey has both forms of megalomania at the same time.

# War Training for Women

A Call to Service—Trained Woman Secretaries are needed to speed Government Work

One of the Government's great needs is for *trained* secretaries and statistical workers. To help supply them, Drexel Institute, in co-operation with the U. S. Civil Service Commission, has prepared special training courses.

Graduates of these courses will be eligible for certificates to positions under Civil Service. The certification of graduation will be the basis for rating; no further scholastic test will be required.

1. A four months' intensive course for High School graduates who are qualified in Stenography and Type-writing and have had one year's experience in business.
2. A one year's intensive course for College graduates. Specific technical and statistical secretarial training of high grade.

*Drexel Institute's special war training courses for women have been approved by the United States Civil Service Commission.*

Students who enter these courses will be at once in training for their country's service.

Uniform will be worn. Military regulations.

Enrollment will be limited and applicants carefully selected. As courses begin October 7, we urge you to write at once for complete Bulletin No. 10 and enrollment blanks.

The Nation needs you.

## DREXEL INSTITUTE

Hollis Godfrey, Sc. D., Eng. D., LL. D., D. C. L., President  
Philadelphia, Penna.

In addition to the above courses, Drexel Institute offers the regular Courses in Domestic Science and Arts, Engineering and Secretarial Work.

# INSURING YOUR SAVINGS

BY LUIGI CRISCUOLO

IN his last annual report to Congress, John Skelton Williams, Comptroller of the Currency, made a recommendation proposing a bill to provide for the Government guarantee of deposits in national banks in the amount of \$5000 or less, with the proviso that Congress could designate a certain rate in excess of which interest could not be paid on such deposits. The Comptroller fixed 3 per cent as the rate he believed adequate. A bill on this subject was reported favorably by the Senate Committee on Banking and Currency, of which Senator Robert L. Owens is chairman, and while it has been argued upon to some extent it has not been enacted, probably on account of the great opposition advanced by large banking interests in certain parts of the country, as well as from the Federal Reserve Board.

According to the terms of the bill, the Comptroller is empowered to publish advertisements in the press calling upon persons having claims against failed banks to present the same with legal proof. Claims of each depositor not exceeding \$5000 which are adjudged valid shall be paid in full by the Comptroller out of funds to be provided under the act. In order to indemnify the Government on account of advances to be made for the purpose stated, a tax is to be levied on each national bank which desires to take advantage of the law, in the amount of not exceeding one-tenth of one per cent of the aggregate of all deposits averaging \$5000 or less, and a similar tax on \$5000 of the aggregate of each of the other deposits averaging more than \$5000. The provision is made that no deposit bearing over 4 per cent interest shall be the beneficiary of the act.

Acceptance of the plan is made discretionary with banks, and individual institutions are not required to accept it unless they feel so disposed. Certain national banks have argued that it is unjust to require strong banks to pay a premium of about one-tenth of one per cent for the benefit of the weaker or poorly managed institutions when the strong banks do not wish to avail themselves of the guarantee. The large banking institutions object to being taxed for the purpose of insuring their depositors but the Comptroller argues that the objection will be met if it is provided that any national bank which does not desire to enjoy the benefits of the act can decline to participate.

This fact, Mr. Williams argues, cuts out absolutely the objections of the large banks and they can have no justification in opposing a measure which, while not taxing them, gives to other banks that are willing to pay the tax the advantages which such banks and their depositors greatly desire. For instance, a bank in New York City having ten millions of capital should have no objection to a bank in Oswego, New York, with average deposits of \$5000 or less taking advantage of a law guaranteeing deposits by paying a small tax and allowing the depositors a small rate of interest in return for the guarantee.

The Comptroller feels that such a law would bring millions of hoarded money into circulation while the banking interests try to refute this contention as very much worn-out and no longer applicable since the issuance of Liberty Bonds. The Comptroller says that many people have no confidence in banks and consequently hide their savings in cupboards and ovens or place them in safe deposit vaults because of their lack of confidence; that if deposits were guaranteed hoarders would take advantage of even a 3 per cent interest rate and deposit their funds in banks.

Personally, I have felt that the latter argument holds particularly true with respect to the foreign population of this country which is more or less transient. Laborers, mill-workers and mechanics of Polish, Russian, Slavonian, Greek and Italian extraction have sent each year many millions of dollars of their savings to their home banks, some to purchase small farms, some to be spent upon property already owned to provide improvements, some to pay debts, but a large part to remain in the Government controlled savings banks. Why? Because they believe that their home Government is safe and they have faith in the banks controlled by it, while they know that they have been so often mulcted of their savings of many years by scheming bankers of their own nationality located here. The records of the state banking departments are filled with cases of absconding foreign bankers and the miserable workmen and women who were their victims. If these alien people could feel that their deposits in American banks had a *Government guarantee behind them*, many millions of dollars would remain deposited here and would be, in turn, available for investment either in Government bonds or in securities of American enterprises.

Some of the arguments advanced in favor of the guarantee of bank deposits by the Government are as follows:

1—The passage of the law would give an absolute guarantee to nearly 16,000,000 depositors in national banks who on March 4, 1918, had deposits of \$5000 or less. Those depositors whose balances exceeded \$5000, and whose funds would not be guaranteed, numbered 353,139, those whose balances were \$5000 or less had to their credit \$4,521,027,000 and those whose balances exceeded \$5000 had deposits aggregating \$8,000,000,000.

2—The passage of such a law would prevent

runs on all national banks enjoying the guarantee privilege, with the attending changes and disturbances which ordinarily follow such runs. Many financial panics would have been averted had such a law been in force.

3—The guarantee of deposits would give peace of mind to the poor man and woman who may have placed the savings of a lifetime in the savings department of a national bank. In cases where national banks have failed, depositors have had to wait years before realizing anything and have suffered great privation on account of their means being taken away.

4—Nothing would contribute more to the unification of our banking system than the enactment of such a law. It would have a paramount influence in bringing state banks into the Federal Reserve System. The desirability of this unification of the banking system of the country has the approval of thinkers of both political parties, especially in times of war when co-operation and coordination of all financial interests is of such paramount importance.

5—Under such a plan all banks will strive to inspire public confidence and maintain a good reputation not only for the sake of protecting their stock investment but also for the sake of drawing large depositors to the bank.

The Comptroller has said that the records of his office show that for the past thirty-six years the total deposits of banks with less than \$200,000 capital which failed in that period amounted to \$60,788,000, representing the amount of money which was tied up from time to time during this period in these banks, part of which was lost. In the same period, the amount of deposits tied up in banks with a capital of \$200,000 or more amounted to \$133,572,000. Of this sum, over \$68,000,000 was tied up in the largest banks, those with a capital of \$500,000 or over. The aggregate amount of deposits of national banks tied up by bank failures from 1912 to 1917 was about \$30,000,000, exclusive of deposits aggregating \$50,000,000 more in banks which suspended temporarily but were subsequently restored to solvency in the same period.

The Comptroller states that while the tying up of \$194,000,000 of deposits in failed banks is not large when compared with the total deposits of all banks, it is of high importance when it is considered how many untold miseries such failures brought to tens of thousands of helpless men and women who, under the provisions of a bill such as the one proposed, could have been (and hereafter should be) spared such loss and suffering.

One of the objections to the bill is founded on the idea that the depositors of a well-managed bank in New York City should not be penalized by a loss in interest in order to aid depositors in a poorly managed bank in Kalamazoo. If this theory held, no form of centralized government or organization would stand and we would have no Government post office, but a separate one in each state, no insurance companies, no building and loan associations, no mutual aid societies, no large corporations.

The Federal Reserve Board has argued that the passage of the bill for the Government guarantee of bank deposits would create a spirit of antagonism between national and state banks. The way to prevent any possible antagonism is to eliminate the various classes of banking institutions and create a really unified banking system. This might mean depriving the states of certain rights but the banking question has ceased to be a state or a local question but a national and even international problem. The financial structure of the whole world will be in the balance after the war is over and we should begin to look ahead. All banks and trust companies should come under the absolute control of the Federal Reserve System by a form of legislation which cannot be misunderstood and the small depositor, the wage earner, should be protected by an absolute Government guarantee.

Comptroller John Skelton Williams

## PLEASURE AS USUAL

(Continued from page 286)

erstwhile luxuries are veriest necessities. This development has crystallized some customs, has precipitated types, has thrown up social froth and left its social sediment.

I can shut my eyes and see the features all in one composite picture. There is the late rising and the long delayed meal hours; the constant round of tournaments; the riding and boating; the swimming and dancing; the beach and the boat house; the garage and casino; the sun-baked piazza; the chic exclusive groups and the porch gossip of the long dull afternoon; the vapid conversation, with the cuisine and the climate for its only topics; the apologies and explanations in re heat, humidity, mosquitoes and the absence of that truant heretofore hardworking breeze; the fraud, deceit, pretense and insincerity; the gossip, scandal, heart-burning and social climbing; the line of automobiles every morning in the offing; the men who every forenoon make believe they play golf out of pleasure and not from necessity.

I go back to any one of twenty places and sit down in retrospection to look in imagination on the passing stream. Here comes a man who might have made a living. Instead, he has merely made a fortune. Here is a couple with no company except each other. They have much ambition, but no means. For that reason they are frozen out effectually. Here comes a family I remember at a less famous resort a few years ago. They were normal people then. The father has had Government contracts since and has amassed five millions. He is now a ruined man, who once was only bankrupt.

Nor would it be so bad, this idleness and this inanity, if it was honest; if these people did not toy at working and pretend they help instead of hinder. Just what do they think they are doing? Here is a young woman recuperating from six weeks' experiment at nursing; she is utterly exhausted. Here is another, puckering her brows over the unwonted task of spelling out her application for some canteen service. The only labor she can think of that she ever did was to steer the yacht.

War work and war saving are, for such as you, Messieurs and Mesdames, sheerest affectation. I address you with acerbity, but to the point. You, gentlemen, who have retired, but who never tired; you, sirs, whose chiefest daily labor is in counting up your score on the ninth hole; you, whose sole evening meditations are post-mortems after the thirteenth trump has been played; you, who are healthy and wealthy but not wise—Your country needs you.

And you, madam. You are buying War Stamps? Have you bought a broom? You are knitting sweaters? Have you tried washing the dishes? And you, charming daughters, I know you look lovely in your uniform. I know you are working—at the Red Cross Bazaar. But who cooked your food and made your bed this morning? Had she been released from her place in your service, she might now be doing what you could not if you tried. One way to solve the servant problem problem is for you to become your own servants. A better way to solve than to discuss the labor problem was for you all of you, to go to work.

While princes of the blood abroad are tending nudes and loading wagons, while kings of royalty that never bowed except to the Almighty are now callous from scrubbing hospital floors, while women of the better social class are risking life and wrecking health in dangerous munition factories, honestly, what are you doing? What are you accomplishing? What are you even endeavoring to do? Tomorrow will be Labor Day. Have you been laboring?

## This Is Our Work

**F**ULFILLING the vision of its founder, this institution serves and will continue to serve its double function in providing safe investments for the funds of the public and the upbuilding of this nation's permanent prosperity.

Promoting thrift, encouraging systematic accumulations, providing for such accumulations a form of investment unimpeachably conservative; and giving to each investor, large or small, a real, vital, and profitable part in the material improvement of the nation's great cities: This is our work.

## Safe 6% Bonds

The first mortgage 6% bonds we offer are *safe* investments. Safety must be your first consideration—especially so in these times of war. The denominations of the bonds are \$100, \$500 and \$1,000.

Write today for our booklet, "Safety & 5%," describing how the *Straus Plan* safeguards these bonds, and for our current Investment List. Ask for

New York City, August 15, 1918.

A dividend of one and three-quarters (1 3/4%) per cent. on the preferred stock of this company has today been declared, payable September 15th, 1918, to stockholders of record at the close of business on August 26th, 1918.

GEO. W. PETERSEN, Secretary.

## INSURANCE

## Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

he was far more eager than for his decoration. This was the new Spad aeroplane in which was mounted a 200 horse power Hispano-Suiza motor which drove a propeller from the end of a hollow shaft. And thru this hollow propeller shaft a light one pounder gun fired straight ahead, avoiding the danger which would attend any attempt to synchronize its shells between the blades of his propeller.

It was his own idea! For months he had argued and pleaded with the authorities to give him a more deadly arm. Finally forced to succumb to his impetuous desire the new fighting machine was built according to his directions. Guynemer had brought down his forty-ninth victim. Three more were added to his score with this new and powerful weapon before his customary recklessness again imperiled his life and filled his new aeroplane with bullet holes.

Thruout August, 1917, Guynemer fought even more furiously than was his wont. His fifty-third and last victory was gained on the 20th. But his miraculous instincts seemed deserting him.

He made several visits to the factory in Paris and to his father's home in Compiègne. Parents and friends urged him to rest, to give up the chase now that he had attained "his fifty," to teach his new pilots the tactics and maneuvers that brought him such wonderful successes over the enemy pilots.

To all such suggestions Guynemer replied impatiently: "They will say that I stopped fighting because I have received all the decorations France can give me." He burned with the desire to show "them" that he would work harder now to bring down aeroplanes than he had ever done before. And he did work harder. He took even greater risks. He flew seven hours one day, engaged in several combats but was unable to score a victory. Evil luck pursued him. On September 10 he used up three different machines, each one refusing to function properly and forcing him to land.

That night his comrades, unable to control their captain, telephoned to Paris informing their old commanding officer, Brocard, that Guynemer was sick and in no condition to fly, and imploring him to come to the aerodrome to take their captain away for a much needed rest. Commander Brocard telegraphed Guynemer to expect him the following morning at nine o'clock.

Guynemer undoubtedly suspecting the intrigue of his friends ordered out his aeroplane next morning at eight o'clock and directed Lieutenant Bozon-Verduras to accompany him. Brocard arrived at the Dunkirk aerodrome in automobile shortly before nine. Guynemer had departed on his last flight at eight twenty-five.

The mystery of Georges Guynemer's disappearance is truly so baffling that one wonders little at the superstitious belief held by the French peasants that he did not come down but on the contrary ascended straight to heaven—a last miracle!

The facts are these: Lieutenant Bozon-Verduras reports that northwest of Ypres he and Captain Guynemer discovered a two-seater Aviatik at 12,000 feet. Guynemer went in for the attack leaving the lieutenant above him to guard against a rescue. A distant formation of enemy fighting planes was sighted by the sentinel and he went forward to intercept them. They swerved off to the east without seeing him.

Returning to his station he searched the skies for the captain's aeroplane. It was not in sight. Believing Guynemer had downed his opponent and had followed him

close to earth to witness the crash, Bozon-Verduras volplaned down and circled about at a low level for a considerable time without discovering any sign either of Guynemer or his victim.

It has always been the German custom to announce promptly the fall of any enemy aviator. If the pilot has fallen from his machine and his identity lost, the number and name of his aeroplane is published and sent abroad. In the case of a German victory over a Guynemer, whose name and exploits were frequently published in the German press, the proud news would certainly flood the entire world. But for ten days after September 11, not a word came from Germany concerning Georges Guynemer.

The French had maintained a strict silence on their side, hoping that Guynemer had dropt uncaptured within the enemy lines and that unaware of his presence the enemy's chance of apprehending him would be lessened. But a London newspaper on September 17 printed the story of his disappearance.

Four days later, about the time required for a London paper to reach Germany thru Holland, the Cologne *Gazette* printed the casual information that a Cologne fighting pilot, one Wissemann, heretofore unheard of, had written to his mother in Cologne that he had shot down Guynemer, the French Ace of Aces, and that hereafter he need fear no one. He dated his victory September 10. Guynemer disappeared the 11th.

Necessity for secrecy removed, application was made thru the Geneva Red Cross directly to Germany for information about the body of the French aviator, Georges Guynemer. An immediate reply was given the Red Cross to the effect that Guynemer was shot down in combat back of Ypres on September 10, and that he was given a military funeral and his body was buried in the cemetery at Poelcappelle in Flanders.

A few days later Poelcappelle was captured by the British. Diligent search was made for the grave of Guynemer but none was found.

An official request was thereupon made by the French Government thru Spain to the German Government for facts concerning the disposition of Guynemer's body.

The extraordinary reply came that Guynemer had been killed on the 11th, and not the 10th (full particulars having been published meantime of Guynemer's disappearance on the 11th); that Guynemer had been killed by a bullet in the forehead, that his aeroplane had broken its right wing in the crash so that its number could not be ascertained and published (when as a matter of fact the number is stamped on the fusilage and the broken wing could not affect its discovery), and that finally, Guynemer's body could not be removed and buried owing to the violent artillery fire that was directed against the spot by the British, which fire eventually obliterated and destroyed every trace of both aeroplane and pilot!

Consider the incredulity with which this astonishing official contradiction from Germany must have been received by a people already anxious to believe that their hero was immortal, that he had accomplished his miraculous tasks by a power superhuman, that his unrivaled wings had at last carried him into the infinite where no man made machine could follow, where no human mind could soar!

Thus shrouded in mystery we leave Georges Guynemer, a marvelous if not a miraculous human being.

# Right and Wrong Methods in Child Training

**M**ANY loving parents with the best interest of their children at heart are unknowingly committing nothing less than a crime against their little ones because of the methods they use in training them in the way they should go.

Not only do these methods fail in their immediate purpose, but they work an irreparable harm in their effect on the child's future success and happiness.

Abraham Lincoln, perhaps our greatest American, once said: "All that I am and all that I ever hope to be I owe to my mother." Great men before and since Lincoln have in the very same way given the big share of credit to their parents—and how truly they spoke!

The trouble has always been that we have never given any really scientific study to the question of child training—we have not searched for the cause of disobedience, the cause of wilfulness, the cause of untruthfulness, and of other symptoms which, if not treated in the right way, may lead to dire consequences. Instead, we punish the child for exhibiting the bad trait, or else "let it go." As a result, we do the child an actual wrong instead of helping it. What we should do is to attack the trouble at its source.

## Confidence the Basis of Control

The new system of child training is founded upon the principle that confidence is the basis of control.

Scolding and whipping are relics of the Barbarous Ages

Under this new system children who have been well-nigh unmanageable become obedient and willing, and such traits as bashfulness, jealousy, fear, bragging, etc., are overcome. But the system goes deeper than that, for it instills high ideals and builds character, which is of course the goal of all parents' efforts in child training.

Physical punishment, shouted commands, and other barbarous relics of the old system have no place in this modern school. Children are made comrades, not slaves; are helped, not punished. And the results are nothing short of marvelous.

Instead of a hardship, child training becomes a genuine pleasure, as the parent shares every confidence, every joy and every sorrow of the child, and at the same time has its unqualified respect. This is a situation rarely possible under old training methods.

And what a source of pride now as well as in after years! To have children whose every action shows culture and refinement, perfect little gentlemen and gentlewomen, yet full of childish enthusiasm and spontaneity withal!

## Results Without Friction

To put in practice these new ideas in child training, strange as it may seem, takes less time than the old method. It is simply a question of applying principles founded on a scientific study of human nature, going at it in such a way as to get immediate results without friction.

The founder of this new system is Professor Ray C. Beery, A. B., M. A. (Harvard and Columbia), who has written a complete Course in Practical Child Training. This Course is based on Professor Beery's extensive investigations and wide practical experience, and provides a well-worked-out plan which the parent can easily follow. The Parents' Association, a national organization devoted to improving the methods of child training, has adopted the Beery system and is teaching the course to its members by mail.

## Nothing Else Like It

Membership in the Parents' Association entitles you to a complete course of lessons in child training by Professor Beery. These lessons must not be confused with the hundreds of books on child training which leave the reader in the dark because of vagueness and lack of definite and practical application of the principles laid down. It does not deal in glittering generalities. Instead, it shows by concrete illustrations and detailed explanations exactly what to do to meet every emergency and how to accomplish immediate results and make a permanent impression.

No matter whether your child is still in the cradle or is eighteen years old, this course will show how to apply the

The New Method places confidence as the basis of control

right methods at once. You merely take up the particular trait, turn to the proper page, and apply the lessons to the child. You are told exactly what to do. You cannot begin too soon, for the child's behavior in the first few years of life depends on the parent, not on the child.

## This Book Free

"New Methods in Child Training" is the title of a little book which describes the Parents' Association and outlines Professor Beery's course in Practical Child Training. The Association will gladly send a copy free on request.

If you are truly anxious to make the greatest possible success of your children's lives, you owe it to them to at least get this free book which shows how you may become a member of the Parents' Association and secure the fine benefit of this wonderful new way in child training. Merely mail the coupon or a postcard or letter, but do it today, as this offer may never be made here again.

## Do You Know How—

to instruct children in the delicate matters of sex?  
to always obtain cheerful obedience?  
to correct mistakes of early training?  
to keep child from crying?  
to develop initiative in child?  
to teach child instantly to comply with command, "Don't touch"?  
to suppress temper in children without punishment?  
to succeed with child of any age without display of authority?  
to discourage the "Why" habit in regard to commands?  
to prevent quarreling and fighting?  
to cure impertinence? Discourtesy? Vulgarity?  
to remove fear of darkness? Fear of thunder and lightning? Fear of harmless animals?  
to encourage child to talk?  
to teach punctuality? Perseverance? Carefulness?  
to overcome obstinacy?  
to cultivate mental concentration?  
to teach honesty and truthfulness?  
These are only a few of the hundreds of questions fully answered and explained, in a way that makes application of the principles involved easy through this course.

The Humphrey Investment Co.

This business established by L. U. Humphrey, later Governor of Kansas.

INDEPENDENCE, KANSAS

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## THE WAR AND SUPREME VALUES

(Continued from page 291)

set about to answer their own question. Surely, it is not God's job to rob men of their opportunity to develop themselves by performing their tasks for them. Surely, it is not God's job to lug a lot of lazy lubbers into glory land where they would be the most unhappy creatures imaginable. There can be no question that God is on His job. The question is, what is God's job and what is our job. We may believe that God is more interested in the development and realization of human beings than He is in anything else. But He is not merely interested in their temporal ease and comfort, and certainly not in their programs of selfishness.

If we are alert and attentive, we shall realize as never before that human beings only are of supreme value; that ultimate values are always spiritual; that times of peace offer opportunities just as real and more numerous than do times of war for the development of the virile virtues; that it is a foolish and wicked people who suffer and sacrifice for destructive programs if they do not also willingly suffer and sacrifice for worthy constructive programs; that every one, regardless of nation or station, has a right to the opportunity for complete self-realization; and that God develops the people by using them as His instruments in the accomplishment of His work.

## MOBILIZING THE MIND OF AMERICA

(Continued from page 290)

opportunity for this intellectual mobilization.

Before the war it was the prerogative of every citizen to express his views as to whether or not this country should go to war. But the time comes when a democracy makes up its mind and every believer in a representative system of government must accept the decision as if he himself had been sitting in the Congress and voting for the war. The Government has undoubted power in war time to force unity and cooperation behind the war program. But, however much suppression may be necessary, along with it must go the positive task of educating the masses of the people as to the real reasons for the war and the part which they can play in it.

In all this, however, we must emphasize the fundamental elements in this struggle. America is in this war because the German Government has outraged every one of the fundamental principles of international morality. As long as the ruling class of Germany is in control of the military resources of the Central Empires, Germany is a standing menace to our peace and safety.

We owe it to ourselves, to our Allies, and to our enemies to make it perfectly clear that this is our war and has been from the beginning because it is waged for all the ideals America has believed in. Against all the fundamental assumptions of Germany's ruling class we resolutely set our face. Against her dream of a Holy Roman Empire in the modern guise of Pan-Germanism we set that French motto at Verdun, "They shall not pass." Against the belief of her military caste that "might makes right" we place the right of the individual to "life, liberty, and the pursuit of happiness." Against the theory of the divine right of kings, we assert that to secure the inalienable rights of freemen "governments are instituted among men, deriving their just powers from the consent of the governed."

## "Do You Mean To Say You Ironed All These In An Hour"

"Yes, and I really enjoyed doing it. I used to think an ironing machine was only good for flat work, but on my SIMPLEX I iron John's soft shirts and underwear, my own lingerie, aprons and house dresses, besides the children's play clothes, curtains, and many other necessary articles.

"And, Nell, the wonderful thing is that I'm saving \$2.50 every week, for now I only need my laundress for one day instead of two. Doing my own ironing on the SIMPLEX is my pet economy. It saves fuel too and the work which I used to send to the laundry I now do myself."

Irons everything except skirts and shirtwaists. Completes an average ironing in a single hour at a total fuel cost of 3c. Saves \$100 a year in fuel, help and laundry bills.

## REMARKABLE REMARKS

**JOHN McCORMACK**—I do not think that music is a non essential.

**HERBERT C. HOOVER**—The danger of privation is now passed.

**BOOTH TARKINGTON**—Loyalty is a feeling, it is not a spoken word.

**R. L. GOLDBERG**—The Crown Prince's brain is completely missing.

**MRS. VERNON CASTLE**—Turkish baths. Gracious, what abominations.

**J. D. ROCKEFELLER, JR.**—Savagery has thrown the gauntlet to civilization.

**DR. SHALER MATHEWS**—Denominations are ceasing their internecine strife.

**GERTRUDE ATHERTON**—I doubt if a century will give the average American good manners.

**THE KAISER**—The United States will never be truly great until it becomes a monarchy.

**EX-PRESIDENT ELIOT**—Every child, whether boy or girl, should learn mechanical drawing.

**SENATOR LEWIS**—The tariff is no longer a party issue, but a matter of international bookkeeping.

**ANNE RITTENHOUSE**—If there is any way of getting away from capes, no woman has discovered it.

**ADMIRAL VON HINTZE**—The entire truth at certain times does not serve but harms the public interest.

**CHARLIE CHAPLIN**—I like to go among people and get intimately acquainted with their loves and hates.

**ED. HOWE**—I sometimes think I may be supplying the new note in literature so long prayed for by critics.

**SECRETARY MCADOO**—Every man, woman and child who can avoid using passenger trains at this time should do so.

**PRESIDENT POINCARÉ**—Those who have fought together for liberty will remain united together by indissoluble links.

**DR. FRANK CRANE**—In any consultation you will notice that the man who speaks last carries the most authority.

**MARSHAL HINDENBURG**—Our position is favorable, altho we may frankly admit it, we lately have happened to be set back.

**PRUDENCE BRADOCK**—One family of my acquaintance has had chicken salad for supper every Sunday night for nearly fifty years.

**ARNOLD BENNETT**—No sane person wants the Government to fall. All sane persons want the Government to be afraid of falling.

**GENERAL LUDENDORFF**—The colonies are inseparable from that German future for which we fight and for which we must conquer.

**WOODROW WILSON**—The profiteering that cannot be got at by the restraint of conscience and love of country will be got at by taxation.

**CHAPLAIN G. A. GRIFFITH**—Were I in America today—priest as I am—I should do my best to have put to death any Boche

in America who would apologize in any way for what the Boche has done.

**AUSTRALIAN PREMIER HUGHES**—I am sick of this canting humbug about internationalism. Nationalism, not internationalism, is the policy for Britain.

**LIEUT. PAT O'BRIEN**—For seventy-two days and nights I had been swimming across rivers. I had fallen 8000 feet from my aeroplane into Germany, etc.

**WILLIAM HARD**—Anybody who calls anybody else pro-German on the ground of German descent, without further inquiry and information, is anti-American.

**REV. J. R. STRATON**—If divorces keep on increasing as rapidly in the next few decades as they have in the past, it will soon be true that the only difference between us and the Turks in the matter of wives will be the difference between a team and a tandem.

## THE NEW PLAYS

*He Didn't Want to Do It*—a girl and music play of the usual sort with an involved plot concerning crooks. (Broadhurst Theater.)

*She Walked in Her Sleep*—a breathlessly funny comedy of errors in which a pretty somnambulist and a tube of high explosive nearly wreck the happiness of several homes. (The Playhouse.)

*Under Orders*—a thoroly absorbing war play so skilfully done that two players hold the audience tense thru four acts. Shelley Hull and Effie Shannon both play two roles. (Eltinge Theater.)

*Three Faces East*—an ingeniously constructed mystery play of the German and British secret service in which you guess wrong about the identity of each character at least three times. (Cohan and Harris Theater.)

## AFTERNOON TEA

BY ARTHUR GUITERMAN

### A SONNET SEQUENCE

*As wildly ragged the tea-imbibing throng  
About the urn, with measured step and slow,  
The mighty spirits of the realm of song  
(At some weird seance on the floor below  
Materialized), among them moved, amazed  
At what they heard, A teacup dropt and broke,  
All unregarded, when, with hand upraised,  
Full solemnly the shade of Milton spoke:*

### I

#### RESIGNATION

When I consider how my time is spent  
At gatherings to meet some tender bride,  
Or "Just a few dear friends," or, wo betide!  
Some foreign superperson, eloquent,  
Whom women rave about, or ill-content,  
Some bashful English poet, wistful-eyed,  
Who yearns, I know, to run away and hide—  
Rebelligiously I question, "Was I meant  
To hear this talk that runs around in rings?  
And must I waste the blessed afternoon?"  
Then, "Hush," says Patience, "Think upon  
the fate  
Of those who needs must pass the tea and  
things—  
Who may not say 'Good-by,' as you shall soon—  
Who have to serve, and, likewise, stand and  
wait!"

*Backed up against a shelf whereon reposed  
His works (with leaves uncut, I sadly fear),  
Stood Wordsworth. Intermittently he dozed.  
The solitary Bard of Windermere;  
Then, waking from a pleasant forty winks,  
He drew about his shape its cloak of gray:  
And, borrowing a sonnet-form, methinks  
Employed by Shelley, thus he said his say:*

### II

#### SOME FOLKS ARE TOO MUCH WITH US

Some folks are too much with us; much too  
much.  
"Yes," sighed the lady with the gems galore,  
"One's life in Europe puts one out of touch  
With matters here; but then, this dreadful war  
Just fairly drove us back. And we had such  
A weary hunt to find a house, before  
We took that spacious, fine old Tudor place.  
Or mansion, rather. Then the coal, you know!  
We burn twelve tons a week in any case!  
But no one would deliver it, and so  
We had to send the touring-cars with Grace  
Our second-man, the five chauffeurs, and Fred.  
To load and fetch it home and store it!" "Oh,  
I'm glad you are so rich!" said I, and fled.

# Little Signs That Reveal Character at a Glance

The Simple Knack of Knowing All About a Person at Sight

EVERY one knows that a high forehead indicates the intellectual type—that a receding chin denotes weakness while a pronounced chin means determination—these things and a few other signs are understood by all. But often these signs are counterbalanced by others which are just as apparent but which the average person doesn't know how to diagnose.

As a consequence we often jump to conclusions about people, which prove incorrect because we don't carry our observations far enough. It's like trying to read a sentence by looking at the first one or two words. We might guess the sense but more likely than not we'd go wrong. Yet once you have the secret, you can understand what *all* the little signs mean and get at a glance a complete picture of the characteristics of every person you meet, as easily as you read this page.

I know this to be true for I used to be about the poorest judge of character that I know. I was always making friends only to find that they were the wrong kind, or saying the wrong thing to my customers because I had failed to "size them up" correctly, or lending money to people who never intended to pay me back. I even made a costly mistake by giving up a good job to go into partnership with a man who turned out to be little short of a thief.

I was pretty much discouraged by this time and I determined that the thing for me to do was to learn to read character, if such a thing as that was possible, for I felt that unless I did know whom I could trust and whom I couldn't, I never would get very far.

It was about this time that I read an article about Dr. Katherine M. H. Blackford, who is recognized as the foremost character analyst in this country, and who was employed by a big company at a salary of \$16,000 a year to select their employees. I thought then that if hard headed business men paid such a salary as this in order to insure their getting the right kind of workers that there surely must be something in character reading for me.

One day while in Pittsburg my eye was attracted to an announcement of a lecture on Character Analysis by Dr. Blackford and I decided to go and see if I could learn anything.

That lecture was an eye opener! Not only did Dr. Blackford show how easy it is to read at a glance the little signs that reveal a person's character, but after the lecture she gave a remarkable demonstration of character reading that amazed the audience.

She asked the audience to select two people in the hall to come up and be analyzed. Several men, all of them entirely unknown to Dr. Blackford, were suggested and finally two were chosen. A few came upon the platform Dr. Blackford looked them over keenly and, after a moment's thought, began to analyze both of them at once. As she mentioned the characteristics of one she described the corresponding characteristics in the other.

Beginning with generalities, she told the audience every one of whom seemed to know both men, that one was a good mixer, argumentative, bold and determined, while the other was more or less of a recluse, very self-contained, quiet and gentle.

The first, she said, was brilliant, clever, quick-witted and resourceful; the second a silent man, slow and deliberate when

he spoke, and relied upon calm, mature judgment rather than brilliant strokes of ingenuity and wit.

The first man according to Dr. Blackford was active, restless, always on the go, impatient, and able to express himself only in some active, aggressive manner. The second man was studious, plodding and constant, and expressed himself after prolonged concentration and careful thought. The first man, the doctor said, was therefore especially equipped to execute plans, to carry to success any course of action, but was not particularly qualified to make plans or to map out a course of action—he could make practical use of many different kinds of knowledge but did not have the patience or the power

was the brilliant trial lawyer; the other the student and counselor, and as a team they were remarkably successful.

\* \* \* \* \*

When the lecture was over it didn't take me long to get up to the platform and inquire as to how I could learn more about character reading, and I found that Dr. Blackford had just completed a popular Course that explained the whole thing and which would be sent on approval, without charge, for examination. I immediately wrote the publishers and received the Course by return mail.

And when it came I was never so amazed in my life—for here was the whole secret in seven fascinating lessons. No hard study—no tiresome drudgery, just interesting pictures and simple directions that I couldn't go wrong on.

Why, the very first lesson taught me pointers I could use right away and it was only a matter of a few weeks before I was able at one quick but careful survey to tell just what a man was like by what he looked like.

And what a revelation it was! For the first time I really *knew* people whom I *thought* I had known for years. It was all so simple now that it hardly seemed possible that I could have made such mistakes as I did before I heard of Dr. Blackford.

People took on a new interest. Instead of just "blanks" each one became a definite personality with qualities, tastes and traits which I was always able to "spot." Why, the very act of meeting people became the most fascinating pastime in the world. And how much more clearly my own character loomed up to me. I knew as never before my limitations and my capabilities.

But it has been my contact with people in business that my new faculty has helped me most—to say that it has been worth thousands of dollars to me is to put it mildly. It has enabled me to select a new partner who has proved the best help a man ever had—it has made it possible for us to build up probably the most efficient "frictionless" organization in our line of business with every man in the right job—it has been the means of my securing thousands of dollars' worth of business from men I had never been able to sell before because I hadn't judged them correctly, for after all salesmanship is more in knowing the man you're dealing with than in any other one thing—and what I've learned from Dr. Blackford's lessons enables me to know as much about a man the first time I meet him as his best friend—sometimes more.

Is it any wonder that such concerns as the Scott Paper Company, the Baker-Vawter Company, the Westinghouse Electric and Manufacturing Company and others have sought Dr. Blackford as counselor; or that thousands of heads of large corporations, salesmen, engineers, physicians, bankers and educators have studied her Course and say that the benefit derived is worth thousands of dollars to them?

## Send No Money

The biggest surprise about Dr. Blackford's Course you haven't read yet—and that is the price. If after examining the seven lessons in your own home you decide to keep the Course you need only send \$5 in full payment. If you are not entirely satisfied with the Course, send it back and you will owe nothing.

Merely send the coupon for it now without money—or write a letter and it will be sent to you charges prepaid.

You take no risk and you have everything to gain, so mail the coupon, before this remarkable offer is withdrawn.

### FREE EXAMINATION COUPON

## Independent Corporation

Division of Business Education, 119 West 40th St., New York

Publishers of *The Independent* (and *Harper's Weekly*)

Please send me Dr. Blackford's Course of seven lessons called "Reading Character at Sight." I will either remit the Course to you within five days after its receipt or send you \$5.

Name .....

Address .....

"What I've learned enables me to know as much about a man the first time I meet him as his best friend—sometimes more."

of concentration to search out and classify the knowledge so that it could be used. While he was a brilliant speaker, a resourceful and effective debater, he lacked the power to dig out and assemble the material for orations and debates. The second man, she continued, being shy and self-conscious, could not speak in public, but was a master of study and research and strong in his ability to classify and correlate all kinds of knowledge.

"Indeed," said Dr. Blackford, "this gentleman would be a remarkable success as a lawyer, especially in court practice. The other gentleman would be a remarkable success as a lawyer, but his particular field would be the preparation of cases and the giving of counsel to clients. Therefore," she went on, "they would be particularly fitted to work together as partners, not only because they complement each other professionally but because their dispositions are such that they would naturally admire and respect each other."

As she said this the audience broke into a storm of applause and upon inquiry I learned that the two men were indeed lawyers and partners, that they had been partners for twenty years and were well known in Pittsburg for their intense affection for each other and for the fact that during their twenty years' partnership they had never had a disagreement. One

REFERENCE MAP OF THE WESTERN FRONT

The middle line shows where the opposing armies now stand. The line on the left marks the extreme limit of the German advance in August, 1914. That on the right, the so-called Hindenburg line, is the position to which the Germans withdrew in March, 1917, and from which they advanced in March, 1918. Between these two limits the tide of battle has ebbed and flowed for more than four years.

## THE POLISH PROBLEM

THE conference of the Kaisers at the German Headquarters has added a new complication to the already sufficiently perplexing problem of the future of Poland. Prince Radziwill, the leader of the Polish delegation at the conference, telegraphs back in triumph to Warsaw that all the demands of the Poles were conceded except the right to choose their own sovereign. We may surmise that he personally is not distressed about this exception since the king imposed upon Poland, the Austrian Archduke Stephen, has a Radziwill son-in-law.

The object of this new maneuver of the Central Powers is obviously to take the wind out of the sails of the Allies by presenting as an accomplished fact what the Allies promised to do. When the Kaiser the other day received the Finnish Liberty Medal for his assistance in establishing the independence of Finland he boasted: "By our deeds we succeeded, without much talking, in accomplishing what our enemies never tire of proclaiming as their aim but which they never intend to realize, namely, the protection of small nations in their struggle for freedom." Next we may expect that he will be awarded another Liberty medal by his Polish partizans and will again brag of having anticipated the Allies in extending a helping hand to a nation struggling for freedom.

Now we know—and so do most of the Poles and Finns even in the countries concerned—that the factitious and fictitious freedom conferred by the Kaiser is a very different thing from the genuine independence designed by the Allies. Poland even under the Czars has never suffered more than during the three years it has been under the Kaisers. Its population has decreased from 14,000,000 to 10,500,000. Finland, under the German control, is being forced into a war against the Allies and America, and Poland is likely soon to be forced into the same situation. Poland under an Austrian sovereign and Finland under a German sovereign are not the lands for whose freedom Kosciuszko fell and Svinhufvud was sent to Siberia.

But it is not enough for us to know these things. We must take care to make appearances correspond with facts. There is great danger that we may suffer a diplomatic defeat at the moment of military victory. The Germans are now bragging that by force of arms they freed France from the tyranny of Napoleon in 1871 and Russia from the tyranny of the Czar in 1917. It would be very embarrassing to us if history should record that the Russian republic was overthrown and the Czar restored by aid of the Allies and America or that Finland, having gained its freedom by German arms, should by Allied and American arms be restored to Russia, which never had any right to it.

This is the diplomatic trap that is set for us and we must walk carefully if we would not fall into it. Our intervention in Russia has revived the hopes of the monarchists and

there is danger lest they should dominate the combination of all the factions opposed to the Bolsheviki which is now forming under our protection. The Cossack General Semenov, whom our engineers and soldiers are aiding in Siberia, is avowedly fighting for the restoration of the Czar to the throne and of the Russian empire to its original extent.

Senator Lodge in his maiden speech as Republican leader in the Upper House on August 23 asserted as an "irreducible minimum" of the terms of peace that "The Polish people must have an independent Poland. The Russian provinces taken from Russia by the villainous peace of Brest-Litovsk must be restored to Russia." We wish Senator Lodge had been a little more clear and explicit in so important a pronouncement. It sounds contradictory. Why does he except Poland and no other of the lost territories? Does he then hold that Finland, Courland, Esthonia, Livonia, Lithuania, Ukrainia, Bessarabia, Taurida, Caucasia, etc., are "Russian provinces taken from Russia by the villainous peace of Brest-Litovsk" and hence "must be restored to Russia" at any cost to us? If not, to which would he give the right of exclusion and why? As it stands, the statement might and doubtless will be used to give aid and comfort to the enemy, for any of these people now rejoicing in the prospect of release from Russia might take it as an indication that the Allies and America are arrayed against them. Senator Lodge in this speech professes to be supporting the President, yet he calls the Soviet Government to which Mr. Wilson and Mr. Gompers sent fraternal greetings on March 11, as "dangerous to the world as the government of the Hohenzollerns." We quite agree with Mr. Lodge that the Brest-Litovsk treaty was "infamous" and that the Bolsheviki "masquerade under the name of democracy and by a combination of treachery, corruption and ignorance have reduced Russia to servitude under Germany." But on the other hand it would be intolerable to put America into the position of desiring to reverse the Russian revolution and to restore to Russian sovereignty those peoples who really want to get rid of it.

The Allies were placed in a very embarrassing position in the first years of the war by their inability to promise independence to Poland. On November 5, 1916, the German and Austrian emperors declared their intention to form "a national state with a hereditary monarchy and a constitutional government" and to guarantee "the free development of its own forces." This offer to the Poles could not then be matched by England and France, altho these countries had always been enthusiastic for a free Poland when Germany and Austria were conspiring with Russia to crush her out of existence. On the contrary, the Allies were obliged by their alliance with the Czar to deny independence to Poland. In the answer of the Allies to the President's request for their war aims they declared for the liberation of the Ruth-

enians, Rumanians and Poles under Austrian rule but said nothing about the Ruthenians, Rumanians and Poles under Russian rule, altho they had suffered more. The Poles, according to the Allies, might be granted autonomy but must remain "under the scepter of the Czar." So while Austria commissioned a Polish socialist to form a Polish Legion to fight for his country's liberty, the French and British press were obliged even to stop talking about it for fear of hurting the Czar's feelings. In a statement of the Allies' terms of peace made by Professor Milyukov in *The Independent* of September 25, 1916, he said:

It can be definitely stated that Russia cannot tolerate the idea of an independent Poland, even as a buffer state between Russia and Germany.

The Jewish question in Poland must be regarded as a matter of internal politics. The Poles cannot permit them to use their own language in the schools nor in public life.

Professor Milyukov is now the leader of the new monarchist party, the "League for the Rebirth of Russia," which is looking to the Allies and America to set up the throne kicked over by the Bolsheviks. But even he has changed his views or at least his policy, since the revolution and while he wants the restoration of the monarchy he does not ask for the restoration of the entire empire. He and his party are willing to leave out Poland and the Baltic provinces. Does Senator Lodge accept this or does he claim more than the Russian monarchists?

The attitude of the old Russian government and the Constitutional Democratic party as expressed in the quotation from Professor Milyukov gave the Germans a chance and they took advantage of it when they occupied Poland by extending the privileges of the Jews as well as promising independence to the Poles. Fortunately for us the German administrator may be counted upon to alienate any friends that the German diplomat may make. German rule in Poland has of late been decidedly anti-Semitic. The factories have been robbed of their brass, leather and machinery. Polish children have been starved that Polish-grown food might be sent to Germany. The Polish councils have been dismissed when they showed any independence and the Polish armies have been abolished. We have, then, a good chance to recover the ground lost in 1915-16.

President Wilson, being free from entangling alliances, was able to give the first satisfactory assurance to the Poles. In his address to the Senate January 22, 1917, he declared that "there should be a united, independent and autonomous Poland." This went farther than either side had dared go, for Germany and Austria could not promise a "united" Poland nor Russia an "independent" Poland, because it meant for all three a sacrifice of territory. President Wilson also asserted the right of every great people to a direct outlet to the sea, if not by means of the cession of territory then by neutralizing the rights of way. The new Austro-German arrangement professes to solve the question in the second of the alternatives, by promising the Poles free rail connection, free navigation of the Vistula and a free port at Danzig. Probably the Allies, if they were in Germany's position, would adopt much the same solution, for to give Poland the city of Danzig, which contains only four per cent of Poles, would violate the principle of nationality proclaimed by the Allies and would not be conducive to permanent peace. But a river, railroad and port under guarantee of a League of Nations would be a very different thing than being dependent upon the promise of Germany for such privileges.

In 1916 the Central Powers had the advantage in that they alone were in a position to promise independence to Poland. In 1918 the Central Powers have the advantage in that they alone are in a position to give independence to Poland now. But the Poles, who in 1916 trusted the silence of the Allies rather than the promise of Germany and Austria, will now put more faith in the promise of the Allies than in the performance of Germany and Austria. Even the Polish Socialists in America, who two years ago were sending money to Warsaw to support the Polish Legion

fighting under German command, are now enlisting in the army of pianist Paderewski to fight against the Germans. Over 100,000 Poles are now serving in the American army and the daily death lists that come from over the water show that they are among the foremost in the fight. The ancient flag of Poland, furled for a century, has again been flung to the breeze in France by the hand of President Poincaré. In spite, then, of this new Pan-Germanic scheme we have now, if we make no diplomatic blunder, a good chance to win the Poles altho the enemy has won Poland.

## A MISLEADING WORD

IT would serve the cause of clear thinking if the word "war" could be interned. There are still a few people whose thought stops with "Isn't war dreadful! I don't see how you can defend it!" There are others who complacently reiterate that "War is the parent of all high and heroic qualities"—and so forth.

But in reality there is no such thing as this abstract "war" and so it can be neither bad nor good. What we mean by the word is one of three things: aggression, which is a crime; resistance to aggression, which is a duty; or a quarrel in which aggression is found on both sides, which is a misfortune. The war which Germany is waging belongs in the first class. Our war against Germany belongs in the second. Other wars, including possibly the war of 1870 and the fratricidal second Balkan War, in the third.

Suppose we used the term "crime" as we do the word "war" to cover alike the act of a burglar and the self-defense of society by means of the police and the courts. Then we would hear fuzzy-minded folk crying out "Crime is too dreadful! Let's abolish the police," or, thinking only of the devotion of the guardians of the law, "Crime is the mother of all high and heroic qualities." If this world of ours is ever going to be saved it can only be thru applying to international affairs at least as much common sense as the very moderate amount which we now apply to civil life.

## FACING SOCIAL RECONSTRUCTION

IT is intimated that Washington, straining every nerve, as it now is, to conquer Germany and end the war in 1919, or 1920 at the latest, is not unmindful of the tremendous issues of social reconstruction that must be faced in all the Allied countries the moment the military conflict ceases, and already is laying plans for a thoroughgoing study of the problem of reconstruction in its broadest aspects, and making preparations for such governmental participation as may commend itself to prudence and good sense. On every account it is to be hoped that the gossip is veracious.

It is well understood by the intelligent that the price which the world is paying for this war includes more items than death and taxes. It includes also an enormous draft upon limited natural resources, incalculable losses to science thru the premature taking off of gifted men, and vast curtailments of personal liberty. Beyond all these it includes as well momentous changes in the working equilibrium of social classes. To "carry on," the land owning aristocracy of Great Britain and the franchise owning capitalistic enterprisers of all countries have willingly made, or when unwilling have been compelled to make, far-reaching concessions to wage-earning groups. These groups, on their part, have waived, in most instances with a fine and unselfish spirit, rights for which they stubbornly fought before the war began. They have been slow to strike, they have yielded questions of hours and conditions, they have winked at the open shop, and kept quiet about the inroads of women workers upon masculine industrial preserves.

The moment the war ends all of these matters will instantly be in the political arena for reconsideration and adjustment. What is more, they will be there as a new distribution of live political forces. It will be seen then by everybody, as now by the discerning, that the wage-earners have gained

an enormous strategic advantage, and that the public has learned an immense amount about the fundamental contentions of democracy that it did not know and would not listen to before. In other words, a real social revolution is already under way. On a small scale it was under way before 1914. It has steadily gained momentum since. So far it is a revolution of ideas, of working arrangements and adaptations, and of laws. The nations must see to it that it continues to be such, and does not become a revolution by turbulence and destruction, or worse.

Great Britain is awake to the gravity of the thing, and already has given the Government authority and administrative machinery to undertake constructive policies and realignments. In the Cabinet and in Parliamentary committees reconstruction is a recognized interest. The national mind is looking at the situation squarely and fearlessly. It is ready for a redistribution of land, the minimum wage thruout the whole field of industry, price fixing thruout the whole realm of business and a vast educational program.

The United States cannot hope to avert the reconstruction issue and it must not side-step it. It must not again be caught in the perils of an imaginary security and unpreparedness. We shall no more escape this social revolution than we escaped the world war. The time to face it is now. What will Washington do about it?

## SULTAN WILHELM

SEVERAL years before the outbreak of the Great War the German biologist Ernst Haeckel included in his "Riddle of the Universe" a paragraph in praise of Mohammedanism which now reads curiously prophetic in view of the German-Turkish alliance. It may be that Professor Haeckel (who was not in those days nearly so ardent a jingo as his utterances since the war would indicate that he has become) had nothing in mind but a sly hit at his orthodox adversaries. It may be that a friendly feeling for the Ottomans had even then spread as far as Jena. At all events, this is what he wrote:

We must admit that the Mohammedan religion has preserved the character of pure monotheism thruout the course of its historical development and its inevitable division much more faithfully than the Mosaic and Christian religions. We see that today, even externally, in its forms of prayer and preaching, and in the architecture and adornment of its mosques. When I visited the East for the first time, in 1873, and admired the noble mosques of Cairo, Smyrna, Brussa and Constantinople, I was inspired with a feeling of real devotion by the simple and tasteful decoration of the interior and the lofty and beautiful architectural work of the exterior. How noble and inspiring do these mosques appear in comparison with the majority of Catholic churches, which are covered internally with gaudy pictures and gilt, and are outwardly disfigured by an immoderate crowd of human and animal figures! Not less elevated are the silent prayers and the simple devotional acts of the Koran when compared with the loud, unintelligible verbosity of the Catholic Mass and the blatant music of their theatrical processions.

## TO STOP THE TIGER

IF all goes well the Germans will begin a general retreat from France and Belgium within coming months. But the German retreating is in one sense more dangerous than the German advancing. During a general advance the armies of the Kaiser will destroy only such part of the permanent wealth of the invaded country as military expediency requires, the rest they will wish to retain for their own use. But in a retreat they may do on a much vaster scale what they have already done when last year they fell back to the Hindenburg line: take with them every thing which it will pay to move, and destroy the rest. The purpose of this will be not only to leave a desert band between them and the advancing Allies but to put political pressure on the French and Belgian people. They will say, in effect, "If you do not agree to a compromise peace such as we offer you then advance to victory, but find in ruins everything for which you fought!" To recover Belgium but

see the whole country, and a slice of France as well, turned into a Sahara would be the saddest of victories.

It is in the power of the Allies, however, to give the German people a very lively interest in a decently conducted retreat. If the Allies win, some indemnity will unquestionably be demanded to rebuild the lands which German occupation has blighted. The rate of this indemnity may be high or low; it may be based on every form of economic injury which may be traced to the invader or only upon material property actually destroyed or removed and war levies exacted from occupied districts. We do not here attempt to prejudge this complex question. But it could hardly fail to have an influence should the Allies issue a common manifesto to the effect that whatever rate of indemnity might be agreed upon at the Peace Congress twice this rate would be charged for destruction done after a fixed date or after the beginning of the great retreat. It is too late to prevent destruction already accomplished, and fortunately the zone of greatest devastation is very narrow on the map. Our chief aim should not be to penalize what is past but to prevent what may come, to save Brussels and Antwerp from the fate of Ypres and Reims.

The Germans could not complain of the injustice of this arrangement since it would enable them within wide limits to fix their own indemnity. Nor could they fail to be impressed by such an announcement, since the very fact of retreat implies the possibility that the Allies may be able to write the terms of peace. The important thing would be to convince the Germans that we were in earnest and inflexible on this point.

## MUNICIPAL SUBWAYS

A crisis has been reached in the development of the gigantic task of conveying the population of Greater New York to and from, up and down Manhattan, day by day. The practical completion and operation of the Lexington and the Seventh Avenue subway lines, which was to have given large relief, has not on the whole improved the situation. Many trains have been taken off and the system is still run on the plan of packing as tight as the human body will bear, in contemptuous disregard of comfort, decency and safety.

The Interborough Railroad Company pleads that it cannot get enough men of any description, let alone competent men; and that it cannot, or probably cannot, meet expenses. These pleas should receive searching examination. If they are true the public must pay higher fares or a more competent management must be set up. If they are false they must not be "put over" by profiteers.

But whether true or false, the necessity for safe, decent, comfortable, convenient and expeditious transportation of millions of busy men and women in New York City has become too imperative and too tremendous to be complicated and "queered" by considerations of private profit. It is intolerable, as matters stand. In one way or another the private interest must be eliminated.

To look for relief to an intangible "pressure of public opinion" is childish. Neither by "cussing out" Mr. Shonts and Mr. Hedley, nor by admonishing the Interborough Corporation can the thing be done. A business corporation does not exist for the purpose of relieving distress regardless of profit and loss, nor does it expect to take its pay in thanks. As long as it is permitted to handle a given business job it must be permitted to do it on business principles. There is no way to relieve the New York situation except thru a frank and fearless facing of a perfectly obvious fact, namely:

The public interest is paramount and it has become immeasurably bigger than the private business interest, which, by the nature of the practical conditions, and irrespective of the faults or the virtues of corporation managers, is increasingly incompatible with the public interest. The private business interest should be eliminated.

# THE STORY OF THE WEEK

## Back to the Hindenburg Line

The advance of the British below Arras has brought them to and even at one point beyond the old Hindenburg line where the Germans established themselves a year ago. More than 21,000 German prisoners have been taken during the week. The British have captured great quantities of artillery including some of high caliber, and more machine guns than they have time to count. The Germans have left behind great stores of ammunition which they could not stay to remove or even destroy. The Australians took 12,000 German prisoners from the time when their offensive started, August 8 to August 25. This is a much larger number than their total casualties. The British Third and Fourth armies suffered 23,500 casualties between August 21 and 23, but their captives were nearly as numerous, without counting the heavy losses of the Germans in killed and wounded. Altogether 112,000 German prisoners have been taken since July 1, as well as more than 1300 heavy guns.

The unusually large number of German prisoners taken is partly due to the rapid advance of the British and French but also, it is evident, by a growing indisposition on the part of the German rank and file to continue the fighting. One is naturally skeptical of deductions as to enemy morale drawn from the condition and statements of captives. We have heard ever since 1914 that the Germans were on the point of collapse because the captives looked disheartened and dilapidated or else relieved at being out of it. Men who have been under fire for several days, perhaps without food, and then had to give up, naturally make a poor impression and are likely to say anything that their captors want to hear. But the reports now received ought not to be so discounted, for a decline in morale is undeniable. The letters found on the soldiers ready to be sent home contain such expressions as "The war has been lost for some time, only those high up will not admit it"; in another letter "This cannot last much longer"; and again "Our losses greatly exceed our drafts. Germany is sure to lose very soon." In many cases soldiers surrendered in groups at the earliest opportunity. The new tanks excite great alarm and at some points the Germans at sight of the approaching tanks ran forward to meet them, calling out "Kamerad!" Alsatian soldiers, who hitherto have been sent to other fields because of a well founded distrust of their loyalty, now appear on the French front scattered among the German regiments, from which they are quite willing to escape. Some of the Alsatian prisoners embraced their captors,

## THE GREAT WAR

August 22—French and British take 15,000 prisoners in two days. Canadian trawler "Triumph" converted by U boat into German raider off Nova Scotia.

August 23—British airmen raid Rhine cities. Russian Government protests against invasion by Allies.

August 24—Federal District Court decides Cunard Company not responsible for loss of "Lusitania." House of Representatives passes by vote of 336 to 2 draft bill for ages eighteen to forty-five.

August 25—British reach Bapaume. Many fishing vessels sunk off Newfoundland.

August 26—British cross Hindenburg line at Croissilles. Semenov defeats Bolsheviks near Lake Baikal.

August 27—French take Roye. Page resigns British Ambassadorship.

August 28—French take Chaulnes. Allies have taken 112,000 prisoners in France since July 1.

thanked them in French for liberating them and pulled from hidden pockets pictures of their fathers dressed in the French uniform of 1870. A correspondent reports seeing a mounted British soldier, prowling around on his own hook, bring in seven German soldiers, altho he was armed only with a German revolver without cartridges. But this demoralization is by no means universal. Many points have been held with the utmost tenacity or retaken in the face of superior numbers.

The Germans excuse their giving of ground by saying that it is a voluntary strategic retirement like that of Hindenburg last year. It is true this movement can in a sense be considered voluntary and strategic, for the Germans began evacuating their front trenches on the Ancre and the Avre on August 2 while the British offensive was not started till the 8th. The Germans are deserting without a struggle points which they might hold for some time and are falling back systematically to some predetermined position, presumably the old Hindenburg line. But Ludendorff's retreat is not in the least like Hindenburg's, for in that case the Germans moved out of their entrenchments into the new, carried off all of their stores and systematically laid waste the strip of country in between before the British knew what they were up to. But now the British are close at their heels and they must frequently turn and fight to protect their retreat. Even at this they are losing men by the wholesale and leaving behind valuable supplies and munitions. Hindenburg's maneuver so disconcerted the British and French plan of campaign that they were not able really to get at the new line until the season was over. But this time Haig and Mangin will be

able to bring all their force to bear upon the Germans whenever and wherever they may make their stand. We can see this already, for when the Canadians reached the Hindenburg line beyond Arras they did not stop but went on four miles further.

The whole August movement may be regarded as essentially a rearguard action on a fifty mile line. The Germans have been falling back almost continuously for more than two weeks, but their line, tho shattered at places, has been so far kept unbroken and tolerably straight. Evidently, then, the German armies are retreating in parallel columns in much the same order as they advanced over these same roads last March.

**Roye and Bapaume** The forces of France and England, now under one management, have combined in a forward movement that is sweeping the Germans back at every point along the seventy-five mile line extending from Soissons to Lens. The French beyond Roye are fifteen miles and the British beyond Bapaume are ten miles east of where they stood on the 1st of August. The junction of the French and British forces is at Chaulnes, which was captured by the French. The Allies have already recovered about half of the territory taken by the Germans in their advance from the Hindenburg line of March 21. The Allied line is now drawn approximately where it stood during the deadlock of 1915-16. The same dugouts are reoccupied in some places and the old cemeteries being used for those newly fallen. The barbed wire corrals that five months ago were filled with British and French prisoners are now being filled with Germans. The British found some of their old ammunition dumps intact and ready for their use.

The German advance last spring was accomplished by swinging forward toward Amiens the south end of the line hinged at Arras on the north. The pendulum is now swinging back with Arras still as the pivot. General Byng, who then held the Arras end firm when the lower part of the line yielded, is holding it now with the Third Army. The Canadian, Scotch and London troops under Byng's command penetrated the old Hindenburg line at Fontaine and Croissilles and took two thousand prisoners in one day.

South of Byng's Third Army is the Fourth Army under General Rawlinson, largely composed of Anzac troops. They are advancing up the Somme on both banks. On the north they have entered Bapaume, tho the Germans are still holding on to it. On the south they are within easy gunshot of Péronne.

South of Chaulnes is the First French Army under General Debenedy. The re-

## A GUEST FROM DENMARK

Prince Axel, captain in the Danish Navy and cousin to King George of England, is a member of the naval mission from Denmark soon to come to this country.

capture of the knot of wooded hills north of Compiègne known as the "Little Switzerland" gave the French command of the Lassigny plateau beyond, as described by the editor of The Independent on another page of this issue. Lassigny was occupied without opposition on August 21 and this brought the French in between Noyon and Roye. General Debeney then executed an encircling movement on the north of Roye and forced the evacuation of this important point and half a dozen villages of the vicinity.

## Rhine Towns Bombed

Since the British adopted the policy of reprisals they have been remarkably successful in their air raids into German territory. Cities on both sides of the Rhine and all the way from Essen to Freiburg have been repeatedly visited by day and night. At the same time the German air raids on England have become more rare. On the night of August 21-22 five German cities and five airdromes were heavily bombed. The victims of this raid were Frankfort, Cologne, Treves, Mannheim and Coblenz. Frankfort had previously suffered from such attack several times, especially that of the morning of August 12 when a squadron of twelve airplanes dropped twenty-six bombs on the city, killing five persons. The Kaiser sent a message of sympathy to the Burgomaster denouncing the

attack on "the open town" of Frankfort as contrary to international law.

Cologne was greatly terrified when the British airplanes appeared above that city at 6 o'clock in the evening and bombs began to fall on the public buildings, killing sixty persons. One struck a hotel causing 124 casualties. Others fell close to the cathedral. At Darmstadt, the capital of the Grand Duchy of Hesse, eleven persons were killed and twenty-six wounded. One of the British bombs exploded in the palace and several visitors and servants were killed or injured. In the raid on Karlsruhe most of the bombs, according to German accounts, fell in the open country, but some striking private dwellings at one place caused the death of nine persons and the injury of six others.

The Allies are now bringing down an average of about 900 German airplanes a month, and since about as many more go out of commission thru accidents or wear this means that some sixty machines must be replaced or repaired every day. In the month of June British airmen fired 915,308 rounds of machine gun ammunition at ground targets and dropped 853 tons of bombs. During this month they made seventy-four bombing raids into Germany and took over 40,000 photographs over enemy lines.

**A Kingdom of Poland** The meeting of the Emperor Charles and the Emperor William at the German General Headquarters is said to have settled the question of Poland. The Austrian Archduke Karl Stephen is reported to have been chosen King. He is a cousin of the late Emperor Francis Joseph and is now fifty-eight years old. He has long had the Polish throne in view and has cultivated Polish society. His home is in the ancient Polish city of Cracow and his children

have been brought up to speak Polish. Two of his daughters are married to Polish princes.

Altho the official announcement states the conference was most cordial and the agreement complete on all points, yet it is surmized that there were serious differences. The German Emperor is said to have demanded that Austria confine herself to the defensive on the Italian front and send ten or fifteen divisions to the aid of the Germans in France. On the other hand the Austrian Emperor insisted as a condition of this that Germany open the way to peace negotiations by renouncing all annexations and declaring a willingness to evacuate, restore and indemnify Belgium. Germany, Austria stipulated, should not annex Poland as the Pan-Germans wished, but should constitute of it an independent kingdom under an Austrian sovereign.

The Poles would have preferred to choose their own ruler but otherwise they got, according to the statement of the Polish delegation at the conference, all that they asked for. The next question of an outlet to the sea is to be settled by neutralization of the Vistula River to the Baltic and of the railroad that runs beside it and by making Danzig a free port. The financial and political administration of Poland now in the hands of Austrian and German officials is to be turned over to the Polish civil government. The Polish army is to be increased to 20,000 men and used to defend the country against any attempt of Russia to reconquer it. The eastern frontier is left undetermined with the idea that Poland may annex Russian or Lithuanian territory on this side to compensate for what it lost on the other when the Kholm district was ceded to Ukrainia by the treaty of Brest-Litovsk. The district in dispute formed part of the ancient Polish king-

## A NEW RECORD MADE

The Alameda plant of the Bethlehem Shipbuilding Corporation has smashed all previous records in building the "Invincible," a 12,000-ton freighter, in twenty-three working days.

#### AFRICAN AMERICAN DEVIL DOGS

That is the name by which General Ludendorff, the German Commander, has referred to New York's colored troops, the 15th Infantry, in his reports. These soldiers were among the first Americans to participate in the front line fighting in France, and have achieved great success. Many individuals have been specially commended for bravery by General Pershing.

dom, but is settled largely and in some parts predominantly by Ukrainians. The Ukrainian representatives at the Brest-Litovsk conference insisted upon having Kholm brought within their boundaries as the price of letting Germany and Austria have their grain. The Poles of all lands were infuriated with the German and Austrian governments for having thus signed away what they regard as part of their fatherland and this has tended to alienate them from the Central Powers and incline them toward the Entente. A Polish army has been organized in France and is fighting there under the old Polish banner of a white eagle on a red ground. In the United States the Polish organization under the leadership of Paderewski the pianist has raised, equipt, trained and transported five thousand Polish volunteers and eleven thousand more have been recruited and are under training.

The efforts of Germany and Austria to create Polish armies that would fight for them have not been very successful. At the outbreak of the war the Polish Socialist Pilsudski on his own initiative organized a Polish Legion to fight Russia. The Austrians gave him arms and the rank of general. But becoming dissatisfied with the delay of the Central Powers to support the independence of Poland he withdrew his troops from the front in the midst of a battle. The Austrians were disposed to forgive him, but the Germans insisted that he be dismissed and interned. After the proclamation of Polish independence by the German and Austrian emperors, November 6, 1916, a new Polish army, the First Polish Corps, was organized under their auspices by General Dowboz-Musnicki, but this has recently proved insufficiently subservient and has been dissolved.

**Vladivostok News** News from the Far East is conflicting. Our State Department gives out information to the effect that "Virtually all of Siberia is now under control of anti-Bolshevik forces. Irkutsk is the only important strategic point controlled by the enemy." On the other hand the news that comes from London is not so encouraging. According to this the Bolsheviks hold the Irkutsk, Trans-Baikalian, Amur and coastal provinces, a range of about a thousand miles, blocking both railroads and the Amur and Usuri rivers. On the Usuri the Bolsheviks seem to be gaining ground on account of their superiority in numbers and artillery. The Cossacks and

Czecho-Slovaks went north from Vladivostok in the hope of clearing the railroad as far as Khabarovsk, where the Usuri runs into the Amur. They were supported by Japanese, British and French troops, but nevertheless had to fall back after hard fighting. The Bolsheviks, augmented by drafting in Siberian peasants, advanced southward and now hold the Usuri river and the railroad that runs along its eastern bank as far as Lake Khanka, only 150 miles north of Vladivostok. Bolshevik monitors on Lake Khanka are harassing the left flank of the Allies. Half the road from Lake Khanka to Vladivostok, the section from Nikolsk south to the sea, is held by the Americans.

The American troops brought to Vladivostok from the Philippines are camped at the American Locomotive Works in the outskirts of the city. A large building formerly used for housing the employees of a German wholesale house has been made the American headquarters. The first fighting that the Americans were called upon to do was in defending the suburb of

Razdolny from a threatened attack of 400 Chinese bandits. Altho the Chinese were strongly armed with machine guns and trench mortars the Americans, assisted by the Japanese, drove them back.

The workmen employed in unloading the ships at Vladivostok struck at the instigation of German agents, who told them the Allied troops they were aiding intended to restore the Czar. But this did not put a stop to transportation, for the soldiers were employed as roustabouts until a force of Chinese coolies could be brought in to replace the Russians.

The American Red Cross is engaged in the care of the wounded soldiers and the sick and destitute civilians. There are 20,000 refugees, of whom 4000 are children. American capitalists have loaned \$1,750,000 to the municipal government of Vladivostok, taking the tramways as security.

On the western boundary of Manchuria General Semenov's Cossacks, now reinforced with Czechs and Japanese, is making progress in the direction of Lake Baikal. A Magyar-Bolshevik force was here attacked and defeated with heavy losses. All the Russian troops in Siberia and Manchuria have gone over to General Horvath, Dictator of Siberia.

**A Trawler Warship** The U-boat which has been operating off the Nova Scotia coast captured on August 20 the Canadian steam trawler "Triumph" and converted her into a sea raider. The "Triumph" had put out from Portland two days before well supplied with coal for her fishing cruise. She is 129 feet long and fifteen feet deep and registers 250 tons. The captain and crew of the "Triumph" were taken on board of the submarine, treated to refreshments and photographed, then were allowed to make their way to shore, sixteen miles off, in their boats. A prize crew of sixteen men from the submarine was put on board the "Triumph," light guns mounted fore and aft and a wireless apparatus set up. Then in coöperation with the U-boat she set out to clean up the Grand Banks of Newfoundland. Seven fishing schooners were sunk within the first twenty-four hours, their crews landing upon Cape Breton Island. A few days later the crews of four schooners and a steamer came ashore at St. Pierre, Miquelon, the French islands on the Newfoundland coast. One of the trans Atlantic cables has been cut.

#### MORE PREPAREDNESS

This Yank is riding a bicycle out to the fields now, so he can ride a horse on the battlefield. His immediate job is to pitch hay to be sent to France for the cavalry horses.

"THEY ARE A GREAT BUNCH"

The white commanders, in the foreground of the group picture, have written enthusiastic letters to the home folks about the exploits of their troops. "Shells make holes six feet deep, landing inside the trenches, and don't even give the boys shell shock. They get right up and go on fighting." Colonel Hayward is the eleventh figure from the right and Major Lorillard Spencer the ninth from the right in the front row

## Decoy Ships

One of the reasons why U-boats have been lost so rapidly of late is because of the changes in the tactics of the British Admiralty. At first the sole aim of merchant vessels was to escape the U-boats. Next they were armed to defend themselves. Then the systematic hunting for U-boats began and latterly their capture by decoys. The famous "Baralong" was one of the first of these decoys and the Germans are still scolding about the deception practised on them at that time. Sir Eric Geddes, First Lord of the Admiralty, at a concert given to the American troops in London, told stories of the ingenious ruses employed. For instance, decoy "No. 950" was got up to look like a dingy old collier with a dilapidated crew. She sailed into the Atlantic accompanied beyond the horizon by a warship. When a submarine sighted her the decoy turned and ran toward her escort. The U-boat pursued, firing upon the fleeing vessel, which finally halted as if to surrender. But when the U-boat came in front of her she unmasked her forward gun and shelled the enemy. One projectile tore away the conning tower and another hit her hull.

The naval correspondent of the London Times gives authentic versions of similar stories. He tells of a retired admiral who sailed out in an ancient looking craft with a haystack on deck. When a U-boat drew up alongside and hailed her to surrender she apparently complied. The boats were lowered and the men brought their belongings from below. But at the moment when the commander of the U-boat was preparing to receive his prisoners he received instead a broadside from the haystack.

The Times correspondent tells of another trick equally clever and successful but likewise not calculated to encourage the Hun in indulging any humanitarian impulses he may possess:

On another occasion when a submarine's shells cut thru the rigging of a disguised British boat the crew lowered the boats and left in haste, leaving on deck a woman with a baby in her arms. The mother ran shrieking up and down the deck. When the boats bearing the crew reached the submarine which had drawn near the captain explained to the German commander that one of the submarine's shells had killed the boat's chaplain and that his wife had gone mad, refusing to leave the ship.

Thus reassured the submarine commander ordered his craft alongside, and just as the Germans scrambling out thru the opened hatches were about to cast lines to the boat the woman, rushing to the rail, threw her baby into one of the open hatches and then ran to the other side of the ship, from where she leaped into the sea.

Just as the Germans were beginning to feel shocked over this display of inhumanity toward infants the abandoned baby exploded and blew the whole bottom out of the submarine. In due course of time the "grief maddened mother" appeared at Buckingham Palace to receive the Victoria Cross.

## The Man-Power Bill

The Man-Power bill, providing for the proposed extended selective draft for the army, was reported to the House on Wednesday, August 21, by the Military Committee and given right of way, with amendments specifying that youths of eighteen should be called for service last, and that those of nineteen should not be called until after the men from twenty to forty-five years old had been taken for service; that soldiers under twenty-one years old may receive commissions; and authorizing the Secretary of War to assign to educational institutions for special training soldiers who enter the military service, their tuition to be paid by the Government.

On Thursday debates began in both Senate and House. In the Senate an amendment was offered by Mr. Cummins, of Iowa, to make the anti-strike provision less drastic. Under the bill all workmen in essential war industries who refuse to remain at work become subject to the draft. Under the Cummins amendment their grievances could be submitted to an arbitration board to be appointed by the President, the findings of the board to be accepted without dispute by the workers.

That evening Secretary Baker issued a statement emphasizing the purpose of the War Department to keep the youngest registrants in the deferred class as far as practicable, but urging that its hands be not tied in this matter. Julius Kahn led the fight to defeat the McKenzie amendment, which proposed to call boys of eighteen last.

On the 23d, after a hard struggle, the McKenzie amendment was defeated in the House in Committee of the Whole, and in the evening this was ratified by the House in session, by 160 to 120 votes. An amendment to fix the maximum age at fifty years was rejected. Two amendments were adopted—one, to take away from all aliens, including citizens of co-belligerent countries, the protection of deferred classification; the other, to exempt agriculture from the draft as one of the "essential" occupations. An

incident of interest was the vociferous acceptance of an amendment providing that nothing in the bill shall be construed as exempting officers of either the executive or legislative departments of the Government. This included members of Congress, and it was stated that 110 Representatives alone would thus become subject to the draft.

On the 24th several minor amendments were offered, and some accepted; and the House, in cooler mood, reversed its resolution to subject itself and other Government officials and clerks to the liability of being drafted. Then the so-called "anti-strike" proposal was decisively rejected. At the last minute, when the final roll call on the completed bill was about to be taken, Mr. Dent moved to recommit it to the Military Committee with instructions to report that men less than twenty years old should not be called until after all others had been summoned. This obstruction was defeated again by a vote of 194 to 146, and the House passed the bill by 336 to 2. The two negative votes were cast by London (New York, Socialist) and by Gordon (Ohio, Cleveland pacifist).

Persistent efforts were made to defeat or modify the intent of the law to include youths under twenty-one years old. Amendments and motions for that purpose were offered and argued for again and again by a group of western senators, among whom Kirby, Gore, Poindexter and Vardaman were conspicuous. All these proposals having been voted down by divisions that had little regard for party lines, the bill was passed unanimously and immediately sent to conference with the House.

## Costly Aircraft Experience

The Senate sub-committee for the investigation of aircraft production in the United States was filed on the 23d by Senator Thomas of Colorado, its chairman. Other members were Reed of Missouri and Smith of Georgia, Democrats, and New of Indiana and Frelinghuysen of New Jersey, Republicans. It reported that it had nothing to say as to graft or personal dishonesty, as the handling of that subject properly belonged to the investigation being conducted by Charles E. Hughes for the Department of Justice.

The general effect of the document was to display the vast distance between promise and accomplishment;

and it alleged that a substantial part of the expenditure of \$640,000,000 appropriated had been "practically wasted." After pointing out that \$884,000,000 was found to be necessary to carry forward the aircraft program, it congratulated our great success in putting troops at the front, and in building ships, with the delay here by asserting that only thirteen squadrons of aviators in France have been equipt.

The report enumerates a long list of contracts let for machines of various kinds, then canceled, or modified so frequently that it was impossible to carry them out. "Hundreds of changes," in the language of the report, were ordered, largely in an effort to utilize the Liberty motor before it was concluded that this motor was adapted only to heavy bombing planes. Out of this welter of experiments and failures have emerged a few Handley-Page machines made in parts to be sent to England to be assembled, an increasing number of which are now going forward. A lot of De Havillands, useful for observation and reconnaissance, had to be cured of serious defects before they could be used. An order has now been placed for a type known as S. E. 5, virtually the English Spad, which might have been made two years ago from British plans in our shops. This and the Handley-Page (in parts) are the only machines, according to this report, that can be produced in quantity before 1919.

The committee says the Liberty motor is finally a success after much tinkering, but no plane has been "built around it" yet, and until this is done our program will not be complete. Meanwhile

C. Underwood & Underwood.

**THE LATEST THING IN CONSERVATION**  
The Government has started a drive for peach stones. The sign above the barrel explains: "Reduced to a charcoal powder they filter the poison out of gas and save our soldiers' lives." Donate your peach stones to Uncle Sam

engines of several foreign types are now building in this country; and the neglect to have such engines made in quantity long ago for our own use, instead of waiting for the perfection of the Liberty motor, is severely condemned.

The committee had much to say on the subject of training fields and experiment stations, as to their unsuitability in some cases, and especially with reference to the fact that certain members of the Aircraft Board were

intimately interested in the ownership of the land just preceding their appointments.

The committee appends a series of recommendations, in part as follows: That a commission be named of pilots and engineers for observation of the service at the front for the benefit of designers and manufacturers; that aircraft development and production be taken up now not only as a military necessity but as an industrial and commercial problem; that quantity production be accelerated by enlisting the constructive abilities of all responsible concerns engaged, or which can be engaged in the business; that better arrangements be made for taking advantage of new inventions.

Finally, there is a strong recommendation that the whole matter of aircraft production, including machines of every kind, and those intended for the navy as well as those for the army, be placed under a single authoritative head. The committee says it has arrived at this conclusion because it has been impressed with the fact that divided counsels and control, and lack of coördination, are at the root of the mistakes and failures it has reported.

**Americanization Work** Much thought is now being given to measures for the

Americanization of the foreigners among us, and of those who are to come. The most systematic effort, probably, is that of the Carnegie Foundation for Americanization Study. One of its agents, Dr. P. A. Speek, reports that in North Dakota, for example, he has found many rural communities so astonishingly exclusive that German has been made the common language, so that immigrants of other nationalities send their children to parochial and even public schools to learn German instead of English.

The majority of the people in these communities are German; their church services are conducted in German, and their religious instruction is given the children in German. Instead of making Americans of Polish, Hungarian and Bohemian immigrant children in these communities, you are making Germans of them. Their teachers are German trained, if not German-born and bred; their textbooks teach a German kultur; their heroes are German heroes; their affection is a German affection.

Meanwhile many other agencies are at work toward correcting this state of things. Americanization committees have been formed by chambers of commerce and similar influential bodies in a great many towns in various states, in response to a call by the National Security League. One of the immediate results has been the suppression of objectionable journals in foreign languages, and the cessation of the teaching of German in schools. A proclamation by Governor Harding prohibiting such instruction thruout Iowa has excited much comment. This movement is particularly strong west of the Alleghanies. Fifty publishers and editors of foreign language news

#### FIRST AID IN FREIGHT YARDS

Freight yards all over the country are being visited by the Red Cross hospital car in charge of Dr. M. J. Shields. Employees are taught first aid for injuries likely to occur thru their work. Practical demonstrations are given in making stretchers out of two coats and two fence poles, and tourniquets out of a railroad flag and a piece of coal, stone, or an old bolt.

papers in Chicago met on August 13 and pledged themselves to the support of the United States War Exposition to be held in that city September 2 to 15. The German-born members of the Chicago Symphony Orchestra met on the 16th and formally renounced the Kaiser and all his works.

In Boston settlement work in parts of the city filled with foreigners has been definitely applied to this problem. R. A. Woods, director of South End House, says that the

results of this constructive work are seen in the whole-heartedness with which our young men have joined the army and navy, and our girls the Red Cross and other wartime service. It has been made possible largely because the newly assimilated people of the settlement communities have gained a clearer conception as to the cause of the United States in the war.

Large factories and shops in some places refuse to hire men who are totally ignorant of English, and elsewhere the managers have found it worth while to devote an hour or two a day to teaching employees. It is said that accidents were lessened by half in Ford's huge works in Detroit after such classes had taught foreigners to read warning signs and understand orders given in English. Arrangements are being made elsewhere, as already in New York City, to provide for this factory-schooling trained teachers controlled by the school authorities. "After the board of education gets things going with the workers," an advocate of this method lately remarked, "then they may get to the employer, who often needs to be truly Americanized as much as the workers."

**Food Economy** Mr. Hoover returned from Europe, where he had been studying the food situation with British and French authorities, on August 23, with information of importance. He reported that the harvests in Great Britain, France and Italy are better than could be expected, considering that almost all farm labor is by women; yet the next winter will be distressful, because the coal supply for domestic use will be smaller even than it was last winter. It is the more needful, therefore, that the civilian population in the Allied countries be well fed. Mr. Hoover declared in a formal statement to the press that those countries will need to import, beginning September 1, the following food supplies:

Cereals for human consumption, 500,000,000 bushels; fats (pork products and vegetable oil), 1,000,000,000 pounds; sugar, 1,500,000 tons; beef products for civilian consumption, 900,000,000 pounds. In addition to this beef must be imported for army needs and oats for army horses. If this program is fulfilled there will be no need for drastic rationing of their food as during last year, except in beef and sugar.

In respect to sustenance in the hostile countries, he said that the confidence felt in Germany that their army was to conquer a peace this season had led to some negligence in making adequate preparation for carrying their soldiers thru another winter; and the German crops have not turned out as well as they had hoped, owing to

HAROLD HOWLAND

Our readers will be pleased to learn that Mr. Harold Howland, the Associate Editor of The Independent, is now on his way to the war zone, where he is to work for the American Y. M. C. A. with the Italian Army. Mr. Howland's experiences in this service, close to the line of battle, will provide him with interesting and striking material for special articles and editorials which may be expected from him later.

scarcity of fertilizers and infrequency of rainfall. Severe drought has affected all the area from Bulgaria and Rumania thru Ukrainia and eastward. The resulting crop failures, in connection with the disturbances among the Russian and Ukrainian peasantry, has prevented the production of crops on any but the smallest scale.

**Insuring the Steel Supply** A momentous conference of the War Industries Board with the Steel Committee of the Iron and Steel Institute was held in Washington on August 22, to arrange for meeting in full the demands of the country for steel. These rose during the last six months, including the need of the Allies, to 23,000,000 tons, and the amount must be increased for the coming year. The largest requirement, it was discovered, is for the railroads, after which the Shipping Board, the War Department, the army, and the navy must be supplied in the order

named, before private calls can be considered. It was agreed that these demands could not be met except by very forcible measures, such as greater conversion of mills to this particular purpose; an increase in coal supply, particularly of by-product coal by diversion from industries that could utilize a poorer quality, and the commandeering of hoards if necessary; by further restricting coal-consuming nonessential industries; by more economical methods in steel production; and by shutting off steel supplies to all not engaged in advancing war work. The steel men pledged themselves by these stern methods, in which the Government will coöperate, to produce sufficient steel to meet the demand. One of their troubles, which would not occur to the ordinary man's mind, is the great falling off in the supply of scrap, owing to the reduced use of iron and steel in building and other domestic operations.

# COMPIÈGNE, PLÉMONT, LASSIGNY

**T**HE Lassigny Plateau, which General Mangin wrested last week from the Germans, is bounded on the south by the group of wooded hills known as the "Little Switzerland" of France. Last May I stood on the crest of Plémont Hill, at the extreme front of the French line, and looked across the valley to Lassigny only a few hundred yards away, which on August 21 was recaptured by the French.

The taking of this key position brings the French around behind Noyon and has forced an extensive withdrawal of the Germans from this whole region. If the Germans had succeeded in their effort of June in breaking thru this barrier to Compiègne, Paris would have been in serious danger of being taken.

On the 4th of May, 1917, at seven o'clock in the morning we left Paris for the Lassigny front. It was a wet, rainy day and the train was crowded with French officers returning to their posts. Our party consisted of Judge Ben Lindsay of Denver, Judge William H. Wadhams of New York, Luici Campolonghi, correspondent of the *Seculo* of Milan, Louis de Tapia, correspondent of the *Impartial* of Madrid, and myself, all under the guidance of Commandant G. de Garnay, a tall, handsome French officer whose mother was an English woman. As neither our Italian nor Spanish fellow travelers could speak a word of English, and as none of us Americans could speak anything else, our party naturally broke up into two uncommunicative but smiling groups except when Commandant de Garney acted as interpreter.

We were to spend three days at the front, making our headquarters at Compiègne, Soissons and Epernay, three cities well behind the lines and now mentioned every day in the despatches. We left our train at Clermont and you may be sure my eyes were wide open and intent on the sights about me, for it was my first visit to any front. The station was thronged with heavily accoutred soldiers and mud-stained refugees, and in the square behind a number of military automobiles were drawn up to meet the officers who had left the train with us. We en-

tered two large cars and in a jiffy

were whisked away thru the city and out over a perfect road into a country which looked very much like Massachusetts, with its broad valleys, wooded hills and cultivated fields.

The sun shortly came out and the rain stopped. Apple blossoms glistened white in the orchards and the lush green grass sparkled after the morning rain. Flocks of birds were hopping about for worms in the soft, brown, plowed fields and the peasants were already at work with their yokes of white oxen and teams of fat-backed Percheron horses wearing enormous collars. The whole scene looked for all the world just like a familiar painting of Millais. Tho it was a populous country we were passing thru, I noticed none but women, old men and boys in the fields.

We arrived at Compiègne in time to stroll about town before luncheon. Compiègne is a city of memories, stories and romance. It was here that Joan of Arc was made prisoner. It was here that Napoleon married Marie Louise. It was on the bridge on the other side of the river that Louis XVI awaited his bride, ill fated Marie Antoinette. Compiègne was an old sporting town of France before the war. The neighboring forests abounded in wild bear and deer as well as with all kinds of feathered game. In the olden days the nobles used to visit it in the hunting season. But now it is on the direct line of the German drive toward Paris and the 20,000 inhabitants have almost entirely fled. As we walked

about the dense shaded streets I saw my first evidences of the Huns' devilish work with airplane bombs. I passed by many buildings which the Boche shells had hit. Sometimes they would raze to the ground half a dozen adjoining houses. Sometimes they would split a house in two, leaving one side intact. I noticed in one such house a crucifix still hanging over the place where the head of the bed had been and the pictures still hanging on the wall. We saw the hotel which Dr. Carrel had transformed into his famous hospital and altho a red cross was painted on the top it had received a direct hit by a Hun bomb and had to be abandoned.

We put up at the only hotel in town. The proprietor and two helpers did all the work for the forty guests. He invited us to make up our beds with him in the cellar, but we preferred to take our chances in the freer atmosphere of the top story. We were told that we must not under any circumstances use a light in our rooms at night. We were within a few miles of the front and the French sentinels had orders to fire on any light seen moving in a window. There have been too many signals to the enemy by the flashing of lights, and France will take no chances.

The hotel was the headquarters of the American Red Cross and there I met Rev. Major Robert Davis of Englewood, New Jersey, as broad-gaged a fellow as one could care to meet. He presented me with a great soap box full of chocolates and cigarets to give the soldiers on the front lines when we visited them in the afternoon and authorized me to act as Red Cross distributing agent for the time being.

Compiègne was the city thru which the Fifth English Army under General Gough retreated last March when the great German drive began. The American Red Cross men told me some very interesting stories about it. When the order for the evacuation of the civil population was promulgated, American Red Cross representatives, both men and women, stayed on for seventy hours, giving out soup and sandwiches to the soldiers. They were nearly court-martialed for this, tho I expect that eventually they will be decorated

"Sometimes the Boche shells split a house in two, leaving one side intact"

for their heroism. The English soldiers were coming thru dejected and beaten. Some were even crying. It was not a retreat, but a rout. One Tommy said to Major Davis, "We are defeated. We are going back home to Blighty! The war is over." Another said, "My gasoline has given out. You can have my Rolls-Royce machine up on the hill if you want to go for it. I'll never use it again." Finally the French came and filled up the twenty-five mile gap the English had left open to the channel. Major Davis said, "The French in their old blue costumes saved the day."

After luncheon we started for the front. It was a beautiful sunny afternoon and we motored due north to the extreme southern limit of the German offensive. As we sped thru the tiny villages we saw the women on their knees washing their clothes at the town troughs. Along the roads hundreds of motor trucks were moving toward the front and rear. First we passed the reserve trenches with their barbed wire entanglements set up before them in case France had to fall back. Then came hundreds of wagons standing along the roadside all camouflaged with branches. Every farmyard seemed to be filled with automobiles and wagons as tho a Connecticut auction was going on within. I noticed little signs on every gate telling how many soldiers could be billeted in the home. We soon began to pass troops moving toward the front, both infantry and artillery. I saw one battalion fully equipt, with the cook bringing up the rear walking behind his stove on wheels. We now began to hear the distant thunder of the artillery. At last we stopped at a château in a clump of trees a hundred yards back of the road and paid our respects to General Bregard in command of that sector, who furnished us with a guide to take us to Plémont Hill, our final destination.

We now motored up hill for several miles and found ourselves in that part of France known as Little Switzerland, which has been the theater of as fierce fighting in the last few weeks as any spot in Europe. First we came upon the soldiers in the third line trenches and then we entered the region of shell holes, some of them twenty-five feet deep, which showed that we were within range of the German heavy artillery. Our chauffeurs then gave the cars gas and we hit up our pace to forty or fifty miles an hour, for we were within plain sight of the German balloons. Altho the road was completely camouflaged and hidden with green stripes of cloth strung on netting or small branches bound close together, we were not taking any chances. We passed by little villages blown to bits and peach orchards that had been wantonly cut down by the Germans on their former retreat. The inhabitants had

Press Illustrating

Compiègne Town Hall. The Club des Allies is at its left

all fled, but soldiers were still occupying what remained of the houses. Subterranean cellars had been dug beneath most of them in case the soldiers had to seek quick protection from heavy bombardments. We finally left our cars in a concealed quarry beside the road and then walked forward to the communicating trench. This we entered by descending into a cellar and zigzagging forward to the front lines. Altho the bottoms of the trenches were overlaid with duck boards, the mud frequently oozed above them. Our shoes were dripping with slime and we were bespattered well up to our knees. We walked down the hill, across a valley in plain view of the German outposts and up another hill. We kept continually passing soldiers, some mending the trenches and others returning to the rear lines. We noticed every few feet pockets on the sides of the trenches full of hand grenades, and at longer intervals deeper hollows where the machine guns were placed. At last on arriving at the top of the hill we came upon the soldiers holding the second line trenches. We were immediately conducted to the officers' headquarters, a dugout originally built by the Germans. It was about as big as a ship's cabin, and a single candle furnished the mirky light for the adjutant at the desk within. There was a wooden frame about two feet high at the back of the dugout upon which was stretched chicken wire. This was the officer's bed. Above was a ceiling of wooden planks, then a three-bag thickness of sand, and then earth for two feet, and then a concrete top, making ten feet of solid matter above the dugout, an absolutely bomb-proof structure. The men slept in an adjoining long hole thirty

feet deep in the side of the hill and not more than four feet high. It was strewn with straw on the bottom and seemed to be anything but clean. I crawled in on my hands and knees. A few French soldiers were sleeping about. After backing out of this musty lair we visited an observation post. It was situated on the crest of the hill and consisted of a four-foot thick concrete pill box big enough to hold three or four men at one time. Looking thru a slit six feet wide and six inches high, I got my first glimpse of No Man's Land. There it was, as quiet as death. Directly in front of us was a steep decline down to the bottom of the valley a couple of hundred yards ahead. Just across we could see the faint, brown scratch of the German trenches. To one side, half way up the broad, green plain, was the city of Lassigny, with straggling woods to the right and river in front. Lassigny glistened white in the green and brown checkered plain, and directly behind a great white road ran up to the distant horizon, tho, of course, there was nothing moving on it in the daytime. The city was badly shot up, but we knew it was full of German troops. Our guns were kicking up clouds of dust on the low ridges behind the city. The French officer escorting us showed me the spot where several shells had exploded the day before not twenty feet away from where we were standing. At this observation post there was an officer stationed night and day. Why the Germans have not blown it to bits I could not understand, for they built it themselves and must have known exactly where it was. Coming out of the observation post, we talked to the French soldiers who had collected in the meantime in great numbers to see the strange visitors. They presented us with some stray German bullets and other souvenirs that had been left in the dugouts when the French drove the Germans out, and as we left they gave us a good cheer in response to our "Vive la France!"

Before returning to our automobiles the rumor must have got abroad that we had some chocolates and cigarets for distribution, for we found what seemed to be the entire French Army waiting for us at the exit of the trenches. Fortunately there was enough to go round, and it was pleasant to see how each Poilu would refuse to take more than one cigaret or one cube of chocolate till each of his comrades had been provided for. Before leaving the Plémont region we stopped at another spot two or three miles back of the lines to visit an old limestone quarry which has now been turned into a rest quarter for the soldiers. We took lighted candles and walked for half an hour thru the vaulted and obscure corridors of this great cave. Along both sides of the [Continued on page 332]

# THE MASTER OF MOBILIZATION

BY DONALD WILHELM

**T**HE last of the four but perhaps the most important of all the four major divisions of the War Department—(1) war plans division, (2) operating division, (3) executive, (4) purchasing, storage and traffic—has “cognizance and control of the purchase and production of all munitions and other supplies required for use of the army and of all munitions and other supplies for the army, both on land and sea, and all storage facilities in connection therewith, under an officer designated as the Director of Purchase, Storage and Traffic.”

The Director of Purchase, Storage and Traffic, who is one of America's great administrators, is, without question, the greatest shipper in the history of the world, with more ton-miles to his credit, at the end of only eighteen months of war, than any man. He has achieved, in fact, a far more important, far more complex, and far larger thing than he achieved, even, in the building of the Panama Canal.

General Goethals, by grace of his important work as assistant to the Chief of Staff, never seems to be quite contented unless he is achieving something bigger than any other administrator can do, and bigger than he himself has ever done. He is a tireless giant who requires something like the building of the Panama Canal to keep him happy. Thus he built the Panama Canal when every one—notably De Lesseps, Wallace, and Stevens—had failed. Probably he would have built our merchant marine if the President had not put him at the mercy of a lawyer and a corporation created by Congress, an uncentralized two-headed corporation perfectly planned to disobey the simplest rule of organization, that there shall be one master. He failed on that huge job; now he is making up for lost time and energy in accomplishing wonderfully the biggest job, and the most important job, he has ever attempted. When the Senate inquisitions, in the manner that they have of sometimes accomplishing good, made sentiment sufficient for the retirement, upward, of General Crozier, the head of Ordnance Department, and of General Sharpe, Quartermaster General, and the hero of Panama, and the victim of the Goethals-Denman row, as it is called in Washington, was made acting Quartermaster General, he went at his task so formidably, with such a herculean air of hammering its tremendous fragments into a going system qualified to make swift progress over the straight and narrow bridge of ships to Necessity, in France, that to him may rightfully be accorded much of the credit for ninety thousand men going overseas every week. He failed, he nearly died in the throes of thwarted effort as chairman of the Emergency Fleet Corporation, but now he looms up in the War Department and has thumbs jerked at him wherever he goes, as one of the great achievers of the war.

He seems to be like another Conrad's Lord Jim, who, it will be remembered, so imagined that he was thought to have failed in an emergency that he gave the rest of his life to retrieving what he imagined to be his loss of prestige and self-respect. At any rate, General Goethals, while acting Quartermaster General, not only forced thru, with able assistance, the new department of purchase, storage and traffic, but made such short shrift of obstacles, callers, cigarets, lunch, and other incidentals, that he gives one the illusion of going at things with the cold fury of a man who knows he will and must succeed one day. “It is General Goethals,” said one of his assistants, “who has put the ‘go’ into the progress of our troops overseas.”

He coördinates all matters in reference to purchase and other procurement for the five old and the four new bureaus of the War Department—Medical, Quartermaster, Ordnance, Engineer, Signal Corps, Construction, Chemical Warfare, Tank and Aircraft—with the other departments of the Government of the Allies, and of the Nation generally. That is, as Director of Purchase, while working in coöperation with George W. Perkins, who succeeded Mr. Stettinius, he is a kind of coördinator and clearing house for all the War Department bureaus. To prevent competition between the bureaus all requests for munitions, supplies, and other commodities required are sent thru this department. If the articles needed are on what is called a released list, and there is no competition between any of the Allied or Government agencies, and no likelihood of injury resulting to the economic interests of the country a large, the bureau concerned is directed to proceed as under peace-time conditions. In case the matter concerned is likely to cause confusion, as in the case of steel, the issue is referred to the War Industries Board. That board refers its decision back to the department of the General, who forwards the decision to the bureau concerned with the proper allocation of the commodity and with information as to where, when and at what price it can be procured.

The material of war at issue next enters the province of the General in the inland transportation section of his department, which gathers up the material and turns it over to one of three other divisions, to the storage branch, for such storage as may be desirable to sustain the prescribed reserve, for delivery to a post or cantonment or camp, or for shipment overseas.

If the vast quantities, or parts of them, which are handled continuously, have to be stored in America, as is very often the case, it is the General and his department that provide the proper facilities. That means, for instance, gigantic refrigeration facilities

Paul Thompson

General George W. Goethals

at some points, and it means, in one instance, a storage depot “somewhere in America” that is fifty square miles in extent, has hundreds of buildings, and is relentlessly guarded night and day by soldiers and heavy voltage wires. It means, too, most careful allocation and movement of supplies, since thirty days' rations and supplies are kept on hand at all assembling points, thirty days' are kept at the depots, and [Continued on page 333]

## GENERAL BYNG, WHO HAS BROKEN THRU THE HINDENBURG LINE

*Sir British general has more distinguished himself than Sir Julian Byng. Under him the Canadians carried Vimy Ridge in 1917 and now they have surpassed this feat in driving the Germans back to and beyond the old Hindenburg line before Arras. It was the stand of General Byng's Third Army at Arras that prevented the Germans from breaking thru to the Channel last March*

## MUNITION WORKERS CREATE NEW TOWNS

A MODEL OUTDOOR CLASSROOM

*All the errors of old town methods are eliminated here*

*The problem of housing the thousands of munition workers has been solved not in makeshifts in the communities already existing near the factories, but by the rapid erection of new towns planned for the convenience and the comfort of the employees. This is more largely true in England than in other countries*

THE POST OFFICE

*The old one room post office of the country town won't do here, for the new community is too large and important. All the pictures on this page show that everything is woman's work, even when her ordinary household tasks are being carried out on an enormous scale. The factory employee who is taking a man's place is not expected to do her own housework besides, and as far as possible other women relieve her of these tasks, and in this way contribute their help to securing a victorious peace*

THE COMMUNITY KITCHEN

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## FLAGS FOR THE GARDEN

BY FRANK A. WAUGH

LET us consider the iris. Some there are—good old-fashioned persons of Colonial taste—who call them “flags” of such is the sweet flag or orris root. Others with a tongue for the French, call them fleur-de-lis, tho they are not lilies at all. But all the while the good Greek name iris, which very properly means “rainbow,” has been fully domesticated into our English vernacular.

Everywhere the iris comes up smiling and radiant with a dazzling show of color. Hardly any group of garden flowers is so versatile. Hardly any will thrive in such a diversity of soils and climates. Hardly one will stand more abuse.

Irises will grow with one-fifth the fuss and bother of roses, or one-tenth the trouble of most lilies, and they will make a brave display in thousands of places where the lilies and the roses cannot be grown at all.

The old-fashioned blue flags were of two kinds, the tall and the dwarf. In our aboriginal minds these distinctions were very clear; but since times have improved and we have studied Darwin and Max Leichtlin and the modern nursery catalogs we don't feel so sure of anything. Only we do know

even now that these common blue flags will grow almost anywhere, in dry sterile soil or in fat deep gardens, in Canada or Texas. We know that the round clumps or straight ribbon-beds by the front door of humble cottages will look cosy and appropriate; and we know that the friendly way of dividing the clumps with the neighbors is still the best method for growing the flowers of lilies and also the flowers of human kindness among neighbors.

Other ways there are, of course, of making irises effective in the modern garden. A slender ribbon of irises of proper color along the foundations of a low cosy cottage looks even better than the traditional ribbons bordering the walk. Against picket fences or especially in front of gray cement walls they make a splendid showing. Planted thus in straight rows against the cement garage or the greenhouse they are superb. Their foliage is wholly agreeable in these situations, even when the plants are out of flower.

Diversity is one of the strong points of the iris. There are about one hundred and seventy wild species known to the botanist, any one of these may yield a hundred good garden varieties and several of them have done more than that.

The irises grouped under the name of “German,” it appears, were not made in Germany. They got the name from the Latin of that good old Swedish doctor Linnaeus, who called them *Iris Germanica*. Why, nobody knows; for they do not grow in Germany either, but all along the Mediterranean from Spain to Asia. This all refers to supposedly wild forms; but the garden hybrids which form the German irises of the catalogs did not even descend from the non-German *Iris Germanica*, but mostly from other species. To complete this nonsense of nomenclature we need only add that the so-called “German” iris is the genuine fleur-de-lis, the national flower of France.

But it is a multifarious and wonderful group. Take it the country over the German irises doubtless make up ninety per cent of all those grown in America. They flower from April to July; some are dwarf, only a foot or so in height, while others stand up a stately four feet tall; some are white, some red, some yellow, many purple, but the finest in all values of purest blue. Obviously the careful selection of varieties with reference to color, height and season of flowering is important in making up an iris garden.

Hardly any worth-while garden flower gives less trouble in its culture. Any clean, well-drained soil will answer. Even the dry and sterile town gardens founded upon contractors' fills of tin cans and ashes will grow German irises if only a trifling layer of real top soil has been supplied. Yet, of

course, they give their best blooms when growing in fertile, warm, well-drained garden soil. Thorough tillage, however, counts for much. They prefer a situation tending to dryness rather than moisture.

Most irises, like many other citizens of the perennial border, will do best if occasionally taken up, divided and replanted. Once in three years will suit some varieties; but other kinds in other soils will need handling oftener; still other varieties not so often. This division and transplanting should come in July or August, soon after the plants are thru blossoming.

Probably the Japanese irises stand second to the German irises in the favor of American amateurs. In point of beauty their blossoms are unsurpassable.

American tradition has it that the Japanese iris is a water plant and must be planted along the margins of ponds. It is supremely beautiful in such situations, and this is in fact something like its native habitat. Yet it is not strictly a water-loving plant, and will not submit to wet feet, especially thru the winter. In this it differs distinctly from our native iris. Nine times out of ten, in fact, the ordinary grower will do better with Japanese irises wholly out of reach of standing water. Planted in any good rich garden soil and given thorough tillage they will yield their broad and glorious blooms in profusion. The frequent tillage keeps the ground moist, aerated and cool, and that is all the plants want. Like the German irises, the Japanese varieties do best with August transplanting.

The Spanish irises are my next preference; and my preference rests first on their exquisite and delicate beauty and second on their cheapness. They are “cheap as dirt” and ought [Continued on page 23]

The colorful iris makes an effective border

*Filling grease cups is easy when two boys do it together*

# LET SONNY TAKE CARE OF THE CAR

BY C. H. CLAUDY

*Sonny's first consideration is that the oil sump is filled*

FOR the new driver who proposes to keep his car without the aid of a chauffeur its home care frequently looms large as a difficult problem. Yet it often seems a greater task than it really is, particularly if there are children in the family. While turning over the care of a motor car to a couple of small boys seems perhaps a revolutionary proposition, a little analysis of what care a car really requires shows it to be quite feasible.

The one absolute essential in caring for a motor car is to see that it is properly lubricated. The outside may be covered with mud, and windshield be spattered with dirt, the top need brushing and the leather seat shining with a dressing and yet the car, as a car, be in perfect condition, if only its running gear, motor and springs be properly oiled and greased.

There is nothing whatever about lubrication which any ten or twelve year lad cannot accomplish as effectively as his father. Most boys love machinery and are so anxious to drive, to have a feeling of participation in ownership of the car that what is to most a disagreeable task will be to him a matter of play.

First show him where the oil gage is and at what point it should be when the sump is filled with oil. Next instruct Small Son that it is as the laws of the Medes and the Persians that the car never leave

*The boys can crawl around the car while it is being driven and locate any squeaks*

the garage until the oil sump is filled to the proper point, and one item in home care will have been disposed of.

Getting underneath a car with a grease gun to inoculate the universal joints and fill the differential is an awkward task for a grownup. Small Son can sit upright upon the floor beneath the car and do the job with ease and dispatch and economy since good grease in cans is much cheaper than when purchased with the labor of putting it in, at a garage.

It is wise to hang a grease chart on the walls of the garage. Under permanent entries of differential, universal, gear set, leather protected steering joints, fan, hubs, starting motor and generator, enter dates when greasing is done. Write a plain statement as to the intervals to elapse between greasings. Starting motor and generator should receive a drop or two of machine oil at least once a week. Ball bearing fan hubs which are grease packed should receive a dose every thousand miles. The differential should be filled every thousand miles and that car is well cared for which has its wheels pulled and greased every twenty-five hundred miles.

It will depend on the character of grease advised by manufacturers as to how often the gear set is to be filled. Those which use a heavy oil should receive attention approximately every thousand miles; those which use grease at least every two thousand miles.

Universal joints should be packed not less often than a thousand miles apart and it does no harm to grease them every five hundred miles. Practically all the energy which reaches the rear wheels passes thru these joints and every oscillation of the car requires motion here. As universals are expensive to replace and as the proper grease costs but little, teaching Small Son to keep these constantly full of lubricant is a distinct economy.

Filling grease cups and screwing them

Annoying spring squeaks worry any driver. A small boy with a can of oil and a paint brush can banish them easily by painting the edges of the spring leaves with motor oil. Never mind the dirt and dust—paint over the accumulated road dirt which soaks up oil which will in time percolate in between the leaves. If Small Son will do this painting once a week, spring leaf squeaks will be conspicuous by their absence.

The best car ever made occasionally develops unusual noises. If these noises are continuous and regular they come from moving parts, and such calls for grease should never be neglected. It is one thing, however, to hear a noise and sometimes quite another to find just where to put the needed grease.

Here one or two small boys who can crawl around the car while it is being driven putting their ears here and there can speedily determine the cause.

By no means [Continued on page 327]

# THRU THE LOOKING-GLASS

BY WINIFRED FALES

PHOTOGRAPHS BY MARY H. NORTHEED

THE ornamental value of mirrors is well known to professional decorators by many of whom they are employed lavishly and with great skill. One eminent member of the craft has a hobby for mirrored walls and doors wherewith she contrives amazing effects of spaciousness in limited areas. The layman who acts as his own interior decorator, however, is prone to regard the looking glass as a strictly utilitarian product, and to limit its use to bedrooms and dressing or bath rooms, now that the gorgeously framed pier glass, that towered to the ceiling between the front windows of every well regulated parlor a generation ago, is practically extinct.

Occasionally, it is true, a mirror may be seen in a living or dining room, but this usually is an integral feature of a buffet or a factory-built mantel, or, in rarer cases, a family heirloom treasured for sentiment rather than artistic appreciation.

Yet, rightly understood, there is no greater decorative asset than a mirror; and a generous percentage of the money now expended for superfluous bric-a-brac that clutters shelves and tables and crowds cabinets to overflowing, might profitably be diverted to the purchase of mirrors which, historically, are as rich in interest as pottery and porcelains, and are much easier to reconcile with their surroundings.

Of course in their decorative employment, practical ends may also be considered. Mirrored doors in wardrobes, closets and dressing rooms are both useful and ornamental, and in various other ways practical and artistic functions may be happily combined. Occasionally it may seem desirable to install a mirror with the sole object of completing a group composition, supplying accent or balance, or of strengthening structural lines; but in general the oft-quoted injunction of William Morris, to "have nothing in your homes which you do not know to be useful, or believe to be beautiful," may be adopted as a working principle.

The convex mirror perhaps approaches most nearly to an exclusively ornamental type, since the distortion of reflected images makes it useless so far as any aid to the toilet is concerned. As an over-mantel decoration it is most happy, particularly when the mantel is delicately carved, in the Colonial fashion, and painted white. Where paintings are hung at either side of the fireplace, as is so frequently the case, another against the chimney breast is superfluous and consequently in poor taste, whereas a mirror so hung not only prevents monotony and crowding, but by the introduction of a contrasting note actually enhances the effect of the pictures. When it is possible to place convex mirrors so that

they reflect a brilliant garden vista, their charm and decorative value is doubled.

Between windows is another happy situation for either a large or a small mirror. Here a picture would be lost owing to lack of illumination, but the looking glass reflects the well lighted objects that face the windows, and thus brightens a wall space that often seems disproportionately dark in contrast with the strong light pouring in on either side. In similar fashion, a gloomy corner can be made cheery and inviting by placing a mirror so that it reflects a window or a hearth fire. Its impersonal character makes its use possible in spaces that obviously clamor for decoration,

*It is often a good idea to hang a mirror between two windows where it carries the effect of illumination along the whole side of the room. A picture similarly placed is frequently ruined for lack of suitable light*

tion, but in which for various reasons a picture seems unsuitable.

It must not be inferred that the placing of a mirror demands less careful consideration than that of a print or painting. On the contrary, its brilliancy — accentuated by reflections of color and movement in the room — make it inevitably a focal center wherever it may be placed, and consequently it is important that its position should coincide with some natural center of interest in order that the room as a whole should not appear to pull apart. To make a mirror appear an integral part of its surroundings there must be, first, consistency of scale between it and the place it is intended to adorn; and, second,

the establishment of balance and stability, either by relating it to some structural feature of the room—as an alcove, mantel, or built-in seat—or to a furniture group of importance and interest. A mirror which exists as an isolated fact, suspended in mid air like Mahomet's coffin, is a meaningless excrescence rather than a decorative element.

Nor is this all. The mirror must scale with surrounding objects as well as with the wall space it occupies. A large, massively framed mirror hung above a delicate, spindle-legged chair will appear gross and top-heavy, whereas it might seem perfectly balanced above a davenport or other heavy piece of furniture. But a mirror may be so related to a furniture grouping as to form therewith a well balanced decorative unit. In one such grouping a cabinet reinforced at either side by plants in heavy pots forms the base of the unit, and a tall Chinese vase serves as a connecting link between cabinet and mirror. In another case a relatively small mirror may be rendered sufficiently imposing to constitute the sole decoration at one end of a narrow, ivory walled reception room by placing it against a panel of antique brocade, thus balancing a heavily draped window at the opposite end. Beneath the mirror is a fine commode supporting a candelabrum and vases of cut crystal may be placed, and a chair at either side will complete and add stability to the group.

In another room, a mirror above a mantel is harmoniously grouped with sconces and candlesticks hung with sparkling crystal pendants from which it gains added brilliancy. Still another use for mirrors may be observed in the same room, where they form the backs of two small curio cabinets hung in shallow recesses at the ends of the fireplace. By catching the light from the windows, the glass aids materially in throwing into relief the art treasures in the cabinets, and in illuminating the recesses themselves.

THIS page is published as a tribute to mothers, wives, daughters and friends, in honor of the hundreds of thousands of brave, loyal and patriotic American boys who comprise the magnificent American fighting forces both at home and abroad.

It is believed that the various insignia shown are absolutely correct and it is suggested that this page be cut out for future reference.

It may be interesting to note that hundreds of thousands of Parker Safety-Sealed Fountain Pens, which are peculiarly suited to the needs of "our boys", are being carried by men in the Army and the Navy.

Note how Parker Clip is securely held in place. It holds pen to level of pocket.

# What to Do in September

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## VEGETABLES

**Spring Greens** A liberal application of well decayed manure should be spread on the surface of the soil, dug in, and the surface made fine. This soil is then in condition for the sowing of New Zealand spinach, one ounce to 100 foot row, rows eight to ten inches apart and one half inch deep, yielding one bushel. After the frosts set in, cover with clean straw or some other litter to a depth of three to four inches. Corn salad may also be sown this month.

**Sweet Corn** If a light frost has nipped your late corn and the ears have formed, pull up a few of your best plants, root and all, and stand them in the barn or some protected place. If the soil is moist and the plants not too badly frozen, the corn will mature. Some of the strength or sap in stem, leaf and root will go to the ear. The stalks may be packed close together.

**Fall Planting of Roots** Horse radish and rhubarb roots planted this month will be well established by spring. The soil should be deep and rich. Parsley roots if lifted, tops cut close, and planted into a six inch pot, will supply parsley during the winter. The soil should be very rich, kept moist and the plant kept in a sunny window.

**Asparagus** As soon as the leaves begin to turn yellow and the berries turned red, cut the stalks close to the surface of the bed and burn between the rows. The woody stems do not make good compost and if burned all of the disease or insects on the stems are destroyed. After frost has set in, apply a heavy application of decayed manure and mix in coarse bone meal.

**Beet Greens** If beet seed is sown one inch deep and the rows twelve inches apart in a rich mellow soil, the beets are just the right size for greens and canning before frost.

**Lettuce** If the plants of Prizehead and Grand Rapids (loose-leaves) are planted the first week of this month, they will mature before frost. May King and Big Boston are the best head varieties for fall planting.

**Radishes** Seed should be planted in a very rich soil and the radish may be harvested in thirty-five to forty days. The French Breakfast is one of the best varieties for the home garden. Keep the soil moist and cultivate freely.

**Turnips** Sow one ounce of seed to one hundred foot rod. Thin to three inches apart in the row. Cultivate frequently and keep out all fall weeds. The crop will mature in forty to sixty days; yield should be about two bushels.

**Onions** The White Potato (Multiplier), yellow potato and yellow Globe Danvers are the best varieties for fall planting. Place the sets in a rich soil in rows twelve inches apart. After the severe frosts come, protect the tops with litter. Onions grown for winter use should be ripened. If the tops still stand, throw them down by dragging light branches on them or by throwing them over with the rake handle. After two weeks, rake them to the surface and allow the tops to dry before they are cleaned and stored.

**Tomato** In order to hasten the ripening of the fruit before the first frost appears, prune out all suckers, cut off all growing tips and cut the leaves half off. Cut off all flowers. The strength of the plant will then be forced into the fruit and the sun and air will have free access.

**Celery** This is the month to blanch the celery. This may be done by banking it with earth, placing boards on each side of it or by the use of "blanchers" made of wood and heavy paper.

**Cabbage** If the late cabbages have a tendency to split, loosen the plant in the soil by lifting the head a little or pushing it over on its side. This stops the excess supply of moisture and the cracking of the head.

**Soil** Contract with a livery stable or farmer for a liberal application of stable manure for your garden next month. If manure is plowed or forked in the soil in the fall and allowed to stand in the rough, the frost, snows and rains will not only help to cause decay in the manure but will make the soil a finer texture.

## FRUIT AND BERRIES

**Apples** Handle your apples in picking them as you would handle eggs. Do not break or pull out the stem.

Select only the best for storing and dry or can the rest. Apples keep well in a cool potato cellar. Shelves placed along the wall with a little straw placed in the bottom of them makes an ideal place to store apples. Do not place the apples too deep. Ventilate on warm bright days and keep the air dry. Apples may also be stored in crates if the air is allowed to circulate freely. Be careful in picking the fruit that you do not break off the fruit buds for next year. All broken and diseased branches should be cut off and burned. Mulch the trees with manure, cut grass or straw under the limbs where the water drips from the foliage. Never pile manure about the trunk.

**Pears** In order to ripen them and secure the best flavor, place the fruit in a cool dark place. The air should be kept sweet and the fruit picked over so that the ripe pears may be removed.

**Blackberries and Raspberries** Cut all the old canes and stragglers off close to the ground. Keep out all weeds. A furrow thrown over the canes will be of decided advantage in cultivating in the spring. This should be done the last of the month after the plants are mulched with manure. Early mulching causes diseases to infect the canes.

**Currants and Gooseberries** This is the time to plant currants and gooseberries in the garden. The soil should be deep and rich. A liberal application of coarse bone meal will supply plant food for a long time and the humus will hold the much desired moisture. Wood ashes worked into the soil about the established plants will ripen the wood and buds. The last of the month cuttings may be made. Not more than six buds to a cutting and the root ends should be cut at the node and bunched so their ends are even. The bunches are packed in sand in a cool place with the cuttings turned wrong side up. These will be ready to transplant in the early spring.

**Planting** There are differences of opinion as to the advantage and disadvantage of planting fruit trees in the fall but in general it is strongly advised. If the tree is fully ripe, when lifted from the nursery, the roots properly pruned and the tree set in two inches below where the graft or bud has been inserted, the plant is easily established early in the spring. The soil should be made firm about the roots but no manure mulching is necessary until spring. Do not prune the branches until spring.

## FLOWERS

**Sweet Peas** Incorporate decayed stable manure and bone meal into the soil, forming a trench eight inches wide and two feet deep. Draw a furrow eight inches deep in the center of the trench and sow the seed. Cover the seed and press down the soil with the back of the rake. The seed should be kept below the frost line and this may be done by covering it with straw or boards. On warm days this protection should be removed so as not to hasten or suddenly start germination.

**Bulbs** This is the month to set out bulbs for spring bloom. The soil should be rich and well drained. Plant hyacinths six inches deep, snowdrops five inches, daffodils seven to eight inches, tulips eight to ten inches. Cover the bulbs and allow the bed to remain unprotected until steady frosts set in, then cover with straw, manure or leaves. This is the last call to plant the Madonna Lily, twelve to eighteen inches deep.

**Peonies** If your peony plants are not as satisfactory as you desire, make sure they have plenty of sun, a well drained and sweet soil. They also require considerable food in the form of decayed cow or horse manure. The plant does not do well in the open but requires a semi-shady place.

**Flowering Shrubs** Cut off all withered blooms or seed. Thin out the plants but do not prune back. Do not top-dress the soil until the lasting frosts have set in and then do not pile the manure up around the crown.

**Fall Planting** Practically all of the ornamental evergreens may safely be planted this month. Never use manure about the roots of evergreens. Just as soon as the leaves of such shrubs as the lilac fall and wood ripens, the shrub may be transplanted. The soil for all flowering shrubs should be made deep and rich.

**Lawn** In order to have your flower beds attractive, your lawn should be fresh and green. If your lawn needs remodeling, peel off the surface. Cultivate it to a depth of twelve inches. Remove all weed roots. Incorporate a well mixed commercial fertilizer of bone meal. The soil is then made very fine and you may then sow the grass seed. Rake in lightly and roll. The lawn may be top dressed later with well decayed manure.

**Compost Heap** This is a good month to make a compost pile to be used to top dress your rose and shrub beds late in the fall or early next spring. Invert a layer of sods. If you have pea or bean vines, spread them on the soil beside the sod. Then add six to twelve inches of manure and sprinkle in a little bone meal. Then another layer of sod and soil until the pile reaches three to four feet in height. Cover the entire pile with soil and inverted sod.

## IN THE GREENHOUSE

**Cuttings** It is not too late to make the last cuttings of Ageratum, Snapdragons, Geraniums, Hellatropis and other tender wooded plants. Take cuttings from healthy vigorous plants.

**Bulbs** Buy only the best bulbs. Cheap bulbs are known as "Culls." For cut flowers place the bulbs of tulips or narcissus close together in flats filled with a rich sandy loam. The soil should be moist but not wet. Place the flats in a trench so that [Continued on page 325]

## WHAT TO DO IN SEPTEMBER

when covered they will be below the frost line. For pot bulbs the following rules are generally applied: Freesia, three inches apart, four inches deep, blooms in December; Roman Hyacinth, four inches apart, five inches deep, blooms in December to April; Dutch Hyacinth, four inches apart, four inches deep, blooms January to April; Easter Lily, one in a six inch pot, five inches deep, blooms December to April; Calla Lily, one large bulb in an eight inch pot, six inches deep, blooms until spring; Daffodils, four inches apart, five inches deep, blooms January to April; Tulips, three inches apart, three inches deep, blooms February to April; Lily of the Valley, two inches apart, one inch deep, blooms February to April. With the exception of the Freesia and Calla the rest of the bulbs should be buried from five to eight weeks so that a strong root system may be developed in the pots before they are brought to the light. It is advisable to place a sifting of ashes on the bottom of the trench before placing the pots. If these plants are to be lifted late, cover them with two to three inches of straw and then sand or ashes, so that the bulb is below the frost line.

**Sweet Peas** Forcing varieties may be started in small pots or in trenches in the ground beds. Peas sown this month will bloom for Christmas. The soil should be rich in nitrogen, decayed humus and must be sweet. Do not over water. Cultivate freely and ventilate. Never allow the house to get hot and do not leave the ventilators open on a cold, rainy day. Sweet peas should be kept growing vigorously from the time the seed germinates.

**Roses** This is a dangerous month for vermin and mildew. Fumigate frequently after sundown. Spray the plants with a force of clear water on bright days to check the red spider. Paint all heating pipes with a paste of flowers of sulfur. If the mildew appears on the leaves, dust the plants with flowers of sulfur. Keep all yellow leaves picked off from the plants and from surface of the soil in benches and walks. Keep the soil well cultivated, the plants clean, the air sweet and the house warm.

**Pansies** Seed sown early this month and the seedlings planted five inches apart in a rich soil will give a free bloom in December and January. Keep the plants free from green fly by dusting the foliage with tobacco dust.

**Chrysanthemums** The early varieties are well budded this month. Do not get water in the cup of the bud. Spray only the late varieties. Keep the house filled with sulfur fumes to check the mildew. Paint the heating pipes with sulfur paste. Stop feeding and cultivating the early varieties. Feed the late varieties with liquid cow manure.

**Soil House** Fill the soil shed or house with sufficient soil and sand to last most of the season. This practise saves time in breaking into the compost heap after the severe frosts have locked the soil. Soil brought under cover when frozen warms up slowly, is usually wet a long time and is never as fine as soil kept under cover in winter.

**Repairs** Don't put off repairing all the broken glass. Get the boilers in shape and test out. If thru patriotic reasons you do not care to raise many flowers, raise vegetables, such as lettuce, cucumbers, radish, etc., and take them to the base hospitals. Beets and Swiss chard may be raised if the temperature is kept above freezing.

**Hotbed** The hotbed should be well filled with beets, lettuce, radish, a few parsley plants, or violets. Great care must be exercised in ventilating so that the plants are never overheated or chilled.

## MAZDA

*"Not the name of a thing, but the mark of a service"*

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this service.

A MAZDA Lamp for every purpose

MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York. The mark MAZDA can appear only on lamps which meet the standards of MAZDA service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

# GETTING THE MOST FROM YOUR MOTOR

**E**CONOMY in motor car operation is a subject of vital and increasing concern to the motorist not alone on account of his pocketbook in these days of ascending wartime prices, but because of a desire to subscribe to national economy while maintaining his or her share of national efficiency by continuing the use of motor travel.

In considering economy of motor car operation the question of fuel, which usually evolves itself into a matter of more miles per gallon, is generally accorded first place. And it is worthy of this, not because of its direct bearing on the motorist's pocketbook, but because the practices necessary for fuel economy, such as moderate rates of speed in driving, are also conducive to low maintenance and repair costs with slower actual depreciation.

Considered from the foregoing viewpoint it is really beside the question whether or not there is at present or likely to be a shortage in the supply of gasoline. Statistics compiled by the Government's Bureau of Mines indicate that there is an almost inexhaustible supply of crude oil, from which gasoline is refined, in this country and Mexico, but inadequate transportation and distribution facilities and a shortage of labor would just as surely curtail the supply of gasoline as would a scarcity of crude oil. The same statistics show that the production of gasoline in this country in 1917 was 65,000,000 barrels of 42 gallons each. In the first quarter of this year the production was 17,384,000 barrels in comparison with 13,700,000 barrels during the same period of 1917. On April 1 last there were 12,500,000 barrels of gasoline in storage in the United States.

The present attitude of the Government on the gasoline question is indicated by the following statement recently made by Mark L. Requa, Director of the Oil Division of the United States Fuel Administration:

Up to the present time there has been sufficient supply of gasoline to meet all requirements; but in order to be prepared for any shortage, should it arise, plans are being considered by the Oil Division of the United States Fuel Administration, in cooperation with the automobile industry and the National Petroleum War Service Committee, for the purpose of determining the most satisfactory method of gasoline conservation. It is not expected in any event that it will be necessary to restrict normal consumption for freight vehicles, and provided there is reasonable conservation by all concerned, it may not be necessary to interfere seriously with passenger cars and motor boats. It must be borne in mind, however, that the paramount use for gasoline is for war purposes, all of which requirements will be supplied. The volume of this will largely govern the situation. It seems possible that rational conservation by the public will render Government action unnecessary.

The motorist must bear in mind that the conservation of gasoline begins with its proper storage and handling. Underground storage and the use of wheeled tanks with measuring pump and hose is desirable because they prevent evaporation, spilling and possible fire. Gasoline evaporates rapidly when exposed to the air. The Petroleum Division of the United States Bureau of Mines esti-

BY JOHN R. EUSTIS

mates the wastage of gasoline in this country thru poor storage, careless handling and unnecessary use at over one million gallons daily. The use of gasoline for cleaning the mechanism of motor vehicles is to be avoided. Kerosene or one of the special preparations will "cut" grease just as effectively. Repeated examinations should be made for possible leaks in gasoline tanks, feed lines and carburetors, and these repaired immediately.

The next step for the motorist in practicing fuel economy is to see that a minimum of power is lost thru friction and to maintain this condition. Dragging brake bands, shafts out of alignment, tight bearings, insufficiently inflated tires and lack of proper lubrication in moving parts, all consume power and waste fuel as well as cause undue wear on the mechanism. The matter of lubrication in this connection is highly important and includes the use of good quality lubricants. The proper adjustment of brake bands also requires constant attention and should not be neglected.

Next in order the motorist must consider the matter of maximum efficiency in converting fuel into power. Carburetors must be kept properly adjusted. Service stations ordinarily perform this task without charge, but as will be pointed out later, the time has come when the motorist must depend largely upon himself for adjustments and minor repairs, and the sooner he learns now, the better. The needle valve should be kept clean and the carburetor adjusted while the motor is hot to use the leanest mixture possible. A rich mixture not only wastes gasoline but fouls the cylinders, pistons and valves of the motor. It is advisable to preheat the air before it enters the carburetor or else the mixture before it enters the cylinders, or both. Devices for churning up the mixture and for adding steam vapor are available and in many cases can be advantageously employed. Spark plugs should be kept clean and the points adjusted in order to insure a hot spark. There must also be ample current for ignition. It is advisable to drive with the spark well advanced as a late spark is believed to increase fuel consumption.

With the average motorist the biggest opportunity of conserving gasoline lays in not running the motor when the car is stationary and in driving at comparatively low speeds. In the former case it should be remembered that the starter battery is actually benefited by frequent use, while the exercise one gets in cranking a car is quite beneficial. In the matter of speed most cars show their highest fuel mileage at speeds ranging from fifteen to twenty-five miles an hour, most record performances being made at about the former figure. Such conservatism in driving will be the hardest pill for many motorists to swallow, but the alternative is suggested in Director Requa's statement previously quoted. Quick acceleration wastes gasoline while a saving can be effected by coasting down hills with the motor shut off. It is further advisable to know one's mileage per gallon from day to day as an aid to gasoline conservation.

Under Government curtailment the manufacture of tires is being reduced, and certain sizes are being eliminated entirely. This fact emphasized the need of conserving tires as of almost equal importance to saving gasoline. Many of the foregoing suggestions are applicable to securing greater mileage from tires as well as conserving gasoline, but there are additional considerations in the matter of tires. Proper inflation is highly important and a majority of motorists are guilty of neglecting this. Roughly the right pressure under ordinary conditions is twenty pounds per inch of diameter. Quick stopping is as hard on tires as rapid acceleration, and slow rounding of curves and turning of corners will add to tire mileage. Driving in street car tracks is especially bad for tires as is rubbing them against curbstones and other obstructions. Fast driving over rough spots in the road is to be encouraged for the sake of the entire car and its occupants, while changing to lower speeds before the motor begins to labor on hills will benefit the entire mechanism. Too many motorists seem to forget the existence and purpose of intermediate gears in the transmission. The manufacturers would omit them soon enough if they were not needed.

The increasing need for the motorist to depend more on himself and less on

the service station for adjustments and minor repairs has been mentioned above. There is a marked shortage in automobile mechanics due to their enlistment and drafting into the army where their services are required in almost unlimited numbers. Next to the needs of the army come those of the motor transport so that the passenger car is a last consideration. A movement has been started by the National Automobile Dealers' Association doing away with all night and Sunday work in the garages. Already a large number of cities have subscribed to this plan and service is given and fuel and supplies sold only during the daytime on six days of each week.

A final word concerns the unnecessary use of motor cars, a matter for each motorist to decide for himself.

Save gasoline by not running the motor when the car is stationary

## LET SONNY TAKE CARE OF THE CAR

(Continued from page 321)

all noises, however, come from revolving mechanism. Non-continuous intermittent noises may come from the body working on the frame, from a fender not tight against the body, from brake rods or shackles, a loose spring on clutch or brake, a rattling light bracket or tire carrier, or any one of a hundred and one different loosenesses which may develop underneath the car. Hunting "canary birds" at "a dollar a bird" is a favorite sport of garage boys with new drivers. Your lads will do it for fun and offering ten cents for the location of a squeak or rattle is an absolutely certain method of removing it.

A car driven without sufficient water can do itself comparatively little damage before it shows signs of overheating. But it is annoying to stop several miles from the nearest well and wait for the motor to cool sufficiently to enable you to proceed. This will never occur if the small caretaker be instructed that after oil in the engine, the next most important thing is filling the radiator.

There are any number of points about car-care which any lad can learn. No car should be taken on a long run without an examination to see if spark plug connections are tight. To "wiggle" the wires to each spark plug is the momentary stitch in time which may save many annoying moments on the road.

Let your lads have the responsibility of seeing to the gasoline supply. Teach them to set the trip speedometer to nothing whenever the tank is filled; it will be but a few days before you learn the number of miles you get to a gallon. Knowing the average mileage to the gallon, watching the trip speedometer tells when more gas is needed.

More than one operator who knows little about cars has run for miles wondering why he does not get the power similar cars in other hands possess. Unfortunately even well meaning dealers can not always think to impart every point about running a car. If he has not been sufficiently mandatory about brakes, they may be overheating without your knowledge. If Small Lad will, at the end of every run, lay his fingers against the brake drums he will be able to tell whether loss of power is due to dragging brakes. Brakes get warm on long runs but should never be hot. If they are, unless at the bottom of a long hill on which brakes have been continuously applied, it is a sure sign that either emergency or service brake is dragging, and needs shop treatment.

Some cars have a curious tendency to overheat, the cause of which is difficult for the amateur to trace. In nine cases out of ten, if the circulatory system is in good condition, the trouble comes from a loose fan belt. Fan belts, whether made of webbing or leather, stretch as they gradually absorb oil. All motors are provided with a means for keeping the belt tight, usually a winging jacket adjustable with a wrench. It may be beyond a boy's strength to make the adjustment, but if, whenever he looks under the hood he will lay an investigatory finger against the belt he will know whether or not it is loose. As a too tight belt tends to break, in adjusting it be careful not to get it too tight.

For the rest of the care of the car, such as rubbing of the leather with a leather dressing, brushing of the carpet, and dust from the top, polishing with one of the many good automobile dressings, no suggestions need be made here. Your men children will show less enthusiasm for the appearance of the car than they do over its mechanical end, but undoubtedly they will be willing to take the latter with the sword!

# HARVEST HOME

BY E. I. FARRINGTON

**N**OW that the garden crops have been raised it is more than usually important that all the surplus be saved for winter use. If every family could store enough vegetables and fruit to last it thru the winter months, a real step would be taken toward winning the war, for the railroads would be released of much of their burden. Many gardeners planted with the expectation of filling their cellars with the products of the ground this fall. All too often, tho, the cellar is not adapted to the storage of vegetable crops, particularly if it is furnace heated. Perhaps this phase of the matter has been overlooked. You can't expect to keep most vegetables if the temperature runs above 40. Indeed, the closer you can keep it to 32 degrees, the better.

The only exception is in the case of the squash and its cousin the pumpkin, unless you live far enough south to grow sweet potatoes. These three vegetables must be kept in a fairly warm, dry place. There may be no better place than the furnace cellar. It is best, tho, to use shelves so that the vegetables need be piled only one or two layers deep. Not having a heated cellar, you may find a place near the chimney in an upper room where they will keep. Farmers sometimes bury their squashes and pumpkins in hay in the barn.

If you have a cool, well-ventilated cellar, where the temperature does not drop below freezing at any time, you need not worry about storage facilities. Otherwise it may be necessary to construct a vegetable closet. No great difficulty should be encountered in doing this, if you have a furnace cellar where a corner can be partitioned off and where there is an outside window. A corner is best because there you can get the advantage of two outside walls and a window for ventilation. A double window or an outside shutter gives best results, especially if hung on hinges so that one or both can be raised as weather conditions may dictate. Sometimes a stove pipe with an elbow at the top is carried from the window to within a foot or so of the floor to introduce fresh air. A vegetable cellar or closet which is eight feet square should be large enough for the average family if shelves and boxes or elevated bins are used. By all means have a double wall partition. Make it of terra cotta, hollow tile or of brick, if these materials are not too expensive. Otherwise put up 2x4 studding and nail matched boards to both sides. You can further insulate the walls by the use of building paper. Have a double door if the furnace cellar adjoins. Sometimes it may be necessary to leave these doors open a little to admit more heat, but usually they must be kept closed. A natural earth floor is the best. If you have a cement floor, cover it with sand and sprinkle the sand occasionally or else keep a pail of water in the room.

Perhaps the use of a house cellar is out of the question. In that event build a vegetable pit out of doors. This is a simple matter if you can dig into a side hill or banking, excavating a kind of cave which you can line with boards or cement. There should be a double pitch roof which can be covered with earth or sods, or boarded be-

# Apollo

*Rust-resistant,  
Durable, with  
Copper Steel base—*

**for Culverts**

**Apollo-Keystone Copper Steel Galvanized makes safe, substantial roadway culverts.**

APOLLO is the highest quality galvanized product manufactured for Culverts, Flumes, Tanks, Roofing, Spouting, Garages, and all exposed sheet metal work. The added Keystone indicates that Copper Steel is used. Time and weather have proved that APOLLO-KEYSTONE Sheets last longest in actual service. Sold by weight by leading dealers. KEYSTONE COPPER STEEL is also unequalled for Roofing Tin Plates. Send for "Better Buildings" and "Apollo" booklets. They are valuable to all sheet metal users.

low, so as to form a dead air space. Some kind of ventilation is needed and is easily provided by extending a drain pipe thru the roof, putting a wooden hood over the top so that the rain will not enter. It is important to make the front wall frost proof because that will be exposed. Have double walls and a double door. It is well to hang a screen door, too, so that the cellar doors can be left open on cool nights in the fall and spring. All cellars are best opened at night and closed during the day until very cold weather comes.

If only level ground is available you can dig out a pit six or eight feet deep with a sloping entrance and roof it over. If digging is hard, it may be necessary to have some wall space above the ground, but the walls can be made frost proof by heaping sods and earth against them. Such a storage pit may be well built and permanent, or hastily constructed with old boards. The lighter the construction, the more necessary it becomes to cover it with earth, hay, leaves or straw manure. Very satisfactory permanent storage cellars can be made from concrete, and have the added advantage of being entirely rat proof.

Of course it is necessary in every case to provide drainage unless the cellar is naturally porous. A short tile drain will usually be sufficient.

But even tho you have neither cellar nor pit. It is quite possible to store your garden crops safely. Great quantities of vegetables are wintered in the open ground every season. A common plan is to pile them in conical heaps, covering them with straw and a layer of earth at first, more straw and more earth being added as the weather gets cold.

Sometimes a shallow pit is excavated and the vegetables piled in it. If you adopt this plan, use a very light covering of straw at first with just enough earth to keep it in place. Increase the covering as the weather gets colder and make it at least two feet deep when the ground is frozen an inch. Always make a point of having a little of the straw project thru the earth, as a matter of ventilation.

Potatoes and the root crops can be stored in this way. It really isn't necessary to dig or store parsnips and salsify, for they can be left in the ground where they grew until spring, unless it is necessary to get them out of the way so that the garden can be plowed in the fall. Cabbages are sometimes stored with the root crops, but more often are placed side by side, head down, in shallow pits and covered with earth so that only the roots project. Three rows of cabbages can be placed conveniently side by side. Sometimes two additional rows are placed on top. Frozen cabbage will keep perfectly well until it thaws. It is the alternate freezing and thawing that make cabbages spoil. Even if you have a cellar, it's a good plan to store cabbages in the open ground. They are likely to go bad in the cellar before spring comes, and the odor which they give off is far from pleasing.

Potatoes are doubtless the most important crop to be stored. Most of them will go into house cellars. Such a cellar should be at least moderately dry. Unless there is an earth floor it is best to have the potato bin raised at least six inches and made with a slatted bottom so that there will be plenty of ventilation. Do not have a very large bin or the potatoes in the center may start to rot before the winter is over. In all events be sure that the potatoes are perfectly dry before they are stored. # Make Your Mind a File—Not a Pile—Stop Forgetting

By Prof. Henry Dickson

PROF. HENRY DICKSON, America's foremost authority on Memory Training and Principal of the Dickson Memory School, Hearst Bldg., Chicago.

Is your mind like a scrap pile—heaped up with a lot of unrelated, unclassified, unindexed facts? When you want to remember a name, place or date, must you grope uncertainly in this mixed-up pile seeking in vain to locate the desired information? And finally, in embarrassment, give it up? Summoned on any occasion to give facts and figures—does

your mind become a blank? When suddenly called upon to speak—do you seek wildly to collect your thoughts—utter a few commonplace remarks—and sit down—humiliated? Without Memory, all the knowledge in the world becomes worthless. "Stop Forgetting" makes your mind a file—not a pile.

I CAN MAKE YOUR MIND AS SYSTEMATIC AND FORGET-PROOF AS A CARD INDEX FILE

The average mind resembles a scrap pile.

—master of your mind's infinite ramifications—instead of a victim of its disordered details. My course of Memory Training perfected by 20 years' experience, is universally recognized as the most thorough, practical and simplest system of its kind now before the public. My system so thoroughly trains the memory that you will be able to classify impressions, ideas, names, facts and arguments and have them ready at a moment's notice. It develops concentration—overcomes self-consciousness,

bashfulness—enables you to address an audience intelligently without notes.

## IMPORTANT NOW

No time has been more opportune than the present to train the memory and the powers of concentration. The soldier needs this training to help him to master quickly the multitude of technical instructions which are part of his military discipline. The man who remains at home needs this training because business from now on will be more intensive than ever before. Every man in every place will find a reliable, efficient memory an asset of the utmost value. Whatever may be your position, send now for information.

DICKSON MEMORY TRAINING HAS HELPED THOUSANDS

Mail coupon or send postal for statements from students who had exceedingly poor memories and developed them to perfection—and men with remarkably good memories, who made them even better. Give me 10 minutes daily, and I will make your mind an infallible classified index, from which you can instantly select facts, figures, names, faces, arguments. Perfect your memory and you can command what salary you will.
